Mr. Naido—Had we not better ask the *Kiushu Doshikai* to undertake this work?

Mr. Yamada—I doubt the advisability of our party's undertaking the work. I would rather decline.

Mr. Naido—I hope my proposition may be adopted by the meeting.

This course was finally adopted.

Mr. Oye—I am in full concurrence with the views just expressed. The *Kiushu Doshikai*, being a new party, is free from all kinds of disagreeable relations in the past and consequently is placed in a singularly happy position for undertaking work of this kind. A draft prepared by it runs no risk of being received unfavourably either by the *Daido Danketsu*, or the *Kaishin-to*, as would naturally be the case did the draft emanate from a party hitherto in opposition to those whose union is now sought. Moreover, considering the desirability of forming the new great party as far as possible on the model of the political parties in western countries, I think it very advisable to trust this important work to such men as Mr. Kawashima, who has spent so many years in investigating affairs of the kind in Europe and America. Should it, however, be made public that the draft for organizing the new party was entrusted to the hands of the *Kiushu Doshikai*, the natural consequence would be—well the result would not be entirely satisfactory, to say the least. I should like, therefore, to recommend that the draft be represented as having been prepared with the concurrence of all the parties concerned.

Mr. Naido—Inasmuch as it will be by our own resolution that the preparation of the draft is entrusted to the *Kiushu* party, the formal responsibility of the work will of course rest upon us all. I see no occasion for the uneasiness expressed by Mr. Oye.

Just here Mr. Kawashima produced a sheet of paper bearing what purported to be a draft prepared by the *Kogoshima Daishikai*.

Mr. Shimada—Now the draft committee having been fixed, what shall we consider next?

Mr. Naido—In the first place, we had better fix the principles of the new party and then our platform. While matters of mere detail need not be settled at the present meeting, I think we can express on this occasion our views respecting the party's principles and platform.

Mr. Suzuki—The vindication of the national honour shall be placed in the fore front of the party's platform!

So saying, he was proceeding to refer to the treaty revision affairs of last year, when—

Mr. Sugita interposed—That affair should not be discussed here, because—

Mr. Oi—I cannot understand why Mr. Sugita seeks to prevent others from giving full expression to their views. Mr. Sugita always—

Here a few sharp words were exchanged.

Mr. Suzuki—In my opinion, it is of paramount importance that treaties of full equality should be negotiated.

He then propounded at great length his views on the subject.

Mr. Shimada—Such propositions are embarrassing to us.

Mr. Kawashima—Questions bearing on the foreign relations of the country had better be excluded from our discussion at the present meeting.

Mr. Oye—The vindication of the national honour is one of the five leading principles of our party,

and I hope earnestly that it will be preserved in the programme of the new party.

Mr. Kawashima—I suppose there will be no objection to our adopting liberalism as our principle.

Mr. Shimada—And our motto should be "Magnifying the Glory of the Crown and the Extension of Popular Rights."

These remarks elicited neither approval nor condemnation.

Such was the substance of the proceedings of the meeting. The most striking features about it were an exchange of sharp words between Messrs. Oi and Sugita, and a spirited argument between Messrs. Suzuki and Takata.

Considering the attitude the *Nippon* adopts towards the proposed amalgamation, we are not at all prepared to vouch for the accuracy of the above report, especially when we remember how frequently the light of truth in such matters is apt to be deflected in passing through journalistic lens. The editor of the *Choya Shim-bun* avers that there must be some inaccuracies in the report, especially in the part referring to Mr. Shimada. Moreover, one thing will certainly strike our readers, as it has struck us, how did the *Nippon* and other papers obtain access to the above information. The conference was avowedly confidential, and inferentially all discussions were conducted under the seal of strict secrecy. That outsiders should have been allowed to overhear the proceedings of such a conference cannot be credited. If we accept the report, we must at the same time accept the disagreeable hypothesis that the events which transpired at the conference were divulged by some of the representatives present. Such untrustworthy action is by no means to be hailed as an auspicious omen of the success of the proposed amalgamation, and we may make the same comment about the publication of the so-called report in the columns of newspapers professing to be friendly to the cause of union.

THE CONSERVATIVES.

ACCORDING to the *Choya Shim-bun*, the conservatives, alarmed at the prospect of all the progressive parties forming an amalgamation, are trying to prevent the consummation of the scheme. They are represented as endeavouring to cause discord among the progressionists by pointing out the absurdity of parties which stood in diametrically opposite positions last year on the question of Treaty Revision, passing, this year, into one political camp. Our contemporary rebuts this attack with considerable warmth and ridicules the idea as too silly to impose upon public intelligence. "The ultimate object," the *Choya* avers, "of the *Daido Danketsu* and the *Jiyu-to* in opposing Count Okuma's treaty revision proposals, was one and the same with that of the *Kaishin-to* in approving them, namely, the conclusion of treaties on a basis of perfect equality." The only difference between the two was that the one proposed to attain this end at a bound and was not satisfied with anything short of a programme of absolute equality, while the other, acting upon the principle of *festina lente*, held that the shortest path to the realization of the ultimate object of both was to accept the most favourable terms obtainable under the actual circumstances. The difference lay in the route to be taken, not in the goal to be attained. With weak-minded Conservatives, who at this eleventh hour are still dreaming of the seclusion of the country from the outside world, and to whom mixed residence is a fearful nightmare, any coalition would certainly be absurd and impossible. But what wonder can there be in a combination of the different sections of a progressionist party having a common object and destiny?"

POLITICAL RUMOURS.

SOME time ago it was rumoured in a certain quarter that important changes in the personnel of the Cabinet were contemplated. The rumour died a natural death at the moment, but is resuscitated in a new form by the *Kokumin-no-Tomo*. The article is in our contemporary's usually mysterious style, but nobody can mistake its purport. In plain language, it means to say that Count Ito is about to succeed Count

Yamagata as Minister President, that Viscount Tani is to take the place of Mr. Yoshikawa in the Department of Education, that Mr. Mutsu, and Viscount Aoki do not stand on firm ground, and that Counts Matsukata and Saigo will remain in the Cabinet. The *Kokumin* also states that there is an institution in the Government which is always opposed the policy of the Cabinet, and that the members of that institution are about to propose a successor to the present Minister President. Does the Tokyo journal mean the Privy Council? It further publishes imaginary correspondence between Counts Ito and Inouye, whom it calls respectively the Chief of Odawara Castle and the Lord of Isobe. In Count Ito's letter, that statesman recommends Count Inouye to give the chair of Education to the honest General (Viscount Tani); because, as he has many friends among the grey-headed Privy Councilors, his entrance into the Cabinet would constitute a safe link between it and the Privy Council. Count Ito is also made to state that the progressive parties being about to unite, he and his friends ought to effect a combination between their followers and the Conservatives and Independents. In reply, the Lord of Isobe finds a difficulty in accepting advice as to the honest General. He acknowledges the General's importance as a means of securing the support of the Privy Council. He further observes that the Satsuma men are favourably inclined towards the General. Still he finds it extremely inconvenient to give a Ministerial seat to the General, because the latter is not on good terms with his Lordship's own followers. From these letters and from another note in which our contemporary states that recently a bright star appeared on the horizon and moved towards Odawara, where another bright star appeared to receive the first star, and that these two stars went to the east hand in hand—from these circumstances it appears that the *Kokumin-no-Tomo* includes Count Inouye among the new Ministers of State. Our contemporary's ambiguous writing admits of another reading. It may possibly mean that the governmental power is really vested not in Count Yamagata but in Counts Ito and Inouye.

A NEW POLITICAL BODY.

As already noticed in these columns, a new political body of considerable importance is being formed under the guidance of Messrs. Sugiyama, Oyagi, Motoda, Yoshino, and some other Members of the House of Representatives. What their political creed is, no paper or magazine pretends to know definitely, but judging from the avowed opinions of some of the above named gentlemen, especially Mr. Sugiyama, we may safely state that the fundamental principle of the new body will be progressive conservatism. Many of the men whose names are associated with the new combination would indignantly object to be called conservative, but making every allowance for the apparent liberality of their political views in certain respects, the fact still remains that the essential tendency of their opinions is towards conservatism. In the coming Diet, they may co-operate with the progressive parties against the Government on certain questions, but their ultimate position in Japanese politics will be in the van of the conservative party. Meanwhile, as they have not yet declared their platform, they are the subject of much ill-natured criticism at the hands of some of the papers representing liberal principles. The *Kokumin-no-Tomo* and the *Kokumin Shimbu* are specially conspicuous in abusing the new party. But the virulence of these criticisms attests the growing importance of the new combination.

THE TOKYO WATER-WORKS.

The *Shogyo Shimo* says that the President of the Tokyo Improvements Committee has forwarded a sum of two thousand yen to Mr. Shibusawa Eiichi, in acknowledgment of the value of the plans and estimates presented by that gentleman to the Committee when it undertook the management of the Tokyo Water-works

Scheme. It will be remembered that the Water-works enterprise was originally started by a private company of which Messrs. Shibusawa, Masuda, and Okura were the projectors, and that plans and estimates were prepared by Major-General Palmer at the request of the Company. When it was decided that the question of Water-works ought to fall within the province of the City Improvements Committee's investigations, these plans and estimates were submitted to the Committee and became the basis of the scheme which is now to be carried out. Two thousand yen was, we believe, the nominal honorarium paid for the preparation of the documents, and this sum Mr. Yoshika, on behalf of the Improvements Committee, has doubtless refunded to Mr. Shibusawa. It cannot in any sense be considered "an acknowledgment" to Mr. Shibusawa of the value of the plans and estimates, as the *Shogyo Shimo* puts it.

THE EXERCISE OF THE FRANCHISE.

We had hoped that the publication of accurate returns would have enabled us to ascertain ere this the exact number of voters who actually cast ballots at the recent elections as compared with the number who possessed the franchise. Unfortunately, however, we see little prospect of arriving at precise results. Collecting all the returns hitherto published, we find that in only 192 districts out of 300 are complete figures given. In these 192 districts the total number of persons possessing the franchise was 355,536, and the total number who actually voted was 266,713, or 75 per cent. When we remember that the country was not stirred by any great party question and that many of the electors must have felt very little direct interest in the result, this average seems decidedly high. It indicates, at all events, that no such political apathy exists as some writers have been accustomed to predict. We remark, further, that in almost every part of the empire a tolerably equal degree of interest was shown by the voters; even remote country districts have as good an average as the centres of political agitation. Curiously enough, there appears to have existed more apathy in Kyoto than anywhere else. In the four districts of which the returns are to hand, only 5,800 voters balloted out of a possible 13,560. Hyogo also falls below the average, only 15,600 votes having been cast in ten districts out of a possible 24,106; while Osaka, where the *soshi* have their head-quarters, barely comes up to the average, with 10,248 voters in six districts among 14,313 who possessed the franchise. In seven districts of Niigata, on the other hand, no less than 13,503 voters came to the polls out of a total of 16,944. The returns are still too incomplete to enable us to compile comparative figures for the various Prefectures and Cities, or for the different parties.

THE OPPORTUNITY FOR THE FORMATION OF A GREAT PROGRESSIVE PARTY.

The *Kokumin-no-Tomo* of the 13th instant has an article on the formation of a great progressive party. The question is discussed under twelve headings, and will prove interesting to students of Japanese politics. In the first place we are told that public opinion, having already recognised the importance of an alliance between the various progressive parties, must also admit the importance of their amalgamation. Amalgamation is, if anything, better than alliance. The original object aimed at by the proposed alliance can be better attained by amalgamation. In the second place, under existing circumstances there are only two possible courses of action, either to unite all the parties of progressive principles into one body, or to suffer them to maintain their independent existence. No other course is now open within the limits of law. If to remain inactive were the chief object, the parties could do better than pursue the latter course. But now is the time for them to take a bold and decisive step in order to present a united front to their common enemy. In the third place, as to the proposal for the organization of a club, some persons believe that by

this means it would be possible to preserve union among the progressionists in the Diet. The members of this club would have their names struck off the rolls of their respective parties, thus evading the veto imposed by the Law of Political Associations. But the *Kokumin* thinks that such a combination would be very limited in its scope and correspondingly inefficient. Political parties ought to have their heads in the Diet and their bodies and limbs in the country at large. A partial combination of the representatives of a number of parties might lead to estrangement between the heads and bodies of those parties. What difficulty, in the fourth place, can there be in amalgamating the progressive parties? The terms *Kaishin*, *Jiyu*, and *Shimo* are but different translations of the same English word "liberal." All the different progressive parties have virtually identical platforms; they all agree in desiring Government by party, in demanding a reduction of the land tax; in insisting on the curtailment of public expenses; in demanding some extension of the franchise; in wishing for the amendment or abrogation of the Public Meeting Regulations, the Newspaper Regulations, and so forth; in condemning official interference with private enterprise, and in asking for integrity of local self-government. It is, moreover, an indisputable fact that the platforms of these parties represent the wish of the majority of the nation. What should prevent them from uniting into one great party? The *Kokumin* answers that nothing stands in the way of such a consummation. In the fifth place, the present parties are only provisional. Their separate existence is not due to any unavoidable reason, but is purely accidental. The period of their usefulness has passed away. In the sixth place, the preservation of such names as *Kaishin-to* and *Jiyu-to* is calculated to preserve all the old feelings of mutual antipathy and the present is a rare opportunity to erase all these hostile feelings from the memories of the various progressive parties. In the seventh place, there are, besides the larger parties, many political bodies and many members of the Diet maintaining an independent attitude, partly because they are dissatisfied with existing parties and partly because they think it humiliating to seek admission to the ranks of any of them. Such associations and individuals might take part in the formation of a new party without lowering their dignity. To secure their allegiance and co-operation would be no small gain to the cause of progress. In the eighth place, as to the objection that amalgamation of the progressive parties would entail the same danger of dismemberment as that which befel the *Daido Danketsu*, the *Kokumin* observes that those who think thus simply confess their inability to read the signs of the time. The organizers of the *Daido Danketsu* obtained adherents at first by making opposition to clan Government their war cry, but they were not able to point out a method of attaining that object. Their aim did not go beyond intimidating the Government by agitation. But there is now a definite line of action in sight. The progressionists can now give effect to their advanced views in the Chambers of the Diet. The dismemberment of the *Daido Danketsu* was owing to its inaction, but a field of battle now offers in which the opposition can fight for supremacy; there is now a Diet in which they can attain their object by constitutional methods. In the ninth place, towards the close of 1887 there was a project for the formation of a great party by uniting the *Jiyu-to* and a section of the *Kaishin-to*. It failed because such a partial and exclusive union could not but engender jealousy in the minds of the members of other progressive parties. But the present scheme being the amalgamation of all the progressive parties, there need not be any fear of producing such a feeling. The situation is made still more hopeful by the presence of a party like the *Kyushu Shimo-to*, which is ever ready to mediate between the various progressive bodies. In the tenth place, the contention that a large party would inevitably split into several sections is no reason why such a party should not be formed. Every party, however small and insignificant,

is necessarily made up of some small sections. When the proposed amalgamation has been in existence for about a year or so, some of the former members of the *Kaishin-to* may be found to have become intimately connected with the former members of the *Aikoku-to*, while some of the former members of the *Jiyu-to* may be discovered to have cemented a close friendship with those of the *Kyushu Shimpoto*. The existence of such minor groups within the main party need not be regarded with any apprehension. In the eleventh place, with the formation of a great progressive party, there would rise up a great conservative and pro-official party. The existing parties of the latter kind are at present wearing a mask. They are like parasites; they change their colour with the colour of the sap on which they feed. But the appearance of a great progressive party will compel them to show their true countenance. Nothing will be more welcome than the formation of two large parties in the State. Finally, the tendency of the time is irresistibly favourable for the formation of a great progressive party. It is a remarkable fact that the *Kyushu Shimpoto*, which has hitherto been distinguished for its deliberate and cool attitude, has to-day become the most zealous supporter of the amalgamation of the progressive parties. Its delegates, now staying in Tokyo, have taken the decisive step of dissolving their party, and they seek to prevail on the other parties to do the same. The *Aikoku-to* and the *Jiyu-to* have also decided to take a similar step, while the majority of the members of the *Daido Danketsu* and the *Kaishin-to* are of the same opinion. To speak individually, men like Count Itagaki, the leader of the *Aikoku-to*; Mr. Oi Kentaro, of the *Jiyu-to*; Messrs. Kataoka Kenkichi and Sugita Teichi, of the *Aikoku-to*; Count Okuma, the leader of the *Kaishin-to*; Messrs. Shimada Saburo, Fujita Mokichi, and Kato Masanosuke of the same party; and Mr. Yano Fumio, who declares himself no longer a member of the same party; Messrs. Kawashima Jun, Yamada Buho, Matsuda Masahisa, Takeda Jibin, and Okada Koroku, of the *Kyushu Shimpoto*; men like these are especially enthusiastic in advocating the organization of a new party. It is also significant that the *Hochi Shimbun*, which has hitherto been remarkably moderate, now shows unusual warmth in discussing this question and advises the *Kaishin-to* to dissolve. As to the *Daido Danketsu*, the *Kokumin* regrets greatly that some of its members are opposed to the project of amalgamation. The very name *Daido Danketsu* (similarity-in-essentials party) ought to induce them to take a different course. But the *Kokumin* has no doubt that the majority of the party will be found favourable to amalgamation, and that the men of the North-East are sufficiently sagacious and single-hearted not to be duped by a few wary politicians in the capital. The tendency of the time is now fixed. They who swim with the tide will be victorious, while those going against it will be defeated.

ELECTRIC LIGHTING IN YOKOHAMA.

In view of the disastrous consequences experienced in American cities, due to the overhead wires of electric lighting companies being placed in public thoroughfares, the local Authorities appear to have adopted a short-sighted policy in permitting a similar system to obtain in Yokohama. Unhappily as are the poles now being erected to carry the electric wires, it can scarcely be urged that they disfigure streets where no architectural beauty exists, but permission having been granted for the commencement of the system, the overhead erections will become an intolerable nuisance when they invade the narrow thoroughfares in which many of the business houses of the Settlement are located; and if electric lighting is ever adopted in Yokohama to any great extent, serious difficulties will arise in connection with the distribution of the illuminant. In the United States many dire calamities have been reported from time to time, resulting primarily from breakage in the supports of the overhead system, in which people were roasted alive in the streets after becoming entangled in

a network of fallen wires. There is no reason to suppose that Yokohama will be exempt from accidents of the kind, and there can be no question, so far as we can see, about the underground system being vastly superior as a provision against accident, to say nothing about space and the appearance of the streets. In many American cities the electric light is very extensively used, and the cost of laying the wires underground, after the overhead arrangement had been found to be a constant source of danger to life, involved an enormous outlay on the part of the companies. These naturally objected, though they had to succumb, the pressure brought to bear upon the Authorities by the press and the public making it imperative that the change should be effected. A combination of companies or corporate bodies as formed in the United States is no mean antagonist, and in some cases the Authorities had to proceed to extreme measures to enforce the order for the conveyance of electric wires underground. The companies in New York, for instance, flatly refused to make the desired change, and openly defied the Mayor and Municipal Council. Mr. Grace, the Mayor, however, was equal to the occasion. He gave a final order that the wires were to be placed underground by a certain date, warning the companies that they would have to suffer the consequences of non-compliance. The date passed, and nothing was done. The companies thought the Mayor was beaten, but they found out their mistake to their cost. Mr. Grace waited a few days, when, having made his preparations, he marched out five hundred men armed with the necessary implements at twelve o'clock at night, and in a short space of time had every overhead wire in the city cut down.

"THE HYOGO NEWS" AND THE LOCAL CLERGY.

A CORRESPONDENT signing himself "Justice," whose letter we publish to-day, complains of statements that have appeared in the Editorial and Correspondence columns of this journal bearing on the comments made by the *Hyogo News* apropos of the non-appearance of the clergy and the absence of Christian rites at the burial of Mrs. Rodgers and Mrs. Schroeder. Prior to the reception of the letter from "Justice," we observed that the *Hyogo News* accused us of making "silly blunders" and of failing in the performance of the duties of a gentleman because we neglected to apologize for our shortcomings. We have purposely taken no notice of our contemporary's criticism. The weather is probably more oppressive in Kobe than it is here. Irritability is to a certain extent excusable. But since "Justice," as the mouthpiece of the *Hyogo News*, has seen fit to defend the action of that journal in these columns, we think it advisable to lay before our readers in a few words the plain facts of the case. The remarks of the *Hyogo News* on which our editorial note was based were as follows:—"Dread of cholera is surely not so bad in Kobe that a clergymen cannot be found to perform the last offices to the dead even when the dead are victims of cholera in a serious form. . . . We trust, however, that should it come to pass that any more strangers breathe their last among us the reproach which the community has incurred in this matter will be atoned for." Now, if language means anything, in writing thus the editor of the *Hyogo News* makes two implications. He implies that the absence of the clergy was designed—otherwise the community of Kobe cannot be said to have incurred a reproach—and he implies that dread of cholera was the cause of their absence. We maintain that we were perfectly justified in describing the reasons given by our contemporary for the absence of the clergy as "improbable and uncharitable." If the editor of the *Hyogo News* maintains that while writing the above, he did not mean to blame the clergy, then all we can say is that instead of indulging in pointless satire, he would do well to pay a little more attention to the import of the words which he uses. "Justice" does not inform us that various residents of Kobe, clergymen and others, regarded the

editorial comments of the *Hyogo News* in a no less unfavourable light than we ourselves. He does not inform us that an old and respected resident of Kobe, Mr. Lucas, sent a letter to the *Hyogo News* which commenced thus:—"As your leading editorial of this date concerning the absence of any minister at the burial of Mrs. Rodgers and her daughter is, if unexplained, likely to create a false impression with reference to the clergy residing in this town." (The italics are ours.) He does not inform us that two resident clergy, Mr. Lambuth and Mr. Dunn, found it necessary to address letters of explanation to the *Hyogo News*. It is somewhat odd that so many readers should prove too dense to see the way in which the criticism in question was intended by its author to be understood. We recommend our contemporary to justify his claim to be an expert journalist by showing his readers that he knows how to express what he means in language that no one can misunderstand.

THE END OF THE UPPER YANGTZE NAVIGATION COMPANY.

THE abandonment of Mr. Archibald Little's scheme for navigating the Yangtze rapids to Chungking, and the purchase of his steamer the *Kuling*, are already known to all our readers. We give here, as the formal record of the termination of this interesting episode in the commercial relations of the West with China, the deed of purchase by the Chinese Government of the *Kuling*. The document has not, we believe, been published before. The formal copies of the register of the steamer, in accordance with the British Merchant Shipping Acts, and the seals, signatures, and witnesses at the end are omitted, as merely formal:—

This agreement made the twenty-first day of December, one thousand eight hundred and eighty-nine, between the Upper Yangtze Steam Navigation Company Limited (hereinafter called "the Company"), whose registered office is situate at No. 63, Gracechurch Street, in the City of London, and who are the lawful owners of the steamship called *Kuling*, hereinafter described as of the first part, Edward Ford Duncanson of Whittington House, Whittington Avenue, Leadenhall Street, London, Merchant, of the second part, and James Duncan Campbell, of No. 8, Storey's Gate, St. James's Park, in the County of Middlesex, Esquire, C.M.G., Commissioner of Chinese Imperial Maritime Customs, as Agent for and on behalf of Sir Robert Hart, G.C.M.G., Inspector General of Chinese Imperial Maritime Customs, acting as Agent for and on behalf of the Imperial Chinese Government, of the third part, whereby it is agreed as follows:—

1.—The Company shall sell and the said Inspector-General, acting as such Agent as aforesaid, shall purchase at or for the price or sum of Eighteen thousand Pounds British Sterling (which includes an allowance for the expenses of the intended winding up of the Company), free from a Mortgage, for three thousand seven hundred and fifty pounds to the said Edward Ford Duncanson now subsisting on the said ship and free from all other charges and encumbrances, claims, and demands whatsoever, all that the said ship called *Kuling*, whereof Frederick Johnson is or was lately Master, and in such state and condition as she may be in when she shall be delivered in the Port of Shanghai, in China, a full description of which said ship is contained in the certificate of Her Majesty dated second February, one thousand eight hundred and eighty-eight, a copy whereof is hereunder annexed together with all the steam engines, shafts, cranks, paddles, masts, sails, yards, spars, anchors, cables, compasses, chains, ropes, cords, stanchions, guns, ammunition, tackle, apparel, boats, oars, furniture, utensils, and appurtenances whatsoever to the said ship, now belonging or in anywise appertaining, in such state as the same respectively shall be in when delivered, and together also with the benefit of the existing policy or policies upon such ship until transfer thereof, which said ship had been duly registered at Shanghai aforesaid as appears by the said certificate.

2.—Forthwith after the execution of this agreement the said Edward Ford Duncanson shall telegraph to his attorney at Shanghai directions to duly transfer the said mortgage to the said Sir Robert Hart and to deliver the original mortgage and the transfer thereof to the Commissioner of Customs at Shanghai for entry on the said register there, and shall also execute a duplicate transfer upon a copy of the said mortgage in London and deliver the same to the said James Duncan Campbell, and the Company shall duly transfer or cause to be transferred the said ship in London to the said Sir Robert Hart free from all other charges and encumbrances, claims, and demands whatsoever, and shall deliver such transfer and the certificate of the said ship to the said James Duncan Campbell, and shall telegraph to their Agents at Shanghai directions to deliver or cause to be delivered possession of the said ship free from all claims and demands whatsoever to the Commissioner of Chinese

Customs at Shanghai and the ship shall be at the risk of the said Sir Robert Hart from the time of such delivery of possession.

3.—The said Edward Ford Duncanson and the Company shall cause their Agents, Messieurs Gibb, Livingston & Co., at Shanghai aforesaid, to transmit to the said Edward Ford Duncanson for communication to the Company immediately on such transfer of the said mortgage being completed by entry thereof on the said Register at Shanghai and on such delivery of possession of the said ship taking place, telegraphic information of the completion thereof and the said James Duncan Campbell shall also arrange for the like telegraphic information being immediately sent by the Commissioner of Customs at Shanghai to the said Sir Robert Hart and by him to the said James Duncan Campbell.

4.—Simultaneously with the execution and delivery of such transfers of the said mortgage and ship in London the said James Duncan Campbell shall pay or deposit the sum of three thousand nine hundred and eighty-one pounds ten shillings, being the amount of principal and interest now due and to become due on the said Mortgage up to the first day of July next to a joint account in the names of the said Edward Ford Duncanson and James Duncan Campbell at the Hongkong and Shanghai Banking Corporation, and on receipt by the said Edward Ford Duncanson and James Duncan Campbell respectively of such telegraphic information as aforesaid the said sum and any interest made thereon shall be paid over to the said Edward Ford Duncanson.

5.—Simultaneously with the execution of such transfers as aforesaid in London the said James Duncan Campbell shall pay or deposit the sum of fourteen thousand and eighteen pounds ten shillings, being the balance of the said purchase money of eighteen thousand pounds to a joint account in the names of Frederick Leigh Hutchins, of 11, Birchin Lane, London, Solicitor, and William Harwood, of 31, Lombard Street, London, Solicitor, at the said Bank to be held by them until the transfer of the said ship free from all incumbrances, claims, and demands except the said mortgage shall have been duly entered on the said register at Shanghai and then to be paid over by them to the Company with any interest made thereon.

6.—Telegraphic information of the completion of the transfer of the said ship on the Shanghai register shall be sent in manner aforesaid to the Company through the said Edward Ford Duncanson as aforesaid, and to the said James Duncan Campbell respectively, who shall respectively communicate the same to the said Frederick Leigh Hutchins and William Harwood; such telegraphic information shall be deemed to be sufficient evidence of the completion of such transfer and sufficient authority to them to withdraw the said deposit and interest and pay the same to the Company as aforesaid.

The Company and all necessary parties, if any, shall at the Company's expense make, do, and execute all further acts, deeds, matters, and things which may be reasonably required for completing the transfer of the said ship on the said Shanghai register free from all charges and incumbrances, claims, and demands whatsoever except the said mortgage or for clearing off any such charges and incumbrances, claims, and demands.

The said James Duncan Campbell shall incur no personal liability whatever under or in respect of this agreement.

As witness the hands and seals of the said parties of the second and third parts and the common seal of the party of the first part.

THE PEIHO FLOODS.

The Chinese Times, writing of the Peiho floods, says:—

If it could be approximately ascertained what has been the aggregate loss caused by the recent floods to the population, and if it could be demonstrated that an outlay of no more than 5 or 10 per cent. of that amount would ensure immunity from such disasters in the future, surely some effort would be made by the government to discharge so rudimentary a duty. When hard pressed the Chinese are by no means wanting in energy; the erection of the Great Wall, the excavation of the Grand Canal, and the embankments of the Yellow River prove that they are capable of carrying out works of the greatest magnitude; but they seem to be wanting in energy and forethought when it comes to maintaining these in proper condition; and in fact to be able only to act under the immediate pressure of disaster. Hientsin has this summer been excluded from direct steam communication with the outer world because of the silting up of a small part of the Peiho; anybody giving himself the trouble to sail a few miles down the river will find that just below Hientsin the river suddenly widens to a considerable extent, and here is naturally found one of the shallow places which, without much trouble, could be made deeper, either by weirs projecting from the banks, or by two parallel embankments. Judging from the reports from the Yellow River published in the Peking Gazette, it is certain that the Chinese officials are fully aware of the effect of sudden contractions and widenings of a river-bed, notwithstanding which, not the slightest attempt has been made to do anything by way of averting the mischief. One excuse for the present state of river affairs is no doubt that very few materials are available for the construction of embankments and for works tending to protect the banks. Stone must be brought from a great distance, and willows and other trees of which fascines might be made are not grown to any extent, so there are only millet stalks to be had. Therefore, on the re-appearance of dry land, the first undertaking ought to be the planting of such useful

trees. The system of rivers draining the province of Chihli is constitutionally affected, and no amount of merely local improvements will be of permanent efficacy. Close a breach and make it stronger than the rest of the embankments and you have merely changed the place where the danger will show itself; but it will surely appear again in the next nearest point. This was predicted of the Yellow River, when the great breach at Ching Chou was closed; the Chinese themselves were quite alive to the certain consequences of that closure, and the people of Shantung did all they could to throw obstacles in the way of repairing the breach in Honan, having but too accurate a prescience that Shantung would eventually pay for the immunity of Honan and Anhui. Until some comprehensive system of river conservancy is established in China the periodical floods with continue in the future as they have done in the past; the water hemmed in at one place must escape at another. The substance of the country is wasted from year to year, and from generation to generation, by this neglect or incompetence of Government, whereas a moderate expenditure laid out on a well regulated plan would yield a hundred-fold in the material wealth of the people, and in the strengthening of the Government, internally and externally.

GOLD AND SILVER RATIOS.

The Official Gazette gives the following table of comparative values of gold and silver coins and of the pound sterling for the week ended the 16th inst., as derived from the returns of the Bank of Japan and the Yokohama Specie Bank:—

Days	Gold Coin. (Per yen 100. Silver Yen.	Pound Sterling. (Per £1. Silver Yen.
11th	112.300	A.M. 5.5491 P.M. 5.5752
12th	112.000	A.M. 5.5172 P.M. 5.4545
13th	110.800	A.M. 5.4545 P.M. 5.4545
14th	110.800	A.M. 5.4545 P.M. 5.4545
15th	110.800	A.M. 5.4545 P.M. 5.4545
16th	110.800	A.M. 5.4545 P.M. 5.3932
Averages	111.250	5.4713

The above averages show for gold coin a decrease in value of yen 0.550, and for the pound sterling a decrease in value of yen 0.0509 as compared with the previous week.

THE REPORTED ERUPTION AT IWO-ZAN.

Some days ago it was reported that a volcanic eruption has occurred at Iwo-zan, and that the watering place at Doyu-mura, in Fukushima Prefecture, had been completely buried. It turns out, however, on enquiry, that nothing worse occurred than an overflow of the river Ara-kawa which runs past the hamlet supposed to have been overwhelmed. The rains on the 5th and 6th raised the water to such a height that it washed away the greater part of its banks, and carried away fourteen houses, destroying at the same time five bathing-places. No lives were lost. The Yiji Shimo explains that the mountain of Iwo is about seven miles from Doyu-mura, and that nothing in the nature of a volcanic disturbance occurred there. Another mountain, Uyeno-zan, in the immediate vicinity of Doyu-mura, was the scene of a landslide about eighty yards long and three or four feet wide. The alarm caused by this is supposed to have been responsible for the rumour about Iwo-zan.

CURIOSITIES IN CURIOS.

What is the "famous blue lacquer" of which the Hongkong Telegraph speaks? It seems that a firm of dealers in objects of art has opened a store in Hongkong and that one of the most attractive articles is a screen having a ground of "the famous blue lacquer, the birds upon it being in ivory, tortoise-shell, and pearl, while the life-like and natural pose of each figure is not one of the least merits." Blue lacquer is a novelty, and so is the life-like and natural pose of a bird's figure. Another curiosity among curios, to be seen at the same store, is "cloisonné inlaid with gold." By what kind of process this strange manufacture is produced, or what it looks like when produced, we have not the smallest idea. Hongkong is very fortunate.

ATTEMPTED BURGLARY.

An extraordinary attempt at burglary was made on Wednesday night on the Bluff, when, at about half-past eleven, a man knocked at No. 46, a house occupied by Mr. Wallace, who was away from home serving on board a steamer, and on Mrs. Wallace asking who was there the man replied

yubin—"post." Mrs. Wallace said she could not open the door at that time of night, when the man gave her to understand that he had letters of importance. On the strength of this assertion she opened the door, when the ruffian seized the lady and attempted to get a rope around her neck. Being pretty active she was quite a match for her assailant, and not only resisted the robbing, but got hold of his hand with her teeth. Her screaming when the robber first seized her had by this time attracted the neighbours, and the robber then took flight. He had left his gata, however, hanging on or near the gate, and one of these Mrs. Wallace took to the police station close by, which it is hoped may lead to the capture of this miscreant, as was the case in a Bluff robbery not long ago.

PUGILISTIC PRAISES.

"ANOTHER step is to be noted in the progress of woman," says the St. James's Gazette:—"Henceforth the noble art self-defence is to be included in the list of her many accomplishments. The American girl appears to be responsible for this latest innovation, and the pugilists of the United States are said to be experiencing an era of unusual prosperity in imparting their science to Columbia's daughters. For a long time there has been a great desire on the part of many of these daughters to acquire knowledge of what has hitherto been known as the "manly art" as there has been on the part of certain English ladies to display their prowess and ankles in the cricket-field. This desire has been intensified by the publication of a little *rencontre* that recently took place on Fifth-avenue. One of New York's fairest and wealthiest was walking unattended down that fashionable thoroughfare, when a man whom she did not know walked beside her, raised his hat, and spoke to her. Without a second's hesitation the young lady dealt the shiny and carefully brushed *chapeau* a right-hander that sent it rolling into the mud and planted a left-hander between her insulter's eyes that tumbled him after and on top of his hat. Then, "with scorn depicted on her features and conscious of her own superiority," this fair one marched placidly on amidst the applause of a few on-lookers, while the unfortunate individual who had received such unexpected chastisement picked up himself and his battered head-gear and slunk away. And now there is a legion of girls anxious to attain the ability, and to find an opportunity, of going and doing likewise. It is just possible that this thrilling story is only the invention of a pugilist who takes lady pupils, and who foresaw what a stimulus the publication of such a tale would give to his business; but, whether true or not, it has, in the words of a feminine aspirant for pugilistic honours, "opened the eyes of woman to the possibility of her being able to meet man on even terms anywhere and everywhere." "If," says this lady to her associates, "you are insulted in the street, knock your insulter down." No doubt that is a very right and proper course to take; but should women become as proficient and handy with their fists as some of them appear to believe is probable, it is greatly to be feared that they will use these fists on very much less urgent occasions. The man who accidentally jostles against a lady in the street may find himself flying backwards through the plate glass window of a shop; that wickedly selfish individual who hurries into a train or omnibus in front of several women may very likely get his head "in chancery;" and that most discourteous specimen of masculinity who sits on top of an omnibus and lets the smoke from his pipe blow into the face of "lady passengers" near by will probably experience the felicity of seeing his pipe pitched into the street and, if he demurs, himself following after it. To acquire true prowess in the art of boxing much labour and time must be expended, and the domestic hearth and the boiling of potatoes must be entirely forgotten. In the first instance, according to an ex-prize-fighter who now devotes his time to initiating young ladies into his science, the pupil has got to be taught to walk properly

—a thing which very few of them know how to do. Further than that, he says that he first teaches his pupils to walk in a room and then, when they have learnt that thoroughly, to walk in the open air. Next, when their legs and feet are thoroughly drilled, he begins an elementary instruction as to how they must use their hands and arms. This is long and tedious, and commences with Indian clubs and dumb-bells. Some time elapses before the pupils reach that happy stage when they can enjoy the serene felicity of punching each other; for even after they have learned to walk and to wield the clubs and dumb bells, they have to spend many weary hours punching an inflated rubber bag secured to the ceiling and floor by rubber bands. Finally, when with unerring eye they can deliver rights and lefts *ad libitum* on this bag, they are allowed to don the gloves and to become students of all the intricacies of feinting, countering, ducking, etc. In regard to the "ducking," the teacher says that women are more expert at it than men: No doubt! Indeed, if all this gentleman says is true, women's ability to become superior to men as pugilists is beyond dispute; for, according to him, in keenness of eye, deftness of hand, and celerity of foot they are capable of much greater prowess than any members of the masculine sex; and his lady pupils, no matter how small or fragile, when they have completed their courses of instruction with him are at once able to "knock out" the biggest men "like sticks." But what a transformation women must undergo in his establishment! When they first attend his lessons they do not know how to walk; when they have passed through the entire training provided by him they are expert walkers, runners, duckers, dodgers, and boxers. If this study is adopted in earnest by woman, the "unprotected female" must become a thing of the past. Every woman will be armed with a pair of fists which, when occasion requires—or perhaps sometimes does not require—will dart out from the shoulder like a flash of lightning and inflict summary vengeance on any luckless offender. To acquire absolute proficiency, however, careful attention and constant practice is not only necessary, but also a change of dress and diet. The former will at once receive the approbation of the Dress Reform Association, for the costume most fancied by 'lady boxers' is very similar to the picturesque but scanty bathing attire worn by young ladies at Newport and Long Branch. The latter may not receive so many adherents, for all sweets and pastries are tabooed as tending to create flabbiness instead of muscle; although an atom of comfort will be derived from the fact that the offending potato is also on the forbidden list, and therefore will not need to be boiled. Perhaps the more attractive features held out by the advocates of boxing for ladies are that it is warranted to develop and create a "perfect figure" and to "beautify" the complexion. The first is attained, so it is said, by the exercise and by freedom from the ordinary restraint and pinching incurred by wearing the regulation feminine apparel; the second comes of itself when a regular diet of underdone meat and stale bread is adhered to, and a good daily pounding in the face received. These, at least, are the Professor's recipes and form part of his training; but then he does not teach the female arm to hit straight from the shoulder for nothing; and whether his pupils take their lessons from a desire to be in the latest fashion, or to be armed against attack, or to develop a robust figure or to attain a clear and 'peachy' complexion, the good effect on their instructor's bank account must be the same."

CRICKET IN ENGLAND.

SOME tall scoring has been witnessed at home this year, and so extraordinary is the total in the innings of Cambridge University playing against Sussex at Brighton, that we reproduce the score in full. During the match no fewer than 1,342 runs were scored, which beats the previous best English aggregate on record of 1,295 made in the Middlesex and Yorkshire contest at Lord's, in June, 1889, by 47 runs.

The greatest aggregate ever obtained in a first-class match is 1,411 in the Victoria v. New South Wales contest at Sydney in February, 1882, when the game extended into the fifth day. The highest innings on record also stood to an Australian team, New South Wales having obtained 773 in the match alluded to; but this has now been eclipsed by the "Cantabs" at Brighton piling up the phenomenal total of 885.

CHOLERA RETURNS.
THE latest cholera returns derived from official sources are as follow:—

Prefecture.	Date.	New cases.	Deaths.
Nagasaki	15th	54	37
	16th	39	30
	17th	23	40
	18th	23	36
	19th	66	37
Yamaguchi	20th	41	31
	21st	39	36
	14th	39	34
	15th	46	19
	16th	34	23
Fukuoka	17th	37	21
	18th	28	26
	19th	50	24
	20th	25	14
	14th	40	33
Kumamoto	15th	43	25
	16th	28	25
	17th	33	18
	18th	35	23
	19th	40	33
Kagoshima	20th	44	31
	14th	14	7
	15th	27	14
	16th	19	12
	17th	15	8
Saga	18th	27	13
	19th	14	14
	20th	19	9
	14th	11	5
	15th	3	2
Oita	16th	3	4
	17th	7	3
	18th	18	9
	19th	15	5
	20th	17	8

The numbers of cases and deaths since the commencement of the epidemic, inclusive of the above figures, appear in the following table:—

Prefecture.	Cases.	Deaths.
Nagasaki	2,374	1,379
Yamaguchi	653	361
Fukuoka	1,354	917
Oita	181	49
Saga	258	148
Kumamoto	479	248
Kagoshima	163	113

The total number of cases and deaths in the following Cities and Prefectures since the commencement of the epidemic to the 20th instant, not included in the above, are:—

City or Prefecture.	Cases.	Deaths.
Tokyo	226	110
Osaka	355	194
Kanagawa	372	248
Chiba	81	55
Kagawa	95	56

The Japanese who was taken with cholera on the 18th inst., at Messrs. Levy & Co.'s, No. 76, died on Thursday morning at about nine o'clock. According to a Japanese doctor, who attended him, he recovered from the attack of cholera, but died of a long standing brain disorder.

The U.S. steamer *Omaha* went outside on

Thursday to bury a man in deep water who had died on board of cholera or of some complaint closely allied in appearance to that disease. The vessel returned to the anchorage in the evening, and no cases have been reported since.

THE BANK OF JAPAN.

THE amounts of convertible notes and reserves in the Bank of Japan for the week ended the 16th inst. were as follows:—

CONVERTIBLE NOTES.		RESERVES AND SECURITIES.	
YEN.		YEN.	
Notes issued	71,314,241	Gold coin and bullion	24,305,247
		Silver coin and bullion	21,869,641
		Public Loan Bonds	13,479,450
		Treasury Bills	—
		Government Bills	4,712,182
		Other securities	—
		Commercial Bills	4,050,234
	71,314,241		71,314,241

Of the above total issue of notes, the sum of yen 3,128,006 is in the treasury of the Bank, and yen 68,196,235 in actual circulation, the latter showing an increase of yen 417,235 as compared with yen 67,779,000 at the end of the previous week.

A ROLAND FOR AN OLIVER.

A WRITER in the *British Sportsman* says:—"I heard a good story the other day concerning Mr. W. G. Grace and the late late George Fordham, the jockey, which I do not think has been in print before. Fordham was a great lover of cricket, and went frequently to see Mr. Grace play, but, unfortunately, could never find the great batsman at his best. He said to him once, 'Well, I have come to see you play cricket now six times, and you have never made double figures.' To which the veteran champion's prompt reply was, 'Well, George, I have been to see you win fifteen Derbys, but I have never seen you win one yet.'"

FRACAS IN KOREA.

THE *Nichi Nichi Shimbun* gives the following account of the alleged case of manslaughter on the sea shore at Sai-shu in Korea:—"Though no details of this affair have yet reached us, we are credibly informed that a Japanese whaler when near Tsushima, landed to seamen at Sai-shu to obtain fresh water, but the Koreans objected to their landing and refused to give them any water, and, subsequently, attacking the Japanese, a Korean got killed. It is stated that the man killed was a high local official."

DROWNED.

ON Thursday morning about half-past one Mr. C. J. Baines, second officer of the *Mitke Maru*, when going off to his ship in a sampan fell overboard. It was at once reported to the Hatoba Police, who, with the police boat and two sampans hired for the purpose, went out but searched without avail. Mr. Baines fell overboard when between the ship and the Hatoba, but nearer the former than the latter. The body has not yet been found. The wind was blowing rather fresh at the time, but there was not a very big sea on.

THE FUKUSHIMA ERUPTION DENIED.

THE *Official Gazette* of the 13th inst. says:—"We have inquired into the truth of the recent reported eruption of a sulphur mountain near Doyo-mura, Shinobu-gun, Fukushima Prefecture, and obtained the following answer by a telegram despatched on the 12th inst.:—"The rumour that a sulphur mountain has erupted is without foundation. Fourteen houses in Doyo-mura were destroyed by an inundation of water, but there was no loss of life or injury suffered by men or animals."

DEATH BY DROWNING.

ON Saturday evening at half-past six o'clock Mr. Heinrich Grauert, of No. 92, was drowned while bathing at Honmoku. His body was not recovered till half-past nine, when it was found at a distance of 50 yards from the shore by a foreigner who had been bathing with him. The funeral took place on Sunday.

THE American ship *Occidental*, Captain Taylor, from New York for Yokohama, passed Anjer on the 27th ultimo.

AMENDMENT OF THE ORGANIZATION OF THE DEPARTMENTS OF STATE.

A REMARKABLE series of Imperial Ordinances introducing amendments in the Organizations (*Kuan-sei*) of the different Departments of State, which appeared in the *Official Gazette* from time to time since March last, has now been brought to conclusion. We have thought it best to defer our comments on these Ordinances until the whole should have been made public; and we now propose to say a few words about the circumstances that led to this legislation and about the general nature of the changes themselves.

The series commenced with General Rules for the Organizations of the Different Departments of State (*Kakushō Kansei Tsū-soku*). These were published towards the end of March, and were followed at varying intervals by the Organizations of the nine Departments of State for Foreign Affairs, for Home Affairs, for Finance, for War, for the Navy, for Justice, for Education, for Agriculture and Commerce, and for Communications. It will be observed that the Household Department is left out of the category and, so far as we can see, its organization is not to undergo any immediate alteration. At any rate, we may exclude it from our comments, since it is kept entirely apart from the ordinary Departments of State, its Minister taking no part in Cabinet deliberations, though in other respects he is accorded the same status as an ordinary *Daijin*.

The object kept in view by the Government in introducing the recent changes seems to have been two-fold. In the first place, the old Organizations, promulgated in 1886 under the Premiership of Count ITO, were found to be over-minute, thus leaving too little room for each Minister of State to exercise necessary discretion in the mode of conducting the business of his own Department. To remedy this defect was plainly the first and principal object of the amendment. In the second place, although official ranks were largely purged of superfluous functionaries in 1886, the number of office-holders soon began to increase again, with the result of adding largely to the expenditure of the Government. This increase of officials was, in some instances, an unavoidable consequence of a growing volume of Departmental work. But it was none-the-less unquestionable that, speaking generally, the functions of administration might have been discharged by a smaller staff. Thus the second object of the present amendments was to reduce the official establishment to a minimum, and at the same time to make effective provisions against any unnecessary swelling of official ranks in the future.

A careful comparison of the new and

old Ordinances shows that the two-fold object just described has been attained so far as the nature of the case permitted. The General Rules for the Organizations of the different Departments of State of 1886 consisted of no less than eighty-five articles; the present rules contain only forty articles. The Organizations of the various Departments of State have likewise been made very much simpler. In justice to the framers of the old Ordinances, it must be observed that, at the time of the memorable reconstruction of the Government at the end of 1885 and in the beginning of 1886, it was above all things necessary to introduce more uniformity and regularity in the constitution of the various Department of State, as well as in the mode of conducting business. In order to accomplish this object it was thought necessary to formulate provisions which, under ordinary circumstances, would have been best left to the guidance of usage and the expediency of the moment. The minute and detailed provisions then enacted did useful work in their day: they helped to inaugurate many good methods in the management of business and in inter-departmental communications; methods which must otherwise have taken much longer to develop. But so soon as these methods became established, the written provisions enforcing their observance began to seem superfluous. Often, indeed, they seriously interfered with the attainment of the very object for which they were framed—business expedition—for no provision, above all a minute provision, however skilfully conceived and framed, can be comprehensive enough to cover all the cases that daily occur in the conduct of affairs. The framers of the new Ordinances have evidently paid due attention to this point, for they have entirely left out most of the minuter provisions of the old organizations, and have compressed the others into a few articles couched in general and comprehensive language.

As to the economical side of the question, the results achieved are not such as will give satisfaction to sanguine reformers outside the Government. Nevertheless we are disposed to think that the framers of the amended Organizations have done their utmost in this direction, within the limits of effective administration. In the nine Departments of State, nearly ten Bureaus have been either abolished or amalgamated with others; the number of officials above *Sonin* rank has been reduced by more than a hundred, while for officials of *Hannin* rank, a maximum limit has been prescribed in each Department. Some of the leading journals in the capital remark that the maximum limit for the number of *Hannin* officials is too high, that in fact it is actually higher than the present number. It is true that, in some cases, the present staff of these officials falls short of the new limit, but it does not follow that an increase of

public expenditure is thus entailed. The fact is that whereas under the old Ordinances each Minister of State was authorized to engage temporary *employés* in addition to the permanent staff, within the limits of the appropriation for general salaries, the new Organization directs him to pay such *employés* out of the fund assigned for the salary of officials of *Hannin* rank. Thus, if a Minister wishes to engage *employés*, he must diminish the permanent staff to a corresponding extent, while if he thinks it better to appoint the full prescribed number of permanent *Hannin* officials, he will have to dispense with the services of *employés* altogether. The consequence of this alteration should be a greater or less reduction of the appropriation for the salaries of clerks and *employés*, though of course it is difficult to estimate the exact economy likely to be thus effected. Probably the net reduction of expense will not amount to more than a few hundred thousand *yen*. But if the actual saving is comparatively small, we must remember, in considering the merits of the new Organizations, that they provide an effectual guarantee against any further increase of officials, since they fix a hard and fast limit for the number of officials of *Hannin* rank. As to officials of and above *Sonin* rank, a limit has always existed and been observed since 1886.

These are the principal features of the changes effected by the amended Organizations. Other points, however, deserve notice. The principal of these is the omission from the new General Rules of an article which, under the former system, empowered Ministers of State to attach to Ordinances issued in virtue of their official functions a punitive clause prescribing a fine of not more than 25 *yen*, or minor confinement of not more than 25 days, in the event of any infringement of the provisions of such Ordinances. The omission of this clause is justly hailed with approbation by the Metropolitan press; for, as they say, the power to mete out fines or imprisonment ought properly to belong entirely to the courts of law.

Another wholesome change is the raising of the official status of the Directorship in some of the more important Bureaus. Hitherto the Director of a Bureau was invariably of *Sonin* rank. Hence it followed that men of talent and experience did not long remain contented with a post in which they could not hope to rise above first class *Sonin*. In the new Organization, it is provided that the Directors of certain important Bureaus may be promoted to the second class of *Chokunin* rank. Thus these Bureaus will henceforth be able to retain the valuable services of able officials who would otherwise seek different appointments. Apart from this consideration, another circumstance seems to have necessitated the change in question. The Directors of certain Bureaus are required, in the discharge of their

duties, to exercise indirect control over officials of *Chokunin* rank. The most notable instance of the kind is that of the Director of the Local Government Bureau in the Home Office. He has to convey instructions to the Governors of Cities and Prefectures, many of whom are of *Chokunin* rank. It seems expedient, nay necessary, that officials discharging such functions should be of rank at least equal to that of those whose acts they direct.

Apropos this subject, our readers will probably be interested by a general sketch of the official equipment of a Japanese Department of State. Each Department is presided over by a Minister (*Dai-jin*), who is individually responsible to the Emperor. Next to him is a Vice-Minister (*Yi-kwan*), who, under the Minister's direction, exercises general supervision over the business of the whole Department, and who may represent the Minister in the exercise of the latter's functions, with the exception of countersigning laws and Imperial Ordinances, taking part in Cabinet deliberations, making reports to the Emperor on the condition of offices in the Department, and issuing Departmental Ordinances. A Department is divided into a number of Bureaus, each presided over by a Director (*Kyoku-cho*), who is subject, in the discharge of his functions, to the Minister and the Vice-Minister. In Bureaus of great importance, there is a Vice-Director (*Kyoku-Yicho*). The number of Bureaus varies in different Departments, the largest number being nine, in the Department of Finance, and the smallest four, in the Department of Justice. Most of the Bureaus are subdivided into several sections (*Ka*), presided over in most cases by clerks (*soku*) of higher standing. Clerks come lowest on the official list. They perform all the drudgery of the office work, though some of higher standing are, as stated above, put in positions of trust. The number of clerks varies in each Department, the smallest number (65) being employed in the Naval Department, and the largest (553) in the Department of Finance. Besides these officials, there are in each Department two confidential Secretaries (*Hisho-kuan*), attached to the Minister, and there are also Secretaries (*Shoki-kuan*) and Councillors (*Sanji-kuan*), whose combined number cannot exceed eight; the proportion of the two varies in different Departments. Secretaries manage business either in the Minister's office or in some of the Bureaus, whose sections they may preside over. Councillors give advice to the Minister and Vice-Minister on any matter concerning which their opinion is asked. They also make investigations and draw up Ordinances and rules. A number of Probationers (*Shiho*), varying from four or five to about ten, complete the official list in most Departments, though in some there are also a certain number of technical or scientific experts, termed in official language *gishi*. Probationers

are appointed either from among graduates of the various Colleges of the Imperial University or from successful candidates at the higher civil examinations. The period of their trial is five years, after which they may be appointed to some post of trust. The ranks of the clerks are also recruited by a system of competitive examination. Besides the various classes of functionaries thus far enumerated, there is another set of public servants working in the lowest stratum of official life. They are temporary *employés* (*yatoi*), who have no official status and whose names never appear in the list of officials. There is no limit to the number of these *employés*, but an effectual guarantee against any needless increase of their number has been provided by the new Organizations, which oblige each Minister to pay *yatoi* out of the appropriation for clerks.

FOREIGN EMPLOYÉS OF CHINA AND JAPAN.

THE prophet in his own country is proverbially unfortunate for the same reason that deprives the greatest man of greatness in the eyes of his valet. To hear pleasant things said of the Chinese one must not go to the foreign residents in China, and to get a good character of the Japanese one should not refer to the inhabitants of the treaty ports in Japan. All this is natural, nor need we be much surprised to find *per contra*, that while the Japanese are praised by foreigners in China, the Chinese are credited with sundry fine qualities by foreigners in Japan. A case in point is the treatment extended by each country to its foreign employés. This is a subject which we have frequently discussed, always commiserating the lot of the foreign employé in Japan, for we know well how hopeless is his outlook, how fruitless his zeal, and how bitter the sense that his most loyal service cannot win for him that full measure of confidence without which a self-respecting man must always be unhappy. No doubt a great part of this failure is inseparable from the position of an alien in the service of any government. But in Japan the trouble is greatly aggravated by the peculiar circumstance that so long as the foreigner remains exempt from Japanese jurisdiction he can never be more than a mere *yatoi*; can never fill an executive post, never possess substantial rank nor ever look forward to promotion or permanency of employment. Those unhappy features of his lot we recognise and sympathise with most fully, but when we are told, as we were lately told, that China treats her foreign servants much better, and that her example ought to shame Japan into greater liberality, we altogether deny the justice of the comparison. There is indeed one service in China

which, under the control of an exceptionally able and astute Englishman, might be quoted in any part of the world as a model of organization and efficiency; a service which, amid circumstances of no little difficulty, has been raised to such a rank that it attracts the best talent of Europe and America, and offers to its officials the two great desiderata lacking in every other branch of Chinese and Japanese employ, permanency and adequate reward of merit. The Chinese Customs Service is something of which Englishmen may justly be proud, and in so far as the astuteness and practicality of Chinese statesmen persuade them to leave its control in hands which have moulded it into so perfect an instrument, large praise is due to China also. But apart from this somewhat vicarious merit, what verdict is to be pronounced about China's treatment of her foreign employés? The *North China Daily News* answers the question thus in a recent issue:—"It must not be forgotten that the employé has his rights too, and even a foreigner is entitled to a little consideration at the hands of his employers. This has never been admitted in China, or if admitted, has never been acted upon. Officers of various nationalities, but almost without exception men of proved ability, have accepted engagements in good faith, and after services rendered at which it was impossible to cavil, they have been ruthlessly and often rudely dismissed." Such is the character given to the Chinese service by the leading English journal published in China. We do not pretend to endorse or traverse it: our contemporary is in a much better position to judge than we are. But the proportions of an evil are not diminished by close inspection and it is possible that foreign critics in China and Japan alike take a more or less partial view of the circumstances that come under their notice. Admiral LANG'S case, which constitutes the immediate text of our Shanghai contemporary's comments seems, in some respects, to justify the strong stricture evoked, but in others it invites a different view. Here is the story, as told by the *North China Daily News*:—"In February last the Northern Squadron had returned to Hongkong, whence Admiral TING with four of the cruisers set out for Hainan. His departure had scarcely taken place when, without a word of warning, the admiral's flag was hauled down and that of the commodore run up in its place. On demanding an explanation of so outrageous a proceeding, Admiral LANG was shown a telegram from LI HUNG-CHANG, authorising the commodore to take command in the absence of the Chinese admiral, and ignoring altogether the claims of the English colleague. There was obviously nothing to be gained by consultation with the two commodores, even if naval discipline had permitted an admiral to negotiate with his subordinate officers,

and Admiral LANG immediately telegraphed to the Viceroy for instructions. If he was not to fly the admiral's flag, it was for the Viceroy to indicate what distinguishing flag he might be permitted to use. Once more the English admiral found himself utterly ignored. Personally he received no reply to his telegram, but he was shown a message addressed to the two commodores bidding them inform him that no provision was made in the regulations as to what flag he should fly, but that some nondescript article might be improvised for him, of the same shape as an Admiral's flag but with only four colours instead of five. Further communication was of course out of the question, but not until the whole matter had been carefully considered and the full meaning of these discourteous proceedings completely established was the resignation resolved upon."

It is plain that Admiral LANG was placed in a most invidious position. The mere fact that two Chinese officers of inferior rank were made a channel of communication between himself and Admiral TING, could not have been tolerated for an instant from a service point of view. But any one considering the details of the case will perceive at once that the whole affair turned upon this question—was Admiral LANG an executive or a non-executive officer? Did he hold actual command in the Chinese Navy or did he merely occupy the position of an instructor or adviser? The Chinese authorities evidently acted upon the latter hypothesis, whereas Admiral LANG, whose record forbids all doubt as to his competency, judgment, and tact, held to the former view. Now with regard to the same point in Japan, there never has been an instant's doubt. No foreigner in Japanese employ has ever been entrusted with the shadow of executive authority, or allowed to imagine that he could be so entrusted unless he were subject to Japanese jurisdiction. That this has not been the invariable rule in China, we know from the cases of General GORDON and his predecessor, the not less able, though now almost forgotten, American who created the nucleus of the "ever victorious army." In times of national peril China has not hesitated to avail herself of the services of foreigners in the fullest sense. But it is very conceivable that, in the ordinary organization of her Navy, she may be determined to exclude aliens from executive posts. Until, therefore, we know the terms of Admiral LANG's engagement, it is impossible to say whether or no the Chinese authorities acted within their strict rights in refusing to allow him to fly the flag of an executive officer. The language of his contract ought to have placed this question beyond the reach of doubt, and if it did not, the Chinese, in all probability, were justified in the view they took. Unless we are much mistaken, however, Admiral LANG had been allowed, on more than one occasion, to

exercise at least a measure of executive authority. Possibly this was only for purposes of instruction in manoeuvres. At all events the question between him and the Chinese was not a mere point of courtesy or etiquette. Its settlement involved the radical problem of the status of foreigners in the Chinese service, and we cannot pretend to be surprised that the Chinese Authorities adopted the view against which Admiral LANG felt compelled to protest by resignation. As to their manner of giving expression to their decision, however, there seems to have been a great want of tact and courtesy, and while sincerely regretting that such an officer as Admiral LANG has been removed from a sphere where he contributed so materially to British prestige, we cannot but think that the dignity of his cloth precluded any course other than resignation.

POLITICAL PARTIES IN JAPAN AND THE LAW GOVERNING THEM.

IN reply to some very violent strictures penned by local writers against the 28th Article of the Revised Law of Political Associations, we pointed out that precisely the same provisions exist in British statutes enacted during the reign of GEORGE III. and remain still in force. This analogy, the fact of which cannot for a moment be denied, is vehemently repudiated by our critics, who charge us with wilful misrepresentation, with sully-ing our own country, and with all sorts of sins, because we have ventured to compare Great Britain and Japan in such matters. So far as we can discover, one argument, and one only, is advanced to contravene our position. It is this—that whereas the Acts of GEORGE III. were designed "for the more effectual suppression of societies established for seditious or treasonable purposes," the provisions of the Japanese Law are directed against "associations whose only object is to carry on their political aims in a lawful and peaceful manner," in a country where "everything is open and above board." It will be observed that there is here a very large assumption. It is quietly taken for granted that the purpose of the combination interdicted by law is proper and peaceful. But that, we think, is precisely what the Government's enactment and the manner of enforcing it must be interpreted as denying. The 28th Article can only be read to mean that, in the opinion of the Authorities, whose business and right it is to judge, a combination of Japanese political parties at the present time, would be for "seditious and treasonable purposes." Its motive, in fact, would be simply hostility to the Government, not the promotion of any particular set of legitimate political principles. It is quite true that the necessity for such a law reflects little credit on Japan. Looking

at it with the eyes of certain writers who contend that it is merely a device to cripple the strength of constitutional institutions, and, by an exercise of arbitrary power, to defend the Government against weapons nominally placed by itself in the hands of the people, we agree in condemning the measure utterly and incontinently. But unfortunately we cannot look at it in that light. We are compelled to conclude that when the law interdicts combinations of political parties while sanctioning the separate existence of such parties, it is because the purposes of combination are judged improper and seditious. Thus considered, the analogy between the Japanese enactment and Acts of GEORGE III. is perfectly accurate. Both are intended to restrain treason and sedition, and both employ the same penalties to that end. As to whether the contemplated combination of Japanese parties is really prompted by treasonable or seditious purposes, foreign critics are certainly not in a position to judge. We are bound to assume that the Authorities possess evidence and information warranting their action, difficult as it is to conceive that the men who projected the combination were influenced by improper motives. At any rate, the general conclusion will be that by enforcing the 28th Article as it is now enforced, the Government publicly declares want of confidence in the propriety of the union which it has interfered to prevent. Not for a moment can the supposition be admitted that, while believing the purposes of the combination to be strictly constitutional and legitimate, the Government has adopted arbitrary and unconstitutional means to suppress it, lest its results should be an inconveniently powerful opposition in the Diet. That is the charge which our local English contemporaries prefer against the Cabinet, with all the impudent assurance that usually accompanies ignorance. They accuse us very readily of failing to distinguish between England and Japan, but the failure appears to be on their own side, when they talk of correspondence and combination being permitted to political parties in the former country but denied to them in the latter. There are no political parties in England in the Japanese sense of the term. Here parties are registered as such; the names of their associates and other particulars of their organization are duly reported, and notice has to be given of their meetings and speeches. Moreover, they are all nominally arrayed against the Government; their only two elements of cohesion are opposition and personal influence; and every one confesses that they cannot be organized on a genuine basis of principles until they are brought face to face with living issues on the floor of the Diet. To compare such parties with their representatives in England, or to extend to the former, from the outset, the liberty justly enjoyed by the

latter after long years of struggle and proof, must surely be counted extravagant. We confess that, while we fully appreciate the inferences injurious to Japan's political credit which cannot but be drawn from the Government's manner of enforcing this 28th Article, and while classing its provisions with the most illiberal portions of the Press Laws and the Peace Preservation Regulations, we are nevertheless disposed to welcome it as an additional obstacle to the premature formation of political parties, for we entertain not the smallest faith in the genuineness and utility of factions constructed out of the froth of vague opposition and the scum of ambitions agitation. The sum of the matter is that the Authorities obviously regard any combination of parties under existing circumstances as seditious, if not treasonable, and that they have determined to prevent it. It is at least a courageous determination, unpopular as it must inevitably prove in Japan, and little as it will contribute to the reputation of Japanese political progress abroad.

CHARGES AT NIKKO.

FOREIGNERS visiting Nikko during the hot weather complain bitterly of the extortions to which they are subjected. There is doubtless much justice in these protests, but in some respects the apparent overcharges are based on a genuine difference between prices in Tokyo and Nikko. Beef and chickens, for example, are about as cheap at the latter place as at the former, but milk, vegetables, and such things are very much dearer. Milk costs eighteen *sen* a bottle in Nikko against ten *sen* in Tokyo, and vegetables, with few exceptions, have to be brought from the capital, which means not only that their price is increased by the cost of carriage, but also that the business of procuring them is monopolised by a guild which adds an immense percentage on its own behalf. The vegetable difficulty could, of course, be overcome by a combination among a number of foreign residents, but the monopolists doubtless understand that nothing of that kind is likely to be seriously undertaken. We imagine that the example set by the Nikko Hotel is decidedly pernicious. The table there is said to be abominably bad this year, and every opportunity appears to be taken to fleece the luckless tourist. A case has been reported to us of a gentleman who, desiring to be supplied with milk sufficient for dietary purposes, was informed that the lowest charge would be thirty *sen* a bottle. We have also heard of a tourist who was given a guide to take him fishing, the guide charging twenty *sen* an hour and promising to show places where an abundance of fish could be taken. Five hours angling produced nothing but a dollar for the guide, who then had the audacity to

say that if his honorarium were increased by fifty per cent. he could undertake to secure sport. It is very much to be regretted that some respectable person of real business capacity does not start a hotel in Nikko to protect the tourist against such extortions as these, and to save him from having his trip spoiled by miserable food and general discomfort. No one objects to pay such prices as will leave a good solid profit to the people of the place, for it is well understood that Nikko, in common with hill resorts generally, can only count on its summer earnings, and may therefore be pardoned for making hay while the sun shines. But there is undeniable ground for complaint when the only "foreign" hotel in the place compels a tourist to pay fifty *sen* per diem for the keep of his Japanese servant, whereas the same servant can fare better at a Japanese inn for thirty-five *sen*. Apart from this exorbitant squeeze, the keep of servants in general is one of the questions that cause foreigners much perplexity at Nikko. If a man-servant is separated from his family and obliged to maintain himself independently at a place like Nikko, every reasonable master or mistress would admit the obligation of making a corresponding increase in his wages. But what masters and mistresses do not easily comprehend is that when they take an unmarried butler or groom to Nikko, he should expect a very material addition to his monthly stipend on the plea of the greater cost of living. To admit the validity of such a plea seems to involve the supposition that Japanese residing permanently in a remote and comparatively squalid village like Nikko spend more upon their daily food than Japanese residing in Tokyo. That, of course, is not the case. In point of fact the cost of maintenance is less per head in the former place than in the latter. Yet it is at the same time quite true that a Japanese who spends from three to three and a half *yen* monthly on his food in Tokyo must double that sum to live equally well in Nikko. The difference is in the quality of the diet. The Nikko resident makes ends meet by cutting off every superfluity that can keep them apart. He brews his sauce out of one ingredient instead of four, and is content to eat his rice with condiments which a Tokyo man would regard as mendicant's fare. Thus to furnish his customary food for a Tokyo man Nikko has to draw upon external resources, and the Tokyo man is compelled to pay correspondingly. Foreigners sojourning in Nikko must not allow their peace of mind to be disturbed or their confidence in humanity shaken if their servants ask for an increase of wages to meet the extra cost of living. The demand is in itself just enough. Its dimensions, however, are another question. Somebody set the example, two years ago, of assessing this additional cost at twenty-five *sen* per diem, and some-

body else was good-natured enough to accede to the assessment, thus establishing a precedent which Japanese servants have naturally been careful to preserve. But twenty-five *sen* a day is just about the double of what should properly be paid. Twelve or fifteen *sen* is ample. The necessity of an additional allowance is, however, indisputable, and it may relieve the minds of some of our readers to know that such is the case.

ORGANIZATION OF THE CENTRAL SANITARY ASSOCIATION.

We hereby give Our sanction to the present Amendment of the Organization of the Central Sanitary Association and order the same to be promulgated.

(His Imperial Majesty's Sign-manual.)
(Great Seal.)

Dated the 2nd day of the 8th month
of the 23rd year of Meiji.

(Countersigned.)

COUNT YAMAGATA ARITOMO,
Minister President of State.

COUNT SAIGO TSUKUMICHI,
Minister of State for Home Affairs.

IMPERIAL ORDINANCE No. 154.

Article 1.—The Central Sanitary Association shall be under the Superintendence of the Minister of State for Home Affairs, and shall give advice to each Minister of State, express its opinion relating to the sanitation of the public as well as private places, and investigate the mode of its carrying it into practice.

Article 2.—The Central Sanitary Association may file memorials to the Minister of State who has the chief responsibility as to matters relating to sanitary affairs, which are under the chief management of each Department.

Article 3.—The Central Sanitary Association may inquire into the various affairs relating to sanitation by the Chief of the Metropolitan Police Board, Superintendent of the Hokkaido Administration Police Board, and Governors of Cities and Prefectures, or may inspect and examine them by despatching members of the Association temporarily to various localities.

Article 4.—The Regulations of debate in the Central Sanitary Association shall be decided by the Association, and be sanctioned by the Minister of State for Home Affairs.

Article 5.—The Central Sanitary Association shall consist of the following officials:—

- (1.) President.
- (1.) Director.
- (3.) Committees.
- (4.) Temporary Committees.

The President shall be of *chokunin* rank, and the Director shall be of *sonin* rank, and be named by the Minister of State for Home Affairs in accordance with the wish of the Emperor.

Article 6.—Committees shall be composed of the following officials:—

- The Director of the Medical Bureau of the War Department.
- The President of the Central Sanitary Council of the Navy.
- The Director of the Bureau of Imperial Physicians of the Household Department.
- The Head of the Medical College of the Imperial University.
- The Chief of the Metropolitan Police Board.
- The Governor of the City of Tokyo.
- The Director of the Sanitary Bureau of the Home Department.
- The Director of the Bureau of Police of the Home Department.
- The Higher officials of the Home Department.

In addition to the above, 12 physicians and 3 chemists shall be appointed as a committee. Of committees, physicians, chemists, officials of higher rank of the Department of Home Affairs, and temporary committees shall be appointed by the Cabinet in accordance with the memorial of the Minister of State for Home Affairs.

Article 7.—The President of the Association shall preside over deliberations in accordance with the rules of debate of the Association, and report to the Minister of State for Home Affairs as well

as to the Minister of State who has the chief responsibility.

Article 8.—Should the President be unable to attend, the person occupying the first seat on that occasion shall preside.

Article 9.—The Director shall adjust and manage the miscellaneous affairs of the Association in accordance with the orders of the President.

Article 10.—The President or Director shall not be allowed to draw a salary should either hold office in addition to the post in his Association.

Article 11.—Clerks shall be attached to the Central Sanitary Association, and shall write the debates and perform various other miscellaneous duties under the direction of the higher official.

The clerks shall be 3 on the regular staff of the Association and be supplemented with *zoku* of the Home Department.

RANK AND SALARIES OF HANNIN OFFICIALS.

IMPERIAL ORDINANCE No. 165.

We hereby give our sanction to the present Amendment of the Regulations relating to the Rank and Salaries of *hannin* officials.

[His Imperial Majesty's Sign-manual.]

[Great Seal.]

Dated August 12th, 1890.

(Countersigned)

Count YAMAGATA ARITOMO,
Minister President of State.
Count MATSUKATA MASAYOSHI,
Minister of State for Finance.

The Regulations relating to Rank and Salaries of *hannin* Rank Officials shall be amended as follows:—

Article 2.—The monthly salary of civil officials of *hannin* rank shall be paid on the last day of each month in accordance with the table already published.

THE BANK OF JAPAN.

LAW No. 61.

We hereby give our sanction to the present Amendment of the Regulations of the Bank of Japan, and order the same to be duly promulgated. We also order that this law shall come in force on and after the date on which the Commercial Code shall come into operation.

[His Imperial Majesty's Sign-manual.]

[Great Seal.]

Dated August 8th, 1890.

(Countersigned)

Count YAMAGATA ARITOMO,
Minister President of State.
Count MATSUKATA MASAYOSHI,
Minister of State for Finance.

The Regulations of the Bank of Japan shall be amended to the following effect:—

Article 19.—The Directors shall be chosen by the shareholders at the general meeting and shall be appointed by the Minister of State for Finance. The Superintendent of the Bank shall also be elected at a general meeting of the shareholders. The term of office for Directors shall be four years, and for the Superintendent three years.

No Director or Superintendent shall be permitted to become an official of any other bank, company, or other similar institution during their respective terms.

Article 20.—The Governor shall convoke the ordinary general meetings of the shareholders at each half-year. The Governor shall also convoke extraordinary general meetings of shareholders, when he shall deem such meetings necessary for the discussion of important matters. The Governor shall convoke an extraordinary general meeting of the shareholders, should the Superintendent, or not less than fifty shareholders, at a general meeting demand the same after having made a statement of the objects for which such meeting is to be called; and such fifty shareholders at the general meeting shall be those only who have continuously held more than 10 shares for at least 60 days prior to the opening of the said general meeting. Only properly authorised proxies will be allowed to act at a general meeting of shareholders.

Shareholders at a general meeting shall have one vote for 10 shares, and one vote shall be added for each fifty shares above 11 shares. Proxies can only hold ten votes.

RANKS AND SALARIES OF THE CHIEF CLERKS AND CLERKS OF COURTS OF LAW.

IMPERIAL ORDINANCE No. 159.

We hereby give our sanction to the present Regulations relating to the Ranks and Salaries of the Chief Clerks and Clerks of Law.

(His Imperial Majesty's Sign Manual.)

(Great Seal.)

Dated August 2nd, 1890.

(Countersigned)

Count YAMAGATA ARITOMO,
Minister President of State.
Count YAMADA AKIYOSHI,
Minister of State for Justice.

Article 1.—The Ranks of Chief Clerk shall be 3rd and 4th *senin* rank.

Clerks of Courts of Law shall be below 1st *hannin* rank and above 6th *hannin* rank, and *yen* 8, 9, or 10 may be given to clerks of 6th *hannin* rank as monthly salary.

Article 2.—The number of officials for each office shall be limited as follows:—

COURT OF CASSATION.	
Chief Clerk	1
Court Clerks	20
PUBLIC PROSECUTORS' OFFICE OF COURT OF CLERKS.	
Court Clerks	5
COURTS OF APPEAL.	
Chief Clerks	7
Court Clerks	145
PUBLIC PROSECUTORS' OFFICE OF APPEAL COURTS.	
Court Clerks	25
DISTRICT COURTS.	
Court Clerks	775
PUBLIC PROSECUTORS' OFFICE OF DISTRICTS COURTS.	
Court Clerks	150
LOCAL COURTS.	
Court Clerks	4,600
PUBLIC PROSECUTORS' OFFICE IN LOCAL COURTS.	
Court Clerks	485

Article 3.—The regulations shall come into force on and after the 1st day of the 11th month of the 23rd year of Meiji.

TOKYO CITY IMPROVEMENT REGULATIONS.

IMPERIAL ORDINANCE No. 169.

We hereby give our sanction to the present erasure of an Article of the Tokyo City Improvement Regulations and order the same to be promulgated.

[His Imperial Majesty's Sign Manual.]

[Great Seal.]

Dated August 14th, 1890.

(Countersigned)

Count YAMAGATA ARITOMO,
Minister President of State.
Count SAIGO TSUKUMICHI,
Minister of State for Home Affairs.
Count MATSUKATA MASAYOSHI,
Minister of State for Finance.

Article 8 of the Tokyo City Improvement Regulations shall be deleted.

IMPERIAL ORDINANCE No. 170.

We hereby give our sanction to the present Regulations relating to the Tokyo City Improvement Regulations, Rules for the Treatment of Lands and Buildings in regard to City Improvement, and Rules as to Importation of pure *sake* to Tokyo, and order the same to be duly promulgated.

[His Imperial Majesty's Sign Manual.]

[Great Seal.]

Dated August 14th, 1890.

(Countersigned)

Count YAMAGATA ARITOMO,
Minister President of State.
Count SAIGO TSUKUMICHI,
Minister of State for Home Affairs.
Count MATSUKATA MASAYOSHI,
Minister of State for Finance.

Article 1.—Affairs appertaining to the Governor of the City of Tokyo in accordance with the Regulations in regard to the Tokyo City Improvement, the

Rules for the Treatment of Lands and Buildings in regard to the Tokyo City Improvement, and the Rules as to the Importation of pure *sake* to Tokyo, shall be controlled by the Board of Councillors of the Tokyo Municipality, and those belonging to the Municipal Section of the Tokyo City Assembly by the Assembly of the Tokyo Municipality.

Article 2.—The riparian estates which have been granted to the Municipal Section of the Tokyo City for the purpose of raising funds to meet the expenses of the Improvement of City of Tokyo, shall be handed over to the Tokyo Municipality.

Article 3.—The financial estimates of the 23rd financial year of Meiji for the Improvement of the Tokyo Municipality, which have been debated and decided by the Assembly of the Municipal Section of the City of Tokyo, shall be continued by the Tokyo Municipality.

CORRESPONDENCE.

THE "HYOGO NEWS" AND THE LOCAL CLERGY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have read with the greatest satisfaction your Editorial Note upon "the burial of Mrs. Rodgers and her daughter." For some time past it has been the custom of our leading newspaper here the *Hyogo News*—in season and out of season—to cast aspersions against the Clergy, and I agree with your concluding remarks that the insinuations on the present occasion were most unjust and malicious.

Since December last the Foreign Community have supported a resident Chaplain, the Rev. W. Weston. He had gone to Yokohama to see his medical adviser a day or two before the deaths of those poor ladies. With regard to the other clergymen for the time being staying in Kobe, it appears from one and all that not one of them was even informed of the deaths, and no request was made to any one to attend the funerals.

According to the *Hyogo News*, it would seem that the clergy ought to have become aware—I suppose by some species of instinct—that these deaths had occurred, and that their services at the funerals would be required. It is a sad business. No one suggests that any clergyman had been informed, and I do not know what the undertaker could have been about. But whilst feeling the most sincere regret at this sad occurrence, and sympathy with the relatives of the deceased, common courtesy and fair dealing alike condemn a repetition of unjust and slighting accusations against the Clergy, which are absolutely without foundation, and which have caused great pain.

I am, Sir, yours obediently,

A KOBE RESIDENT.

August 12th, 1890.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Will you kindly allow me to say a word with reference to a paragraph appearing in your issue of Monday last respecting the burial of the two ladies who recently died of cholera in Kobe? I have not seen the copy of the *Hyogo News* in which you say "All sorts of uncharitable and improbable reasons" were suggested as to "why the clergy were not forthcoming on the occasion," but as it would, under ordinary circumstances, have been my duty, as chaplain of Kobe, to conduct the funeral, had I been there at the time, I should like to say a word of explanation as to my absence.

Since being appointed to the Kobe Church chaplaincy in December last, I have several times been compelled to visit Yokohama for special advice owing to an affection of the eyes, and for this reason was away from Kobe when the sad occurrence in question took place. Before leaving, however, I had made arrangements for my duty to be taken during my absence, and am quite sure, as you charitably suppose, that "some unavoidable impediment" must have prevented the usual burial service from taking place.

I am, &c.,

WALTER WESTON,
Chaplain of the Kobe Union Church.

Karuisawa, August 13th, 1890.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In common with many of my fellow residents at this port I cannot understand why "A Kobe Resident" should, with disregard to the truth, in his letter, which appears in your issue of the 16th inst., reproach the editor of the *Hyogo News* for casting aspersions against the clergy. He says, "according to the *Hyogo News*, it would seem that the clergy ought to have become aware—I

Original from

suppose by some species of instinct—that these deaths had occurred and that their services would be required."

Now, can "A Kobe Resident" point out any sentence or paragraph that has appeared in the columns of the *Hyogo News* that will justify him for having written this? On the 8th August, when announcing the death of Mrs. Schroeder, the *Hyogo News* drew attention to the absence of clergy at both the funerals, but, in order to prevent any aspersion being cast against the clergy, was most careful to add in the same paragraph: "It is only due to the resident clergy here to say that no request was made of them to officiate;" and this statement the *Hyogo News* has since reiterated. In fact the *Hyogo News* attributed the absence of clergy to some blundering on the part of those in charge of the funeral arrangements, which blundering was probably caused by doubts as to the nationality of the unfortunate ladies (vide *Hyogo News*, 8th August).

Why should "A Kobe Resident" in what appears as a willful disregard of the truth attribute to the editor of the *Hyogo News* sentiments against the clergy which have never been expressed or suggested? He cannot point out any sentence that has appeared in the *Hyogo News* since the deaths of these two ladies, that insinuates in any way that the clergy of this port have been remiss in their duties. These gentlemen may well cry, "Save us from our friends," when they find people such as "A Kobe Resident" defending them from charges which have never been made or even insinuated.

I see that our Chaplain, Mr. Weston, in a letter which also appears in your issue of the 16th inst. says that he has not seen "the copy of the *Hyogo News*, in which you (the Editor of the *Japan Mail*), say all sorts of uncharitable and improbable reasons were suggested as to why the clergy were not forthcoming on the occasion." Mr. Weston, will, I am sure, never see that copy of the *Hyogo News*, for the simple reason that in none of its issues has it in any way suggested "uncharitable and improbable reasons."

I am, &c.,

Kobe, August 18th, 1890.

JUSTICE.

"TRUTH" ECONOMISED.

TO THE EDITOR OF THE "JAPAN MAIL"

SIR,—In a very abusive letter about the Japanese people published in the *Gazette* of the 11th instant, over the signature "Truth," the remark is made that the Editor of the *Mail* "cannot (unless he knowingly utters a falsehood) declare that the average type of head among the Japanese is comparable, *phenologically*, to the average type of head among Europeans." This is the main, and indeed, the only attempt at argument in that frantic column of abuse of the Japanese.

It betrays, however, the fact that the writer is totally unqualified to argue upon the topic of comparative anthropology. The very word *Phrenology* is obsolete. It was the name given to a pseudo-science now only mentioned by charlatans; and the charlatanism of the whole statement about "types of head" must make its author a laughing stock to any educated Japanese.

Whether the nervous system of the Japanese race be less complex, or its cranial capacity less great, than those of other races,—are questions which only great physiologists and craniologists can decide; and nothing could evidence greater ignorance of modern scientific methods in deciding such questions than the astonishing assurance with which this wiseacre tells us to go into a Japanese crowd, and settle the matter with a glance! Possibly Mr. "Truth" also ignores the fact that among educated Englishmen the term "Mongolian race" is not used in the sense in which he uses it; and furthermore, that the origin of the Japanese people is still, scientifically, a matter of much doubt. We do not talk to-day, about the "Caucasian" race in any event, nor about "phenology," nor about several other matters whereof the mention in Mr. "Truth's" letter bears witness that ignorance and prejudice go always hand-in-hand; and that the standard of education among Japanese women which he pronounces "low" is evidently a good deal higher than his own.

I have been, more than once, the only European in a very large Japanese concourse; and I have travelled in many parts of the world. Nowhere did I ever see a crowd so well-behaved, so kindly, so courteous, thoroughly sympathetic and good-natured. As for faces, I have never seen anywhere more pleasant ones than in such Japanese crowds, nor more intelligent ones. What I did not see were unpleasant faces of the conceited, aggressive, or brutal stamp, so common in European and American crowds of the lower class. Perhaps "Truth" may have mistaken this absence of brutal cha-

acteristics for absence of intelligent characteristics. Certainly his general complaint about servants and others seems to warrant the supposition. According to him, they are all cheats and liars, and otherwise contemptible. My own experience has been exactly the reverse. But I have observed that Europeans in the habit of treating the Japanese with contempt, or with positive brutality, are not apt to find or able to keep good servants,—for Japanese are human beings with human feeling; and it is just possible that the disagreeable experiences of "Truth" were of his own making.

I am, Yours, &c.,

A GLOBE TROTTER.

Yokohama, 12th August, 1890.

LETTER FROM SAN FRANCISCO.

(FROM OUR SPECIAL CORRESPONDENT.)

San Francisco, July 31st.

I doubt if Central and South America properly belong to the region which I am expected to cover for the readers of the *Mail*; but a few lines touching events in that section of the continent may not be out of place. You will remember that on the occasion of a ball given to celebrate the usurpation of the Presidency of Salvador by General Melendez, the usurper lost his life. It is not certain whether he was poisoned, or was shot, or died of disease of the heart. The only thing that is certain is that his life came to an end, then and there. In the neighbouring state of Guatemala, the impression was and is general that he was killed by persons who opposed Central American Union. The President of Guatemala—Barillas—no sooner heard of his death than he moved a few battalions to the frontier, and issued a proclamation denouncing the murder. On this, one General Ezeta who usurped the Presidency of Salvador—or was elected to fill that office by the dunces at the ball—moved his troops to the same frontier. What then ensued I am unable to inform you. One account says that a battle took place, and that the Salvadorians were victorious. Another, later, states that six battles have been fought with varying results. And yet a third assures us that eleven engagements have occurred, with frightful slaughter, and that both armies hold their ground. The truth probably is that the two bodies of volunteers are looking at each other, and have no serious idea of fighting, unless they can be entrapped into an engagement by their officers.

Salvador, which is a small state, though spunky, objects to Central American Union because it fears that the Presidency would always go to its big neighbour, Guatemala. For the same reason Barillas is in favour of it. When Barrios first attempted to establish the Union by force, it was Zaldivar of Salvador who took the field against him and fought the battle in which the President of Guatemala lost his life. The Salvadorians did not approve of Zaldivar's treachery (he had agreed to cooperate with Barrios in effecting the union of the five states); they rose against him, forced him to fly, and put one of his generals—Melendez—in his place. It is more than suspected that Zaldivar—who is in Paris—is at the bottom of the present intrigue.

Happily, perhaps, for the cause of union, the United States seem likely to be drawn into the conflict. Some cases of arms, designed for Salvador, and shipped on board of a Pacific Mail steamer from this port, were seized in Guatemalan waters, and confiscated as contraband of war. The steamship company has appealed to Mr. Blaine; and here is the opportunity for interference for which he must be longing. The feeling in this country is that we shall never have pleasant relations with Central America so long as the five small states continue to spend their time and their resources in warring with each other; it is so strong that the country would overlook a departure from our immemorial policy of strict non-intervention in our neighbours' affairs. It would not meet anything more than an ominous threat to bring these quarrelsome half-breeds to their senses.

The situation in Congress is unchanged since I last wrote. The administration party continues to drive the McKinley tariff bill through the Senate by whip and spur. But outside of the two chambers, people say—in the homely language of the boys—that the tariff is "a dead cock in the pit." No one yet knows whether Mr. Blaine spoke for himself alone, or for the whole Cabinet, when he denounced the measure. But the statesman from Maine constitutes so large a part of the Government that without him it is difficult to see how it would continue to exist. In public estimation his utterances are the voice of the party; it is those who differ with him who are the bolters.

Quiet members of the party received another shock last week from a speech delivered by Struble of Iowa, denouncing the dogmatic and truculent behaviour of Speaker Reed. Struble is one of the oldest and ablest Republicans in the House. When he compared Reed with the Democratic speakers who went before him, greatly to the disparagement of the former, he startled Republicans, and added to the number of malcontents in the party. When men or parties begin to fall, they fall quickly, and it is astonishing how many people seem imbued with a desire to give them a parting kick.

Society at Washington is convulsed by the elopement of a leading belle with a hotel waiter. The lady in question is Miss Lilian Porter, a grandniece of Admiral Porter, a beautiful blonde, with a splendid figure, and soft lustrous eyes. She had been highly educated, and was a favourite in society. Her chosen swain is a son of the Green Isle, known as Jimmy O'Brien. It is said by a society reporter that she was fascinated by the skill with which Jimmy balanced a tray full of dinner dishes on the ends of his outspread fingers, and threaded his way through a crowd without losing a dish. Whatever his charms were, they were potent enough to induce the lady to leave a comfortable and fashionable home for Jimmy's society, and to fly with him to Chicago where she may help to earn their joint meal by washing the dishes which Jimmy balances.

The frequency of these *mésalliances* in fashionable society may afford the philosopher a theme for serious thought. Hardly a day passes than one does not hear of one or more of them. One of the richest and most respected citizens of a western city lately married his youngest daughter to a suitable *parti*, and endowed her richly. While the wedding breakfast was going on, her elder sister took the opportunity of eloping with a stable boy. It appears that the young men who are the normal worse halves of the girls of the period will not marry, because they cannot afford it. The average clerk or young professional man earns from \$1,000 to \$1,200 a year. The girl of the period cannot dress on much less than \$1,000 a year. Thus unless the girl had money, a clerk who married her would have nothing to live on. He is far too wise to place himself in such a predicament. He remains single, and consoles himself with flirtations among milliners and shop girls; for whom a few extra dollars a week convert starvation into plenty. The girl of fashion meanwhile sees the years creep on, her nose growed, and her elbows angular, and she mourns like Jephthah's daughter. What wonder if, in her desperation at enforced spinsterhood, she takes the footman or the stable boy to her snowy bosom?

The effect of the Silver Bill is beginning to be felt in earnest. Silver bullion has advanced to \$1.15 an ounce—which is about the price it commanded in 1880. In a fortnight Government will begin its purchases of \$4,500,000 a month, and meanwhile Europe, instead of dumping its silver upon us, as was predicted, is a large buyer of coin and bullion in our market for shipment to Asia. London proposes to anticipate any further advance in the price by laying in a stock sufficient for the present wants of India and China. Every New York steamer now takes out a considerable consignment of silver to the London bankers. The law is imperative upon the Secretary of the Treasury until such time as silver sells on the old parity with gold. That is to say, until the silver ounce is worth \$1.29 in gold. It looks as though that limit would be soon reached. The silver miners and melters of Nevada have thus accomplished their purpose of securing a fictitious rise in their commodity by legislation. But they have done so at the expense of silver consumers throughout the world. Silver ware has already risen 15 per cent., and even watches have advanced in cost. The movement will cause the reopening of mines whose ores ran too low in silver to work when the price was below a dollar an ounce, and it is probable that the silver output of the world, and of this country in particular, will be increased.

People are once more laughing at President Harrison. One day last week he sent a namby-pamby message to Congress asking for legislation to enable the Post Office Department to put its foot down on two prominent lottery concerns. He reiterated all the stock arguments about the demoralizing effect of lotteries, and described the unsuccessful attempts which he and his friend Wanamaker have made to deprive the lottery agents from using the mails. Simultaneously comes the announcement that for the sum of \$1,300, the President's son, Russell Harrison, has agreed to publish illustrated advertisements of the two concerns mentioned by his father, and that one of the advertisements has already appeared.

LETTER FROM AMERICA.

(FROM AN OCCASIONAL CORRESPONDENT)

Denver, Colo., July 24th.

Since writing my last letter, I have noted many matters of interest, but hitherto could not attempt their portrayal for your readers' delectation. Prominent among these was the carpenters' strike. The celebration of Labour Day intoxicated many weak minds, with the final result of convincing them—to quote their own words, "that it is right and fair for a working man to demand nine hours' pay for eight hours' work." Denver is spreading so fast, so many buildings were then actually in progress, so many people were and are interested in the rapid completion of these undertakings, that this "right and fair" demand was at once acceded to, as far as out-door hands were concerned. The newspapers one and all supported the labourers, and to an onlooker it seemed that, though the Unions had passed a resolution much more trenchant, they still might have counted on the vigorous help of the press. But owners of lumber mills refused to be robbed of six hours a week, and their employes went out to hang about the street corners and to live on the wretched pittance sent them by the Unions. This continued, much to the detriment of trade, inflicting great suffering on the strikers and their families and inconvenience on all for a fortnight or three weeks. Here and there a mill was running with non-union hands; here and there a striker deserted his ranks, and at last the whole miserable inflation caved in and things returned to their normal state. Now we have a move on the part of retail clerks (salesmen and saleswomen in retail stores) to secure an eight hours' day with no Sunday trade. They will succeed just as far as their employers care to let them. The waiters' strike in St. Louis is only followed by the employment of waitresses. The barbers here protest against shaving on Sunday, and the Inter-trades Association will do good by pledging the whole body of labourers to get clean shins on Saturday nights. It is curious to hear the Plumbers' union sympathising with the Retail Clerks and resolving to abstain from trading at houses that keep open after six o'clock. And it is still more curious when this and other unions have expressed their kindly feeling for the clerks, to see, late on Saturday evening, crowds of working people and their families thronging the windows and the counters of the May Clothing Company, an establishment which refuses to be dictated to by all the unions in the city. Private interest will thus continue to govern private conduct in spite of public pledges. The cheapest and best goods will attract the consumer, though they are handled by some pale faced "clerk" who had better far be in the fresh air. Nationalism has a long battle to fight on the arena of the individual conscience before its visionary paradise can be revealed to popular gaze. The self-regarding motives are and must long continue to be overwhelmingly strong in the average mind.

Almost every institution of society tends to accentuate and nurture these. Scarcely any of the conditions of life, in Western communities at least, tend to the production of a race of men whose care for each other shall in any way dominate over their care for self. And those who look to the Churches, as at present constituted, for the production of such a new order of men, have surely not considered what are the actual conditions under which the Churches exist. Unquestionably the Christianity of the Master is radical enough. But the Christianity of the Churches is a wholly different article. The former was brave to face and quick to probe all social problems; the latter makes haste to leave social problems alone, is content to use the world as not abusing it, and to interpret the traditional saying of the Master in a way broad enough to leave its inherent selfishness unrebuked. So that one sadly fears that the Church will fail us in this need as it failed our fathers. Yet it is not too much to hope that "the remnant" will prove faithful and that a new reformation is not far off, to be led by those men of pure life and reverent thought whose presence in and outside the churches we are reminded of once in a while, to our great joy and solacement. And may we not definitely affirm that in spite of the trend of society towards a guilty self-seeking, and in spite of the miserable ecclesiasticism which occupies Christ's place in the Churches, there is yet a spirit moving among men, like the wind whose source and goal we know not, an emanation from the life of Jesus, a breath from the Eternal good, making us cry for light, travail in anguish for the good of our fellows, reckon no life wasted that is spent in the service of the depraved or the sorrowful? If this is, beyond question, the true current of our modern life, whereof all other

forces are but the eddies and deceptive side currents, it will carry us on to some broader, clearer, stream, with fairer banks, less mist, more fruit, and more flowers.

If there is any excuse necessary for penning the foregoing sad lamentations, let my readers consider that in this Far West all these social conditions lie very near the surface or crop out in a very rugged, and imposing way.

The Silver Bill, or as it should be called here in the west an act for the Relief of Miners, has become law, much to the jubilation of this part of the world's inhabitants. The Senior Senator for Colorado, Mr. Teller, is the subject of universal encomium. Democratic organs vie with their political enemies in praising this gentleman for the zeal with which he has conducted this campaign and the success which has crowned his labours. The only thing for sceptics now to do is to wait six months, and if silver is then back at its old price or if, as English economists predict, it is already again on the decline, to say like the omniscient farmer, "I told you so." The fact is such an experiment as is now being made by this country in the wholesale coinage of silver is enough to make the world agast with open-mouthed wonderment. As an oracular German friend would say, "we will see what we will see." Meantime, we may go on to dig our ore, smelt it and pocket the proceeds, happy in the conviction that we at least are getting rich.

Great excitement arose a week ago on the discovery of a rich vein of gold at Tin Cup in this State. Tin Cup is consequently booming. Our city is graceful now, robed in green. Cotton-wood trees, acacias, and maples line many of the streets, making avenues of delightful shade. Householders assiduously water their lawns morning and evening. Without this constant supply of sprinkled water no grass but buffalo grass could endure the dry heat, and lawns would be impossible. Happily, however, rubber hose and hydrants meet the difficulty and Denver can boast many delightful grass-plots. Just now every one who is any one has gone to the mountains to rusticate in the practise of self-denial, to shoot harmless beasts and birds and to catch trout. In spite of this fact building goes merrily forward, the city continues to grow, and bricks are in great demand. A bricklayer earns six dollars a day for third rate work, and if he pays one and a half of this to the Union which protects his monopoly, he is still the master of the situation. Last week building permits representing an outlay of nearly a million and a half of dollars were issued by the City Inspector. And this was not so very exceptional a week's work. The Census has taken a little of the conceit out of us. We supposed that Denver with its suburbs contained 150,000 people. Some added another 25,000. The facts show about 125,000 as the actual number. But we keep on growing, that is one comfort.

I am surprised to find so very few Japanese in this city. Chinese are plentiful of course, but one would have thought that the exceptional advantages of the Colorado climate would have ensured the presence of a fair number of Japanese students. Educational advantages are fairly good here, and I have no doubt that the authorities of the University of Denver would gladly welcome lads from Japan.

I had hoped to sketch the present State of Agriculture in Colorado, with special reference to irrigation works, but already this letter approaches its prescribed limits, and this very interesting subject must wait a little longer.

KORIN.

Korin! I like the name, the turn of it, and the rhythm. It undulates, trails along, and has an air of antiquity about it which practically amounts to a picture. It awakens in the true Japanese amateur, the amateur who is at all bitten, heady sensations, and, as it were, a particular vibration which is the very emanation of this strange and surprising individuality. I am one of those who believe in affinities of names and ideas, and I must confess it, who attribute a mysterious sense to the music of such or such an arrangement of syllables. The name of Korin marvellously suits the art which he represents.

Korin is in the first rank of those who have carried to the highest pitch the intuition and the genius of decoration. His style is integral, always like itself. There is no artist more originally or more profoundly Japanese. His works are known in Europe, and appreciated only by a small number of the initiated. I have therefore thought it would be interesting here to speak of an artist who is held by his countrymen to be one of the greatest, to bring into relief a decorative master whose influence has been considerable for two centuries,

and who has pushed to their extreme conclusions the two fundamental principles of Japanese aestheticism, synthesis of forms, and simplification of subjects.

Unfortunately, with Korin as with all Japanese artists, biographic materials exist only in distressing meagreness. We should like to know the daily habits, the character, the physiognomy, the tastes, the state of mind of those who have exhibited such masterly brilliancy, such a rare invention in the creations which charm us; we should be glad to reconstruct the physical and moral portrait of the artists we prefer. We have scarcely five or six details of the private life of one of the most celebrated of all, Hokusai, so little removed from us that some of his contemporaries are still alive. With the Japanese the artist is impersonal, one who exists and survives only in his works. The historical curiosity of Europeans is lacking here.

Ogata Korin belongs to that incomparable period in the history of Japanese art known as the Genrokou period, 1688-1704. He is, together with Motonobu and Itsho, the most striking illustration, the highest expression of it. We must retain and associate these three names, while adding that of Kensei, the original ceramist, and of Ritsuo, the surprising lacquerer; illustrious names which stand out from this great era as from ground which has been fertilised by ten centuries of tillage. With people of taste, the Genrokou *nengo* marks the highest point of perfection which has been reached. In Japan the Genrokou period, is spoken of in the same way as we say the Age of Louis XIV. It was then that the ancient city Kioto attained its highest celebrity as the moment when Yeddo, the city of the Shoguns, the new capital, saw its star in the ascendant and asserted its preponderance.

Korin was born at Kioto in 1661, of a good civic family named Ogata. He was early destined for the study of painting, but writers do not agree as to the origin of his artistic education. The imperial school of Tosa claims him as a pupil of Sumiyoshi Hirodzumi; the Wakan Sogwa Shuian ascribes it to the two Kanos Yassunobu and Tsunenobu, whilst other authorities say it was due to a master who was at once, like Korin himself, a painter and lacquerer, Iman Honnami Koetsu. For my part, I should say that the sources of the talent of Korin are complex, and that the different statements may be reconciled. In submitting his works to an attentive examination, I find in effect, traces of various influences under an apparent unity of style. His manner is a subtle composite, a clever combination. To the school of Tosa is due his aristocratic refinement, his taste for water colour and transparent tints. Some of his paintings, certain of his paintings, where bright colours, strong greens, intense blues, polished whites, &c. prevail, as in the admirable kakemono in the British Museum, "The poet Narilira on the banks of the river Tanagawa" seem direct descendants of the sumptuous and heroic miniature of Tosa. From the Kanos he derives the rapidity, decision, and force in the stroke of the brush. He rivals the cleverest handlers of Indian ink, and paints, upon occasions, in the classic style, a masterpiece like the Shoki in a Parisian collection—such as these crowns *en silhouette*, borrowed from the Gwashi Kwaiyo, or this sketch of the "Little Chicken," of which we here give reproductions. My opinion is that Korin commenced his apprenticeship in the Kano school. He assuredly had in mind the great gallery of chrysanthemums of Tsunenobu at Kioto, when he painted his beautiful screens, decorated with monumental flowers. Then he entered one of the studios of Tosa, very probably that of Honnami Koetsu, where he learned the principles of lacquering. But his own peculiar manner must be traced to a study of the old-fashioned and strange sketches of Shikwado, and, above all, of the paintings of Sotatsu, one of the great artists of the seventeenth century. As a painter, Korin is, to my mind, the immediate offspring of Sotatsu; he has from him, among other qualities, the light touch laid out on a large scale, and, which is a characteristic detail, almost always thrown up by touches of gold. I regard Sotatsu as the most remarkable pupil of Kano Yassunobu. He is no doubt the link which unites Korin to the studio of the latter.

Like his brother Kensei, like Motonobu, like Itsho, like all the great artists of that time, Korin came to Yeddo, attracted by the fame of the Tokugawa. Certainly he produced at Yeddo his most remarkable works, whether in painting or lacquer. The presence of Fuji, and the style of the landscapes in his grand manner, suffice to show a long stay in the city. He returned, however, to Kioto, where he died in 1716, at the age of fifty-six.

Korin had several professional names, among which the best known is Hotshiku, which he used during the later period of his life, and chiefly on his works in lacquer. With this name he has signed admirable works of art, of genial invention

and freest touch. We reproduce here the two signatures in their most usual form.

Korin left numerous pupils, chiefly in lacquer. His studio, strongly equipped, lasted till the middle of this century. The pupil who best assimilated his style is without doubt Hoitsu; but the most eminent of all was his brother Kenzan. There was such a relationship of genius between these twin brothers of art that one is often liable to confound their works. They seem almost double manifestations of a single entity. The style of Kenzan is an emanation from that of Korin. The paintings of these two masters have the same characteristic qualities. The style of Kenzan is more massive and more generous as becomes a painter habituated to the brush of the ceramist: Kenzan is one of the greatest artists of Japan. In some respects we like him better than Korin, he is more elegant, more feminine, and when he does make a dash he is irresistible. An authenticated piece of pottery by Kenzan is always regarded by the *virtuosi* as equal to a piece of lacquer by Korin.

Hoitsu's paintings are wanting in solidity beside the virile robustness of Korin, but they possess a grace and a charm which betray the son of a daimio. The studio of Korin was about to be closed, when Hoitsu, taking it on his own account, restored some of its ancient lustre under the name "New School of Korin."

Authenticated works of Korin are no longer discoverable. Equally sought in Japan, Europe, and America, they fetch very high prices. All amateurs, even such as have not fully sounded this strange personality—and it is not to be sounded without long acquaintance—bow before its high and aristocratic distinction.

Korin, when once in full possession of his manner, drew in a way that no other could; a manner supple, rich, rounded, boldly concise with unexpected turns, and with a curious left-handed simplicity which was the disguise of profound knowledge. The stroke of the brush is sinuous and placid; the dashes are of infinite gentleness; it keeps clear of jostling, angles, of all which can shock the eye. It is indeed the hand of a lacquerer which calmly traverses the silk or the paper. The colour is blended, smooth, harmonious, and as original in its combinations as in the design. I have said elsewhere, and repeat it, there is in this simplicity pursued to its farthest limits, a penetrating charm, an intellectual emanation, insidious, inexpressible, a perfection of rhythm which winds about one like voluptuous music. Beneath an almost infantine appearance is revealed a marvellous knowledge of form, a sureness of composition which no one has possessed to the same degree in Japanese art, and which is especially favourable to the combinations of ornamental art.

Korin has painted hand screens, fans, kakémonos; but he excelled above all in the painting of screens. No artist has, like him, worked out imposing subjects, and made blades of iris, of the peony, of chrysanthemums or poppy to sing, as it were, to warm and vibrating harmonies. All is combined with consummate art; a fine taste presides over the smallest details. Korin is a true Chajin, an accomplished dilettante in an era of supreme refinement. His talent is universal; associated with that of his brother, it embraces the cycle of the decorative arts.

For those who comprehend their intense originality, his kakémonos are an unequalled treat. I know of a group of willows in a collection at Paris—where Korin is held in high honour—which is little short of miraculous.

But Korin's paintings pale before his lacquers. This great master has carried into the decoration and the execution of lacquers, all his spirit of initiative, all his independence of fancy. His action upon this branch of art has been all-powerful; his novel methods or at least his novelty of application—for everything had been indicated by his predecessors—revolutionised the art of lacquering. Koetsu appears to have taught him the technicalities of his art. In this school he acquired his large style, juicy stroke of the brush, and strong relief. But it was in studying the earlier masters of the school of Kanakura, whose works he eagerly collected, that he found the models for the incrustations of mother-of-pearl and of tin which he so strikingly turned to account. I have at the moment in my possession two pieces from Korin's collection. They are of rare interest and of extraordinary beauty. One is a little box of cylindrical shape, with lid, in plain dull gold lacquer deep in tone, decorated with grains and flowers, obtained by slight relief in gold lacquer and incrustations of tin of the most exquisite delicacy. This box is of the fourteenth century. It offers a finished example of the decorative style of the Tosa school at its meridian, and shows us the state of design at that epoch, just as well as a kakémono. Korin has restored it with the greatest

care, adding, at the bottom, a signature in silver lacquer.

The other piece is an oblong inlaid in black lacquer, set in tin and decorated by dragon-flies, whose wings project a thousand reflections which play about it. Korin has taken the pains to make a restoration off-hand. This design, the size of the original, is to be found in the vast collection of lacquer designs formed by his pupils, then enriched by Hoitsu, and after all possessed by Yoyusai. A part of this collection is now the property of Mr. Charles Haviland.

Korin brings to the execution of lacquer methods so peculiar to himself, so original, such an independence of style, such geniality of design, that his works defy comparison, and, I had almost said, all description. Words are totally incapable of rendering sensations of this refined order. One must have held in one's hands a lacquer of Korin, tenderly handled it, and made it pass under the light in order to comprehend the fascination of it.

His fine lacquers seem worked out of a block of gold, the tone even, low, powerful, with spaces full of vibration and warmth. It is a quite peculiar tone. They still say "Korin's gold," in order to denote his tone, which is like no other. Varnish flows from his brush as from a rich and abundant reservoir. His decoration, like his painting, is executed in great masses, with deliberate combinations of exceeding boldness. He gets surprising effects out of incrustations of mother-of-pearl, or of silver, or of tin. With tin employed as a grey note on small surfaces or in higher relief, he assists himself to expedients of design and depth, which give his lacquers the effect of a painting.

Several perfect specimens have reached Paris. The collection of Mr. Gillot shows us two or three large typical pieces, especially a writing-box decorated with a carrier of wood, Mr. de Goncourt is proud of a beautiful box with chrysanthemums. Mr. Ph. Butry of his *inrô*s, Mr. S. Bing is the fortunate owner of another writing-box, decorated with bamboos in incrustations of tin, and a superb panel decorated with iris in relief. I have a few of my own, which I account the most precious treasures of my collection.

In order to appreciate to its full extent the decorative genius of Korin, we have better still than his lacquers or his paintings which are guarded by jealous hands; we have engraved representations of his most characteristic works. They form the contents of twelve volumes, and constitute what is called the "Works of Korin."

First there are the five volumes of the *Makiye Daizen*, published in 1759 by a lacquerer of the house Harokawa Hosi of Kyoto. Among several hundred pieces of lacquer, inkstands, tea-trays, bottle cases, combs, medicine chests, perfume, we find the designs of works by Korin, which lead to the supposition that the master worked for this important house on his return from Yeddo.

Then there are two admirable volumes of the *Korin Gwasifou*, whose extreme rarity is notorious to Japanese bibliographers, Mr. W. Anderson, generally so well informed, does not cite. They comprehend twenty-six large plates and flowers, animals and human figures copied by an artist named Yosinaka, and engraved in colours (Yeddo, 1801). There are in it compositions of such a character that you cannot forget them, and of an extravagance in style, which are, if I might so say, Korin in a state of exasperation—comic inventions, magic in their "go," which leave far behind them the riotous fancy of a Toba or of a Mitsonobu, airy flights of design, which have their parallel in no Japanese work.

The *Korin Gwasifou*, in one volume (Osaka, 1818), is not less remarkable, nor less rare in kind. It offers thirty sketches, which assuredly are among the finest of the artist's work. Ikawa, the engraver, has rendered them with incomparable fidelity. If it were not for the marks of the wood block which show here and there slightly in the paper, we might persuade ourselves that we were looking on the originals themselves, with all the delicate touches of the pencil, and the scarce perceptible gradations of colours, which fade into the grey. The *Korin Gwasifou* is one of the masterpieces of Japanese publication.

The little *Korin Man-gwa*, engraved at Yeddo, and published at Nagaya, by Yeiakui, Hokusai's publisher, is also charming and most rare. It consists of sketches of plants in black and white, ease and the richness which Korin put into his lacquer decorations. The reverse is signed with the two united names, Ogata Korin and Hoishiku. The work, prepared by Korin, appears to have been engraved only for this edition.

The *Korin Shinsen Yakudzu*, in two volumes, published at Yedo (1815), and engraved by Shi-Korin, in painting and lacquer. There we find his most magnificent screens, his most famous

kakémonos, his most precious boxes in lacquer, his most exquisite fans. The engraving, very careful and supple, is in black; it gives a good idea of the originals.

The four volumes of the *Korin Yakudzu*, were published by the Academy of Korin, under the direction of Hoitsu, in two series.* Its engraving is more dry, the impressions less perfect.

These six volumes, containing no less than four hundred designs, is a veritable repertory. It gives an idea of the inexhaustible versatility of the great artist, and yet certainly all of his works are not there, Hoitsu having only reproduced those which he had at hand.

Finally, we find a certain number of Korin's compositions in contemporary collections, particularly in the *Gwasifou Kwaifo*, and in the *Pelon Te Kagami*, published by Shunboku in 1707, and 1720. From this collection we obtained the crows standing out black on the moon's disc, that genial and striking conception which combines the power of the Kanos with the expressive power of the style of Korin.—LOUIS GONSE in *Artistic Japan* for May.

THE FLOODS IN CHINA.

When describing, two weeks ago, the process by which the waters of the Yellow River are often let out upon the country, we had little thought of seeing a rehearsal of the performance at our own door. Nor, when recording the three days' rain at the close of last week, was it possible to imagine that we were on the verge of a flood exceeding in suddenness if not in height all previous visitations of the kind. Owing to the length of time which, through our slow methods of translating and printing, elapses between the issuing of an Imperial Decree and its publication in English, the Emperor's earnest prayers for rain figured in our paper almost side by side with the report of a deluge; and from the threatened failure of the staple cereal crops through drought there is but one step to their total destruction by inundation. The suddenness of this calamity is of course partly due to the absence of any system of communicating information between one part of the country and another. We knew that the rainfall had been very unequal, for in the Peking district 12 inches were registered before there had been any rain to speak of in Tientsin. Over the great watersheds the rain was apparently earlier even than in Peking; and we now know that the banks of the Yellow River had given way early in July. In the beginning of last week it was reported that Tungchow was five feet under water, and later that Chan-kia-wan was flooded. The Customs Courier service was entirely interrupted from the 16th, which we do not remember to have happened before, and that circumstance alone might have suggested alarming things to Tientsin. On Saturday last, however, reports did begin to crowd in of extensive destruction caused by the overflow of the river system which is united in the Peiho, and the river had risen so high at Tientsin as to cause considerable anxiety. The cessation of the rain during the greater part of Sunday fed the delusive hope that we might escape the threatening deluge, but when it was resumed with redoubled force early on Monday morning, the 21st, the situation soon became desperate. The whole of the French Settlement was then found under water, Consulate and Naval Secretariat included. The buildings of the French Syndicate were scarcely accessible, and rafts were navigated about the streets. As for the jerry buildings which ornament the French band their occupants were shut in between two floods, the one that threatened them from below and the one that made cascades through their roofs and ceilings. So rapidly did the waters rise that no general precautions had been taken, and the excitement was excessive during Monday and Tuesday, every one seeming to do what was best to protect his own property, regardless of consequences to the contrary. Whether in making extempore embankments or in cutting through existing ones, *sautez qui peut* was the only principle which could be followed. The first specific disaster was the breach, or overflow, or cutting of the right bank of the Peiho at the Korean Consulate, which occurred on Monday, and sent an immense volume of water into the lowlands which skirt the eastern side of the river were threatened, the lower portion of their contents being actually reached by the water before anything effective could be done to protect them. Some years ago the country was

* First series published at Kyoto, in the *Bunkyo* period, from 1804 to 1817; second series published during the *Banwa* period, from 1818 to 1829, and beautifully engraved, by the same Shimidzu Riuzo, with a preface by Bounshio. These were reprinted in 1864.

deliberately put under water in order to save these same salt heaps, and the like policy would have been followed in the present case if the impetuous stream had not got ahead of the slow cerebration of the Salt Commissioner. The whole area on the left bank enclosed by the mud wall of Sankolinsin was flooded on Monday, and the large population which has grown up there within the last few years were washed out of their houses. The area is bisected by the railway embankment. Imagining, quite truly, that this embankment and mud wall dammed the body of water to their detriment, the people, with the tacit sanction of the authorities, cut through both, and allowed the rapidly rising water to burst into the open country, where it wastes everything it encounters and where it will remain probably for years. A second breach had been formed on the right bank, whether by nature or man's hand, near to Messrs. MacLay & Co.'s premises, whence the water found a tempting outlet into the plain through the hollow space which adjoins the Viceroy's and the London Mission Hospitals. These easements, with the numerous breaches made in the higher reaches, in the Huenho, Yuenho, and Peiho seemed to take so much pressure off the Tientsin Reach as to reduce the level of the river between Monday and Saturday by seven inches, and portions of the French Settlement has appeared above the water. But the fate of the low grounds at the back of the British Settlement and City was sealed by their low level, for at the two breaches at Ma-chia-kow (which have since been closed) there was a drop of several feet from the river bank to the adjoining land. The receiving area was so extensive, however, that no visible impression was made in the level of the water in the plain during Tuesday, and from all that was known then it appeared that if these outlets had been stopped, as they might easily have been, the plain might have been saved, at any rate that portion of it which is within the Western arc of the mud wall of Sankolinsin. It is true that from an overflow at the Everlasting Bend, two miles by road and about three by river below Tientsin, the water was pouring into the country between the canal which skirts the race course and Sankolinsin's wall, and on Tuesday it was beginning to break over the Municipal road leading to the race course. Whether from these various sources sufficient water would come in to cover the inner plain in rear of the settlement was a subject of anxious speculation on Tuesday. It was all a question of the levels, about which people generally had no very clear ideas. Conjecture was set at rest, however, by the advent of a new factor which was signalled on Wednesday morning. The water had been visibly rising in the ditches of the inner plain, when the report came in of a break in the bank of the Grand Canal, to the westward of Tientsin about 17 li, at a place called Ta Sao Chih K'ou.

The break was variously reported as 400 and 1,400 feet in length, and the level was said to be 3 feet above the plain into which the water was flowing. This immense body of water made itself rapidly felt, and it was a wonderful sight to see the steady but stealthy rise of the vast glittering mass. Not a breath of wind rippled the surface, and to see the mud villages, grave mounds, with here and there a group of pines on the higher spots surprised at grass and stolidly swishing the flies from their flanks with their long tails, unconscious of the rising danger,—to see these all placidly mirrored in the silent water it required an effort to realize the irresistible force of this remorseless element. By mid-day the water had covered all the roads in the inner plain, except the Cemetery Road, but the Taku Road remained dry until Thursday morning, when its sanctity was also invaded. During the whole of Thursday the water rose steadily, over the lower portions of the Taku Road, Messrs. Mackenzie & Co.'s premises were completely surrounded, and from the Meadows Road to the Kwanglung Road it washed the back walls of Messrs. Cordes & Co., Dr. Irwin, and Messrs. Piatkoff & Co.'s premises.

As the water threatened the Taku Road the only practical measure of defence which was organised was a dam hurriedly run up from the corner of the compound wall of the Japanese Consulate across the Taku Road, and carried outside Mr. Tenney's house, the Flour Mill, and Mrs. Moore's dairy, to the arch-way of the mud wall over the Race-course Road. This clever piece of extemporaneous engineering was probably due to the sharp-eyed instincts of the Jesuit missionaries, who own an immense amount of house property within the protected area, and whose recently erected houses on the French Concession had been mercilessly flooded the day before. In thus defending their own property the good Fathers also protected a vast number of Chinese tenants, and also much foreign owned land, godowns, and houses which are included in the section, the Taku Road gateway being high enough to keep out the water

on that side. The inner plain was rapidly filled from the outer plain entirely through the openings at the Hai-kwan-su, which could easily have been blocked, but no thought was given to this until the flood was pouring in like a millrace, when chairs and peacock's feathers and red tasselled cavaliers began to career along the wall in a state of aimless disarray.

Another excellent piece of work, was the prompt protection of the Gas Works, when the Cemetery Road was threatened. Improvised embankments were thrown up just in time, for before they were completed the site of the Gas Works was only approachable by wading through two feet of water. Now it is believed the measures taken will insure our regular supply of gas, the deprivation of which would have been severely felt, and the Directors of the Company deserve credit for their promptitude.

The cemetery itself is unfortunately covered, as it was in 1871.

Like an island in the sea stands the Powen-shu-yuen, the new College on the river bank, its immunity being due partly to the height of its foundation, and partly to the substantial embankment thrown up round it. It is wonderful indeed how effective these simple contrivances are, for on the opposite side of the river the Military School, which was so easily inundated by the last floods, has been kept perfectly dry by the good earth-work which was thrown up round after that valuable experience.

The progress of the flood on the north, or east, or left bank of the river has been even more disastrous than on the right bank. The extensive plain between the French Marsh and the river was flooded from several sources, and others from a huge gap cut in the outer wall close to the railway bridge; through this for two days the waters rushed with all the features of a rapid—the roar being heard at a considerable distance. Cutting the creek stream at right angles the combined floods seethed under the railway bridge and rapidly rose to the level of the military road which runs from the city to the Arsenal and Camps. This, although 6 ft. above the level of the plain, is into a wash, and should the slightest breeze arise will inevitably be totally destroyed, as the waves attain considerable size and force, having so long a "fetch," in a northerly or north-westerly blow.

The quadrangular plain which contains the Camps and brick kilns had complete exemption from water till Thursday; and would have had it still but for the supineness of the Chinese authorities and the incompetence of the gangers; on Thursday a wet mud wall (no dry material being then obtainable), three feet high and three feet broad, was thrown up to keep back the waters threatening the plain from the moat—this proved ridiculously inadequate, and on Thursday, at three a.m., the pent up floods broke through.

So far they have been kept from invading the Arsenal itself, but how long this great centre of labour will have exemption is uncertain. The Camps, the Arsenal, and the Railway are now the only land visible on the left bank.

The water has been practically stationary since Thursday night, neither rising nor falling. The river level varies a few inches, but on the average is 2 feet 6 inches above the water on the plain. The Grand Canal level is of course the same as that of the Peiho into which it falls, and as it still pours its waters on the plain the fact that the rise of the latter has been arrested seems to show that the water is finding an equivalent outlet somewhere. Reports came yesterday from Pai-tang-kou, where steamers now discharge, that the water had begun to pour from the plain into the river.

The water is up to the City walls but it cannot get through; the gates on the south and west sides are closed and dammed up. The Viceroy's Yamén, situated on the farther side of the Grand Canal, is however under water.

According to the recollection of "the oldest inhabitant," and from certain marks on stones and walls, the height of the present flood is about a foot less than the great flood of 1871, and as the Taku road as well as the roads within the British Settlement have been considerably raised since then by repeated layers of macadam, the inconvenience to foreign residents is not nearly so great now as on the former occasion.

The country being now an open sea, with trees to mark the line of roads and canals, and the villages standing out of the water like islands, with the higher of the grave mounds showing their heads above water, those who could muster boats or canoes had a fine time in sailing over the road over which only three days before carriages were driving. Curious sights presented themselves. The animal creation, surprised by the inundation, were non-plussed like the mammoths in Siberia. Nearly every tree formed the refuge of a snake, and the

exponents of "Tree and Serpent worship" might have derived from the spectacle some light on the mythical origin of that cult. The graves were literally covered inches deep, some with beetles, some with mole-crickets (carpenters) and other many kinds, while the water in places was alive with the creatures swimming for their lives. What became of the small mammals we have not heard, but probably the villagers on their mounds could tell a tale of the unwelcome invasion of their asylums.

Of the causes of the flood it is perhaps premature to speak. The rivers to the west undoubtedly overflowed, and the Hunho is said to have effected a junction with the Peiho at Yang-tsun instead of at Hsi-ku, its normal confluence. This would perhaps account for the congestion of the river below Yang-sun. But the controlling influence which the Grand Canal has obviously exercised over the situation points strongly to the overflow of the Yellow River as the main cause of our present inundation. Should that be the case it would be futile to make any attempt to stop the overflow of the Grand Canal, and all that can be practically aimed at is to facilitate the drainage of the plain towards the sea.

What all this means to the poor people it is superfluous to dwell upon. Their distress is beyond expression, only equalled by their marvellous patience in bearing it. Most of the houses of the poor in this province being built of mere mud, no resistance could be offered to the water, and when the flood passed over a village it melted away like a lump of sugar in a cup of coffee. The first reports of loss of life appear to have been exaggerated, though no doubt a good many found watery graves. So sudden was the rise in the river above Tientsin that some boats which were anchored with short cables were lifted up before the crews took the alarm and could pay out chain, and were swamped at their moorings, the crews being drowned. The complete destruction of a season's crops is alone a calamity of the first importance, and the exposure and discomfort of old and young is painful to contemplate. Of the area of the devastation no exact estimate can be formed, but probably 3,000 square miles, which is only one-tenth of the area drained by the Peiho system, is not an excessive figure. The entire obliteration of the roads has so isolated the towns and villages, that of their condition nothing at all is known. We can only speak of the sufferers on the immediate outskirts of Tientsin, who, like the animal tribes, are seeking the dry places whereon to spread their mats. The city wall has been portioned out among the refugees from the different sections, and the roads and streets are beginning to be thronged. Nothing is more remarkable than the exemplary quietness with which these poor people meet their woes. The British Settlement with its wide, dry, and not too busy streets offers what might have been through an irresistible temptation to the drowned-out multitudes, but no thought of invading it seems as yet to have entered their minds. No doubt when the authorities have had time to collect themselves some general scheme of relief will be set on foot, and it is certain that private benevolence will not be backward in mitigating, to some slight extent, the misery around. Relief works of a useful character would undoubtedly have been found had the flood been somewhat less exacting, but as all work of that nature requires some dry ground, of which there is not a rod in the whole distressed area, the very material is denied to the hands of the labourers.—*Chinese Times*.

FALSE DAWN.

BY RUDYARD KIPLING.

To-night God knows what things shall tide,
The Earth is racked and faint—
Expectant, sleepless, open-eyed;
And we, who from the Earth were made,
Thrill with our Mother's pain.

—In *Durance*.

No man will ever know the exact truth of this story; though women may sometimes whisper it to one another after a dance, when they are putting up their hair for the night and comparing lists of victims. A man, of course, cannot assist at these functions. So the tale must be told from the outside—in the dark—all wrong.

Never praise a sister to a sister, in the hope of your compliments reaching the proper ears, and so preparing the way for you later on. Sisters are women first, and sisters afterward; and you will find that you do yourself harm.

Saumarez knew this when he made up his mind to propose to the elder Miss Coleleigh. Saumarez was a strange man, with few merits, so far as men could see, though he was popular with women, and carried enough conceit to stock a Viceroy's Council

and leave a little over for the Commander-in-chief's staff. He was a civilian. Very many women took an interest in Saumarez, perhaps, because his manner to them was offensive. If you hit a pony over the nose at the outset of your acquaintance, he may not love you, but he will take a deep interest in your movements ever afterward. The elder Miss Copleigh was very nice, plump, winning, and pretty. The younger was not so pretty, and from men disregarding the hint set forth above, her style was repellent and unattractive. Both girls had practically the same figure, and there was a strong likeness between them in look and voice; though no one could doubt for an instant which was the nicer of the two.

Saumarez made up his mind as soon as they came into the station from Behar to marry the elder one. At least, we all made sure that he would, which comes to the same thing. She was two-and-twenty, and he was thirty-three, with pay and allowances of nearly 1,400 rupees a month. So the match, as we arranged it, was in every way a good one. Saumarez was his name and summary was his nature, as a man once said. Having drafted his resolution he formed a select committee of one to sit upon it, and resolved to take his time. In our unpleasant slang, the Copleigh girls "hunted in couples." That is to say, you could do nothing with one without the other. They were very loving sisters; but their mutual affection was sometimes inconvenient. Saumarez held the balance fair true between them, and none but himself could have said to which side his heart inclined; though every one guessed. He rode with them a good deal and danced with them, but he never succeeded in detaching them from each other for any length of time.

Women said that the two girls kept together through deep mistrust, each fearing that the other would steal a march on her. But that has nothing to do with a man. Saumarez was silent for good or bad, and as business-like attentive as he could be, having due regard to his work and his polo. Beyond doubt, both girls were fond of him.

As the hot weather drew nearer and Saumarez made no sign, women said that you could see their trouble in the eyes of the girls—that they were looking strained, anxious, and irritable. Men are quite blind in these matters unless they have more of the woman than the man in their composition, in which case it does not matter what they say or think. I maintain it was the hot April days that took the colour out of the Copleigh girls' cheeks. They should have been sent to the Hills early. No one—man or woman—feels an angel when the hot weather is approaching. The younger sister grew more cynical—not to say acid—in her ways; and the winningness of the elder wore thin. There was more effort in it.

Now the station wherein all these things happened was, though not a little one, off the line of rail, and suffered through want of attention. There were no gardens, or bands, or amusement worth speaking of, and it was nearly a day's journey to come into Lahore for a dance. People were grateful for small things to interest them.

About the beginning of May, and just before the final exodus of hill-goers, when the weather was very hot and there were not more than twenty people in the station, Saumarez gave a moonlight riding picnic at an old tomb six miles away, near the bed of the river. It was a "Noah's Ark" picnic; and there was to be the usual arrangement of quarter-mile intervals between each couple, on account of the dust. Six couples came altogether, including chaperones. Moonlight picnics are useful just at the very end of the season, before all the girls go away to the Hills. They lead to understandings, and should be encouraged by chaperones; especially those whose girls look sweetest in riding habits. I knew a case once. But that is another story. That picnic was called the "Great Pop Picnic," because every one knew Saumarez would propose then to the eldest Miss Copleigh; and, beside his affair, there was another which might possibly come to happiness. The social atmosphere was heavily charged and wanted clearing.

We met at the parade ground at ten; the night was fearfully hot. The horses sweated even at walking pace, but anything was better than sitting still in our own dark houses. When we moved off under the full moon we were four couples, one triplet, and Mr. Saumarez rode with the Copleigh girls, and I loitered at the tail of the procession, wondering with whom Saumarez would ride home. Every one was happy and contented; but we all felt that things were going to happen. We rode slowly; and it was nearly midnight before we reached the old tomb, facing the ruined tank, in the decayed gardens where we were going to eat and drink. I was late in coming up; and, before I went into the garden, I saw that the horizon to the north carried a faint, dun-coloured

feather. But no one would have thanked me for spoiling so well-managed an entertainment as this picnic—and a dust storm, more or less, does no great harm.

We gathered by the tank. Some one had brought out a hanjo—which is a most sentimental instrument—and three or four of us sang. You must not laugh at this. Our amusements in out-of-the-way stations are very few indeed. Then we talked in groups or together, lying under the trees, with the sun-baked roses dropping their petals on our feet, until supper was ready. It was a beautiful supper, as cold and iced as you could wish; and we staid long over it.

I had felt that the air was growing hotter and hotter; but nobody seemed to notice it until the moon went out and a burning hot wind began lashing the orange trees with a sound like the noise of the sea. Before we knew where we were, the dust storm was on us, and everything was roaring whirling darkness. The supper table was blown bodily into the tank. We were afraid of staying anywhere near the old tomb for fear it might be blown down. So we felt our way to the orange trees where the horses were picketed and waited for the storm to blow over. Then the little light that was left vanished, and you could not see your hand before your face. The air was heavy with dust and sand from the bed of the river, that filled boots and pockets and drifted down necks, and coated eyebrows and mustaches. It was one of the worst dust storms of the year. We were all huddled together close to the trembling horses, with the thunder clattering overhead and the lightning spurting like water from a sluice, all ways at once. There was no danger, of course, unless the horses broke loose. I was standing with my head down and my hands over my mouth, hearing the trees thrashing each other. I could not see who was next to me till the flashes came. Then I found that I was packed near Saumarez and the eldest Miss Copleigh, with my own horse just in from of me. I recognized the eldest Miss Copleigh, because she had a pagri round her waist, and the younger had not. All the electricity in the air had gone into my body, and it was quivering and tingling from head to foot exactly as a corn shoots and tingles in the rain. It was a grand storm. The wind seemed to be picking up the earth and pitching it to leeward in great heaps; and the heat beat up from the ground like the heat of the Day of Judgment.

The storm lulled slightly after the first half hour, and I heard a despairing little voice close to my ear, saying to itself, quietly and softly, as if some lost soul were flying about with the wind:—"O my God!" Then the younger Miss Copleigh stumbled into my arms, saying:—"Where is my horse? Get my horse, I want to go home. I want to go home. Take me home."

I thought that the lightning and the black darkness had frightened her; so I said there was no danger, but she must wait till storm blew over. She answered: "It is not that! It is not that! I want to go home. Oh, take me away from here!"

I said she could not go till the light came; but I felt her brush past me and go away. It was too dark to see where. Then the whole sky was split open with one tremendous flash, as if the end of the world were coming, and all the women shrieked.

Almost directly after this, I felt a man's hand on my shoulder and heard Saumarez bellowing in my ear. Through the rattling of the trees and howling of the wind, I did not catch his words at once, but at last I heard him say:—"I've proposed to the wrong one! What shall I do?" Saumarez had no occasion to make this confidence to me: I was never a friend of his, nor am I now; but I fancy neither of us was himself just then. He was shaking as he stood with excitement, and I was feeling queer all over with the electricity. I could not think of anything to say except:—"More fool you for proposing in a dust storm." But I did not see how that would improve the mistake.

Then he shouted: "Where's Edith—Edith Copleigh?" Edith was the younger sister. I answered out of my astonishment: "What do you want with her?" Would you believe it, for the next two minutes, he and I were shouting at each other like maniacs—he vowing that it was the younger sister he had meant to propose to all along, and I telling him till my throat was hoarse that he must have made a mistake! I can't account for this except, again, by the fact that we were neither of us ourselves. Everything seemed to me like a bad dream—from the stamping of the horses in the darkness to Saumarez telling me the story of his loving Edith Copleigh since the first. He was still claving my shoulder and begging me to tell him where Edith Copleigh was, when another lull came and brought light with it, and we saw the dust cloud forming on the plain in front of us. So we knew the worst was over. The moon was low down, and there was just the glimmer of the false

dawn that comes about an hour before the real one. But the light was very faint, and the dun cloud roared like a bull. I wondered where Edith Copleigh had gone; and as I was wondering I saw three things together: First Maud Copleigh's face come smiling out of the darkness and move toward Saumarez, who was standing near me. I heard the girl whisper: "George," and slid her arm through the arm that was not claving my shoulder, and I saw that look on her face which only comes once or twice in a life-time—when a woman is perfectly happy and the air is full of trumpets and gorgeous coloured fire and the earth turns into cloud because she loves and is loved. At the same time I saw Saumarez's face as he heard Maud Copleigh's voice, and fifty yards away from the clump of orange trees I saw a brown holland habit getting upon a horse.

It must have been my state of over-excitement that made me so quick to meddle with what did not concern me. Saumarez was moving off to the habit; but I pushed him back and said:—"Stop here and explain. I'll fetch her back!" And I ran out to get at my own horse. I had a perfectly unnecessary notion that everything must be done decently and in order, and that Saumarez' first care was to wipe the happy look out of Maud Copleigh's face. All the time I was linking up the curb-chain I wondered how he would do it.

I cantered after Edith Copleigh, thinking to bring her back slowly on some pretence or another. But she galloped away as soon as she saw me, and I was forced to ride after her in earnest. She called back over her shoulder:—"Go away! I'm going home. Oh, go away!" two or three times; but my business was to catch her first and argue later. The ride just fitted in with the rest of the evil dream. The ground was very bad, and now and again we rushed through the whirling, choking "dust-devils" in the skirts of the flying storm. There was a burning hot wind blowing that brought up a stench of stale brick kilns with it; and through the half-light and through the dust-devils across that desolate plain flickered the brown holland habit on the gray horse. She headed for the station at first. Then she wheeled round and set off for the river through beds of burnt-down junglegrass, bad even to ride a pig over. In cold blood I should never have dreamed of going over such a country at night, but it seemed quite right and natural, with the lightning crackling over head, and a reek like the smell of the pit in my nostrils. I rode and shouted, and she bent forward and lashed her horse, and the aftermath of the dust storm came up and caught us both and drove us down-wind like pieces of paper.

I don't know how far we rode; but the drumming of the horse-hoofs and the roar of the wind and the face of the faint blood-red moon through the yellow mist seemed to have gone on for years and years, and I was literally drenched with sweat from my helmet to my gaiters when the gray stumbled, recovered himself, and pulled up dead lame. My brute was used up altogether. Edith Copleigh was in a sad state, plastered with dust, her helmet off, and crying bitterly. "Why can't you let me alone?" she said. "I only wanted to get away and go home. Oh, please let me go!"

"You have got to come back with me, Miss Copleigh. Saumarez has something to say to you. It was a foolish way of putting it; but I hardly knew Miss Copleigh, and though I was playing Providence at the cost of my horse, I could not tell her in as many words what Saumarez had told me. I thought he could do that better himself. All her pretence about being tired and wanting to go home broke down, and she rocked herself to and fro in the saddle as she sobbed, and the hot wind blew her black hair to leeward. I am not going to repeat what she said, because she was utterly uninteresting.

This if you please, was the cynical Miss Copleigh. Here was I, almost an utter stranger to her, trying to tell her that Saumarez loved her, and she was to come back to hear him say so. I believe I made myself understood, for she gathered the gray together and made him hobble somehow, and we set off for the tomb, while the storm went thundering down to Umballa and a few big drops of warm rain fell. I found out that she had been standing close to Saumarez when he proposed to her sister, and had wanted to go home to cry in peace, as an English girl should. She dabbed her eyes with her pocket handkerchief as we went along, and babbled to me out of sheer lightness of heart and hysteria. That was perfectly unnatural; and yet, it seemed all right at the time and in the place. All the world was only the two Copleigh girls, Saumarez and I, ringed in with the lightning and the dark; and the guidance of this misguided world seemed to lie in my hands.

When we returned to the tomb in the dead stillness that followed the storm, the dawn was just breaking and nobody had gone away. They

were waiting for our return. Saumarez most of all. His face was white and drawn. As Miss Copleigh and I limped up he came forward to meet us, and when he helped her down from her saddle, he kissed her before all the picnic. It was like a scene in a theatre, and the likeness was heightened by all the dust, white, ghostly looking men and women under the orange trees, clapping their hands—as if they were watching a play—at Saumarez' choice. I never knew anything so un-English in my life.

Lastly, Saumarez said we must all go home, or the station would come out to look for us, and would I be good enough to ride home with Maud Copleigh? Nothing would give me greater pleasure, I said.

So, we formed up, six couples in all, and went back two by two: Saumarez walking at the side of Edith Copleigh, who was riding his horse.

The air was cleared; and little by little, as the sun rose, I felt we were all dropping back again into ordinary men and women, and that the "Great Pop Picnic" was a thing altogether apart and out of the world—never to happen again. It had gone with the dust storm and the tingle in the hot air.

I felt tired and limp, and a good deal ashamed of myself, as I went in for a bath and some sleep.

There is a woman's version of this story, but it will never be written * * * unless Maud Copleigh care to try.—*Alta*.

DEPARTED.

Per French steamer *Congo*, for Shanghai via ports:—Mr. Schlessler, Mr. A. Seisson, Mr. Frank Reddaway, Mrs. Reddaway, Mrs. Brandio, family and 2 amahs, Mr. E. Lusecombe, Mr. Edward Machele, Mr. F. M. da Luz, Mr. Pitteri, Mr. Ijiri Hikosho, Mr. Taketa Hideo, Mr. Imai Kune-masa, Mr. Kaburaki Makoto, and Mr. Hong Jeong Wu in cabin.

Per German steamer *General Werder*, for Hongkong via Kobe:—Consul General Greathouse, Dr. and Mrs. Heering, 2 children, and amah, Dr. Briegleb, Mr. Groeper, Mr. Stacken, Captain Hohimaru, Mr. Aslamoff, Mr. Basom, Mr. Schroeder, Mr. O. Keil, Mr. Scheidt, Mr. Stewardt, Mrs. Harlow, Mr. Napalkoff, Mr. Kunii and servant, and Mr. Paulsen in cabin; 11 Europeans and 38 Chinese in steerage.

Per Japanese steamer *Saikio Maru*, for Shanghai and ports:—Rev. and Mrs. O. A. Dukes and 2 children, Rev. and Mrs. G. R. Loehr and 2 children, Bishop Wilson, Mrs. Bradley, Mrs. Milton, Mrs. B. Gardiner, Mrs. A. Thomson, Mrs. Fitzgerald, Miss D. Fitzgerald, Rev. W. A. Madley, Dr. Abercrombie, Messrs. D. H. Blake, T. A. Hearne, Ichinose, Hirano, T. W. Hellyer, Delacamp, J. Bio, L. L. Forbes, J. A. Peebles, J. Beattie, A. M. Bisbee, and Hosoya in cabin; Mr. Saka and Mrs. J. Hanna in second class, and 66 passengers in steerage.

CARGO.

Per French steamer *Congo*, for Shanghai via Kobe:—Silk for France 74 bales. For Italy 1 bale. Treasure for Singapore, \$140,000. For Shanghai \$1,400.

REPORTS.

The Japanese steamer *Nagato Maru*, Captain Ekstrand, reports:—Left Hakodate the 13th August at 8 a.m.; had light variable winds and overcast; passing fog banks at times p.m. weather fine and clear southerly swell. Arrived at Oginohama the 14th at 7.20 a.m. and left at noon; had moderately S.E. swell at 11 p.m. set in variable with rain; which finished at 2 a.m. on 15th weather clear. Arrived at Yokohama at 1.45 p.m.

The Japanese steamer *Saikio Maru*, Captain Conner, reports:—Left Shanghai the 9th August at 4.30 a.m.; had pleasant weather throughout the passage. Arrived at Nagasaki the 10th at 4.50 p.m. and left the 12th at 5 p.m.; had strong S. winds and heavy squalls. Arrived at Shimonoseki the 13th at 5.25 a.m. and left at 5.30 a.m.; coming through the Island Sea had strong E. winds and misty, rainy weather. Arrived at Kobe the 14th at 4 a.m. and left the 15th at 2 a.m.; had first part strong E.N.E. winds and blinding rain to Rock Island; thence to port fresh breeze and rain. Arrived at Yokohama the 16th August at 10.50 p.m.

The British steamer *China*, Captain Seabury, reports:—Left San Francisco the 31st July at 3.45 p.m., and left Victoria the 3rd August at 2.35 a.m. Time from San Francisco 16 days, 3 hours, and 47 minutes. Time from Victoria 13 days, 3 hours, and 53 minutes.

The Japanese steamer *Wakunoura Maru*, Captain Hussey, reports:—Left Kobe the 16th August at noon; had light winds from the S.E. and fine weather; passed Oosima at 10.15 p.m., with a strong wind from E.N.E., increasing to a strong gale with high sea continuing to 4 p.m. on the 7th; passed Rock Island at 9 p.m., with strong winds from E.N.E. Arrived at Yokohama the 18th August at 5 a.m.

The Japanese steamer *Omi Maru*, Captain Christensen, reports:—Left Hakodate the 18th August at 11 a.m.; had light S.E. winds with thick fog from Cape Blunt to Shiroiyasaki; thence moderate southerly wind and fine clear weather to port. Arrived at Yokohama the 20th August at 9.30 a.m.

The Japanese steamer *Yamashiro Maru*, Captain Young, reports:—Left Kobe the 19th August at noon and anchored in the roads till 1 a.m. next morning; had strong E.N.E. gale and high sea which continued all day unabated, moderating somewhat on approaching Omai-saki this morning (20th); thence to Rock Island at 4 a.m., moderate breeze from east and clear bright weather; Rock Island to port N.E. moderate to fresh breeze and clear weather. Arrived at Yokohama at 10.45 a.m.

The Japanese steamer *Nagato Maru*, Captain Ekstrand, reports:—Left Kobe the 20th August at noon; had light easterly winds and fine weather throughout on the 21st at 6 a.m. wind increasing and heavy easterly sea getting up, 8 a.m. set in with thick rain; at noon wind and sea decreasing but raining hard at times which continued till arrival at Yokohama at 9 p.m.

LATEST COMMERCIAL.

IMPORTS.

Business is almost at a standstill, owing to the rise in exchange, which has frightened buyers, who are now becoming seriously disturbed in mind about their previous purchases. Values of all imports are nominally lower, in sympathy with the rise in exchange. Sales reported during the week amount to 400 bales English Yarns, 275 bales Bombays, and 3,500 pieces Shittings.

COTTON PICK GOODS.

Grey Shittings—8 1/2 yds. 39 inches	\$1.35	to 1.90
Grey Shittings—9 1/2 yds. 45 inches	1.65	to 2.54

METALS.

Nothing fresh report in this market. Exchange continues to rise and all imported goods are equally depressed. Quotations nominally unchanged, but weak. Some business said to be done in Wire Nails, but at very low prices.

Flat Bars, 1/2 inch	\$2.70	to 2.80
Flat Bars, 1 inch	2.80	to 2.90
Round and square up to 1/2 inch	2.70	to 2.90
Nailrod, assorted	Nom.	
Nailrod, small size	Nom.	
Iron Plates, assorted	3.00	to 3.15
Sheet Iron	3.30	to 3.50
Galvanized iron sheets	6.00	to 6.50
Wire Nails, assorted	4.00	to 4.50
Tin Plates, per box	4.80	to 5.10
Pig Iron, No. 3	1.30	to 1.35

KEROSENE.

Market without any noteworthy feature. The trade in Tokyo is not active and prices there are reported easier. Russian is said to be especially weak. We do not alter quotations until some important business justifies the change.

QUOTATIONS.

Chester	Nom.	1.75	to 1.77 1/2
Comet	Nom.	1.70	to 1.72 1/2
Devoe	Nom.	1.67 1/2	to 1.70
Russian	Nom.	1.65	to 1.67 1/2

SUGAR.

Buyers have kept aloof, and during the past seven days not a single picul of Takao brown has been sold. Only two small lots of White Refined have been disposed of, and at slightly lower prices than last week—500 piculs at \$7.20 per picul, and 1,000 piculs at \$6.20 per picul. The market has declined fifteen cents per picul for Formosa Browns, but the stock is firmly held for this rate.

White Refined	\$5.80	to 8.40
Manila	3.80	to 4.60
Taiwanfou	—	—
Pentania	3.00	to 3.40
Namidia	2.90	to 3.20
Cake	3.70	to 4.10
Brown Takao	4.40	to 4.50

EXPORTS.

RAW SILK.

Our last was of the 15th inst., since which date settlements are only 56 Piculs. The entries give

sales of *Filatures* 73 piculs, while in *Re-reels* rejections have exceeded settlements by 17 piculs. There has been no business for direct export; consequently the whole week's trade is comprised in the above mentioned 56 piculs.

The great cause of this stagnation has been the rapid advance in Silver which has compelled buyers to abstain entirely from the Market while holders maintain that they cannot face the losses which the situation involves. By common consent, therefore, both sides have taken up a post of observation and it seems probable that no business of any consequence can be done during the present month.

Telegraphic intelligence both from Europe and America is far from cheering; consumers complain of bad trade, and while they cannot sell their goods they naturally feel disinclined to purchase Raw Material.

Supplies come in from day to day, and we have now 8,000 piculs Stock in Yokohama. It would seem certain that quotations here must presently decline unless holders are successful in getting extraneous aid for carrying purposes.

There has only been one shipping opportunity—the French mail of the 17th—that vessel, the *Congo* took 75 bales for Lyons and Milan, thus bringing the present export figures up to 2,106 piculs against 4,919 last year and 4,390 on the 22nd August, 1888.

Hanks.—No business whatever in this department. No arrivals of any importance and not a single sale.

Filatures.—Business in these has been very small consisting of a few fine sizes for Europe at \$650 and \$630. No trade at all in full sizes until yesterday when a buyer for the United States took about 45 piculs of Tokusha at \$630. Quotations are irregular, many holders refusing to sell at the last-named price.

Re-reels.—Small business in these consisting of Usui at \$615 and \$620. This has been off-set by heavy rejections of previous purchases.

Kakeda.—No transactions in this branch at all; the stock on hand is not large and it is understood that about 1,000 boxes are blocked in the interior by reason of the Railway having been carried away during the recent floods. When communication is restored no doubt supplies from that neighbourhood will be more liberal.

In other sorts nothing whatever has been done.

QUOTATIONS.—(NEW SILK.)

WASTE SILK.

There has been some daily business in this branch resulting in settlements of 205 piculs distributed thus—*Noshi* 171, *Kibiso* 27, *Neri* 7.

As will be seen from the above paragraph we have not a very active market. Buying is in one or two hands and they do not take very large quantities. News from consuming markets are not good and

with the smart rise in Exchange holders will sooner or later have to take a lower price for their wares.

Shipments during the week have been very small, consisting only of 8 bales common Waste sent to Shanghai per steamer "Congo." Present export to date is 750 piculs, against 521 last year and 1160 at the same date 1888.

Pierced Cocoons.—Stock now amounts to 800 piculs, but so far no sale has been made; holders have borrowed money on their stocks and seem to be in no hurry to sell.

Noshi.—Some transactions in *Oshu* are reported at \$135. About 100 bales of *Shinshu Filature* are also entered, price said to be \$150, which seems high. Nothing more done in *Joshi* which appears to "hang fire" for the moment.

Kibiso.—One sale of good *Joshi* at \$45. Nothing done in *Filatures* or in the better kinds of ordinary *Kibiso*.

Sundries.—Nothing done beyond a small transaction in *Neri* at \$8 (uncleaned).

TEA.

There has been a steady demand, though on a somewhat smaller scale than last week. Average sales have been 477 piculs per diem. Some holders sell their Teas cheaper than others, but on the whole the market remains about the same. Total settlements for the week are 3,340 piculs, making a total of 186,740 piculs for the season, against 154,790 piculs in 1889 at same date.

CONTRACTORS TO THE ADMIRALTY, LEADING STEAMSHIP COMPANIES, AND YACHT OWNERS.

STEAM LAUNCHES & YACHTS,

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 10 tons and upwards. We also build small light Boat, Yacht, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. Illustrated Catalogue in English, French or Spanish. Send for Copy to

SIMPSON, STRICKLAND & CO.

DARTMOUTH, SOUTH DEVON (ENGLAND).

LONDON OFFICE:
161, QUEEN VICTORIA STREET, E.O.

MACHINERY.—MR. ARTHUR WADHAM, proprietor of *The Machinery Market and Exporter* (illustrated)—the greatest machinery business journal published—(subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery and Engineering Materials. Mr. Wadham is open to act as sole Buying Agent in England for one or two good firms in Japan desiring to deal with a reliable house. Mr. Wadham's intimate knowledge of the English Machinery and Engineering Trades enables him to save large sums to foreign customers placing their orders in his hands. Firms dealing with Mr. Wadham may rely upon being served in a prompt and straightforward manner. Address:—MR. ARTHUR WADHAM, Engineering Offices:—161, Queen Victoria St., London. Registered address:—Wadham, London. June 28, 1890.

THE GREATEST WONDER OF MODERN TIMES. HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful in an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN! HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcers, curing skin diseases, and in arresting and subduing all inflammations. Mr. L. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; not, in consequence, milk, food, butter, and horse feed ceased to open up until at last a teaspoonful of Ointment was worth gold and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1889.

KEATINGE'S INSHOP POWDER.

BINGS, BEARS, MOTHS, BEETLES, and all other insects, are destroyed by KEATINGE'S INSHOP POWDER, which is quite harmless to domestic Animals. The powder being free from the odour of this Powder is extraordinary, and no one need be troubled by these pests. It is perfectly clean in application. Ask for and take no other than "KEATINGE'S POWDER," as imitations are numerous, and fail in giving satisfaction. Sold by all Chemists, in Tins and bottles. May 3, 1889.

NOW READY,

WITH COLOURED PLAN.

A FULL REPORT on the ERUPTION of BANDAI-SAN, being a reprint from the "JAPAN MAIL" of copious translations from Tokyo Journals, a Description by "Our Reporter," and an "Editorial," written after a visit to the locality. Price 50 Cents.

To be obtained at the Japan Mail Office, or to KELLY & WALSH, Limited.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, AUGUST 30, 1890.

BIRTH.

On the 30th inst., at 7.30 a.m., at 72A, Bloff, the wife of HOLYOAKE BOX of a Son.

DEATH.

On the 23rd inst., at No. 35, Bloff, Captain R. J. C. FRANK.

SUMMARY OF NEWS.

MR. J. M. BIRCH, U.S. Consul at Nagasaki, will leave Japan at no distant date for home.

H.I.H. PRINCE KITASHIRAKAWA returned to the capital on the 26th instant from the Tokaido.

H.I.H. PRINCE KUNI arrived at Kuwana on the 26th instant from Kyoto, and paid a visit to the Great Shrine.

DR. ITO, an Imperial physician, proceeded to Nikko on the 24th instant to attend H.I.H. Princess Kane.

PRINCE KONOVE, who has been staying in Europe pursuing his studies, will return to Japan in a few days.

THE 31st instant is the birthday of H.I.H. Prince Hara, and the celebration will take place at the Hama Detached Palace.

THE *Chiyoda Kan*, ordered by the Naval Department from England, will leave for Japan about the beginning of next month.

H.I.H. PRINCE FUSHIMI proceeded to Chiba Prefecture on the 26th instant, where His Highness will stay for a week.

THE line of the Japan Railway Company between Ichinoseki and Morioka will be opened for traffic about the middle of September next.

DURING the three days ended the 31st ultimo goods estimated at yen 13,954,514 were sold

in the Exhibition, making a total of yen 127,183,635 since the opening of the Exhibition.

THE heavy rain of the 22nd instant damaged the railway line between Usunomiya and Omiya and communication was suspended.

A NEW steamer, named the *Hokkaido Maru*, ordered by the Nippon Yusen Kaisha from England, will be shortly brought out to Japan.

DR. HEINRICH WEIPERT, lately a professor in the College of Law in the Imperial University, has been appointed to a post in the German Legation.

MR. TERAU TORU, a Judge of the Yokohama Court of First Instance, was appointed Professor of the College of Law in the Imperial University on the 25th instant.

RAILWAY communication between Isobe and Maunida, which had been stopped in consequence of the line having been damaged by flooding, was re-opened on the 26th instant.

THEIR Imperial Highnesses Princes Arisugawa, Komatsu, Fushimi, Kitashirakawa, Kacho, and Nashimoto have collectively subscribed a sum of yen 1,000 towards the Relief Fund for distress in the capital.

THE ordinary meeting of the Cabinet was held on the 26th instant and was attended by Counts Yamagata, Yamada, Matsukata, and Goto, and Messrs. Yoshikawa and Mutsu, the proceedings closing at 2 p.m.

THE receipts of the Sanyo Railway Company during the month of July last were yen 12,539,335, the daily average being yen 411,634. The number of passengers carried during the same period totalled 69,410, showing an average of 2,239 daily.

A REPORT by the Sanitary Bureau in the Home Department shows that the number of persons attacked by cholera throughout the Empire from the commencement of the epidemic to the 25th instant was 8,210, of whom 5,862 died.

A TELEGRAM from the Ibaraki Prefectural Government dated the 24th instant announces that various rivers in Ibaraki Prefecture overflowed on the 23rd instant, several bridges were washed away, and an embankment was seriously damaged.

MR. NAKAHARA TARU, residing at Motoshirokanecho, Nihonbashi, was permitted on the 25th inst. by the Minister of State for Agriculture and Commerce, to commence silver mining operations at Sefu-mura, Ashigarakami-gun, Sagami, Kanagawa Prefecture.

ON the evening of the 13th instant three houses were destroyed, and two persons were injured by lightning at Okisugi-mura, Nomi-gun, Ishikawa Prefecture. On the following day a woman was killed by lightning at Oi-mura, Mii-gun, Fukuoka Prefecture.

INVESTIGATIONS prepared by the Sanitary Bureau in the Home Department show that the total number of persons attacked by cholera throughout the Empire from the commencement of the epidemic to the 24th instant was 7,717, of whom 4,566 died.

AN outbreak of fire took place on the 21st instant in a house at Shinomachi Sanjo, Echigo,

Niigata Prefecture, and one hundred and seventy-six dwellings and four telegraph posts were entirely destroyed, before the flames could be got under control. Seven persons were burned to death.

AT a meeting of members of the Kakumelkai Club organized by members of the *Kiushu Kaishin-to* in Nagasaki Prefecture, held on the 27th instant, a motion of dissolution was passed in accordance with the Regulations for Meetings and Public Associations.

A REPORT of the Shizuoka Prefectural Government states that in consequence of the heavy rain of the 22nd instant, the Kano River in Shunto-gun overflowed, and the Iritane, Kurose, and Minato bridges were carried away, about three hundred houses at Numazu being also under water.

AN outbreak of fire took place on the 3rd instant in a house at Tsutsukawamura, Yosagun, Kyoto, and sixteen dwellings were entirely destroyed before the flames could be extinguished. On the 11th instant ten houses were burned to the ground at Kamokami-mura, Kasagun, Kyoto.

A PROJECT has been started by Messrs. Morinaga Katsusuke, Kakinaga Shinsaku, and Morinaga Kyukichi, of Kokura, Fukuoka Prefecture, to establish a bank at Kokura, to be named the Oyo Bank, with a capital of yen 300,000, of which yen 200,000 will be raised from the public in shares of yen 50 each, the remainder being provided by the promoters.

A PHYSICIAN named Nakamura Naoshi, residing at Suzukicho, Kyobashi, who was sentenced in the Tokyo Correctional Court a few days ago to pay a fine of yen 40 for having failed to report to the Authorities that a person whom he had examined had been attacked by cholera, was suspended from medical practice for three months by the Minister of State for Home Affairs on the 26th instant.

NO revival worth mention has taken place in the Import trade. A small quantity of Yarn has been sold, and some Italians and Velvets, but all at lower rates. Metals and Kerosene remain as last reported, and a few small parcels of Sugar, common Manila, comprise the business of the week in that commodity. The principal feature in the Silk trade is the strength of holders. There is plenty of Silk here of high quality and of all descriptions, yet the settlements to date are only one-third of those at the same time last year, and the stock is double, notwithstanding that large quantities are kept back through the rail and other roads having been flooded. A little business was done at the beginning of the week—the total is less than 300 piculs—when exchange dropped 1d., and this was the signal for many holders to raise quotations or take their Silk off the market. Buyers' limits do not admit of business on an extended scale at ruling prices, and if the present condition of affairs in Europe and America continues, holders here will either have to make concessions or keep their Silk. Not a single transaction in Waste Silk has taken place, the attitude of holders being largely responsible for this state of things. Stocks are heavy, and settlements last year at same date were 1,100 piculs more than now. The Tea trade is steady, leaf being unchanged in value. Shipments continue to raise the quantity far above those of last season. Exchange fluctuated—went down for a couple of days, but rose again, and closes firm.

EDITORIAL NOTES.

MR. HARA'S "KWANON" AT THE EXHIBITION.

We read with much interest a note in the *Tokyo Shimpō* epitomizing a discussion said to have taken place between Professor Suyematsu and Mr. Kuki, President of the Committee of Jurors at the Exhibition. All visitors to the Exhibition will remember an oil painting by Mr. Harada Naosaburo, representing the Goddess Kwanon riding on a dragon. Probably no picture in the Exhibition attracted more attention. It was by no means without faults. The dragon, for example was somewhat hard, its colour looked garish, and certain points in the drawing were inconsistent with the idea of rapid motion which the painter evidently intended to convey. But on the whole it was a production of very high merit, nobly conceived and well executed. Moreover, it was an attempt, and a very successful attempt, to adapt oil-painting to a Japanese subject. One would imagine that this feature above all others should have won the hearts of the jurors, especially when accompanied by such qualities as the picture otherwise showed. Yet the Kwanon remained without a prize and even without honourable mention. Against this neglect Professor Suyematsu is represented as having protested. His protest elicited from Mr. Kuki a reply the gist of which is reported as follows by the *Tokyo Shimpō*:—The Professor's remarks had much truth. Mr. Kuki himself had found a great deal to admire in the picture, and the foreigners, above all, who were hired (*yakōtaru*) in the capacity of advisers, had praised it as work of great promise. But the prizes had been limited to one for any individual exhibitor in one section. Mr. Harada had not exhibited the "Kwanon" alone: he had also sent a portrait of Prince Mori of Choshū, and the latter having been judged faultless, whereas the former showed many defects, the prize had been awarded to the portrait, after some discussion.

It is satisfactory to learn that the picture's failure to obtain a prize was due to reasons chiefly independent of its merits. But of the reasons themselves we can only say that they astonish us. The picture of Kwanon and the portrait of Prince Mori were paintings of an entirely different class, and to deny a prize to the former because the latter was more admirable in its own genre amounted to declaring that the same painter could not obtain recognition for excellence in more than one line. If the rules of the Exhibition were framed in that sense, we can only say that they were very unfortunately framed. When we remember what a number of prizes and certificates of merit were awarded to Japanese pictures almost ludicrously wanting in every element of artistic merit, and how very few similar distinctions were conferred on oil paintings, the operation of the rules appears doubly defective.

One error, doubtless of pure inadvertence, we desire to correct in the *Tokyo Shimpō's* writing. The foreigners who acted as advisers to the Committee of Jurors are said to have been "hired" (*yakōtaru*). They were nothing of the kind. Their services were purely gratuitous, and we take it upon ourselves to say that Mr. Kuki never employed the term attributed to him by our Tokyo contemporary.

THE DEPARTMENT OF COMMUNICATIONS RECEIVES UNPLEASANT VISITORS.

We read in the vernacular press that seven or eight days ago the denizens of the servants' quarters in the Department of Communications began to find their rest troubled by insects of a most pernicious character, thousands of which are said to have made their appearance at night and attacked everyone they could find. The result of their bite was a very painful swelling, some four or five inches in circumference, a few of which produced so much constitutional disturbance that the victims were temporarily incapacitated for duty. Application for assistance was made to the Sanitary Bureau of

the Home Department, whence an expert, Mr. Nakahama, was sent to investigate the matter. His examination revealed the objectionable insects to be "bed-worms," according to the translation of the *Mainichi Shimbun*, but the general public will know them by the humbler title of "bed-bugs." It is thought probable that the only way to get rid of the pests will be to burn the houses where they have made their appearance. They are spoken of by our vernacular contemporaries as an importation from the West, and will therefore doubtless rank with cholera, scarlet fever, and other pleasant gifts which the Occident is supposed to present to countries accepting its intercourse. But were bed-bugs unknown in Japan before the signing of the treaties? Perhaps so. Certainly their favourite lodgings by day, the crevices in a wooden bedstead, used not to be available in Japan, but we presume that the interstices of mats, that inexhaustible nursery of fleas, would serve a bed-bug at a pinch. We must admit that we have never before heard of their presence in Japan, but of course our experience is not conclusive. At all events, if they have found their way from the West, the Department of Communications, is a very fitting place for them to make their début.

ELECTRIC LIGHTING IN TOKYO.

Our readers remember no doubt that the present Tokyo Electric Light Company is the result of the amalgamation of two rival companies. As is perhaps not unnatural in the case of a company thus circumstanced, a good deal of animosity is said to be entertained by a portion of the shareholders toward the officers of the company. This strained feeling made itself manifest at a stormy meeting recently held. According to the reports of the vernacular papers, the company's general meeting was held in the Baker's Hall, Sakamotocho, on the afternoon of the 11th last. There were about 80 shareholders present, and Mr. Yajima Sakuro, the president, occupied the chair. After a report on the company's financial affairs had been read, the sense of the meeting was asked in regard to the declaration of a dividend at the rate of 7 per cent., whereupon the shareholders, apparently in a very suspicious mood, began to propound question after question of a searching character. The statement that the profit accruing from the electric railway established by way of trial in Ueno Park, had been a thousand yen, was especially criticised and drew forth many pressing queries. A motion was made by one of the discontented shareholders to the effect that the proposed dividend should be refused and that proper steps should be speedily taken for the reorganization of the company. This motion was enthusiastically seconded, and for a time disruption seemed inevitable. But fortunately, through the great efforts of Mr. Shibusawa Yei-ichi, the shareholders were finally induced to pursue a more peaceful course, with the understanding, however, that a special meeting should be convened about the middle of next month for the settlement of the whole affair.

THE COMMERCIAL CODE.

THE opposition against a speedy carrying out of the Commercial Code seems to be gaining ground day by day. The majority of the vernacular Press unite in demanding a postponement of the date of its operation until at least the 1st of January, 1893, when the Civil Code comes into force. It is also understood that an influential section among officials is strongly in favour of postponement. An idea may be formed of the general character of the arguments employed by the advocates of postponement, from two articles on this question in the *Nippon-jin* and the *Koku-Hon* of a recent date. The *Koku-Hon* acknowledges the importance of a well arranged code of law, now that commercial enterprises and transactions are daily growing more extensive and complicated. But our contemporary cannot approve the Commercial Code promulgated some time ago, for being in its spirit essentially alien, cannot be expected to harmonize with the existing Japanese customs. From this point

of view, the Tokyo journal thinks it especially important that ample time be given before putting the code into operation. A few passages from Count Yamada's memorandum on this subject are then quoted. The Minister of Justice alleges that affairs in the business world are in a complicated condition, and that taking advantage of the general mania for the formation of companies, there are unscrupulous men who rob unsuspecting capitalists of their money by recourse to various fraudulent practices. He ascribes this to the absence of laws regulating commercial matters, and, by way of refuting the arguments for the postponement of the date of the operation of the Commercial Code, he observes that such a course would tend to the destruction of order in the commercial world. The *Koku-Hon* avers that Count Yamada exaggerates the facts of the case. If it be true that the state of things in the commercial world is such that proper order could not be introduced into it were the operation of the Commercial Law postponed until the time when the Civil Law comes into force—two years' interval from now—then, says our contemporary, it was surely the duty of the Minister of Justice to take an earlier opportunity of promulgating the Commercial Law. The *Koku-Hon* observes that, so far from being in a state of disastrous confusion, the business of the country, as acknowledged by every candid observer, is developing upon the whole healthily, and that existing methods have proved by no means defective. The first article of the Codes provides that, so far as they do not come in conflict with its provisions, existing customs shall have force. But, our contemporary goes on to observe, the whole law having been drawn up on a foreign model, its operation cannot but cause a vast convulsion in the business world. The *Koku-Hon* alludes also to another circumstance making for the postponement of the operation of the Commercial Code, namely, that its articles, numbering more than a thousand, are couched in language difficult of interpretation even by legal experts. The fact is that the framers of the Code have very unwisely coined new technical words even where there are better ones in common use among lawyers and others.

Such, in effect, are the reasons which the *Koku-Hon* advances for the postponement of the date of carrying out the Commercial Code. A writer in the *Nippon-jin*, Mr. Kon Soto-saburo, takes a similar line of argument. He observes that to enforce the Commercial Code at so short a notice, smacks of a military despotism, and he urges the necessity of giving people time to study its provisions and to take all necessary steps before its coming into force, in order to avert the misfortune of having their business declared illegal under the new law. Mr. Kon thinks that when the law comes into force, there will be many companies which will have to be dissolved. In the case of such companies it is cruel to require them so to arrange their affairs in the short interval of a few months as to comply with the conditions of the new Code. Should the Government persist in carrying out its original purpose, Mr. Kon thinks that it will be the cause of universal animosity. As to the period of postponement, the writer leaves it to the judgment of the Authorities.

Since writing the above we have come across an article on the same subject in the *Kisat Zasshi* from the pen of Mr. Masujima. After observing that this question is engaging the attention of men of business, he goes on to express great satisfaction that practical men have begun to recover the influence and power hitherto usurped by professional politicians. He thinks that in order to justify the demand for the postponement of the date of carrying out the Commercial Code, it is not necessary to employ any intricate and profound argument, but that it is sufficient to mention the bare fact that the law in question is difficult to understand. The same, he says, is true of the Civil Code. Though an ordinary person cannot be expected to comprehend the principles underlying legal pro-

visions, he ought to understand their direct meaning. Now Mr. Masujima tells us that, as they stand, the provisions of the Commercial Code—Civil Code likewise—are extremely difficult of interpretation. He goes so far as to assert that the original framer having had before his mind's eye the state of things in the European commercial world only, the provisions of the Code have the appearance of having been brought together at random without any consideration for customs prevailing in Japan. The eminent barrister also discusses a few more points about the Commercial Code, but as they have little reference to the question at issue, we do not think it necessary to allude to them in the present connection.

We have frequently found ourselves in a position of unwilling opposition to Mr. Masujima and his fellow-thinkers with reference to the subject of the new laws, but the point advanced by him now is plainly reasonable. If he, a thoroughly well informed barrister, gives it as his deliberate opinion that by putting the Commercial Code into operation from the commencement of next year, business men will be gravely inconvenienced, the interval not being sufficient for them to master the contents of the Code or to adapt their business to its conditions, we certainly shall not attempt to gainsay him. It has always seemed to us also that to put the Commercial Code and the Civil Codes into operation on the same date would be more convenient and natural than to make the operation of the former precede that of the latter by two years. But with regard to the articles in the *Koku-Hon* and the *Nippon-jin*, as well as to the previous utterances of Mr. Masujima himself, we are surprised that the objectors, while announcing in sweeping terms a vast difference between Japanese and Western business methods, never take the trouble to tell us wherein the difference consists. Is the Japanese trade system so very unlike the American or European? Many people would be pleased to have instruction upon this point.

THE FREQUENCY OF CHOLERA CASES IN CERTAIN DISTRICTS.

THE *Hochi Shimbun*, referring to the frequency and virulence of the cases of cholera in Minami Konya-cho, Kyobashi, says that it may with confidence be attributed to the nature of the soil, which is known to be bad, and that another cause is doubtless the condition of the water conduits. These are said to be more than 20 years old, and as the Kyobashi district is at the end of the line of pipes, the water there probably contains more impure matter, the result of percolation, than in any other place along the water route. Yet this does not appear to satisfactorily account for the fact that Minami Konya-cho suffers more than other streets in the neighbourhood where the condition of the conduit is precisely similar, nor for the fact that, during the last cholera epidemic Minami Konya-cho was afflicted more than any other street in Kyobashi. Sanitary officials are busy endeavouring to discover the immediate cause.

CHOLERA PREVENTION.

WHETHER or no cholera be a gift from foreign countries to Japan, there is no doubt that to foreign countries Japan owes her knowledge of how to prevent and cope with the terrible disease. Professor Osawa of the Imperial University has brought out this point very strongly in a recent lecture. He explained that whereas, in the epidemic of the 5th year of Ansei (1857), no less than eighty thousand deaths from cholera occurred in the city of Tokyo alone during the month of August, the total number of seizures in the capital during the ten years from 1877 to 1887 was only twenty thousand. It cannot be said that the type of cholera is less virulent this year than in previous epidemics, considering that some cases have ended fatally in less than two hours from the time of seizure. Yet there is no gainsaying the fact that the disease has thus far made less head than it ever did before; a happy result which can only be attributed to improved measures of prevention. Such is Professor Osawa's opinion, and we cannot

question its correctness. We can ourselves look back to a time when the treatment of cholera cases and the steps taken to check the spread of the disease were almost barbarous as compared with present fashions. A great deal of very amusing criticism has been penned on this subject by writers who evidently know much more than the best experts about the causes of cholera and its prevention. One of them has just told us that "the hopelessly insanitary methods of the Japanese themselves and their utter disregard of the laws of hygiene are themselves an ample reason for the presence of cholera in their midst." "Hopelessly insanitary methods," and "utter disregard of the laws of hygiene" are pretty strong terms to apply to people remarkable for cleanliness and moderation in diet. Cholera ought to be perennial in every Chinese town if its occasional presence in Japan be due to such causes.

THE "ST. JAMES'S BUDGET" ON CONSTITUTIONAL GOVERNMENT IN JAPAN.

THE *St. James's Budget* has the following article on what it calls "The dawn of democracy in Japan."—"Japan has been undergoing the novel experience of a general parliamentary election. The new Constitution, which was promulgated in the early part of last year, provided, among other things, for a House of Commons composed of three hundred members; the parliamentary franchise being conferred upon every man who has attained his twenty-fifth year and who pays land or income tax to the amount of at least £3 a year. The first general election of members of Parliament took place on Tuesday. Now that the Jap has got his House of Commons the question is, What will he do with it? Will his new Constitution fit him like his European clothes? Time will show. Meanwhile, it has to be acknowledged that the Japanese have displayed phenomenal aptitude for Western civilization in the fullest sense of that term. In them the seclusion of centuries seems to have operated in exactly the opposite way to that which Chinese seclusiveness has done. The latter, as a nation, remain nerveless, and still cling to a "played out" civilization. In Japan, on the contrary, long isolation from the rest of the world would appear to have resulted in a conservation of energy; for no sooner were the more intelligent classes really in touch with European influences than vigorous resolution began. The Emperor ceased to be an *Empereur Pâissant*. An army and a navy were devised on modern lines. Trade was placed upon a sound economic basis; as witness the redemption of the depressed currency. The applied sciences were cultivated with assiduity, and with no small amount of success. The civil and the criminal law have been placed on a footing which would do no discredit to some European nations; while education is receiving due attention. The change which began with the Restoration of 1867 may be said to have culminated in the establishment of Constitutional Government, and the present elections give the finishing touch to a steady and—on the whole—peaceful revolution. Assuming that the Japanese are ripe for representative Government, the parliamentary institutions with which they are now endowed can hardly be cavilled at. For electoral purposes, the administrative divisions of the empire into cities and prefectures are taken as the basis; each city and prefecture being subdivided into election districts, on the principle of equal representation for equal numbers of the population. The ballot has been eschewed; but each election district is managed locally, Government officials having no cognizance of the matter until the headman and witnesses communicate the result. The House of Peers, established under the new Constitution, is partly hereditary and partly elective, with a further section nominated by the Emperor. To these Houses of Parliament are entrusted all legislative functions, and also—within certain limits—the control of the public purse. While Parliament is out of session, the Emperor may promulgate ordinances which will have the full effect of law; but only until Parliament re-

assembles, when they must be submitted for acceptance, amendment, or rejection at the earliest possible moment. One might suppose, if it were only for the novelty of the thing, that the Japanese electors would be little better than dumb driven cattle. It appears to be otherwise, however. Party (or, rather, partisan) politics have been raging fiercely for the past year or two. It was "public opinion," formed and directed by writers in the press and by political agitators on the platform that forced Count Okuma to resign in December last. The present composition of the Japanese Cabinet, however, can only be regarded as provisional. There are ten Ministers of Cabinet rank in the Government, besides the Minister-President of State. The latter occupies a position analogous to that of the German Imperial Chancellor, and not to that of the English Prime Minister; for in Japan, as in Germany, the First Minister may resign on a question of policy while the rest of the Cabinet retain their portfolios. Thus it happens that, at the present moment, not one of the four leading statesmen of Japan—namely, Counts Ito, Inouye, Kuroda, and Okuma—is a member of the Government. The principal of Ministerial responsibility for a single department only is no doubt best for Japan; for administration by party is only possible under highly advanced conditions of responsible Government. Japanese Ministers have yet to learn what dual responsibility means—responsibility to the Emperor on the one hand and responsibility to Parliament on the other; and possibly it will take some time for the Legislature to understand its own proper functions—and power. Whether representative government will prove a success in Japan time alone can show; but the Japanese are patriotic, courageous, and intelligent; they possess great confidence in themselves, and mean to succeed in what they have undertaken. These qualities make for success."

MR. NAKAI TOKUSUKE AS PROMOTER OF THE CONTEMPLATED PROGRESSIVE PARTY.

THE earnest endeavours of prominent politicians to organize a grand coalition party based on progressive principles is at present one of the most conspicuous features in the political world. Count Itagaki, who is very enthusiastic for this project, is represented by the *Kokumin Shimbun* as having said that, "This is no occasion for brooding over the past, and that, casting aside all selfish considerations, men should act with lofty disinterestedness." The old leader of the Radicals disclaims any preference as to the man who shall become the promoter of the contemplated alliance, and says that a leader like Mr. Nakai Tokusuke would be very acceptable and that, so far as he (Count Itagaki) is concerned, he should be perfectly willing to act under Mr. Nakai. This spirit of unselfishness is consistent with Count Itagaki's past career. Were others equally inspired by it, the much desired union would soon be an accomplished fact.

RECENT STEAMSHIP CASUALTIES.

OF the fine sister vessels, the *City of Paris*, the *City of Rome*, and the *City of New York*, two are now lying disabled, and are under repair. All these are among the latest and highest products of modern shipbuilding, and are favourite vessels with trans-Atlantic voyagers. Originally built for the Inman and International Steamship Company, the *City of Rome* became the property of the Anchor Line; the *City of Paris*, which proved to be the finest of the three, was until recently the Commodore's vessel of the Inman Line, and the *City of New York* ranked only second to the *City of Paris* as a magnificent modern steamship. This last named vessel, the *City of Paris*, though built for speed, was also built for strength, and her breakdown on the 25th of March was a surprise to every one. Her speed was twenty nautical miles with both screws going, and 16 miles with one. It will be remembered that her shaft suddenly broke, and that the vessel with some difficulty reached Queens-town, the passengers having worn life-belts for 120 hours. It appears that the shaft, getting out of

its true position through the wearing of the bush, broke under the enormous strain, and worked all the damage in the engine-room that caused so much consternation at the time of the accident. The *City of Paris* will be laid up all the summer, a very heavy loss indeed to the Inman Company. The *City of Rome* had equally bad fortune. Leaving New York harbour on the last day in May, she met with bad weather when half way across the Atlantic, and approached the Irish coast in a fog. One of the interesting sights to ocean voyagers nearing Europe is the Fastnet Lighthouse, situated off the Irish coast about 60 miles to the west of Queenstown. They know their voyage is nearly over when this lighthouse is passed. The captain of the *City of Rome*, deceived by currents or otherwise, imagined he was four or five miles to the south of the islands on which the lighthouse stands, when in reality he was heading for them. Warned in time, by hearing the signal of the nearness of land, he slowed down and took soundings, but before he knew the danger his fine vessel had crashed on the rocks, which drove a huge hole in her hull, tearing away the bottom for a considerable distance at the prow. Happily the damage was insufficient to cause her to sink, and she is now under repair in Birkenhead. The finding of the court of inquiry in the matter of the accident to the *City of Paris* must be very satisfactory to the officers and the owners of that vessel. The accident, due, as before stated, to the wearing of the *lignum vite* in one of the bushes of the starboard bracket, was a fatality that was difficult to provide against. Various suggestions of a technical nature were made; but the whole summing up gave full credit to the excellent material and workmanship of the engines, and was highly flattering to the captain and officers, who had conducted themselves admirably in the trying situation in which they were placed.

A NEW DISCOVERY.

"NOTICES have repeatedly been published," says the *Spectator*, "of a coming discovery which would enable a telephone operator to see as well as hear his interlocutor at the other end, and at last the discovery has been completed. The *Telegraph* reports that during the Post Office Jubilee celebration on Wednesday, an instrument was shown, invented by Professor Hughes, F.R.S., and Mr. Preece, which enables any one speaking into a telephone to see his correspondent at the other end, the "image appearing like an animated coloured photograph." The distance covered in the experiments shown was only 30 ft., and it still remains to be seen to what distance light will travel over the wires; but there seems no reason why "visuality" should not be established as far as audibility has been. If it is, the electricians will have realised one of the dreams of the Middle-Age physicists, and have struck one more blow to diminish the separating influence of time and space. It will follow, we presume, that it will be possible not only to recognise but to photograph a face miles distant, a triumph of science which, though probably useless, strikes the imagination almost as much as the revelation of unseen stars on sensitised paper. Strange that the photographer should still fail to fix natural colours, though they appear in every mirror."

A QUESTION OF PRECEDENCE.

THE first official visit ever made out of England by a Lord Mayor of London was made by Sir Henry Isaacs to Edinburgh on the 19th of last June. That dignitary, as representing the great metropolis, came in state to visit the International Exhibition in Edinburgh, and was graciously received by the Lord Provost on behalf of the northern capital. Everything passed off pleasantly. On the 20th his Lordship and suite passed in procession through the streets of Edinburgh, an official coach of great magnificence having been sent on for the occasion, and were received by Lord Provost Boyd at the buildings of the International Exhibition. Here the freedom of the city was conferred on the Lord Mayor, unanimously this time, and not, as in the recent case of Mr. Parnell, under protest of a minority in the Council, including

the chief magistrate, and in face of an overwhelming dissentient vote of the citizens. Why did not the Lord Provost and Council join in the procession, as would have seemed gracious and natural? Because, it is said, a question of etiquette came in the way. The Lord Provost, within the bounds of the burgh, is next to the sovereign, and it is a serious thing to waive one's precedence. To go first, ahead of the Lord Mayor, might be questionable taste; to come in the rear was a surrender of dignity. And so Lord Provost Boyd, it appears, chose to stay away altogether. Mr. Blackburn, one of the guests at the banquet given to the Lord Mayor, seems to have disgraced himself. He is an ex-president of the Trades' Council of Edinburgh, and is therefore looked upon as a representative of Trades Unionism in the city. When Her Majesty was toasted, he refused to rise, and the words, "To h— with the Queen," were distinctly heard by his neighbours. The Trades' Council have had a sitting over the matter, and censure their former ex-president in warm terms. The following motion was passed:—"That this Council deeply regrets that any ex-president of the Council should have so far forgotten himself as to have acted in the ungentlemanly way attributed to Mr. D. A. Blackburn, and that the Council further repudiates entirely the idea that he was in any way representing this Council."

A "CRÉDIT MOBILIER" IN JAPAN.

A PROJECT is reported to be on foot in proper quarters for the establishment of *Crédit Mobilier* (*Dosan Ginko* 動産銀行). In connection with the report, the editor of the *Yiji Shimpō* observes that the need of such an institution is growing more urgent in business circles. Owing to the steady progress of the work of redemption, numbers of the public loan bonds have been withdrawn from the hands of the public, and, as a natural consequence, the insufficiency of sureties for effecting loans is keenly felt by business men in general. The recent amendment in the Regulations of the Bank of Japan enabling it to advance money on the security of various railroad and other stocks when they are presented through a National Bank has certainly had the effect of alleviating this inconvenience to some extent. But after all, the Bank of Japan, from the nature of its organization, has necessarily to be very scrupulous about extending assistance of this nature. Under these circumstances, the *Yiji* considers that a *Crédit Mobilier* would undoubtedly be a great boon to the business world.

ANNIVERSARY MEETING OF THE PARTIES WHICH OPPOSED TREATY REVISION LAST YEAR.

Our readers no doubt well remember that, just a year ago this month, when the nation's attention was wholly absorbed by the question of treaty revision, a strong coalition was formed between the five parties opposed to Count Okuma's programme, the object being to present a united front to the Government's policy in respect of this important question. In order to commemorate this event, a project was set on foot a few weeks ago for holding a "monster meeting of fellow-thinkers." This scheme was naturally regarded by the *Kaishin-to* papers as a shrewd device on the part of the conservatives to frustrate the proposed amalgamation of all the progressive parties, by sowing seeds of discord between the *Kaishin-to* and the other parties contemplating amalgamation. The conservative papers replied to this accusation in a very nonchalant fashion, virtually telling their accusers that people harbouring suspicions were welcome to think as they pleased, and declaring that a question of such national importance ought not to be judged by any narrow partisan view. But whether or no there were grounds for suspicion, it was beyond question that the carrying out of the scheme must have the effect of reviving the feeling of antagonism between the parties who took opposite sides on that great issue. The meeting was opened on the 15th instant in the commodious rooms of the Nakamura Restaurant. The number present is reported to have been one

hundred and thirty-four in all—a figure doubtless a little too large for the peace of mind of the *Kaishin-to* and a little too small for the comfort of the conservatives. It is noteworthy that the names of Messrs. Oi Kentaro, Naido Roichi, Oye Taku, and Kuno Hironaka, the leading members of the *Jiyu-to* and the *Daido Danketsu*, were found in the list of those present, and, on the other hand, it is significant that the leading members of the *Aikoku-to* were conspicuous by their absence. Another feature of the roll of those present was that it included two names which public report has always associated with the dastardly attempt of the notorious Kurushima Tsuneki on Count Okuma's life. This was bad enough, but incomparably worse was the fact that Mr. Yagihara Hanshi, a leading member of the *Daido Danketsu* and one of the promoters of the meeting, is reported to have referred, in his opening speech, to the would-be assassin himself. Kurushima was accorded the honourable distinction of being included among the dead members who had worked for "the cause of national renown" during the eventful period of the negotiations. This circumstance subsequently elicited a sarcastic remark from the *Fomuri Shimbun* and a spirited editorial from the *Choya*. For our own part, we should not have credited the story had not the *Nippon* endeavoured to construe it as lightly as possible without denying its truth. Following Mr. Yagihara, Messrs. Tatsu Shinichiro and Ayai Takewo delivered earnest speeches which were heartily received by the meeting. Both addresses were chiefly retrospective, dealing with the circumstances under which the coalition sprang into existence. The speakers indulged in some bitter allusions to the *Kaishin-to*, and expressed their strong aversion to shaking hands with that party as one wing of the contemplated grand amalgamation.

What lesson is to be learned from such an event as Mr. Yagihara's eulogistic allusion to Kurushima Tsuneki? Surely the lesson which we have often insisted on before, that however changed Japan may be in some respects, the spirit of feudal days still lingers and may at any time find expression. A nation does not change its skin by donning the externals of a foreign civilization. Hostility to foreign intercourse was never indigenous in Japan. A plant sown by events for which foreigners themselves were largely responsible, two centuries of growth did not suffice to root it so deeply that it could survive the influence of nineteenth-century progress. But the case is different with the spirit educated by a thousand years of feudalism. That old notion that a man may attempt anything in the doing of which he is willing to risk his own life, undoubtedly still holds sway in some Japanese breasts, and accounts for the acts of men like Nishino and Kurushima, as well as for the tolerance, to say the least, with which such acts are regarded. But think for a moment what is signified when words of praise are openly bestowed upon a would-be political assassin, a bomb-thrower and a suicide, by a leader of the Radical Party at a meeting attended by the most respected and influential members of the party. How can we venture, after this, to criticise the measures adopted by the Authorities for the control of political associations? Would it be safe in any sense that men who could sit quietly and listen with apparent approval to such language as that of Mr. Yagihara, should be entrusted with the conduct of State affairs? Out of evil good sometimes comes. We sincerely hope that this meeting may have the effect of preventing a coalition which, under the influence of agitators like Mr. Yagihara and his fellow-thinkers, could not be trusted to stop short of any measure or method. Count Iwakura has never shown a scintilla of sympathy with such doings. One of his reasons for dissolving the *Jiyu-to* in past years was inability to control effectually the lawless agitators in its ranks. The *Kaishin-to*, too, has always been conspicuous for moderation and sobriety. It is to be earnestly desired for Japan's sake that the leadership of the great liberal party now certainly on the eve of its

birth may fall effectually into the hands of Count Okuma, Count Itagaki, and their genuine fellow-thinkers, who not only understand what is meant by the responsibilities of Government and the obligations of a constitution, but who know also how to preserve the reputation of their country while working for the cause of their party.

DISSOLUTION OF THE "DAIDO DANKETSU" PARTY.
For some time the public has been anxiously awaiting the final meeting of the *Daido Danketsu* Party. The meeting was opened at last on the afternoon of the 17th instant in the Yayoi-kwan, Shiba Park. Eighty delegates were present, beside many persons who attended the meeting simply in private capacities. The principal, in fact the only, business of the meeting was to decide whether or no the *Daido Danketsu* Party should be dissolved in order to amalgamate with other sections of the *Shimpo-to*. The question was decided affirmatively by a large majority, there being only fourteen "nays." After attending to some minor business, the meeting dissolved.

In arriving at the above resolution, the members of the party acted with apparent unanimity, but in point of fact there exist at least three different opinions in the party. The first—to maintain the independence of the party—is supported by Messrs. Suyehiro, Vagihara, Inagaki, and others. The second is advocated by the members from Yechigo and Shinshu, who, while willing to amalgamate with the *Aikoku-to* and the *Jiyu-to*, have a rooted aversion to union with the *Kishin-to*. The last, but numerically not the least, section, consists chiefly of the provincial members from the north, who are no respecters of parties, and are willing to amalgamate with any politicians professing a progressive creed, whether they belong to the *Kishin-to*, or to the *Jiyu-to*, or to the *Aikoku-to*, or to any other *to*. It is evident, therefore, that although the resolution of the 17th may mean the dissolution of the *Daido*'s organisation, it does not mean the translation of the whole party into the ranks of the new union.

TRADAL DEPRESSION AND THE OSAKA CHAMBER OF COMMERCE.

SOME time ago the vernacular papers mentioned that the Osaka Chamber of Commerce was engaged in investigating the causes of the present tradal depression, and the means of remedying it, with a view to presenting a memorial to the proper quarter on this important subject. The *Jiji Shimpō* now says that Messrs. Teramura and Yoshida, respectively Vice-President and Manager of the above Chamber, arrived at the capital and presented, on the 12th instant, memorials to the Finance Department and to the Bank of Japan. The following are said to be some of the items recommended by the memorialists as proper measures for remedying the evil: first, abundant import of foreign rice, after making a careful estimate of the probable amount of this year's crop; secondly, the inauguration of better means for converting fixed capital into circulating capital by extending the list of securities against which the Bank of Japan is authorized to issue loans; thirdly, the introduction, into commercial and industrial circles, of the habit of conducting business transactions on credit; fourthly, the establishment of uniformity in the rate of interest on money lent by the Bank of Japan both in Tokyo and Osaka; the opening of a *Crédit Mobilier* and a *Crédit Foncier* for agricultural purposes (*Nogyō Ginkō*), to promote the commercial and agricultural interests of the country. The memorials appear to be prepared with great care and to embody the results of much thought and investigation.

TOKYO WATER WORKS.

ALL the vernacular papers announce that it has been finally decided to raise a municipal loan of ten million *yen*, of which six millions and a half are to be employed in the construction of the Tokyo Water Works, and the remaining three

millions and a half will be devoted to the City Improvements scheme. The money is to be raised in five annual instalments, namely, one-tenth on the 1st of January 1891; two-tenths in 1892; three-tenths in 1893; three-tenths in 1894; and one-tenth in 1895. The rate of interest is to be six per cent., and the capital will be paid off in twenty-six years. The scrip will, apparently, be guaranteed by the Government, for we are told that it will circulate in the same manner as the Pension Bonds. It will be of two denominations; a hundred *yen* and a thousand *yen*. No doubt the amount will be subscribed readily enough. It might be obtained in London at five per cent., but if the Japanese shrink from contracting a gold loan when the price of silver was so low that no one could foretell how much further it might fall, they will naturally shrink even more from any such operation at the present time when America is trying an experiment which may possibly end in a financial catastrophe, and which has at all events, dislocated the market so suddenly and sharply that no one can tell what a day may bring forth. For the past seven years Japan has been fixing her floating capital at a rate which ought to have produced most inconvenient results, but unfortunately for her material progress she is debarred from having recourse to the large supplies of cheap money which lie waiting employment in London; and although she no doubt understands, as everybody does, the inevitably crippling results of these perpetual drains upon her own scanty resources, she has to choose the lesser of two evils. Tokyo must have water-works.

SHARKS.

THE fishermen of Wakamatsu in Miye Prefecture seem to have had a somewhat disastrous struggle with sharks. A man called Ito Tokuro employed a number of men, on the 8th instant, to draw a seine. Six big fish were enclosed, and the fishermen hauled in the net with great delight. But when it came into shallow water, four of the fish struggled so violently that they burst their way through the net. Anxious to secure the remaining two, Ito mounted on the back of one of them and attempted to seize its right fin, but the shark fastened its teeth in his arm and dragged him under water. He was rescued, but with the loss of a part of his arm and probably of his life. The last shark was attacked by a number of men, but it bit off a finger of one of its assailants and effected its escape. Not one of the six brutes was captured, the net result of the struggle being a broken net and two fishermen badly hurt.

PRINCE ARISUGAWA'S VISIT TO ENGLAND.

THE letter in *The Times* from its Tokyo correspondent relative to the degree of official attention shown to the Duke of Connaught in Japan, seems to have attracted some interest, on account of its reference to the treatment of Prince Arisugawa when he was in London a few years ago, especially to his being called upon by an official of the Great Western Railway Company to pay his return fare to Windsor, when he went to visit the Queen. This incident was recorded in a French periodical some time in 1885, which purported to give a translation of a portion of the Prince's diary said to be published in Japan after his return. It was quickly taken up in England by *Truth*; but many people thought the story apocryphal, and the Prince's diary a myth. A myth it was not, however, we regret to say.

FINANCIAL RETRENCHMENT.

EVERY political party formed now-a-days in Japan sets retrenchment of administrative expenses in the forefront of its platform, but no political party has yet undertaken to explain how it would go about the task which it so strongly advocates. Count Itagaki puts the amount of possible saving at eight million *yen*; Count Goto, in his political campaign of 1888, put it at fifteen or sixteen millions. The former would cut down the country's expenditure by a tenth; the latter by a fifth. Such divergent es-

timates do not invite confidence. The *Mainichi Shimbun*, finding itself perplexed by them, applied for guidance to a certain Count, who is represented as having replied in the following terms:—"I do not know in what manner Count Itagaki arrived at his estimate of eight million *yen*, or Count Goto at his of fifteen or sixteen millions, but in my opinion, though there is no doubt that administrative expenses should be reduced as much as possible, fifteen million *yen* or even eight millions are quite out of the question. Putting military expenditure in a separate category, to accomplish a saving of two or three millions would be the very utmost achievable. If, indeed, no concern be felt though the business of the State is interrupted and though things that ought to be done are left undone, and if the sole and only object be retrenchment, it would doubtless be possible to effect a saving of ten, or even twenty, millions, but so long as there is a Government, such appropriations must be annually made as will enable it to discharge the essential functions of a Government effectively and expeditiously. Within these limits it is idle to talk of eight or fifteen millions. I do not know what may be the ideas of Counts Itagaki and Goto with respect to the Army and Navy, but I do know that when you come to touch these services you are met by great difficulties. What are you to take as a standard? A country reduces or increases its military establishment when it knows exactly what enemies it has to cope with, but Japan has no such knowledge. Considered in regard to China, to Russia, or to England, her condition is the very opposite of reassuring. But even granting that you reduce the numbers of your soldiers and sailors, are you also to abandon the general survey of the country and the duty of providing good ships of war and efficient arms? If not, you will find that little margin for retrenchment offers in the military line."

FLOODING AT KAWASAKI.

ONE result of the heavy rain which accompanied the gale of Friday evening was extensive flooding in the region bordering the mouth of the Tamagawa at Kawasaki. During the night the river rose steadily, but it was not till well on in the forenoon of Saturday that the overflow assumed serious proportions, though the water had spread inland from the banks at a comparatively early hour in the morning. By mid-day, however, the railway line had been encroached upon to the south of Kawasaki Station and it was found impossible to run the afternoon trains, the water pouring over above the rails. On each side of the river for some hundred yards or so of the bridge, the rails are on an embankment and thus escaped the floods but near the station the track was quite submerged while at the station itself the water stood five inches above the platforms. From the station southward the lines are practically level so that, as will be seen, the passage of trains was out of the question. Fortunately the immense sheet formed by the submergence of the tract of low lying land on both sides of the line moved slowly seaward, otherwise serious damage must have been caused to the line; as things were, however, gangs of workmen quickly prepared the way for traffic as soon as the flooding subsided sufficiently. The first train that ran through from Yokohama yesterday was the 2 p.m. and for a couple of hundred yards south of Kawasaki Station the carriages passed through three or four inches of water. By evening, however, the floods had drained off considerably. The train timed to leave Yokohama at 6.30 p.m. was an hour late, the connecting train from the South having been detained, and though drawn by a couple of engines to make up time, had to slow down over a considerable length of line in the neighbourhood of Kawasaki though the water had all but left the track. Much damage has been caused to the crops by the flooding, the growing grain having been completely submerged over a large district. The town of Kawasaki was invaded by the overflow waters of the Tamagawa and many houses flooded, but the damage thus caused cannot be described as

serious. The roads in the vicinity were covered and locomotion was much retarded; sampans were to be seen on Friday afternoon and Saturday morning cruising in the lanes of Kawasaki, and jinrikisha at the Station got their own prices for conveying travellers to the town, after the floods had partially subsided, having to wade through pools up to the waist. The pear gardens to the north of the river were also flooded, but here the damage was less heavy than in the case of the grain crops.

FLOODS IN YAMAGATA.

THE official report of the recent inundations in Yamagata Prefecture is given in the *Official Gazette* as follows:—"From the 3rd inst. the weather was very changeable and at 6 o'clock p.m. on the 5th very heavy rain came down, which was followed by a strong gale about 11 o'clock the same night. The wind abated a little the following day, but the rain continued to fall heavily. By 1 o'clock that afternoon, a rapid rise was seen in the River Umagasaki, which, rising from Sasaya mountains on the borders of Miyagi and Yamagata Prefectures, flows along the north-east of the city of Yamagata and finally falls into the River Mogami, and the flood carried away the two bridges between that city and Sudzokawa and Chitose. At 6 o'clock in the afternoon, the first and the second embankments were swept away in succession for about thirty *ken*, causing three deaths and a good deal of damage to farms and houses. On the following day at 8 a.m. the flood destroyed the embankment of Tenjinkawara and inundated Hatagomachi, Muyukacho, Hyakushomachi, Kohashimachi, and Sakanamachi, Shimojomachi, and Kazumimachi in the city of Yamagata, washing out the dwelling houses and the bridges on the way. The farms and rice-fields in the neighbourhood of Yemata were damaged to a fearful extent. At 2 o'clock the same afternoon, another breach was made in the embankment a little higher up than the Kunjuku Bridge, causing one death. This was followed by another flood in other portions of the city. The ascertained damage is as follows:—1,490 of *ken* of embankment destroyed, forty bridges swept away, one *ri* and seven *cho* of roadway damaged, 154 houses either carried away or partially broken, 1,031 houses submerged, three persons killed and two injured. The height of the flood varied from six to ten feet. Altogether it was the worst flood that has ever been experienced at this place."

FRIDAY'S STORM IN THE HAKONE DISTRICT.

A JOURNEY to Hakone on Saturday, writes a correspondent, showed the country to be badly flooded in many places, and that several houses had been damaged. At Totsuka there was a wait of about 40 minutes for the up train. The river at Hiratsuka had overflowed its banks, and a vast tract of country was submerged; the water was still very high and rushing down with great force. On arriving at Kodzu, it was seen that the tram-cars had been stopped. The Odawara bridge was found to be in a very shaky condition, the southern end having given way, and nearly half of it was bent down in what appeared to be a very dangerous manner, and it was thought advisable to get out of the jinrikisha and walk across. The roads all the way from Kodzu to Yumoto were badly washed up. The tramway, where it turns off to the left and runs along by the river, has been completely washed away as far as the eye can see up the valley, and at the Yumoto end the new bridges and the line itself are all washed away. Between Odawara and Yumoto several of the large trees have been blown down, and are lying across the road. From Yumoto to Miyazoshita the new road has in many places badly slipped away and is dangerous at several points. At Miyazoshita the water was still pouring down the hill sides and the roads. The new hotel at Kiza suffered badly, all the foundations at the side having been completely washed away and the end of the two-storied building appeared to be in a very dangerous state. What are normally little streams along the hillsides had become rushing torrents, and to proceed

any further up the hill in the direction of Hakone was a matter of great difficulty and considerable danger, as the rushing streams had to be forded, the force of the water and the difficulty of obtaining a foothold made progress slow and difficult. However, in due course Kowakidani was reached, but it found impossible to get any further up the hill. It had been reported that the new hotel at this place had been entirely washed away, but the high and strong stone foundations upon which it is built had stood all the rush of water, and with the exception of a small detached cottage the hotel was found to be intact and in good condition. Here the torrents from the hillsides rushed down in enormous volume and with tremendous force, and the people in the neighbourhood thought Kowakidani was doomed, and this probably gave rise to the report that the place had been destroyed. The small amount of damage sustained speaks well for the builders of the hotel, which is practically uninjured, and the damage to the cottage, which was caused by a land slip, can easily be repaired. The inhabitants never remember such weather as was experienced during the day and night of Friday last. On returning on Sunday the water continued to rush down the hill-sides with great force all the way to Yumoto. A gang of carpenters had been set to work on the Odawara Bridge, and it was expected that the tram-cars would run next day. The bridge appears to be rotten and past repair, though it may be patched up temporarily, and as to the tram-road in the Yumoto valley, that will probably take several weeks to rebuild.

A FESTIVAL OF NEW TEETH.

THE Japanese are proverbially skilled in devising pretexts for celebrations and festivals. It suits their sunny disposition to discover as many occasions as possible for rejoicing. A family festival in honour of the growth of an old gentleman's teeth is, however, about as remarkable as the fact which it is intended to commemorate. The *Hochi Shimbun* says that such an event is on the *tapis* and gives place and name in support of the assertion. A certain Mr. Ito Yeizo, living at No. 64, Ichibemachi, Nichome, Tokyo, having been very fond of sweet things in his youth, lost all his teeth before he was forty and supplied the deficiency with a false set. For a long time he remained happy in the possession of this artificial furniture, but quite recently, being in his sixty-sixth year, he was surprised to find his front teeth growing again. The thing appeared incredible at first, but by and by there were unmistakable evidences that the veteran was about to be provided by nature with an entirely new set of masticators. Preparations are accordingly in progress for a grand family festival, at which all the old gentleman's friends and relatives are to assist in celebrating his second teething.

MEETING OF THE INDEPENDENTS.

THE third meeting of the elected members of the Diet professing independence, came off as expected in the afternoon of the 20th last in the Yayoisha, Shiba Park. The meeting was called to order at three o'clock and on the motion of Mr. Sugiura, Mr. Yoshino took the chair. Mr. Oyagi then addressed the meeting, saying:—"Gentlemen, we meet here to-day for the third time, but as we have no regulations whatever to conduct the affairs of an organized body, our meetings have thus far been only of a social nature. In regard to the formation of an organized body, I presume that you have various views, which it will be impossible to discuss on the present occasion without any kind of rules whatever. Under these circumstances, I beg to move that a committee be appointed for preparing draft of the rules of the association." Messrs. Mori Taichiro, Hashiyama Chuzaimon, and others, members of the Diet from Aichi Prefecture, opposed this motion on the ground that, in view of the fact that the persons assembled had not yet had any opportunity to ascertain their mutual political views, it would be a very rash step to take measures pointing to organization into an association.

These members urged, therefore, that full expression should first be given to political views before appointing a committee to draft rules. Mr. Okata Ryoichiro, a member from Shizuoka, remarked that as strict neutrality *vis-à-vis* existing political parties is the principle of all present, he deemed that principle a sufficient basis for forming the new association, and therefore he saw no need of discussing the various opinions that might be entertained by different members. Mr. Kitagawa Morikatsu, from Miye Prefecture, declared that while they profess at present no attachment to any of the existing parties, they are not pledged to adhere to this neutral position for ever. After these discussions had continued for about two hours, the original motion was put and carried by a large majority. The following resolutions were then adopted:—

Resolved: That a committee of twenty-one be appointed for preparing a draft of the rules of association and choosing its name. This committee shall be elected, one by each prefecture represented, the three prefectures of Aichi, Fukuoka, and Gifu, which have more than five independent representatives, being entitled to elect two.

2. That the committee appointed in the above manner shall hold a meeting at the residence of Mr. Oyagi on the morning of the 21st instant.

3. That another general meeting shall be held on the 22nd inst. in order to discuss the draft prepared by the committee.

The meeting was then adjourned.

The attendance at the meeting was sixty-five, all elected members of the coming Diet. We take this account from the *Choya Shimbun*.

THE HOUSE OF PEERS.

THE members of the House of Peers have now been finally decided, the places of those who were obliged to retire in consequence of a notification of the Household Department having being filled up. The *personnel* of the House now stands as follows:—

COUNTS (15).

Matsura Akira, Ito Hirobumi, Yanagisawa Sakomizu, Uyesugi Shigenori, Ogasawara Tadonobu, Hirohashi Kenko, Ohara Shigetomo, Ogasawa Hisanari, Reizei Tamenori, Matsukata Masayoshi, Tachibana Hirobarn, Ii Naonori, Kiyasu Iyenori, Yamada Akiyoshi, Oginouchi Sanemasa.

VISCOUNTS (70).

Kageyukoji Sukemori, Tachibana Taneyasu, Nabeshima Naoyoshi, Ogino Yuzuru, Kano Hisanobu, Tani Tachiki, Okochi Masatada, Hotta Masayasu, Matsudaira Noritsugu, Kyogoku Takamasa, Mibu Motoasa, Yonetsu Masatoshi, Fukuda Bisei, Okabe Nagamoto, Kaiyeda Nobuyoshi, Sengoku Masakata, Yui Kimmasa, Mura Goro, Hayashi Tomoyuki, Terui Tadatumi, Iwakura Katsusato, Yamanouchi Toyosigae, Nijja Naonobu, Shimadzu Tadaakira, Kawada Kagetomo, Matudaira Nobumasa, Kuze Michiaki, Fumabashi Norikata, Takeda Koretada, Oeko Sadaakiyo, Tono Koyasu, Shishido Ki, Ishino Kanehiro, Aoki Shuzo, Kyodai Kocho, Yonoguchi Munokuni, Sakai Tadaaki, Tanaka Munaki, Koki Takayoshi, Gojo Tametake, Naito Masatomo, Koroda Kiyosuna, Sagara Yonetsugu, Inoue Katsu, Matsudaira Naohiko, Aoyama Yukimasa, Aoyama Yukiyoshi, Satake Yoshitada, Yamaguchi Hiroaki, Sato Hiroyasu, Kawasaka Arimasa, Kawahara Sanetomi, Hitozayami Sugenori, Onuma Kunao, Nabeshima Naotomi, Hiramatsu Takitsugu, Hironaka Masuyoshi, Hosokawa Okisuna, Ito Sukemasa, Akita Akisuye, Hijikata Katsuyuki, Nagatani Nobumasa, Matsumoto Yasutami, Kyogoku Takamori, Tsugami Tsugumasa, Honsho Hisanao, Kurashima Michihiko, Oshio Tadatoshi, Iwahata Huber, Honda Masamichi, Hiramatsu Sadahiko.

BARONS (20).

Watanabe Kiyoshi, Nagaoaka Moriyoshi, Maeda Masanori, Kamiyama Ginoro, Katori Mototaka, Sange Tatsueki, Kikuchi Takeomi, Takasaka Goro, Aoyama Tai, Kaneko Aritomi, Nakagawa Okunaga, Honda Chikao, Nishitsutsuji Fumikuni, Date Munetsugu, Tsuruono Tadayoshi, Sugitani Tokinaga, Kumatsu Yukimasa, Honda Suyemoto, Fujiyeda Masayuki, Niyakubo Fokuyasu.

The nominees of His Majesty the Emperor will have to be added to this list when their names are declared.

THE RAIN.

It is to be feared that by the time the reports from the various prefectures reach us, the heavy rains of last week will be found to have done

much damage. Meanwhile, we note with pleasure that in the regions north of Tokyo, where sheets of water descended on Thursday and Friday, the crops have suffered very little. In the case of great rivers like the Tone-gawa, where farmers are sufficiently sanguine to plant cereals within the space between the margins of the stream in its normal condition and the banks that mark the limits reached by its volume in times of flood, it goes without saying that many acres of rice, sweet potatoes, egg plant, and so forth, have been submerged. But elsewhere the rice and other crops show little sign of the inclement weather. The promise of luxuriant growth which they showed during the burning era of July has doubtless been to some extent marred by the harsh, chilly downpour of recent days, but a spell of sunshine during the next few weeks would probably remedy any harm hitherto suffered, and avert what would this year be a serious calamity, a bad rice harvest.

THE STORM OF THE TWENTY-SECOND.

The railways in the track of last Thursday's storm were rendered impassable in several places. On the Tokaido line the usual service of trains was interrupted on the 23rd instant, but by making strenuous exertions the management were able to announce its resumption the following day. On the roads to the north of the capital, also, much damage was done. Of the line between Takasaki and Yokogawa, only the Takasaki-Isobe section could be kept open for traffic. Between Hongo and Takasaki, also, the trains could not pass on the 23rd, and the service was continued only over the Utsunomiya-Hongo and Takasaki-Matubashi sections. Further, on the Utsunomiya-Nagakubo and Yaita-Nasu sections of the Sendai road, the bridges over the Kisu-kawa and Hohoki-gawa were under water, and trains could not pass. On the Ryomo Railway, a special service was organised for the Koyama-Sano section, but all traffic had to be stopped on the Kiriu-Omama section. Finally, on the 25th instant it was found that, owing to the overflowing of the Tonegawa, parts of the rails between Hasuda and Kurihashi had become unsafe, and traffic had to be confined to the Utsunomiya-Furukawa section.

THE INDEPENDENT MEMBERS OF THE DIET.

We have already explained that the Independent members of the Diet held a meeting some days ago and appointed a committee to prepare a draft scheme of future procedure. It was evident that the meeting already understood pretty clearly what its programme should be, for the committee was only allowed about forty-eight hours to complete its labours, and the 23rd instant was fixed for another general assembly to discuss the draft. On that day, therefore, the members met in the Atagokwan, Atago-yama, Tokyo, to consider the Committee's report.

Mr. Masuda Shigeyuki of Sendai occupied the chair and Messrs. Motoda Hajimu and Nakamura Paroku were elected a special committee to give explanations about the draft resolutions submitted. Contrary to the general expectation that a party containing so many heterogeneous elements would inevitably split into sections, the meeting concluded its business with remarkable concord. There was some contention among the members as to whether or no the document embodying objects of the new association should be made public. But this question was finally decided in the affirmative. Not without eliciting various opinions, however: three different views were advanced: first, that the document should be published, a course necessary implying that the association should be a political one; secondly, that the declaration should be postponed, on the ground that it would be a very ill-advised measure under present circumstances; thirdly, that the organization of the association should be non-political. After a discussion of some warmth, the first opinion prevailed and was adopted almost unanimously, whereupon Mr. Okayama Kenkichi, one of the ablest lawyers in the country and lately elected member of the Diet from Shizuoka Prefecture, formally declared his separation from the association. The Regulations of the Association are as follows:—1. The name of this Association shall be the *Taisei-kai*. 2. The Association shall be constituted of the Members of the Diet holding similar views. 3. The

Association will make full investigations of political questions and will take the results of such investigations as a basis of our action in the Diet. 4. The members of the association shall be divided into a certain number of sections in order to inquire into the practical questions of the day. Such inquiries may sometimes be entrusted to the hands of selected committees, in case the nature of the questions to be investigated should require that course. 5. An executive committee of three shall be elected from among the members in order to conduct the ordinary business of the association. The committee will hold their office for a term of one year. 6. Those who desire to become members of the association must be recommended by at least two members and must send in their application to the executive Committee who, after consulting the opinions of more than ten members, will reply as to whether such application is granted or refused. 7.—The general meeting of the Association shall be held annually before the session of the Imperial Diet for the purpose of deliberating on important matters connected with the Association. In case of urgent necessity, however, an extraordinary meeting may be convened. 8.—The expenditure of the Association shall be borne by the members. All accounts, both estimated and final, shall be submitted to the general meeting of the Association.

From all this we learn very little as to the probable complexion of the *Taisei-kai* policy. The name *Taisei-kai*, we may explain, conveys no political signification. It means merely "great operation party." Any of the existing associations might reform themselves into a *Taisei-kai* without the least alteration of colour. The application is therefore well chosen since it commits the members to nothing in particular. The *Taisei-kai* has, however, made a declaration which we proceed to translate literally, in order that our readers may form their own estimate of the direction in which the so-called "Independents" are destined to gravitate eventually:—

The prosperity of the State and the welfare of the people are our avowed objects in forming the *Taisei-kai*, and justice and integrity are the means we shall employ to attain these objects. Ever inclined to progress, yet never falling into rash radicalism; friendly to the cause of order, but averse to bigoted conservatism; we will steadily tread the path of impartiality, and follow the guidance of moderation and right.

While we fully recognize the imperative urgency of lightening the people's burdens, we shall not be too sparing of public expenditure in matters connected with the vindication of our country's honour. We hold that legislative and administrative perfection is very desirable, but that the actual condition of the people and their stage of progress should be first considered. We hold that of right, a responsible Cabinet ought to be inaugurated, but that political power should never be made subservient to personal ambition and self-interest. We hold that the revision of the treaties is a matter of great necessity, but that the true interests of the nation should never be sacrificed to a morbid desire for fame and achievement. Fully convinced that our true objects can be realized only by the great principle of the "golden mean," we hold aloof from all existing political parties. Being now accorded the great privilege of participating in the legislation of the country, we fellow thinkers, whose individual convictions have unexpectedly been found to be in perfect harmony, hereby organize ourselves into the *Taisei kai*, in order that we may properly discharge the duties devolving upon us as representatives of the people. It is not our purpose to compile out of our own imagination certain political doctrines, or to try to carry the principles of abstract theory into the field of practical politics. Our endeavour shall be to face all practical issues on their own merits and to work out their just and unbiased solution, hoping thereby to realize the great aim of Constitutional Government.

According to the provisions of Article 4 of the Regulations of the *Taisei-kai*, the members were distributed, at their respective option, into the following five sections:—1. Matters relating to diplomatic, military, and educational affairs; 2. Matters relating to international Government; 3. Financial affairs; 4. Judicial affairs; 5. Matters relating to agriculture, commerce, industry, and communications. Mr. Masuda Shigeyuki of Miyagi, Mr. Horiba Katsuhiko of Aichi, and

Mr. Matano Kagetaka of Osaka were elected the executive committee, in accordance with Article 5 of the same Regulations.

It seems to us that of all the political programmes yet put forward, the above is the most sensible and best suited to the time. There are as yet no real issues before the country. Agitators may talk of this question or that; may frame elaborate programmes and clamour for all the privileges elsewhere withheld from a nation, in its own interests, until it has furnished ample proofs of fitness to enjoy them. But until the Diet meets and until these problems really present themselves for solution in Parliament, it is idle to lay down hard and fast rules about them, and still idler to take them as bases for the formation of political parties. The Independents represent the true sense and prudence of the nation. It is into their camp, not into that of the rash Radicals, that we should expect to see a sober, moderate, and astute party like the *Kaishin-to* pass, and it is of such men, not of those who can publicly praise, or tacitly listen to the praises of, Kurushima and his evil imitators that we should expect to see statesmen like Count Okuma and Messrs. Yano and Ozaki act as leaders.

TERMS APPLIED BY JAPANESE TO FOREIGNERS.

REPORTING a correspondence between Mr. Kuki and Professor Suyematsu, the *Tokyo Shimpō* made the former apply the term *yatoi* to the four foreigners who acted in the capacity of advisers to the Jurors at the Exhibition. *Yatoi* means a hired person, and inasmuch as the four foreigners referred to were not hired, but rendered gratuitously the very trifling service required of them, we expressed our conviction that Mr. Kuki had not employed the expression placed in his mouth by the *Tokyo Shimpō*. With reference to this matter the following strange note appears in the columns of a local English journal:—

"The intention of our contemporary in endeavouring to explain away what is naturally calculated to give offence, is worthy of all praise; but unfortunately, we are too familiar with the manners and customs of our Japanese friends to unhesitatingly accept the explanation tendered. We are well aware that among themselves it is the common practice to speak of foreigners in vulgar, if not contemptuous language; and the only inadvertence Mr. Kuki was guilty of, was, that he forgot that his expressions might come under the observation of the foreigner, and unguardedly fell into the usual manner. Does our contemporary wish us to believe that among themselves, and in the absence of foreigners, the Japanese speak of them as *gwaiyoku-jin*? If so, we regret our want of faith. Being well aware that it is always *jin*, and their houses *jin-kan*. This is simply an illustration of what prevails throughout, in connection with foreigners and their concerns. Opportunity is rarely lost to exhibit contempt of, and to insult foreigners, when it can be done with safety, or unknown to the objects. There are exceptions we are sure, who do not wish to speak and act in the manner above indicated, but even they, when amongst their own people, are compelled to follow the fashion, and conform to what is, amongst the majority, practically a natural instinct.

We call this a strange note, not alone on account of the spirit that permeates it, but also because of the curious ignorance it displays. In the first place, the writer is evidently unaware that the only Japanese word which properly describes a foreigner in Japanese employ, under existing circumstances, is *yatoi*. It is quite true that the term implies inferiority on the side of the person employed, but none the less the expression is correct and inevitable. Everybody who, though serving in a Japanese Department of State, does not hold substantive rank as an official, is a *yatoi* and nothing but a *yatoi*. He is classed as a *yatoi* in the Civil List, and he is called a *yatoi*. If the Japanese do not find this term offensive when applied to themselves, why should foreigners rebel against its application to them? They do not hold substantive rank in the Japanese service and cannot hold it at present. Therefore they are classed as *yatoi*, in common with Japanese similarly circumstanced. *Yatoi* does not mean "hiring," as some silly and hyper-sensitive persons are pleased to pretend. It means "employed," and it carries with it just about the same suggestion of inferiority that "employed" does. If the four foreigners who acted in the nominal capacity of advisers to the Jury Committee at the Exhibition had been paid for their

services, we should not have dreamed of criticising Mr. Kuki's supposed use of the word *yatoi*. But as they served gratuitously, and as *yatoi* implies the receipt of remuneration, we thought it right to correct the misconception. So much for *yatoi*. With regard to the rest of our contemporary's strange note, the first question that suggests itself is—whence does the writer derive his knowledge of the language employed by Japanese “in the absence of foreigners?” What can he possibly know about such language? We, at any rate, do not pretend to know about it. Thus much, however, we do know, namely, that no educated Japanese employs the terms “*ijin*” or “*ijinkwan*.” Such expressions are current only among the most vulgar classes—the coolies, the hicks, and the house-servants at the open ports. An educated Japanese would as soon think of employing the words “*ijin*” or “*ijinkwan*” in polite society as he would of saying *shiranai-ya* for *shirimasenu-ya*, or *dambai* for *goshinwasha*. Thus the writer in our local contemporary's columns makes nothing plain but the fact that he himself has moved in and derived his notions from circles to which no person of ordinary information would think of applying. He tells us that “opportunity is rarely lost to exhibit contempt of, and to insult, foreigners, when it can be done with safety or unknown to the objects.” The blind and angry suspicion dictating this assertion is self-refuting. No foreigner is in a position to say anything of the kind. We do not know how Japanese speak of us behind our backs. We cannot know it, except on the evidence of tattle-mongers whose word, under such circumstances, deserves no confidence. What we do know, however, is the fashion of language employed by the writer of the above note and his *confrères* in speaking among themselves of the Japanese. They should be the last persons in the world to talk of “contempt and insult.” Their endeavour to circulate an impression that foreigners are hated and despised by the Japanese is well fitted to the mischief-making part they persistently play under the flimsy guise of honest frankness. Honesty forsooth!

POLITICAL TALK.

THE *Nippon-jin*, in its last issue, mentions the rumours that Viscount Aoki, and Messrs. Mutsu and Yoshikawa have tendered their resignation, that Count Yamagata contemplates a similar step, that Count Matsukata is in a dissatisfied mood, and that Count Saigo has addressed a circular to his colleagues. Our contemporary does not profess to give credit to these reports, but it nevertheless observes that, Count Yamagata being known to be desirous of transferring the Premiership to Count Ito before the opening of the Diet, this circumstance may be the cause of the joint resignation of the three Ministers above mentioned. The Ministers of Foreign Affairs, of Education, and of Agriculture and Commerce, are understood to be under the influence of Count Inouye, and the Tokyo journal is inclined to suppose that they either resign by their resignation to get their chief appointed to the Presidency of the Cabinet, or think it inconvenient to serve under Count Ito, to neither of which hypotheses do we (*Japan Mail*) attach the least credit. As to Count Yamagata, the *Nippon-jin* remarks that he may not be fitted to preside over the Cabinet under a constitutional system, and that it would be wise policy for him to resign at the present juncture. Who is to succeed him in that contingency? Our contemporary seems to regard either Count Ito or Count Inouye as the most probable candidate. Speaking of Count Ito, the Tokyo journal states that it is now time for him to decide between three courses of action; either to become President of the House of Peers, or to accept the office of Minister President, or to continue a literary recluse at Odawara. Some people, we are told, pretend to be in a position to state that he considers himself the only person who can successfully carry out the Constitution. With reference to Count Inouye, the *Nippon-jin* inquires why he continues in a dissatisfied humour. It is true that the *Yichi-to*, of which he is under-

stood to be the chief, is not in a prosperous condition, and that he cannot expect a good harvest in the coming political season. This circumstance may disturb the ease of his mind. Still, with such lieutenants as Viscount Aoki, Mr. Yoshikawa, and Mr. Mutsu, he ought not, says the *Nippon-jin*, to be discouraged about the present condition of his party. As to Count Goto, our contemporary alludes to the rumour published in the *Choya Shimbun*, that it was he who advised the Minister President to frustrate the plan of alliance among progressive parties by enforcing the 28th Article of the Law of Political Associations. The Tokyo magazine neither believes this report, nor agrees with the *Daido Shimbun*, which defends Count Goto by alleging that the Count, in his capacity of Minister of Communications, is not connected with the framing of laws. We reproduce these rumours merely for the purpose of keeping our readers posted as to the state of political feeling in certain quarters. It will of course be understood that we do not in any way endorse them.

RUSSIAN SHIPBUILDING.

CONSIDERABLE activity, says a recent issue of *Industries*, has been displayed for some time in connection with the Russian fleet, and it now begins to attain sufficient magnitude to make it a factor which cannot be neglected in calculating the chances in any war which may occur. The programme which was laid down some years ago is being steadily carried out, subject, of course, to the modifications which are required by the continual developments in naval science. From an industrial point of view, moreover, the movement has considerable importance, when we consider that two keels which were recently laid down for the Russian Navy are for ships of 10,000 and 11,000 tons, and of the style of the *Sanspareil* and *Trafalgar*. These were recently laid in the presence of the Emperor and Empress, and a large company of notables. The largest of these ships, the *Rurik*, will be 426 ft. long at the water-line, 67 ft. broad, and with a draught of 27 ft., and will have side armour 10 in. thick and deck armour 2½ in. thick. She is to be built for a speed of 18 knots an hour, and will have a coal capacity for taking her 20,000 miles at 10 knots. She will be supplied with very powerful guns, and when completed will form a very strong addition to the Russian Navy. After the conclusion of the ceremony connected with the *Rurik*, the Imperial party performed a similar one in a neighbouring shipbuilding yard for the armoured turret-ship *Natarino*. Its length will be 360 ft., its breadth 68 ft., and its draught 25 ft. There will be two engines of 4,500 h.p. each, with 12 boilers, and the speed is expected to be 17 knots. The armament will consist of four 12 in. guns in two turrets, and there will be the usual complement of quick-firing and other guns. The next part of the day's performance was launching the new yacht for the Emperor, which is named the *Polar Star*. She has been built by Captain Kazi, at the Baltic Works on the Neva, and is intended to be used as a yacht in time of peace, but also as a despatch boat in time of war. She will be the only sea-going yacht of modern type possessed by the Emperor, as the *Livadia* lies unused in the Black Sea, while the older ship, the *Derfiwa*, in the Baltic, is now out of date. The *Polar Star* is 315 ft. long by 46 ft. broad, with 18 ft. mean draught of water, and 3,600 tons displacement, and is intended to have a speed of 16 knots. The boilers were intended for a pressure of 130 lb. on the square inch—that is, for triple-expansion engines—but the Emperor has decided that the engines shall be of the ordinary compound type, with a steam pressure of 75 lb., showing that he is willing to sacrifice efficiency for what he supposes greater safety. On the same day was launched an armoured gunboat 229 ft. long and 41 ft. deep, and having a displacement of about 1,500 tons. It is of the same type as those which are being added rapidly to the British Navy, and is intended to sweep the seas of the enemy's mercantile vessels. Besides these are three large ships

being completed on the Baltic, and a similar number on the Black Sea, while several torpedo boats are being built in Germany, St. Petersburg, and Odessa. Altogether, either for offence or defence, the Russian Navy is being rapidly developed, while the proportion of the work which is being done in the country shows that great advances have recently taken place in the art of construction.

PHILATELY.

THE recent exhibition of postage stamps in London, in which the Duke of Edinburgh took a leading part, and with which many other leading persons were associated, marks the progress in the science, or art, of postage-stamp collecting, or philately, as it is pedantically called now. A quarter of a century ago the collection of postage stamps was chiefly a harmless school-boy amusement. Of late years, however, it has become a serious business for a number of grown-up enthusiasts. As a childish fad it was an aid to an easy knowledge of geography, to some acquaintance with recent or current political history, and to a general sharpening of the faculty of observation by the study of water-marks, of the various methods of perforation, of the distinctive lettering, and of the ingenious system of defacement. Geographical crumbs lay by the wayside, while as for political history, the stamps of Germany afford a remarkable instance of the manner in which the record of great national events is preserved in what may be termed aëlic shorthand. The earliest German postage stamp is that of Bavaria, which dates from 1847, and which is remarkable for its inartistic homeliness, for it contains nothing but the name of the country and the tariff. The first Prussian stamp—a laureated effigy of Frederick William IV.—was issued in November, 1850, a few months after the King of Wurtemberg denounced the insidious ambition of the King of Prussia. In 1861—the year in which the National Association voted the formation of a united federal Government under the leadership of Prussia—the effigy gave place to the Prussian eagle. In January, 1863, the postage stamps of Prussia, Hanover, Saxony, Oldenburg, the two Mecklenburgs, Brunswick, and Schleswig-Holstein—the first Schleswig-Holstein stamp was that of a Government in insurrection—were replaced by the new stamp of the North German Confederation; and in December, 1871, the latter was in turn superseded by the Imperial stamp of the new Germany. It was adopted by the Grand Duke of Baden; and Bavaria and Wurtemberg alone retained their special postage stamps with their separate administration. Only those who are versed in the atelic mysteries have any accurate notion of the immense amount of information required by a collector who professes to be a master in his craft. Few outsiders are aware that in the twenty-five years which followed the first issue of postage stamps in London on the 1st May, 1840, the well-known varieties issued in all parts of the world numbered 1,391, or that of these no fewer than 811 were already obsolete in 1865, and were accordingly becoming every day more difficult of acquisition. The first Austro-Hungarian stamp dates from 1850, and during the interval, 1850-83, there have been issued, taking all together, 39 types and 123 varieties. In 1848 stamps came into general use in Russia, and of all Russian stamps, general and local, the types up to 1875 exceeded 135. The survival of these local postages in all parts of that vast empire is to the philatelist a source of despair and an incentive to further exertion. The varieties are so great, and some are so rare, that it must be an exceptional collection in which they are exhaustively represented. The symbolic wheatsheaf, scythe, and rake of Kherson, the beehive of Tamboff, the open book, sheaves, scythe, and plume of interlaced feathers of Elizabethgrad are not often found together in one collection. How stamps ever become rare is not quite so easy to understand. In England alone, between 1840 and 1884, no fewer than 26,651,930.040 penny and 2,970,705,120 half-penny stamps were issued. Supposing anything like similar quanti-

ties have been issued abroad, one would imagine that specimens ought to be as plentiful as blackberries, and yet this is far from being the case. The spread of the use of stamps throughout the world is a curious point. Zurich was the first foreign State to adopt them—in 1843. Six years later they appeared in Belgium and New South Wales. They are believed to have been used a year earlier in the Hawaiian Islands than in the Netherlands (1852). In 1871 they were issued in Guatemala and Japan, and in the following year Persia and Fiji simultaneously assumed this badge of civilisation. In the early days of the schoolboy craze there were splendid myths credited as to the value of a numerically large collection, but even the most golden of juvenile dreams never reached the sums that have actually been paid for stamps. Sir Daniel Cooper's collection was sold in 1878 for £3,000, and the Galliera collection in Paris is reported on good authority to have cost up to 1883 no less than £57,600 in acquisition and arrangement. The catalogue of the new exhibition contains much information of a similar character, and many anecdotes about stamps and stamp collection.

RUPTURE IN THE AMALGAMATION SCHEME.

On the 23rd instant, the delegates of the parties contemplating amalgamation, held another conference for the purpose of taking final action with reference to this matter. The first proposition before the conference was whether the projected new party should be formally organized before September 1st, which is the date fixed by the *Kaishin-to* for deciding, at a general meeting, the question of dissolving or maintaining its organization. The original programme of the unionists evidently was to postpone the formal organization of the new party till all the parties concerned should have dissolved their separate organizations. But meanwhile certain sections of the *Daido Danketsu*, who from the outset conceived a strong aversion to admitting the *Kaishin-to* and the *Kinshu Doshikai* into the proposed amalgamation, gathered strength and began to raise vehement voices of dissent. They held meeting after meeting, and on each occasion denounced the *Kaishin-to* by all the means employable in partizan warfare. In consequence of these demonstrations, their ranks rapidly grew until they began to show threatening signs of forming an independent party. In fact a portion of them virtually absconded from the general meeting of the *Daido Danketsu* opened in the Koseikan, the other day, and held a separate meeting on their own account. In order to put a check on this disintegrating tendency, some formal declaration from the projectors of the new party became a matter of urgent necessity. Hence in the conference alluded to above, the delegates of the *Kaishin-to* were asked if it would be impossible for that party to take some step toward amalgamation previous to the general meeting of September 1st. In reply to this, Messrs. Shimada Saburo, Yoshida Kiroku, and Koto Masanosuke said that it was utterly impossible to take any step until the sense of the whole party had been ascertained by the general meeting of September 1st. They accordingly requested on behalf of their party that the organization of the Union should be deferred until after that date. But the delegates of other parties refused to comply with this request, no account of the circumstances recounted above. The meeting then proceeded to discuss matter connected with the organization of the new party. The draft resolutions submitted to the conference was as follows:—(1) Name; Representative Government Party (*Dagō Seito*). This appellation was, however, changed subsequently to *Rikken Jiyu-to* (Constitutional Liberal Party). (2) Party's principle; Liberalism. (3) Platform; (a) Maintenance of the Honour of the Crown and Promotion of Popular Rights. (b) Inauguration of a Responsible Cabinet. (c) Removal of all Interference with the Empire's Home Affairs, and Revision of Foreign Treaties on a basis of full Equality. In discussing the above draft, the *Kaishin-to* representatives raised strong objection to the

word *Jiyu* (Liberalism) being adopted as the party's principle. While they disavowed all intention to place any stumbling block in the path of the proposed amalgamation scheme by giving undue weight to matters of secondary importance, they positively refused to commit themselves to a course of action which would place the *Kaishin-to* in the humiliating position of apparently surrendering to the *Jiyu-to*. The history of the past ten years, they said, had given to the words *Kaishin* and *Jiyu* a profound signification apart from their literal meaning. Ever since the formation of the Progressive and the Liberal Parties, these two magical words had served as the Shibboleth employed by the two parties in their struggle for ascendancy. They declared as their ultimatum that, unless the objectionable term was removed, the only alternative left for them would be to sever their connection with the amalgamation. But the delegates of the opposite side were equally determined to have the word inserted at any cost. Then the *Kaishin-to* delegates withdrew from the conference in a body. Count Inagaki and other true advocates of amalgamation have since been exerting all their influence to bring about a reconciliation, but at present there is no prospect of their efforts proving successful.

VISCOUNT ENOMOTO AND COLONIZATION.

Our readers may remember that some time ago a man named Tokai Etsuro attracted attention by a scheme of emigration to Mexico. He proved to be a mere swindler and is, we think, under arrest pending trial. It is now announced that Viscount Enomoto contemplates a plan of emigration to the same country on a large scale. We cannot tell whether this report be true or false, but there is no doubt that the question of colonization and emigration is attracting the attention of the nation at present. The *Nippon Hyoron* writes on the subject as follows:—“Through an erroneous policy of the Tokugawa Government, the Japanese race lost its influence in India and the South Sea; and since the Restoration, the short sighted policy of the Cabinet has deprived the nation of the opportunity of extending its influence in Korea and the South Sea. The question of colonization and emigration has now become a national problem, and a large number of men, both in the Government and out of it, are devoting their attention to it. We recommend the Authorities not to disregard the memorandum of Viscount Enomoto on this subject. If Japan suffers the opportunity to slip from her hands for the third time, the day may come when her name will be erased from the map of the world.”

The “short-sighted policy of the Cabinet” in depriving the nation of an opportunity to extend its influence in Korea, may, also and with greater justice, be described as the prudent policy of keeping the Empire at peace with its neighbour China. As for the possibility of preserving Japan's place on the map of the world by sending Japanese emigrants to Mexico, we confess that the connection of cause and effect is quite beyond our comprehension. Emigration to Hawaii has been distinctly a success, as a means first, of bringing wealth to Japan, and, secondly, of inculcating habits of regular and unbroken work among her labouring classes. Emigration to Mexico might be similarly beneficial. But Japan may be quite sure that even though she sends half a million of her best workers to Mexico, she is not in the least degree likely to erect thereby any new pillars of empire. No foreign Power will ever be suffered by the United States to plant so much as the tip of its toes in Mexico. Japanese better informed than the writer in the *Nippon Hyoron* understand this perfectly well, and will have read with as much amusement as we have done, the magniloquent announcement that the Government's attitude toward the Mexican emigration scheme may affect the permanency of Japan's national existence. In the South Sea Islands or even in Korea there may be room for Japanese settlers to found colonies after the fashion that now

absorbs all Europe, but in Mexico nothing of the kind is within the range of possibility. We venture to assert confidently that if Viscount Enomoto has submitted any scheme to the Authorities, it is purely of a wealth-earning character.

AMALGAMATION OF THE PROGRESSIVE PARTIES.

No question occupies so large a share of public attention at present as the proposed amalgamation of progressive parties. It is difficult to tell how movements would end, but at present the chances seem to be rather in favour of the consummation of the project. In the existing state of affairs, the whole question seems to depend upon the attitude of a section of the *Daido Danketsu* toward the *Kaishin-to*. Certain papers report that an unpleasant feeling has been engendered between the two parties in connection with the question of foreign policy. But this report is contradicted by journals which are in favour of amalgamation. For our own part, we find it hard to imagine the *Kaishin-to* marching under the banner of men such as some of the radicals have recently proved themselves to be. But we admit the difficulty of arriving at any clear decision. The *Kokumin-no-Tomo* states that, although the proposed amalgamation is moving with irresistible force towards consummation, its path is not entirely free from impediments. These are four in number; namely, first, the antipathy of a section of the *Daido Club* towards the *Kaishin-to*; secondly, the relations between Counts Inagaki and Goto; thirdly, the relations between the *Daido Club* and the Conservative party; and fourthly, opposition to the clan influence of Tosa. The first impediment—we are still quoting from the Tokyo journal—may be removed, in some degree at least, by making it clear that the *Kaishin-to*'s object is to secure the revision of the treaties on an equal footing. As to Counts Inagaki and Goto, they ought to be on better terms now that the latter has declared himself in favour of amalgamation. With respect to the relations between the *Daido Club* and the Conservatives, our contemporary observes that the chance of an alliance between the two will be averted if the leaders of the *Daido Club* are honestly devoted to liberal principles, and if, further, all the rest of the progressive parties unite in their condemnation of conservatism. As to the last impediment, Count Inagaki's magnanimity will be sufficient to prevent any undue preponderance of the Tosa influence.

We may observe that the *Hochi Shimbun* and the *Choya Shimbun*, which have hitherto been on particularly cordial terms, are now quarrelling on this very subject. The *Hochi* is sober and conciliatory, but the *Choya* is uncompromising and even bitter in its tone. The editor of the latter journal, Mr. Ozaki, as already stated in these columns, is an enthusiastic opponent of amalgamation. He maintains that, if the *Kaishin-to* is doomed to perish, it had better disappear in a dignified manner than solicit unconditional admission to the ranks of the proposed grand party. The *Hochi Shimbun* takes a broader view of the situation, and advises the *Kaishin-to* to forget its own selfish interests and unite in a movement which it thinks is calculated to be beneficial to the cause of progress and liberalism.

THE FIRST BRITISH ORDER CONFERRED ON A JAPANESE.

The London Official *Gazette* of July 1st confirms the news already forwarded by Reuter, that the Queen has been pleased to confer the Grand Cross of the Bath on his Imperial Highness Prince Komatsu. The Prince is gazetted an “Honorary Member” of the Order, a form of expression applied in all cases where, no vacancy happening to exist in the fixed number of holders of the Grand Cross, the distinction is given independently of that number. This is the first instance of a British order being conferred on a Japanese, and we have no doubt that the news will be very welcome. England is very chary in her bestowal of such distinctions,

and their recipients are the more honoured in consequence. Prince Komatsu was the bearer of the Grand Star of the Chrysanthemum to the Prince of Wales in 1886, and many people expected that the occasion would have been taken to invest his Imperial Highness with one of the best English Orders. Japan has nothing higher to bestow than the Grand Star of the Chrysanthemum. A G.C.B. is not its equivalent. But a G.C.B. is a very good beginning, and we venture now to hope for the accomplishment of whatever train of circumstances may be requisite for the presentation of the Garter to the Emperor of Japan. It is unfortunate that the officials responsible for the compilation of the *London Gazette* did not take the trouble to inform themselves correctly of Prince Komatsu's title. They call him "Prince Akihito of Komatsu," a form of expression of which we can easily understand the construction from an English point of view, but which is none the less a solecism. Surely, it will be said, if the Foreign Office was not in a position to give the title properly, information might easily have been obtained from the Japanese Legation. But the evident fact is that the officials who prepared the *Gazette* felt quite confident as to the accuracy of the term, and perceived no necessity whatever for reference. Japanese titles are exceedingly puzzling to Western translators, and a defective rendering of the kind in question, especially when, as in this case, it gives a formula entirely consistent with European precedents may readily be excused. Since we say Albert Edward Prince of Wales, Arthur Duke of this and Louis Count of that, it seems natural and correct to say Akihito, Prince of Komatsu. It will be observed that the Order is conveyed through the War Office, doubtless because the Prince, when he represented Japan at the Queen's Jubilee, was on a military mission to Europe.

THE FORMAL ORGANIZATION OF THE CONSTITUTIONAL LIBERAL PARTY "RIKKEN JIYU TO."

THE amalgamation of progressive parties, at once the dream and the nightmare of politicians in the liberal and conservative camps, has at length become an accomplished fact, but in a manner probably falling far short of the sanguine expectations entertained by earnest workers in the cause of union. The *Kaishin-to* wing of the new grand party as originally contemplated, has been virtually excluded from participating in the movement. Nothing definite can be said about the future course of the *Kaishin-to* till after its general meeting on September 1, but, according to present forecasts, we can see no reason to warrant us in predicting its final fusion into the newly organized union. Be that as it may, the other four parties, the *Aikoku-to*, the *Jiyu-to*, the *Daido Danketsu*, and the *Kiushu Doshikai*, have formed themselves into "the Constitutional Liberal Party" (*Rikken Jiyu-to*). The formal organization of the new party took place in the Atagokwan on the Atago Hill in the forenoon of the 25th instant. The meeting was attended by all the prominent members of the several parties concerned. After some business of a preliminary nature, the meeting was formally called to order at twenty minutes after ten. It was agreed on all hands that a Chairman should be elected by the standard of seniority, and Mr. Yamada Bubo, of the *Kiushu Doshikai*, was unanimously nominated to that position. The following draft resolutions were then submitted to the meeting:—First, that the name of the Party be "Representative Government Party"; Secondly, that the principle of the Party be Liberalism; thirdly, that the platform of the Party be (1) Maintenance of the Honour of the Crown and Promotion of Popular Rights; (2) in domestic government, the policy of interference to be removed, and in foreign relations treaties of full equality to be concluded; (3) the reality of Representative Government and of Cabinet by Party to be inaugurated. Respecting the party's appellation, Mr. Uyeiki Yemori moved that "Popular Rights" should be substituted for "Representative Government," which motion was supported by Messrs. Tada, Shiba, Tanaka, and Matsuta. On the other hand, Mr. Yamakishi Shichishi offered an

amendment to use the word "Liberal." Upon these motions being put before the meeting, it was found that sixteen members were for Mr. Uyeiki's motion and fifteen favoured Mr. Yamakishi's amendment, while six supported the original draft. All the motions, failing to secure a majority, were lost. A motion was then put forward by Mr. Matsura and carried by a large majority, that a committee consisting of three from each of the parties represented should be appointed to choose a suitable appellation. Meanwhile, the other portions of the drafts were submitted for deliberation and were all adopted without any dissenting voice. Mr. Sugita then reported on behalf of the special committee that they had chosen the appellation "Constitutional Liberal Party" (*Rikken Jiyu-to*). The report was accepted and the name was adopted unanimously. The following provisional regulations were then passed:—First, that a board of five executive officers be appointed; secondly, that the expenditures of the party be borne by the members individually; thirdly, that new members may be admitted if the board of executive officers has no objections; fourthly, that the general meeting of the party be held on the 15th day of September next, when the permanent Rules and Regulations will be settled. The next business in order was the election of executive officers, which showed the following result: Mr. Oi Kentaro (23 votes), Mr. Kono Hironaka (22); Mr. Kawashima Jun (16), Mr. Tanaka Kendo (16), Mr. Hayashi Yuzo (11); but as Mr. Oi declined to accept the honour, Mr. Sugita, who was next in order, was appointed in his place.

THE JAPANESE DINNER IN LONDON.

THE Japan dinner in London came off on the 26th of June at the Grand Hotel, one of those colossal new caravanserais in Northumberland Avenue. Mr. William Keswick was in the chair, and the only toasts were "The Queen," "Japan," and "The Chairman." We learn from one of those present that it was a thoroughly enjoyable evening, although all commented on the circumstance that Sir Francis Adams, who was known to every one of the convives, presided last year, and that in concluding a happy speech he remarked that he would come year after year so long as they would have him and so long as he was above ground, even though he might have to be brought in a chair. Although there were, we learn, no members of the high official world present, the gathering abundantly served its purpose of bringing together old friends and persons bound by the tie of common memories. These annual dinners are becoming in recent years quite an institution. Burma has its annual dinner (it took place early in July at the Marlborough Rooms in Regent Street); so have Ceylon, Queensland, the Straits (this was eaten in the first week of July in the heart of the city in Leadenhall Street) and many other places. Ten years ago the practice of dining together in this fashion was usually confined to the military and naval services, regiments, corps, the survivors of certain actions, the Naval Club of 1765, and so on; but now every place has its dinner, and very appropriate and successful institutions these latter are. One gentleman who was at the Japan dinner writes that the speaking was not much, but that the dinner was excellent; and that every one enjoyed himself—which was better than any quantity of speaking, the last commodity being perhaps over plentiful in tongue-ridden England.

THIS YEAR'S HARVEST OF BARLEY.

According to an official report prepared in the Department of Agriculture and Commerce, it appears that the general estimate as to the scarcity of this year's barley crop has not been exaggerated. The incessant rains of the spring inflicted more or less injury on the ripening crop in almost every locality. The damage was most extensive in the Prefectures of Shizuoka, Kagoshima, Saga, Kochi, and Gifu. These localities are followed on the list of comparative suffering by the City of Osaka, and the Prefectures of Kanagawa, Hyogo, Aichi, Nara, Kagawa, Shiga, Shimane, Wakayama, and Kuma-

moto. The report does not say by what percentage the crop was reduced in these localities; but that the harvest was extremely bad may be inferred from the fact that the crop suffered to the extent of 40-50 per cent. in the Cities of Tokyo and Kyoto and the Prefectures of Saitama, Chiba, Ibaraki, Mie, Yamanashi, Akita, Fukui, Toyama, Tottori, Hiroshima, Yamaguchi, Okayama, Tokushima, Ehime, Oka, Nagano, and Miyazaki. In the Prefectures of Fukushima and Awamori, the harvest was better than usual, while the damage was extremely small in the Prefectures of Iwate, Niigata, Miyagi, Yamagata, and Gumma. No statistics have as yet been received from Hokkaido and the Prefectures of Nagasaki, Tochigi, Ishikawa, and Okinawa.

"SOSHI."

THE *soshi* have been re-establishing the fact that they belong to the *Jiyu-to* and that they mean to work in its interests after their own fashion. On the night of the twenty-fifth, several of them attacked Mr. Sugeno Michichika as he was on his way back from the house of Mr. Koike in Nakarokubanchō, Tokyo. Mr. Sugeno's crime was that he strenuously opposed the admission of the *Kaishin-to* and the *Kiushu Doshikai* into the ranks of the new amalgamated party, and that he had censured the conduct of Count Itagaki and Mr. Oi. The *soshi* were seven or eight in number. They proceeded to beat Mr. Sugeno, but he turned on them, and by resolute and dexterous use of a small knife which he chanced to be carrying, managed to give them a wholesome lesson. He did not indeed escape scot free, as he received a cut on the head and is now in hospital. But of the *soshi* two, Suzuki and Hasegawa, fared very badly, the former having a gash in his stomach, and the latter several wounds about the face and neck. Mr. Sugeno reported the affair so promptly that all the *soshi* were arrested and are now lying in prison.

THE HON. P. LE POER TRENCH.

WE learn with regret, which will be heartily shared by his many friends in Japan, that the health of the Hon. P. Le Poer Trench is not by any means restored. It will be remembered that after Mr. Trench's transfer to Berlin he suffered from a very severe of rheumatic fever. The pain of this crippling malady had not entirely left him when he was prostrated by an attack of liver, due doubtless to the long confinement necessitated by the previous illness. A course of the Aix-les-bains waters was recommended by his physicians, and there, at the date of latest advices, he was gradually but slowly picking up strength, his naturally vigorous constitution enabling him to struggle successfully against such a succession of debilitating illness. We trust that news will soon arrive of his complete restoration to health.

THE LEADING TOKYO PAPERS.

THE *Kokumin-no-Tomo* of the 13th instant, has the following:—"The *Daido Shimbun* is like a newly married wife, distracted by solicitude towards her mother-in-law and her husband. The *Hochi Shimbun*, departing from its usual moderation, is bold and dashing. The *Mainichi Shimbun* is serious, with occasional flashes of vivacity. The *Choya Shimbun* has become so violent in its writing since its recent suspension, that it might almost be suspected of a desire to come again into collision with the laws. The *Tokyo Shimpō* and the *Tokyo Koron*, through conscious of defeat, are still beating war drums. The *Nippon* looks full of suspicion and anxiety, and maintains a wary attitude. As to the *Jiji Shimpō*, it is cold and indifferent, and tells you with a knowing look that the importance of Japan does not depend upon her politics.

BILLS TO BE SUBMITTED TO THE FIRST DIET.

WE read in the *Nichi Nichi Shimbun* that, according to present estimates, the number of bills submitted to the Diet by the various Departments of State is expected to be at least a hundred. Of this number, forty will be from the

Finance Department, twenty-five from the Department of Justice, nine from the Departments of War and Marine, five from the Department of Education, three from the Department of Communications, and six from the Department of Agriculture and Commerce. The numbers likely to be sent in from the Departments of Home and Foreign Affairs are not yet known. Considering that the Diet's regular session lasts only three months, it is plain that, assuming the above estimate to be correct, the Houses would have to debate and vote upon more than one bill *per diem* in order to get through the Government's work alone. And considering further that, according to the Constitution, Government bills take precedence of all other business, except when a different order of procedure has been specially sanctioned, it seems plain that the Diet will not have much time to initiate measures of its own.

GOLD AND SILVER RATIOS.

The *Official Gazette* gives the following table of comparative values of gold and silver coins and of the pound sterling for the week ended the 23rd inst., as derived from the returns of the Bank of Japan and the Yokohama Specie Bank:—

Days	Gold Coin. (Per 100 Yen.)	Pound Sterling. Silver Yen.
18th	109.500	A.M. 5.3932 P.M. 5.3333
19th	108.500	A.M. 5.3333 P.M. 5.2459
20th	106.200	A.M. 5.2459 P.M. 6.1172
21st	105.500	A.M. — P.M. 5.2173
22nd	105.500	A.M. — P.M. 5.2173
23rd	105.500	A.M. — P.M. 5.2173
Averages	106.783	5.2591

The above averages show for gold coin a decrease in value of *yen* 4.476, and for the pound sterling a decrease in value of *yen* 0.2157, as compared with the previous week.

VISCOUNT AOKI.

The *Yiji Shimpō* says that during his long residence in Europe, when he had ample opportunities of forming his judgment, Viscount Aoki came to very clear conclusions as to the proper methods of administering a State. He knows his own mind with respect to foreign policy, with respect to commercial and agricultural policy, with respect to finance, with respect to military matters and so forth. Unlike too many Japanese politicians who mould their opinions according to events, he has fixed theories and adheres to them. Thus, though he may seem to proceed deliberately in the matter of Treaty Revision, his resolution is none the less firm. He does not seek to accomplish the thing rapidly and make a brilliant coup, but he believes that by patient and persistent effort the favourable time will surely come sooner or later.

NIKKO.

Nikko has been exceptionally gay this year. A very large number of foreigners came there either to see the beauties of the place or to escape the heat of Tokyo and Yokohama. Picnics and dinner-parties have been the order of the day, and it is prophesied that next season "swallow-tails" and "bell-tops" will be *de rigueur*. Last Monday the Russian Minister and Madame Schévich entertained a large party at dinner in the tea-houses on the plateau overlooking the town from its north-westerly extremity. The buildings were entirely renovated and beautifully decorated for the occasion, and nothing could have been more picturesque than the whole affair. The only *contretemps* was that, owing to the service of trains being interrupted, the Guards Band, which was to have proceeded from Tokyo to Nikko on the 25th instant, could not make the journey.

A NEW BARON.

An addition has been made to the ranks of the nobility in the person of Mr. Sawata Koichiro, who is created a Baron. The new noble is a Shinto priest of the Yamada Shrine in Ise. We are not aware that any special reason existed

for the honour conferred on him. Holders of the office of *Shinkan* are supposed to be descended from the ancestor of the Japanese line of sovereigns, and at the time of the rehabilitation of the nobility the heads of several families in which this office is hereditary received patents. The Sawata family was omitted at that time owing to considerations with which we are not acquainted, and the omission has now been remedied.

CHOLERA RETURNS.

The latest cholera returns derived from official sources are as follow:—

Prefecture or City.	Date.	New Cases.	Deaths.
Osaka	21st	54	39
	22nd	59	40
	23rd	102	15
	24th	103	41
	25th	110	53
	26th	115	41
Nagasaki	21st	30	21
	22nd	31	13
	23rd	32	13
	24th	68	40
	25th	10	19
	26th	32	30
Yamaguchi	21st	23	15
	22nd	23	13
	23rd	23	13
	24th	45	37
	25th	41	35
	26th	27	30
Fukuoka	21st	40	27
	22nd	43	31
	23rd	51	29
	24th	40	27
	25th	37	25
	26th	47	27
Kumamoto	21st	20	11
	22nd	26	25
	23rd	9	7
	24th	19	23
	25th	14	10
	26th	12	9
Kagoshima	21st	1	—
	22nd	4	—
	23rd	3	—
	24th	7	7
	25th	5	8
	26th	15	6
Saga	21st	15	7
	22nd	19	7
	23rd	13	7
	24th	10	7
	25th	10	7
	26th	10	7
Oita	21st	4	4
	22nd	7	3
	23rd	17	4
	24th	9	11
	25th	3	11
	26th	3	11

The numbers of cases and deaths since the commencement of the epidemic, inclusive of the above figures, appear in the following table:—

Prefecture or City.	Cases.	Deaths.
Osaka	937	415
Nagasaki	2,595	1,620
Yamaguchi	930	547
Fukuoka	220	117
Kumamoto	1,618	1,003
	589	341

The total number of cases and deaths in the following Cities and Prefectures since the commencement of the epidemic to the 27th instant, not included in the above, are:—

City or Prefecture.	Cases.	Deaths.
Tokyo	495	228
Kanagawa	575	390
Hyogo	219	99
Chiba	178	105

THE BANK OF JAPAN.

The amounts of convertible notes and reserves in the Bank of Japan for the week ended the 23rd inst. were as follows:—

Convertible Notes.	Reserves and Securities.
YEN.	YEN.
Notes issued	Gold coin and bullion
71,476,322	24,215,247
	Silver coin and bullion
	21,438,289
	Public Loan Bonds
	13,476,450
	Treasury Bills
	—
	Government Bills
	—
	Other securities
	4,732,183
	Commercial Bills
	5,534,054
71,476,322	71,476,322

Of the above total issue of notes, the sum of *yen* 2,799,462 is in the treasury of the Bank, and *yen* 68,676,760 in actual circulation, the latter showing an increase of *yen* 480,525 as compared with *yen* 68,196,235 at the end of the previous week.

MARRIAGE IN TOKYO.

The marriage of M. Jean Noël Emil Federici and Mademoiselle Louise Henriette Boissonade de Fontarabie, daughter of the eminent French jurist by whose labours Japan has so largely profited in the compilation of her new codes of

law, was celebrated at the Roman Catholic Cathedral in Tsukiji on the 26th instant. The Cathedral was filled with high Japanese officials, members of the Foreign Corps Diplomatique, and foreign residents of Tokyo and Yokohama. After the nuptial benediction had been pronounced by the Rev. Pere Everard, who was supported by Monseigneur Bishop Osofi, a sumptuous *déjeuner* was served in the banquet hall of the Rokumei-Kan. The bride and bridegroom leave Japan for Europe on Sunday next.

THE RECENT DROWNING IN THE HARBOUR.

The body of Mr. J. C. Baynes, who was drowned on the night of the 20th inst., while going off to a steamer to which he had been appointed, was found on Saturday morning near the Kanagawa shore, and brought to the Hatoba. A Coroner's jury was summoned, and an inquest held at H.B.M. Consulate before the Consul as Coroner. After hearing the evidence of the *sendos* and some other witnesses, the enquiry was adjourned.

The adjourned inquest on the body of Mr. Baynes was resumed Monday. George Hodges gave evidence as to the condition of the body when found, and the jury returned a verdict of "Accidental death by drowning." The Coroner concurred.

FLOODS AT MITO.

IBARAKI *ken* seems to be the unfortunate locality this year, so far as floods are concerned. Last Saturday there was another heavy rainfall, so that the Naka-gawa rose again on Sunday. It subsided, however, during the day, without doing much serious damage. The Tone-gawa, which flows through the western part of this province, is reported to have risen very high, and in some localities to have broken down the dykes. On Sunday officials of the *ken* went to investigate; but no details have as yet come to hand. The amount of rainfall this summer in this province has been extraordinary.

KARUIZAWA.

The British Representative and Mrs. Fraser are still staying at Karuizawa, and their return is not expected for some weeks hence. The mountain air has happily proved most beneficial to Mrs. Fraser, and after her protracted and painful prostration in Tokyo she is now enjoying good health and is even able to take long walks. Karuizawa has been much favoured in respect of rain this season, the weather there having proved considerably drier than in Tokyo.

WRECK.

THE schooner *Halcyon*, Captain Metcalfe, was wrecked on the night of the 22nd inst. on the coast of Chiba *Ken*, during a gale described as of typhoon force. The vessel went up on a sandy beach and lies there with one man and the mate in charge, the captain and the remainder of the crew having arrived in Yokohama. There was no loss of life, and as the vessel lies now there is no immediate danger of her breaking up.

DEATH OF THE MR. GEORGE WAUCHOPE.

WE regret to record the death of another old resident, Mr. George Wauchope, a familiar figure in this Settlement for many years past. The deceased gentleman had been ailing slightly for some time, but we believe that it was only quite recently that his health had undergone a serious change.

THE SECRETARY OF THE FRENCH LEGATION.

M. GACHER, First Secretary of the French Legation, has been transferred to Peking, where he will proceed very shortly. M. Gacher will find himself in the position of *Chargé d'Affaires* in the Chinese Capital, as the present Minister there goes home on leave.

CHOLERA AT VLADIVOSTOCK.

The *Official Gazette* of the 23rd inst. contains a telegraphic report from the Diplomatic Agent at Vladivostock to the effect that cholera of a virulent type had broken out at that port.

THE STORM OF THE TWENTY-SECOND.

THE storm of the 22nd came from the Pacific, says the *Official Gazette* on the authority of the returns of the Meteorological Bureau, and passing by Yenshu Bay, struck Sunshu, Shinshu and Koshu, blew across Yechigo and Ugo, and thence entering the Sea of Japan, turned northward, touched the western shore of Hokkaido and then took its departure from Japan. The southern parts of the country thus lay beyond the track of the storm: there the weather was fine and no atmospheric disturbance of any kind was reported. On the 24th, however, when the regions lying in the path of the gale were basking in the strong sunshine that always succeeds these phenomena, the southern districts appear to have been visited by cloudy weather. Assuming, as is not unreasonable, that the storm of the 22nd represents the most severe atmospheric disturbance by which Japan will be afflicted this season, we have to note, while granting its violence, that it came at a comparatively favourable time. Last year the great storm which wrought such terrible havoc occurred just twenty days later—on the 11th of September instead of the 22nd of August. Twenty days at this season make a very marked difference in the condition of the rice, and of course the effects of a storm depend largely on the state of the crops when it strikes them. If the rice is almost ready for reaping, it does not suffer much by being deluged or beaten down, provided that some sunshine ensues to dry and save it. If, again, the ear is only just forming, scarcely anything short of an inundation works serious damage. But if the rice is struck by fierce wind and heavy rain when sufficiently heavy in the head to be easily beaten down, yet not sufficiently ripe to be gathered, decay and destruction are inevitable. There considerations have led Japanese agriculturists to fix upon a certain day at the close of summer as the most important in the whole year from the rice-grower's point of view. It is called *nihyaku-toka*, or the two hundred and tenth day—that is to say, the 210th day from the *setsun*, or first day of spring. The *setsun* falls on the 3rd of February, consequently the 1st of September is the *nihyaku-toka*. Of course the state of the weather for one day alone is not vital—unless that day should happen to bring a storm of exceptional violence. But in addition to the fact that the rice crops are just in their most critical condition on or about the *nihyaku-toka*, long experience has taught the Japanese farmer that if only the sky is kind to him on the 1st of September, he may safely count on its benignity for the rest of the season. Last year, the *nihyaku-toka* passed without a storm, indeed, but not without rain in many parts of the

country, and not without evidences of considerable atmospheric disturbance. It was felt that evil days were in store for the agriculturist, and that the terrible floods in Yamato, news of which reached the capital at the end of August, presaged more widespread disaster. Events confirmed this forecast. Last year was, in fact, one of the most calamitous in Japan's modern experience, and there is some reason to fear that its influence has added to the mischievous capabilities of the elements this season. The rice crop in Japan is divided into three classes according to the time of harvesting; namely, the early crop (*wase*), which is harvested during July and August; the middle crop (*nakate*), which is harvested during August and September; and the late crop (*okute*), which is harvested in September and October. It will be understood, of course, that these statements of period are approximate. The time of harvest varies in different localities; the bulk of the *wase* is gathered in before the end of August, yet some of it remains standing in certain districts until the middle of September, and though the greater part of the *okute* is harvested by the end of October, patches of it may be seen unreaped as late as the beginning of December. Under ordinary circumstances the *okute* constitutes the great bulk of the rice crop: the *wase* and *nakate* are cultivated in comparatively small quantities. But owing to the destruction wrought by the inclemency of last season's weather, the price of the cereal rose, from the commencement of this year, to such an extraordinary figure that farmers became anxious to bring new rice into the market as speedily as possible. Accordingly, wherever the nature of the soil permitted, people set themselves to grow *wase*. It is estimated that, whereas in normal times the quantity of *wase* cultivated is only twenty per cent. of the whole crop, this year it has been planted to the extent of thirty per cent. Now the *wase* undoubtedly suffered by the storm of the 22nd. The extent of the damage is not known, but damage there certainly has been. On the other hand, the *nakate* and *okute*, constituting fully seventy per cent. of the whole crop, are practically uninjured. In a word, the conditions of last year are reversed, for whereas the *wase* then escaped, the *nakate* and *okute* were terribly injured by the gales of mid-September. It may indeed happen that the typhoon of the 22nd instant is only the precursor of similar disasters at a more critical time. But such is not the opinion of weather-wise folks. The market has not been affected, and if we may reasonably share the general hope that the worst is past and that a spell of fine weather is now commencing, harvest prospects are still decidedly favourable.

TONKIN AND KIUSHIU.

JAPANESE attention is again being directed keenly to the possibility of strong competition on the part of the Tonkin coal mines. The mines are chiefly in the possession of the Hon. C. P. CHATER, of Hongkong, whose well known business energy leaves no doubt that every possible means will be taken to develop them. Considering the time that has elapsed since Tonkin began to be talked of as an immediate source of coal supply, the public probably feels some surprise that this confident promise remains so long unfulfilled. Still, there is very little reason to doubt that good coal exists in large quantities in the French colony, and that, sooner or later, it will be put upon the market in quantities sufficiently large and at rates sufficiently low to interfere sensibly with Japan. With this prospect in view the question for Japanese exporters to consider is whether they cannot strengthen their position for competitive purposes. The *Tokyo Shimpō* devotes an article to the subject. It says that the total annual output of the Japanese mines at present is two and a half million tons, of which one half is consumed at home and the rest is exported or sold for ships' use. Hongkong and Shanghai are the principal markets. Each takes about the same quantity, namely three hundred and fifty thousand tons, the remaining five or six hundred thousand tons being sold at other ports or supplied to steamers at Nagasaki. It is at Hongkong of course that competition from Tonkin must be chiefly dreaded, the former being much more accessible from the latter than from Japan. The export of the Japanese mineral to Hongkong has steadily but slowly increased during the past few years. In 1883, the total import of coal into Hongkong from all quarters was 260,000 tons; in 1884, 310,000 tons; in 1885, 360,000 tons; in 1886, 380,000 tons; in 1887, 370,000 tons; in 1888, 350,000 tons; and in 1889, 425,000 tons. Of this last figure, Japan's share was 325,000 tons, so that other places took part in the trade to the extent of only a hundred thousand tons. Satisfactory as this record seems, the *Tokyo Shimpō* mentions a feature which shows that, in the matter of coal as well as in that of other staples, Japanese merchants allow themselves to be carried away by the penny-wise-pound-foolish policy so often noted to their discredit. Chikuzen exporters, our contemporary says, mixed bad coal with good, and sent no less than 130,000 tons of the mixture to Hongkong and 80,000 to Shanghai. This coal has proved unsaleable and will have to be disposed of eventually at a price which will barely cover freight, storage, and other export charges. Of course the effect of such reckless methods of trade is not confined to the doubtful coal only. The general reputation of the Japanese staple is in-

jured and the prices fall all round. The *Tokyo Shimpō* says that coal coming to Hongkong is classed in the following order of merit:—first, English coal; second, Japanese coal from Takashima; third, Japanese coal from Goshu; fourth, Japanese coal from Miike and Chikuzen; and fifth, Japanese coal from Hayama. The tampering with Chikuzen coal is said to be done chiefly by unprincipled merchants at Kobe, and it is recommended that Kobe should no longer be used as a place of export, since the special ports opened last year in Kiusiu are quite sufficient to serve the purposes of the trade. But although the evil practices of the Kobe traders deserve punishment, we do not see any guarantee that commercial morality is higher at Bakan and Moji. Another point noted by the *Tokyo journal* is the manner of mining the mineral. English coal, says our contemporary, is cut out in blocks of from one foot to three feet square, but Japanese coal is nearly always small. It has been calculated at the Shanghai Gas Works that a ton of large-lump coal produces 10,100 cubic feet of gas, whereas a ton of small-lump Japanese coal gives only 9,500 feet. The *Tokyo Shimpō* seems to think that by improving the mining methods in Japan, a saving of twenty per cent. might be effected in the cost of production, and putting the latter at 5 *yen* per ton, it easily arrives at the conclusion that the profits on the trade might be increased by two and a half million *yen* annually. But we need scarcely observe that five *yen* per ton is an excessive estimate for cost of production. Moreover, considering the hands by which coal-mining enterprise is chiefly controlled at present in Japan, we cannot be sanguine enough to think that any very great improvement of method is likely to be possible. The mines of the Mitsu Bishi Company are managed by thoroughly competent engineers who, serving intelligent and liberal owners, may be confidently trusted to enlist all the resources of modern science and discovery in the cause of their business. The general character of the Mitsui Bussan Company justifies us in thinking that the Miike mine, which came into their possession two years ago, is also worked with thorough efficiency. If competition from Tonkin can be met and conquered, the directors of these great companies are just the men to undertake the task successfully. We do not ourselves regard the Tonkin nightmare with much apprehension. It may indeed cut into Japan's export trade, but her home consumption of coal is still capable of immense development. By and by when she begins to smelt iron on a large scale, feed her porcelain furnaces with coal, develop her manufacturing industries, and warm herself at wholesome fire-places instead of stifling braziers, one or two million tons of coal will be a mere flea-bite in her annual demand.

PRINCE BISMARCK OUT OF POWER.

ATTENTION has been drawn by some of the home papers to the unphilosophical character of the course adopted by Prince BISMARCK since he retired from the Chancellorship. It is perhaps difficult for an English statesman to understand how a man of BISMARCK's calibre can bring himself to adopt such undignified methods of showing resentment at the treatment to which he has been subjected as those to which the ex-chancellor has had recourse within the past few months. For a man whose consummate wisdom in State affairs has been universally acknowledged, whose career has elicited nothing but wonder and admiration from the impartial, to commence defending himself after the manner of a politician who has a reputation to make is an offence to one's sense of propriety. The explanations which Prince BISMARCK has given to the public have tended to lower him in public esteem. There are some great men who only show to advantage when allowed the free exercise of their wills, whose capability lies rather in action than in endurance, whose Herculean powers are as closely associated with supreme command as SAMSON'S prodigious strength was with his locks, and hence who no sooner lose office than they descend to the ranks of ordinary men.

Regard it from what point of view we will, however, the sight of BISMARCK vexing himself in comparative idleness is a sad one. His rule was despotic. He would abide no rival. But this we are told by those who know Germany well, is what that country needs in its present condition. Anything like popular representation in the supreme legislature would be fatal to the unity of the empire. The future will reveal what BISMARCK'S retirement will cost the nation, if indeed he has permanently retired. His present mood only shows the human fretfulness and chafing of a spirit unaccustomed to bow to another's will. It is doubtless unphilosophical; an element of smallness in a great man. But it is a phase of human nature nevertheless, and hence interesting as a study. One condition of the greatness of such men as BISMARCK is that it cannot be rounded, cannot be moderated to suit all states and conditions. It is associated with extraordinary talent for a particular kind of work—work that can only be done at a special time and under a peculiar set of circumstances. BISMARCK the great must always BISMARCK the Chancellor, guiding the helm of State, revolving in his capacious mind a thousand complicated causes and effects, weighing with the accuracy of scales the political probabilities of Europe. Of BISMARCK out of power we care not to think. The men whose equanimity remains unaffected by activity or inactivity are not BISMARCKS. Elements of greatness they may have, but they are of a different order. One star differeth from

another in glory. And so it comes to this, that to complain of the fretting incidental to inactivity which characterises the man whose pre-eminence has been established by an extraordinary free exercise of power, is to show a want of insight into one of the fundamental principles of human nature—is to fail to recognise that every sort of greatness is dependent on some kind of congenial element in which to move, and that when separated from that element even the greatest minds sink into mediocrity, if not into insignificance. That the man who has made his name by activity should cut a poor figure in retirement ought to be no cause for surprise.

In England the ousted statesman can live a busy life as a leader of the Opposition, and may gain even a greater reputation in this capacity than as the head of the Government. But in Germany the form of Government has hitherto rendered such a course impossible. It is reported, however, that BISMARCK contemplates offering himself as a candidate for election to the Reichstag, where he contemplates heading the Opposition. The art of opposing without obstructing a government party is not one that can be acquired in a day. BISMARCK is a prodigy, no doubt, but as we have endeavoured to point out, there are limits to the feats which even prodigies can accomplish, and hence it will not surprise us to hear that Prince BISMARCK'S wand refuses to work when waved in the cause of the Opposition. It will surprise us more, however, to learn that he has joined the Opposition, for BISMARCK in any capacity except that of the pillar of imperialism is inconceivable.

THE POPULATION OF JAPAN.

Occasionally we find in the vernacular press uneasy notices of the rapid increase of population in Japan, and suggestions that the food-supply resources of the country may soon prove inadequate to meet the growing demands upon them. Similar apprehensions used to disturb the minds of people in the West also, years ago, and at rare intervals lovers of sensation recur to them even in these later days. But after all, why should we distress ourselves about such problems? MALTHUS was a terrible manipulator of geometrical progressions. In his hands the arithmetical laws which seem to govern the growth of mouths to be fed became a gospel of very evil tidings, and, if figures could be trusted at all, he demonstrated, beyond the possibility of doubt, that the human race must either curb its procreative instincts or find itself, ere long, confronted by the necessity of choosing between cannibalism and starvation. Yet when MALTHUS indulged in these curious predictions he forgot that they found their complete refutation in the

history of the past. For, being based on the immutable laws of arithmetic, they must have been just as true five, or even fifty, thousand years ago as they are to-day. Yet they remain unfulfilled. In other words, an interval of time longer than the orthodox estimate of the human race's existence from the creation until this present year of grace, has failed to bring them any nearer to fulfilment, and a similar lapse of time in the future may be trusted not to work out their accomplishment. Here at our own doors we have an example of the danger of trusting to such estimates, for, if Western statisticians could be credited, China ought long ago to have been completely over-run by starving millions, whereas no calamity of the kind has yet come in sight for her. Human beings are but insects. The same causes that promote their increase, operate to supply them with means of sustenance. So long as the race grows more numerous, so long, we may be quite sure, will its ability to support itself develop in proportion. But indeed in Japan's case these general theories need scarcely be applied: a special consideration suggests itself in her case. The *Hochi Shimbun* may believe, as it writes, that whereas her population in 1834 only numbered 27,063,907, it had multiplied to 39,607,334 in 1888, but we cannot place implicit reliance in these figures. Examine the series of assertions advanced by our contemporary. First, it says that a thousand years ago Japan was peopled by only four million souls. Secondly, that in 1834, these had grown to twenty-seven millions. Thirdly, that in 1872 they numbered thirty-three millions. Fourthly, that in 1888 they had increased to thirty-nine and a half millions. And fifthly, that during the twenty-three years of the *Meiji* era—1867 to 1890—the total increment of population has been ten millions. There is no relation whatsoever between these figures. Is it credible that a population which only grew from four to thirty millions in a thousand years, should suddenly leap from thirty to forty millions in the next twenty-three; or that an increase of three millions during the period from 1834 to 1867—an interval of 33 years—should be followed by an increase of ten millions during the ensuing 23 years? We altogether distrust such figures. The art of statistics is an affair of modern origin in Japan. Statements of population for dates earlier than 1875 may be dismissed as in great part conjectural. If we grant that there has been a leap from 30 to 40 millions in the *Meiji* era, then it follows that the population will be 53 millions in 1913, 71 millions in 1936, and 94 millions in 1959. There are no visible evidences of such a rapid development. Occidental statistics show that, in order to keep the population stationary, every married couple must have four children; two to replace their parents and two to supply

casualties. Do Japanese families average four children? We should scarcely have thought so. Large families cannot be the rule in a country where the upper classes agree to regard it as more or less a reproach that a woman should bear many children. The law of increase indicated by a development from four millions to forty in ten centuries, seems much more consistent with what we see about us than the law indicated by a growth of ten millions in twenty-three years. There is therefore no pressing cause for anxiety about the possible dimensions of the population half a century hence. Mr. TSUDA's recommendations in the *Hochi Shimbun* as to the expediency of cultivating sweet potatoes and ordinary potatoes in greater quantities, doubtless deserve attention, though not on account of any Malthusian speculations. Every measure that helps to render the Japanese less thoroughly dependent on rice as their staple of diet, is to be advocated. Sometimes we reflect with a shudder on the not impossible contingency of a complete failure of the rice crop. It is true that no such calamity has hitherto occurred. The famine of 1836 was bad enough, however, and who shall say that it might not be repeated any year? *Satsuma-imo* (sweet potatoes) were cultivated sufficiently largely in 1836 Mr. TSUDA says, to afford material relief. He advises people to follow the example of that time, and also to grow Indian corn, which, whether eaten whole or ground into meal, is an excellent article of diet. Sound counsels these, but we could wish that they had been offered without the accompanying chimera of mouths growing more numerous than the means of filling them.

TRAM ROADS.

LAW No. 71.

We hereby give Our sanction to the present regulations relating to tram roads and order the same to be duly promulgated.

[His Imperial Majesty's Sign Manual.]

[Great Seal.]

(Countersigned)

Count YAMAGATA ARITOMO,
Minister President of State.

Count SAIGO TSUKUMICHI,
Minister of State for Home Affairs.

Dated August 23rd, 1890.

Article 1.—The roads of tramways, or any other similar lines of rails laid down for public use, may be paved after obtaining the special permission of the Minister of State for Home Affairs.

Article 2.—Should the necessity arise for the extension, deviation, or other change in an already existing tram or similar road, or for the cutting or formation of a new road, the road may be paved on obtaining permission as in Article 1, and the land may be acquired through the permission of the Cabinet in accordance with the provisions of the law regulating the Appropriation and use of Land.

Article 3.—In parts of a road where change or extension has been made, both the land on which the rails are laid and the portion paved shall be included in the term "road."

HORSFORD'S ACID PHOSPHATE RECOMMENDED
BY PHYSICIANS

Of all schools, for the brain, nerves, and stomach.

DEBENTURES OF PUBLIC COMPANIES.

LAW No. 60.

We hereby give our sanction to the present Regulations relating to debentures, which shall be issued in accordance with Article 206 of the Commercial Code, and order the same to be duly promulgated.

(His Imperial Majesty's Sign Manual.)

(Great Seal.)

Dated August 8th, 1890.

(Countersigned)

Count YAMAGATA ARITOMO,
Minister President of State.

Count MATSUKATA MASAYOSHI,
Minister of State for Finance.

Article 1.—The issue of debentures by public companies, in accordance with the 206th Article of the Commercial Code, shall be permitted only when at least half of the capital of the company shall have been paid up.

Article 2.—The amount for which debentures are issued shall not exceed the sum total of the paid up shares.

Article 3.—Companies intending to issue debentures shall first obtain permission of that Department which shall have the chief responsibility, and such permission only be obtained through the local authorities.

Article 4.—Each debenture, in addition to a statement of its value, the ratio and period of the payment of interest, date of issue, number, company's name, seal of company, names and seals of directors, and names of creditors, shall contain the following information:—

- (1.) The address of the company's office.
- (2.) The number of shares and the amount paid thereon.
- (3.) The first and last terms of the indemnification of debentures.
- (4.) Date of the formation of the company.
- (5.) Period of the company's existence, should it be one the period of whose existence is a fixed term.
- (6.) That permission to issue debentures has been obtained.

Article 5.—An Original debenture book shall be prepared by a company when it issues debentures, and the following matters shall be set forth in it for the purpose of distinctly locating each debenture.

- (1.) The name and residence of each creditor.
- (2.) The amount and number of *Crédence*.
- (3.) The rate of interest.
- (4.) The date when the debenture is issued and date of its transfer.
- (5.) The first and last terms of the indemnification of debenture.

Article 6.—No transfer of debentures shall be valid as against the company unless the name of the assignee be described in the debenture in the original debenture book.

Article 7.—No company is permitted to raise objection, should any person demand an inspection of the original debenture book within proper office hours. A fee not exceeding *sen* 20 may be charged for such inspection in each case.

Article 8.—Directors shall be punished by a fine not less than *yen* 5 and not exceeding *yen* 50 in the following cases:

- (1.) When matters which are ordered to be mentioned on debentures are not so mentioned, or when some unlawful matter is set forth therein.
- (2.) When the original debenture book is not properly prepared or when some unlawful matter is set forth therein.

THE TEMPORARY BOARD FOR THE AFFAIRS OF IMPERIAL DIET.

IMPERIAL ORDINANCE, No. 180.

We hereby give our sanction to the present regulation relating to abolition of the Temporary Board for the Affairs of Imperial Diet and order the same to be promulgated.

[His Imperial Majesty's Sign Manual.]

[Great Seal.]

Dated August 23rd, 1890.

(Countersigned)

Count YAMAGATA ARITOMO,
Minister President of State.

We hereby abolish the Temporary Board for the affairs of the Imperial Diet.

LEGAL COSTS.

LAW No. 64.

We hereby give our sanction to the present Law relating to Legal Costs and order the same to be duly promulgated. We also order that this Law shall come into force on and after the 1st day of the 1st month of the 24th year of Meiji.

[His Imperial Majesty's Sign Manual.]

[Great Seal.]

Dated August 15th, 1890.

(Countersigned)

COUNT YAMAGATA ARITOMO,
Minister President of State.

COUNT YAMADA AKIYOSHI,
Minister of State for Justice.

Article 1.—Legal costs which are regulated in the Code of Civil Procedure shall be assessed in accordance with the rules mentioned in the following articles:—

Article 2.—The cost for drawing up a statement of claim or other document shall be *sen* 25 per half-sheet the lines in which number 12, each line containing 20 words. An incomplete half-sheet shall however, be reckoned as a full half-sheet. Maps shall be reckoned at *sen* 10 per sheet. Should measurements be required specifically, the charge shall be assessed by the Court.

Article 3.—The cost of translations shall be *sen* 50 per half-sheet of 12 lines, each line containing 20 words. An incomplete half-sheet shall, however, be reckoned as a full half-sheet.

Article 4.—Stamps affixed to documents in accordance with the Stamp Law for Civil Suits shall be charged according to their actual cost.

Article 5.—Fees paid by process servers shall be in accordance with the regulations for the Fees of Process-servers.

Article 6.—The cost of advertising in the *Official Gazette* or public newspapers shall be estimated in accordance with the actual charges.

Article 8.—In cases where the services of advocates are requested by the Court, in accordance with the regulations of Article 127 of the Code of Civil Procedure, the fees shall be assessed by the Court.

Article 9.—The allowance to parties shall be *sen* 50 for each person in attendance before the Court. This allowance shall, however, be *sen* 25 each when incurred for sojourning at the place of trial.

Article 10.—The allowance to witnesses shall be *sen* 50 for each person in attendance before the Court. This allowance shall, however, not be made when witnesses are allowed expenses for remaining at the place of trial.

Article 11.—The allowances to experts, as well as interpreters, shall be assessed by the Court at not less than *sen* 50 and not more than *yen* 5 for each attendance. Extraordinary expenses incurred in order to obtain expert evidence shall correspond to the actual charges.

Article 12.—The costs for parties for sojourning at the place of trial shall be *sen* 25 per day, should they come from a place above 8 *ri* distant. The costs for sojourning at the place of trial for witnesses, experts, or interpreters shall be *sen* 50 per day.

Article 13.—The allowance for the travelling expenses of parties, witnesses, experts, and interpreters shall be *sen* 10 per *ri* either by land or sea. Should there be two or more roads, travelling expenses shall be allowed for the nearest route. The travelling expenses of parties in foreign countries shall be assessed by the Court.

Article 14.—The travelling expenses and costs for sojourning of Judges and Court clerks while engaged in conducting investigations and the like, shall be the same as those of witnesses.

Article 15.—Other necessary expenses unenumerated in this Ordinance shall be assessed at the actual charges.

Article 16.—Expenses incurred in executions and in friendly suits shall be assessed in accordance with the foregoing regulations except those which are affected by the Rules relating to the fees of Process-servers. Should receivers be appointed in cases of executions or in friendly suits, the costs shall be assessed by the Court.

LEGAL STAMPS.

LAW No. 65.

We hereby give our sanction to the present Law relating to Legal Stamps in Civil Procedure and order the same to be promulgated. We also order that this Law shall come into force on and after the 1st day of the 1st month of the 24th year of Meiji.

[His Imperial Majesty's Sign Manual.]

[Great Seal.]

Dated August 15th, 1890.

(Countersigned)

COUNT YAMAGATA ARITOMO,
Minister President of State.

COUNT YAMADA AKIYOSHI,
Minister of State for Justice.

COUNT MATSUKATA MASAYOSHI,
Minister of State for Finance.

Article 1.—Stamps shall be attached to every original document relating to civil suits in accordance with the regulations laid down in the following Articles. Should oral statements be made by clerks of the Court, and the same reduced to writing, such documents shall have stamps attached.

Article 2.—Stamps shall be attached in accordance with the following distinctions; statement of claim in the first instance, claims of proprietary rights, and value of estates *pendente lite*:—

Value of estates <i>pendente lite</i> .		YEN.	SEN.
Not exceeding	5	20
Not exceeding	10	30
Not exceeding	20	60
Not exceeding	50	1.50
Not exceeding	75	2.20
Not exceeding	100	3.00
Not exceeding	250	6.50
Not exceeding	500	10.00
Not exceeding	750	13.00
Not exceeding	1,000	15.00
Not exceeding	2,500	20.00
Not exceeding	5,000	25.00

For sums above *yen* 5,000, stamps of the value of *yen* 2 shall be added for each sum of *yen* 1,000 or fraction thereof. The Regulations mentioned in Articles 3-6 of the Code of Civil Procedure shall be observed in estimating and settling the value of estates *pendente lite*.

Article 3.—In suits which do not relate to claims for proprietary rights, stamps shall be attached in accordance with the scale, and deeming the amount of the claim to be *yen* 100.

Should suits which do not originally relate to claims for proprietary rights involve a question and claim in regard to proprietary rights, and which are the outcome of the original suit, stamps shall be attached in accordance with the value of the claim which is greatest in amount.

Article 4.—Should a claim be followed by a counterclaim and both relate to the same thing *pendente lite*, stamps shall not be attached to the statement of the counterclaim.

Article 5.—Stamps, one-half additional in value, shall be attached to a motion for a new trial in accordance with Article 2; and stamps of the full additional value on a notice of appeal.

Article 6.—Stamps of the value of *sen* 50 shall be attached to the following documents:—

- (1.) Complaints.
- (2.) Motions.
- (3.) Petitions for the examination of evidence.
- (4.) Petitions for temporary seizure as well as for interlocutory depositions.
- (5.) Petitions for the execution of decrees.
- (6.) Petition for copies of original decrees.

Should, however, several copies of the original be asked for, the stamp to be attached shall be of the value of *sen* 50 and on one copy only.

Article 7.—Should a suit be concluded in a local Court, in accordance with the regulation contained in paragraph 3, Article 381, and Article 390 of the Code of Civil Procedure, by mutual agreement, compromise, or other settlement, and proceedings be thereby stayed, the stamp shall be attached in accordance with Articles 2 and 3.

Article 8.—Stamps shall be attached in cases where a claim goes to second trial in accordance with the rank of the Court in which the action is commenced.

Article 9.—Stamps shall be attached to petitions for the recovery of original documents in accordance with the rank of Court in which the documents are filed.

Article 10.—Stamps of the value of *sen* 20 shall be attached to every statement of claim, and to all petitions not mentioned in the preceding Articles.

Article 11.—Documents relating to civil suits which have no stamps attached in accordance with this Law shall have no effect, except in the case of No. 1, Article 97 of the Code of Civil Procedure.

The Courts may, however, amend documents unstamped or insufficiently stamped by ordering the necessary stamps to be attached.

Article 12.—The method of affixing stamps shall be in accordance with notification No. 4, the 17th year of Meiji.

Article 13.—Stamps shall be sold at places sanctioned by the Authorities, and it shall not be permitted to sell stamps at other places than those so sanctioned.

Article 14.—Persons found selling stamps at places other than those sanctioned by the Authorities shall be punished by a fine of not less than *yen* 20 and not exceeding *yen* 200, and the stamps found in the possession of such persons shall be forfeited. Persons found purchasing stamps at places other than those sanctioned by the Authorities shall be punished by a fine of not less than *yen* 10 and not exceeding *yen* 100, and forfeiture of the stamps so purchased shall follow.

Article 15.—The mitigation of punishment, or aggravation of punishment for a second offence or for concurrent offences provided for in the Penal Code, shall not have effect in the cases of those who infringe the regulations of the preceding Articles.

Article 16.—Article 6 and Articles 10-12 shall apply in friendly suits.

STAMPS IN FRIENDLY SUITS IN COMMERCIAL CASES.

LAW No. 66.

We hereby give our sanction to the present Regulations relating to Stamps in Friendly Suits in Commercial Cases and order the same to be duly promulgated. We also order that this Law shall come into force on and after the 1st day of the 1st month of the 24th year of Meiji.

(His Imperial Majesty's Sign Manual.)

[Great Seal.]

Dated August 15th, 1890.

(Countersigned)

COUNT YAMAGATA ARITOMO,
Minister President of State.

COUNT YAMADA AKIYOSHI,
Minister of State for Justice.

COUNT MATSUKATA MASAYOSHI,
Minister of State for Finance.

Article 1.—Persons who desire to obtain an order or decree of a Court of Law in regard to a friendly suit, except in suits relating to registry in the Commercial Code, shall attach stamps to the documents to be filed according to the following Articles. In cases, however, where application is made orally, stamps shall be attached to a note in writing. In the cases referred to in Articles 5, 6, and 7, stamps shall be attached to statements of accounts, which shall be produced.

Article 2.—Stamps of the value of *sen* 50 shall be attached to the following documents:—

- (1.) Petition for temporary seizure.
- (2.) Petition for execution of decree in bankruptcy, when produced by creditor.
- (3.) Petition for postponement of payment.

Article 3.—Stamps of the value of *sen* 20 shall be attached to the following documents:—

- (1.) Statement of opposition to motion.
- (2.) Petition for order or decree of a Court of Law in friendly suits not specially mentioned in this Law.

Article 4.—Stamps shall be attached, according to the following scale, with reference to sums of money on the credit side in a whole group of bankrupt estates; expenses for the superintendence of a whole group of estates, expenses pertaining to proceedings in bankruptcy, debts produced for the whole group, as well as sums used for exceptional payments, shall be taken from the sum of money on the credit side.

When the value of a whole group of estates is:—

Yen 5	Sen 40
Yen 10	Sen 60
Yen 20	Yen 1.20
Yen 50	Yen 3.00
Yen 75	Yen 4.40
Yen 100	Yen 6.00
Yen 250	Yen 13.00
Yen 500	Yen 20.00
Yen 750	Yen 26.00
Yen 1,000	Yen 30.00
Yen 2,500	Yen 40.00
Yen 5,000	Yen 50.00

In a group of estates valued above *yen* 5,000, *yen* 4 shall be added for each *yen* 1,000 or fraction thereof.

Article 5.—In bankruptcy proceedings the value of the stamps shall be reduced in accordance with the amount of assets to be distributed; whenever the proceeds from a whole group of bankrupt estates are distributed, the stamps used shall be in ac-

cordance with the amount of money which shall be distributed at the final account.

Article 6.—Should proceedings in bankruptcy be stayed by composition with creditors, stamps of half of the value of those mentioned in Article 4 shall be used.

Article 7.—In cases where proceedings in bankruptcy are revived, stamps equal in value to those in the first proceedings shall be used.

Article 8.—The Regulations mentioned in section 5, chapter 2, part 1, of the Code of Civil Procedure shall here apply as to the obligation of parties in regard to affixing stamps of the proper value.

The Law of Stamps in Civil Cases shall here apply so far as it does not conflict with this law.

CIVIL CASES AND MILITARY COURTS.

LAW No. 67.

We hereby give our sanction to the present Law relating to the Execution of Judgments in Civil cases delivered by Military or Naval Courts, and order the same to be duly promulgated. We also order that this law shall come into force on and after the 1st day of the 1st month of the 24th year of Meiji.

(His Imperial Majesty's Sign-Manual.)
(Great Seal.)

Dated August 15th, 1890.
(Countersigned)

COUNT YAMAGATA ARITOMO,
Minister President of State.
COUNT YAMADA AKIYOSHI,
Minister of State for Justice.
COUNT OYAMA IWAO,
Minister of State for War.
VISCOUNT KABAYAMA SUKENORI,
Minister of State for the Navy.

Article 1.—Ordinary Courts of law shall put in force the judgments in civil cases delivered by Military or Naval Courts, in accordance with the direction of the latter courts, except in cases where the enforcement of a judgment shall take place in a military camp, on board a man-of-war, or in barracks or the like.

Article 2.—Military and Naval Courts may issue orders additional to or subversive of their judgments, after the consideration of a petition by a plaintiff or a defendant.

Article 3.—The execution of judgments in civil cases by Military or Naval Courts shall be performed in accordance with the original judgment.

Military or Naval Courts shall deliver the original judgment mentioned in the last paragraph to a plaintiff at his request.

Article 4.—Military or Naval Courts shall issue orders for temporary execution, seizure, or disposition, in cases where the court deems it necessary to do so. Should temporary execution be ordered, the fact shall be stated in the original judgment.

In the cases referred to in this Article, a guarantee or a deposit must be forthcoming if demanded.

Article 5.—The Regulations of the Code of Civil Procedure shall be observed in cases where execution is put in force by ordinary courts, in accordance with Article 1.

REGULATIONS FOR SAVINGS BANKS.

LAW No. 73.

We hereby give our sanction to the present Regulations for Savings Banks, and order the same to be promulgated. We also order that this law shall come into force on and after the 1st day of the 1st month of the 24th year of Meiji.

(His Imperial Majesty's Sign-Manual.)
(Great Seal.)

Dated August 23rd, 1890.
(Countersigned)

COUNT YAMAGATA ARITOMO,
President Minister of State.
COUNT MATSUKATA MASAYOSHI,
Minister of State for Finance.

Article 1.—Any person who engages in the business of receiving savings from the public and of paying compound interest thereon, shall be regarded as conducting a savings bank.

Banks shall be deemed to be conducting the operations of a savings bank and shall observe these regulations where they accept a deposit of a

sum of money under yen 5 in any one case either as a fixed deposit or as a deposit at call.

Article 2.—None other than persons or companies possessed of a capital of yen 30,000 shall be permitted to open the business of a savings bank.

Article 3.—The directors of savings banks shall have joint and unlimited liability in regard to the responsibilities of the banks.

The liability of directors, however, shall cease by lapse of time at the end of one full year after their resignation.

Article 4.—Savings banks shall provide a sum of money of not less than half the amount of their paid up capital, to be invested in national loan bonds as a guarantee for the money of depositors, and place the bonds to trust at a deposit office.

Article 5.—No saving bank shall be permitted to devote its funds to any other purpose than the following:—

- (1) Loans.
- (2) Discount of bonds.
- (3) Purchase of National Loan Bonds and local loan bonds.

Article 6.—The period of loans by savings banks, in accordance with the last Article, shall be limited to 6 months, and shall be limited to the amount of the national loan bonds or local loan bonds which have been hypothecated. The discount by saving banks shall be limited to bills of exchange and promissory notes bearing the endorsement of more than two men of undoubted solvency. No savings bank shall be permitted to sell or purchase for fixed periods either national or local loan bonds.

Article 7.—Should any saving bank propose a change in its Articles of Association, the permission of the Minister of State for Finance shall be first obtained through the local Governor.

Article 8.—Should any bank propose to enter into the business of a savings bank, permission of the Minister of State for Finance shall first be obtained through the local Governor.

Article 9.—Should any saving bank fail to observe these regulations, the directors shall be punished with fines of not less than yen 50 and not more than yen 500.

Should any bank not a savings bank conduct the operations of savings banks, its proprietors or directors shall be punished with fines of the amounts mentioned in the last paragraph.

Article 10.—All matters not specially provided for in these regulations shall be dealt with in accordance with the Regulations relating to Banks.

REGULATIONS FOR BANKING BUSINESS.

LAW No. 165.

We hereby give our sanction to the present Regulations relating to Banks, and order the same to be promulgated. We also order that the same shall come into force on and after January 1st, 1891.

(His Imperial Majesty's Sign-Manual.)
(Great Seal.)

Dated August 23rd, 1890.
(Countersigned)

COUNT YAMAGATA ARITOMO,
Minister President of State.
COUNT MATSUKATA MASAYOSHI,
Minister of State for Finance.

Article 1.—Every place publicly opened for the discounting of bills, for the business of exchange, or deposits and loans of any description, shall be held to be a bank whatever the name used by it may be.

Article 2.—Any person intending to do banking business shall determine and state the amount of his capital and obtain permission of the Minister of State for Finance, through the local Governor.

Article 3.—Banks shall make returns of their business for each half-year and transmit the same to the Minister of State for Finance through the local Governor.

Article 4.—Banks shall make a statement of their assets and liabilities, also comparative tables of the money borrowed and lent during each half-year, and shall announce the same to the public through the newspapers or by other means.

Article 5.—No bank shall be permitted to use more than one-tenth of its capital as a loan to one individual or individual firm or company. No bank whose capital is not fully paid up shall be permitted to use a sum of money amounting to more than one-tenth of the capital already paid up as a loan to an individual or individual firm or company.

Article 6.—The business hours of banks shall be from 10 o'clock a.m. till 4 o'clock p.m. These

hours may, however, be extended according to convenience.

Article 7.—The holidays of banks shall be the great holidays, festivals, Sundays, and the customary holidays prevailing in banks generally. Should some inevitable event occur, the bank may cease business after duly informing the local Governor and after announcing the same to the public by advertisement or by other means.

Article 8.—The Minister of State for Finance may examine the actual condition of the assets and liabilities of banks by issuing orders to do so to the local Governor and other officials, at any time whatever.

Article 9.—Should any person conduct banking operations without first obtaining the permission of the Minister of State for Finance in contravention of Article 2 of these regulations, he shall be punished in accordance with Article 256 of the Commercial Code.

Article 10.—Should any bank not make the returns provided for in Article 3 of these regulations, or shall not publish the statements and tables referred to in Article 4 of these regulations, or shall make a false statement or conceal any facts in the documents referred to, penalties will be incurred in accordance with Article 262 of the Commercial Code.

Should any bank object to the examination described in Article 8, punishment shall follow in accordance with Article 258 of the Commercial Code.

Article 11.—These regulations shall not be applied to the Bank of Japan, to the Yokohama Specie Bank, or to the national banks.

CORRESPONDENCE.

CHRISTIANITY AND PERSECUTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The "condescension" of Bishop Newman not being equal to the task of answering the grave charges I brought against the shaky logic, faulty history, and curious ignorance displayed by a recent lecture of his, two champions have come forward to wage battle, not exactly on his behalf—for one mildly condemns him and the other does not attempt a direct defence—but on behalf of that Christianity of which the Bishop is one of the shining lights; and it is some satisfaction to notice in both letters the exhibition of a far better spirit than that displayed by the Bishop. Probably that gentleman thought no one would take the trouble to expose his fictions and fallacies, and was less careful than he might have been had he known the possibility of criticism. But he should be careful. Statements which are all very well and sound extremely plausible when made to a non-critical Christian audience from the safe position of a pulpit, are somewhat dangerous when made from a platform where they run a chance of being reported.

Before, however, replying either to "Vox" or Mr. Brunson, it may be well, in order to clear the ground, to point out briefly what were the arguments of my first letter. Bishop Newman, in his platitudinous way, had claimed in the course of his lecture on "The March of Christian Civilization" that wherever Christ was received "the gyve fell from the slave, the mind was quickened, and woman was elevated." In reply, I pointed out, by reference not only to historical records of Christian practice, but to Christian precept, as laid down in the book which Christians claim to be inspired revelation, that this threefold claim for Christianity was historically false and doctrinally unsound; that so far from assisting in the struggle against slavery, or for knowledge, or for the elevation of woman, Christianity was opposed by its teachings, and the great mass of Christians by their practice, to progress of almost every kind until the battle had been won. I have no doubt that "Vox" finds these statements "astounding." Most Christians do, especially those who have never studied the subject; but what he has to prove in reply is that they are untrue, and this, beyond vague assertion, he makes no attempt at doing. He says that I confuse "the details of Mosaism with Christianity, whereas Christ repudiated expressly the very thing that 'Secularian' cites in condemnation of Christianity." But if "Vox" rejects Mosaism as part of Christianity, he also must be an infidel. Without the Fall there is no need for Redemption; "for as in Adam all die, even so in Christ shall all be made alive" (1 Cor. xv. 22). In the passage "Vox" cites from Mark x., Christ, who is inspired, certainly does teach a different doctrine to the atrocious law laid down by the equally inspired Moses; but then, on the other hand, in Matthew v. 17, 18, the inspired record attributes quite different teaching to Christ: "Think not that I am come to destroy the law, or

the prophets," he says, "I am not come to destroy, but to fulfill. For verily I say unto you, till heaven and earth pass, one jot or one tittle shall in no wise pass from the law till all be fulfilled." "Vox" will see that there is no reservation here, but that Christ puts his seal upon all the laws of Moses, or else the phrase "one jot or one tittle" is meaningless. These are the words, let him remember, of "revelation." He will, perhaps, reply that Mark x. 5 and Matt. v. 17, 18, cannot both be true, and will prefer to believe that which seems the more humane teaching. But I would warn him in such case to be careful to choose the right one, for the consequences of error are serious; "he that believeth and is baptized shall be saved; but he that believeth not shall be damned" (Mark xvi. 16).

"Vox's" remaining arguments are scarcely worth serious attention. They amount in effect to an assertion that everything good is due to Christianity and everything evil to the want of it; when Christians do ill they are not Christians, and when infidels do good they are not infidels; and this is urged notwithstanding that I showed, by chapter and verse from the inspired Christian text-book, that the evils resulting from Christianity were not imputations by unfaithful Christians, but could be traced home to the original teaching itself. It is a sort of "heads I win, tails you lose" argument, which, remarks a recent writer, has come to be very common among Christian controversialists, being simply an unblushing begging of the whole question; and, however convincing to believers in Christianity, "Vox" can surely see that it is a worthless argument in discussion with non-believers. The Bishop of Peterborough certainly does not agree with "Vox's" prophecy that we are moving in the direction of Christian legislation, if by that is meant the carrying out of Christ's teaching as a whole, for he said recently that "If there really be any person who maintains this, I cannot argue with him. His proper place is in a lunatic asylum."

Mr. Brunson begins his reply by charging my assertions with being "bald and inaccurate," but as he refrains from pointing out inaccuracy, and seems to have used the word "bald" simply to round off his sentence, there is no necessity to deal with this remark. Then he is kind enough to pray that my heart may be "touched by the power of God" and my eyes "opened to the truth;" and leaving out the first clause I heartily return the compliment, but yet fail to see why "breadth and liberality of spirit and fairness of mind" should lead me to palter with truth and hail as undoubted good what I sincerely believe to be almost unmitigated evil. However, even Mr. Brunson will scarcely call this part of his letter argumentative, and I will proceed to deal with those portions in which he really traverses my arguments.

In answer to my reference to the "fires of persecution lighted by Christians," Mr. Brunson endeavours to show that the charge cannot fairly be brought against Christians as a whole, and then goes on to allege that Romanists—the most numerous body of Christians—he observed—are the guilty parties, and that "religious intolerance and persecution are utterly at variance with the teachings and spirit of Christ." Such a statement simply shows how little Mr. Brunson knows of history, and how carelessly he has studied both his New and his Old Testaments. The excuse for the most bitter and intolerant persecution is to be found, not in the words of Christ's followers, but in the special injunctions of Christ himself when sending out the twelve apostles (Matt. x. 14, 15): "And whosoever shall not receive you, nor hear your words, when ye depart out of that house or city, shake off the dust of your feet"—about the most contemptuous proceeding possible according to Jewish custom, be it remembered—but this is not all, for the founder of the religion which is asserted to teach universal love continues: "Verily I say unto you, it shall be more tolerable for the land of Sodom and Gomorrah in the day of judgment, than for that city." That is to say, that the shocking and (outside the covers of the Bible) nameless crimes of the inhabitants of Sodom and Gomorrah are to be treated with more leniency by the Christian God at the day of judgment than non-belief in Christian dogma, no matter how just, honourable, and upright the non-believer might otherwise be. What wonder that logical Christian priests, honestly believing this to be divine revelation, appalled at the fate so vividly pictured for unbelievers, felt that their plain, undoubted duty was to coerce, imprison, rack, torture, and burn heretics, if haply souls might be saved from everlasting torment. Surely it was better to burn the bodies of a few heretics than that numberless souls should run the risk of eternal damnation. These priests, however we may detest the shocking cruelties into which their belief led them, are at any rate entitled to respect as more

logical, more honest, more straightforward than the present representatives of Christianity; they did not take the stern injunctions, clearly expressed, of their terrible creed in a non-natural sense; they did not say, "This doesn't mean what it says, but something quite different." No; the words and the spirit were clear; and the guilt of the blood which was shed like water rests upon the hateful precept rather than on its translators into practice.

I have no hesitation in saying that it is Mr. Brunson, with his more humane spirit, who is "farthest from the Bible," and not those who carried out its teachings in all their naked hideousness. "If thy brother, the son of thy mother, or thy son, or thy daughter, or the wife of thy bosom, or thy friend, which is as thine own soul, entice thee secretly, saying, let us go and serve other gods, which thou hast not known, thou, nor thy fathers; . . . thou shalt not consent unto him, nor hearken unto him; neither shall thine eye pity him, neither shalt thou spare, neither shalt thou conceal him; but thou shalt surely kill him; thine hand shall be first upon him to put him to death, and afterwards the hand of all the people" (Deut. xiii. 6, 9). Has Mr. Brunson forgotten that this atrocious "law" forms a part of Biblical teaching; and if he has, his attention now having been called to it, will he continue to assert that only those persecutors who are "farthest from the Bible," Christian ignorance of Christian revelation is simply extraordinary. What would Mr. Brunson and his confidants say of an advocate of the claims of any other religion who should calmly assert those who persecuted to be farthest from his creed when he knew that such a law was to be found in one of the sacred books of his religion?

It is certainly not surprising that, as a natural result, taking the Bible as a guide, Christianity has been essentially a persecuting religion. If to one or two minor sects we add the Quakers, who have always been honourably distinguished for their tolerance—and have been labelled "infidel" by their fellow Christians, perhaps more often than the members of any other denomination—and the Unitarians, who strictly can hardly be called Christians at all, there is scarcely a sect, from ultra Romanist to ultra Protestant, but has persecuted in its turn. Mr. Brunson complains that in charging Christianity with being a persecuting religion I do not discriminate between the various sects. But the difficulty is to find sects guiltless of intolerance. The followers of Christ, by whatever name they have called themselves, have almost always persecuted when they have had the power. One of the saddest facts of history is to observe how Christian sects have fled from most intolerant treatment themselves to be in turn more intolerant still. See how the Puritans, but lately delivered from persecution, behaved towards the Quakers when they got power to persecute. "In July, 1656, two women Quakers, Mary Fisher and Ann Austin, arrived at Boston. Under the general law against heresy their hooks were burnt by the hangman, they were searched for signs of witchcraft [these old Puritans were not ashamed of their Bible in those days], they were imprisoned for five weeks, and then sent away. During the same year eight others were sent back to England. In 1657 and 1658 laws were passed to prevent the introduction of Quakers into Massachusetts, and it was then enacted that on the first conviction one ear should be cut off, on the second the remaining ear, and that on the third conviction the tongue should be bored with a hot iron." Eventually "four Quakers, three men and one woman, were hanged for refusing to depart from the jurisdiction or obstinately returning within it." "The particulars of the proceedings of Governor Endicott and the magistrates of New England, as given in Besse, are startling to read. On the Restoration of Charles II. a memorial was presented to him by the Quakers in England stating the persecutions which their fellow-members had undergone in New England. Even the careless Charles was moved to issue an order to the colony which effectually stopped the hanging of Quakers for their religion, though it by no means put an end to the persecution of the body in New England" (*Encyc. Brit.*). Let it be remembered by Mr. Brunson that this shameful persecution was conducted by men who boasted—and with too much truth—of their fidelity to Bible teachings.

My opponent seems to think that there was no persecution before Christianity became allied with the State, which shows about as much knowledge of the subject as his belief that Christianity has today lost its persecuting character. Lecky, however, in his "History of European Morals," says "All that fierce hatred which during the Arian and Donatist controversy convulsed the empire, and which in later times has deluged the world with blood, may be traced in the Church long before the conversion of Constantine. Already in the second century it

was the rule that the orthodox Christian should hold no conversation, should exchange none of the ordinary courtesies of life with the excommunicated or the heretic. These people were believers in their creed. To-day Christians are milder-mannered than their spiritual forefathers, but at the expense of fidelity to Biblical teaching. And here it may be well to say a word upon my use of the term "infidelity" in my former letter. Mr. Brunson thinks he scores a point by triumphantly showing that infidelity or scepticism (using the words as a term for philosophical objection to Christianity) could have had no influence in quenching "the fires of persecution" because it did not come into existence until the middle of the last century, when these fires had almost ceased to burn. I will deal with the last assertion in a moment; but if Mr. Brunson will read my letter again, he will find that I did not restrict my use of the word "infidelity" to the opinions of those who avowedly ranged themselves against Christianity; but as being fairly descriptive of those who, on any particular point—slavery, or witchcraft, or persecution for example—laboured in direct antagonism to the teachings of their creed. I freely admit that many of the strongest opponents of slavery called themselves Christians, but my claim is that as they were clearly "unfaithful" to the teachings of Lev. xxv. 44-46, they were, consciously or unconsciously, so far "infidels." The same argument holds with reference to those who acted in opposition to the teaching of the Bible on other points. When men had no doubts about the truth of Christianity, they had no qualms about doing just what Christianity taught them to do; but when the spirit of inquiry once entered their minds, and people began to be doubtful if, after all, the Bible had said the last word on questions of practical morality, from that moment we may date the birth of tolerance. My contention is, I maintain, still unshaken that progress in Christian countries having been in the teeth of Judaic-Christian teaching and legislation as expressed in the Bible, it has been possible only by unfaithfulness to those particular teachings, or in other words to "infidelity." So long as Christianity claims to have a divine revelation, a "Christian" who rejects a part of his creed cannot be regarded as a Christian at all; divine inspiration being infallible cannot err, and Christians are therefore not at liberty to pick and choose what they shall accept and what they shall reject.

Now to deal with Mr. Brunson's assertion that by the middle of the eighteenth century the fires of persecution lighted by Christians had almost ceased to burn. If he restricts the words "fires of persecution" to literal burning at the stake, which would be an evasion of the argument, the statement is no doubt true enough; but if he means to say that since the middle of the last century there has been little or no persecution of opinion—bitter, intolerant persecution—such an assertion shows scanty knowledge. "Exonerated from religious bigotry," he says, "was gained by Tyndale, Luther, Calvin, Knox, and their noble coadjutors, many of whose bodies were burnt at the stake, and not by infidelity." The word "exonerated" would seem to imply that the charge of religious bigotry brought against those he mentions had failed; but probably he has used a wrong word, and means to claim what tolerance we now enjoy as due to the efforts of those he mentions. If this be his meaning, as the context shows, how he can so claim, knowing anything whatever of their lives and teaching, is simply wonderful. Excepting Tyndale, none of the other typical leaders he mentions suffered martyrdom, and, as Mr. Brunson must surely know, Luther, Calvin, and Knox showed against those who differed from them, or went further in their opposition to currently received teaching, the most bitter intolerance. Was it in defence of "religious freedom" that Calvin was instrumental in burning his erstwhile friend Servetus with green wood in order that his agonies might be prolonged? Really the statements of Christian apologists display such utter ignorance of facts known to every child that controversy seems almost hopeless. Before again making so ridiculous a claim, let Mr. Brunson study the lives and writings of those whom he eulogises, and he will then come to a different opinion.

Equal ignorance of past and even of contemporary history is shown by Mr. Brunson in his remark that "there is not that in infidelity which makes martyrs." Probably he thought in the innocence of his heart that Christian persecution having "almost" ceased since the middle of the eighteenth century, it would be impossible to bring forward any instances of infidels (using the word now as descriptive of those who objected to Christian dogma and teaching on moral grounds) prepared to give up liberty and even life in defence of what they held to be truth; so it may be well to enlighten him by citing a few examples—examples

which will also show how far Christian persecution ceased, and religious freedom became a fact, in the middle of the eighteenth century.

We will take, then, as our first example Jacob Olive, master printer, who in 1756 was sentenced to imprisonment for two years for publishing "Modest Remarks on the late Bishop Sherlock's Sermons."

In 1762, Peter Annet, for the publication of a journal in London called the *Free Enquirer*, in which he conducted a critical examination of the Pentateuch, was condemned to suffer one month's imprisonment in Newgate, to stand twice in the pillory with a paper over his head inscribed "For Blasphemy," then to be confined to hard labour in Bridewell for one year, after which he was to be remanded to Newgate until he found security for his good behaviour during the remainder of his life. At this time he was seventy years of age, and after lingering for six or seven years in prison, death gave him release from Christian persecution on January 18th, 1769.

For publishing Paine's "Age of Reason," Thomas Williams was sentenced in 1797 to three years' imprisonment, the prosecution being instituted by a society with four bishops among its promoters.

In March, 1812, Daniel Isaac Eaton, a Deist, was sentenced by Lord Ellenborough, also for publishing Paine's "Age of Reason," to two years' imprisonment and to stand in the pillory for two hours. It was this shocking sentence which called forth Shelley's stinging "Letter to Lord Ellenborough," in which the memorable passage occurs: "By what right do you punish Mr. Eaton? What but antiquated precedents gathered from times of priestly and tyrannical domination can be adduced in palliation of an outrage so insulting to humanity and justice. Whom has he injured? What crime has he committed? It is because he is a Deist and you a Christian. You copy the persecutors of Christianity in your actions, and arm an additional proof that your religion is as bloody, barbarous, and intolerant as theirs."

These examples are collated from an excellent article on "Past Prosecutions for Blasphemy and Heresy," in the March number of *Progress* for 1883, from whence I take the following account of one of these prosecutions:—"On the 16th of January, 1819, began a series of prosecutions, instituted by the Society for the suppression of Vice, against Richard Carlile, and his associates, shopmen, and shopwomen. The first trial, that of Carlile himself, began on October 12th of that year, and after a nine days' defence, ended by his being sentenced to pay a fine of £1,500; to be imprisoned for three years, and to find sureties for his good behaviour for the term of his life. In consequence of his non-compliance with the law, this intrepid man, to whom, more than to any other, we owe such freedom of expression as we to-day enjoy, endured no less than nine and a half years' imprisonment. The sale of Paine's "Age of Reason," for publishing which he was sentenced, was not suppressed for a single day, though various expedients were in time adopted to evade the law. For the same and similar offences, his wife, Jane Carlile, suffered two years' imprisonment. His sister, Mary Anne, also two years. William Holmes, John Barkley, Humphrey Boyle, Joseph Rhodes, Mrs. Susannah Wright, William Tumbidge, James Watson (who afterwards so ably fought in the battle for a free press, together with his friend Henry Hetherington), William Campion (editor of the *Newgate Magazine*), Richard Hassell, Thomas Jeffries, John Clarke (author of the *Critical Review*), William Cochrane, William Haley, and Thomas Reley Perry, all of whom carried on Carlile's business, had also sentences varying from three years to twelve months' imprisonment. Various other trials took place in Edinburgh and elsewhere, several who were arrested not being brought to trial." The last of the Carlile trials, that of Perry, took place in July, 1824, and in prefacing the report of the trials of these persons, Carlile, writing from Dorchester gaol in the sixth year of his imprisonment, was able to say, and Mr. Brunson is requested to take note, "All the publications that have been prosecuted have been and are continued in open sale."

Writing upon Carlile, lately in the *Newcastle Weekly Chronicle*, Mr. G. J. Holyoake makes some pregnant remarks. "In days when gentlemen were transported for having in their possession Paine's 'Age of Reason,' Carlile published editions of his works. He was imprisoned himself altogether nine years and three months—his wife was imprisoned—more than 150 of his shopmen were at various times imprisoned. He not only resisted the letters upon the press, but inspired others to resist. He wrote heretical books, delivered lectures, and by his pen and speech and in person maintained the conflict, until he established a free press. Like Paine, recogni-

tion and credit has never been given Carlile, because of his heretical sentiments. The enlargement of freedom has always been due to heretics who have been unrequited during their day and defamed when dead. No publisher in any country ever incurred so much peril to free the press as Richard Carlile. Every British book-seller has profited by his intrepidity and endurance. Speculations of philosophy and science, which are now part of the common intelligence, power, and profit, would have been stifled to this day but for him."

I will not proceed to quote more of these prosecutions, the list of which could be very considerably extended, but would like to ask whether it is possible that Mr. Brunson is ignorant that the laws under which these men were convicted are still unrepealed? As the law in England stands to-day, by the 9 and 10 Will. III. cap. 35, any person convicted of blasphemy (which has been defined by judges to mean simply denial of Christianity) for a first offence may be adjudged incapable of holding any public office or employment, while upon a second conviction he becomes disabled from being a plaintiff in the law courts, incapable of being the guardian of his own children, and liable to three years' imprisonment. This is but one out of many laws all directed to the same object; and Christians cannot argue that they are simply relics of a barbarous age, for, putting aside the fact that they have been enforced very recently, a Bill which sailed as April 1889 came before the British House of Commons with object of the repeal of these laws, only received 46 votes, and found its most zealous opponents among those members who most loudly boasted of their Christianity.

Of course Mr. Brunson has never heard of this debate, has never heard of infidels suffering for their opinions, know nothing, in fact, of the matters upon which he expresses so confident an opinion—perhaps, notwithstanding the evidence adduced, will still believe that Christians in general are opposed to the enforcement of laws against people for matters of opinion. But there happens to be a noteworthy test, so far as British Christianity is concerned of how far this is so. There is in existence in London a Society whose efforts are directed to obtaining the repeal of the blasphemy laws which still disgrace the statute-book—and which Lord Chief Justice Coleridge in a recent trial described as "shocking"—yet, out of the thousands of established and dissenting clergy in the country, in 1889 two only had become members of that society. One was a Unitarian who was too advanced even for that liberal body; I have myself heard him declare that he had received frequent hints from clergymen of his own denomination that his room in that ministry would be preferred to his presence. This gentleman has since died, and the sincerity of Christians in their opposition to persecution is now shown by the presence of but one solitary Church of England clergyman on the list of members—a gentleman whose orthodoxy is so doubtful that the Bishop of London has inhibited him from preaching in his diocese.

This matter of the relation of modern Christianity to persecution seems to me so important, and there exists such extraordinary ignorance on the subject, that I have treated it at such length as to be unable within the compass of an ordinary letter to deal with the remainder of Mr. Brunson's reply which I hope to have space allowed me to do on a future occasion. In bringing my remarks on this subject to a conclusion, I would strongly advise Mr. Brunson when next he writes on Christianity and persecution to limit his use of the words "the freedom from intolerance that we now enjoy" to the members of his own particular sect, for it is certainly not true so far as Freethinkers are concerned that intolerance—Christian intolerance—is dead. And he will find it well in future to examine facts before he makes such a "bald and inaccurate" assertion that "there is not that in infidelity which makes martyrs"—this when seven years have not passed since Mr. Foote was sentenced by an avowedly Christian judge to one year's imprisonment for the publication of the *Free-thinker*; when the latest blasphemy prosecution in America is scarcely two years old; and while Mr. Viktor Lennstrand is at this very moment serving a sentence of one year's imprisonment in Sweden, with other prosecutions hanging over his head, for writing and lecturing against Christianity. Grass ignorance of a subject upon which an opinion is expressed is no defence when statements such as those of Mr. Brunson are made. I do not for a moment believe that he wrote in bad faith. Christian prejudice blinded his eyes and barred his pen, and led him to make random assertions about a matter of which he knew nothing, and apparently took no trouble to make any inquiries. But I yet hope that he may be led to see the truth, and to give up the vain pursuit of this will-o'-the-wisp Christi-

anity, turning his eyes from the skies to the world around him, putting his new wine into new bottles, and blending what truth there is in the Palestinian ethics of nineteen centuries since with the newer and richer experience of "this our present day."

SECULARIAN.

Kobe, August 24th, 1890.

F.A.R.C. AQUATIC SPORTS.

The swimming races and diving competitions, postponed from Saturday, came off yesterday afternoon at the bathing barge, and commenced with standing headers from the top of the barge. Eight entered for this event and seven turned out. Mottu was the victor, beating Campbell by one point only.

Mottu 1 | Campbell 2 | Arthur 3
The next item on the programme was a swimming race, 100 yards (open). Mottu again winning, and coming in first by 20 yards. Eight entered for this, six competing. The tide was very strong against the swimmers, thus slow time was the result, 4 min. 20 sec. The first three were:—

Mottu 1 | Martin 2 | Shepherd 3
Then followed the long dive, for which eight entered and six came out, Campbell winning by about 30 yards.

Campbell 1 | Kenney 2 | Arthur 3
Running headers from the spring board was the next event, for which nine entered and seven tried. Mottu again won, diving in fine form and beating Campbell this time by two points, though the latter went off gracefully.

Mottu 1 | Campbell 2 | Arthur 3
The quarter mile swim, for which six were entered did not come off, the strong tide deterring those entered.

The running headers from the top of the barge was won by Mottu, with 26 points, Campbell, a good second, with 25 points. Arthur dived in capital form. Six entered, and all tied.

Mottu 1 | Campbell 2 | Balk 3
Then came the 100 yards swimming race, open to non-winners in China and Japan, for which eight entered and five started. Arthur won, after a very close race with Campbell. The prize was a pair of porcelain incense burners kindly presented by Mr. Mottu. The race was from the barge to the pontoon, the tide being too strong to swim against.

Arthur 1 | Campbell 2 | Balk 3
A scratch race was got up for 100 yards from the barge to the pontoon. Eleven went in for this, and Crawford was the victor after a close race with Gibbs.

Crawford 1 | Gibbs 2 | Campbell 3
The Committee conducting the sports were H. C. Litchfield, judge; J. Kickett, time-keeper; W. W. Till, starter. The judges of the diving were Messrs. G. H. Seidmore and F. H. Hooper.

BRITISH CONSULAR TRADE REPORT FOR NAGASAKI FOR 1889.

Consul QUIN to the Marquis of SALISBURY.

Nagasaki, April 14th, 1890.

MY LORD,—I have the honour to report on the Trade and Navigation of the Port of Nagasaki for the year ended December 31st, 1889, enclosing the following tables:—

I.—Return of the Principal Articles of Import to Nagasaki during the year 1889-88.

II.—Return of the Principal Articles of Export from Nagasaki during the years 1889-88.

III.—Table showing the Total Value of all Articles Exported from and Imported into Nagasaki to and from Foreign Countries during the years 1889-88.

IV.—Return of all Shipping at the Port of Nagasaki during the year 1889.

V.—Return of Foreign Residents and Firms.

The total imports and exports for 1889-88 are as follows:—

	1889.	1888.
Exports	449,540	369,516
Imports	943,765	841,016
Total	1,393,305	1,210,532

Showing an increase in imports of 80,024/4 and in exports of 90,840/4, and a total increase in the trade of the port during last year of 179,873/4 over that of the preceding year.

Four steamers, valued at 65,802/1, were sold during 1889, whereas two vessels, valued at 67,525/4, were sold in 1888.

The value of cotton manufactures imported during 1889 only amounted to 4,602*l.*, as against 5,581*l.* in 1888, showing a decrease of 979*l.*

There is also a decrease in the imports under the head of woollens and mixed cottons and woollen goods of 2,490*l.*, the figures being 2,083*l.* for 1889, and 4,573*l.* for 1888.

In metals there has been a considerable increase during the year under review, caused mainly by the necessary materials for the Kinsui Railway, 2,774 tons of rails were imported at a cost of 14,084*l.* Plate and sheet iron to the amount of 8,611*l.*, and the figure for miscellaneous metals totals to 30,132*l.*, forming a grand total under the above heading of 52,827*l.* for 1889, against 26,816*l.* for 1888, being an increase for 1889 of 26,011*l.*

The import of sugar has decreased during 1889, though slightly, being 9,042,846 lbs. in 1888, valued at 62,473*l.*, and 9,695,189 lbs., valued at 69,738*l.* in 1889, being a decrease of 247,657 lbs., with an increase in value of 7,265*l.*

There is a decrease in the quantity of white sugar imported of 359,751 lbs., but an increase in the value of 4,044*l.*

Brown sugar was imported to the extent of 4,004,033 lbs., valued at 21,604*l.* in 1889, against 3,891,939 lbs., valued at 18,525*l.* in 1888, being an increase, both in quantity and value, over the preceding year.

The consumption of kerosene oil during 1889 was nearly 100,000 cases more than the preceding year, due to the increased demand for it throughout the country, and the enhanced value of the native seed oil. The business in oil last year, generally, was not remunerative to importers, although prices, on the whole, show a rise on the previous year. Atlantic brand has continued the favourite, Chester selling at about 5*c.* per case less. Russian oil is in more favour than formerly, selling at about 10*c.* or 3*d.* per case below Atlantic, but the quality is said not to be always reliable.

The year opened with Atlantic, selling at 2*d.* 35*c.* (7*s.* 3*d.*). During February, March, and April, the average price was 2*d.* 30*c.* (7*s.* 1*d.*), to 2*d.* 35*c.* (7*s.* 3*d.*). May saw a decline to a *d.* 20*c.* (6*s.* 9*d.*), and in June, July, and August it was sold at 2*d.* 17*c.* to 1*d.* 18*c.* (6*s.* 8*d.* to 6*s.* 8*d.*), from which point it rose by degrees to 1*d.* 30*c.* (7*s.* 1*d.*), which was the closing price on December 31.

Chester was sold at 2*d.* to 2*d.* 12*c.* (6*s.* 2*d.* to 6*s.* 6*d.*) in August and September, rising to 2*d.* 16*c.* (6*s.* 8*d.*) in October.

Drugs show a slight decrease of 192*l.* in 1889, the figures being 6,827*l.* in 1888, and 6,635*l.* in 1889.

Under the head of machinery, which includes instruments, &c., there is an increase of 5,264*l.*; the imports in 1889 being 22,534*l.*, against 17,270*l.* in 1888.

The import of raw cotton has, as will be seen by the following table, more than trebled during the last three years:—

1889.	1888.	1887.
Quantity. Value.	Quantity. Value.	Quantity. Value.
Lbs. Lbs.	Lbs. Lbs.	Lbs. Lbs.
4,751,222 91,535	3,269,757 55,895	1,362,121 30,987

The increase in 1889 being 1,541,456 lbs., valued at 35,640*l.* A considerable quantity is consumed by the local spinning mill, and the remainder goes up country for hand spinning, &c. Some portion has been re-shipped in native bottoms to ports in the inland sea. This trade is almost entirely in the hands of the Chinese.

The import of beans, pulse, &c. has decreased about 490 tons in quantity, but the value is higher, being 12,817*l.* in 1889, against 10,579*l.* in 1888, an increase of 2,238*l.*

Beans and peas constitute two of the staple exports from Korea, but the export fell off somewhat last year, owing to the bad harvest in that country. By far the large portion of the crop found its way to Osaka.

Gunny bags, which appeared in last year's report valued at 8,091*l.*, have fallen this year to 3,510*l.*, owing to the great probability of a cessation of the export of rice consequent upon the harvest reports after the rainy season last year, the import of gunnies depending almost entirely on the export of rice.

The import of hides which was considerable a few years ago has continued to decrease, as they mostly go to Osaka to be worked up by the native tanneries as mentioned in last year's report.

In imports during the year 1889 the exchange between dollars and sterling has been calculated at 3*s.* 1*d.* to 4*d.*, and the totals for the exports for the year under review have been converted into sterling at 3*s.* 1*d.* to the dollar.

The total for the exports for 1889 compares favourably with 1888, being 943,865*l.* against 844,016*l.*, an increase of 99,849*l.* in favour of 1889.

The export of tea of all classes had declined to the insignificant amount of 5,385*l.* in 1889 against

12,639*l.* in 1888, and 13,089*l.* in 1887. This trade is not likely to recover in the future.

The export of rice during 1889 exceeded that of 1888 by 3,092 tons, the figures for the two years being 41,244 tons valued at 217,830*l.* in 1889, and 38,152 tons valued at 195,250*l.* in 1888.

The trade was fairly remunerative. This staple was principally shipped to the northern and southern continental ports of Europe. The shipments for the year were mostly sent forward by June, after which date an anticipated deficit of about 15 per cent. in the crop, on account of excessive rains, occasioned a considerable rise in the price of rice, and entirely stopped the export.

The market in January, 1889, stood at 2*d.* 9*c.* (6*s.* 4*d.*) for Higo rice, and 2*d.* 1*c.* (6*s.* 1*d.*) for Hizen, per picul of 133½ lbs. Prices with slight fluctuations remained fairly steady for the first few months, the lowest figure being reached in April. After that month, prices rose considerably. In August, Hizen stood at 2*d.* 75*c.* (8*s.* 4*d.*), and Hizen at 2*d.* 65*c.* (8*s.* 0*d.*) per picul.

In September, quotations rose 3*s.* higher, gradually declining again till in December the figures stood at 3*d.* 5*c.* (9*s.* 3*d.*) for Higo and about 1*c.* less for Hizen per picul.

It is not expected that there will be any rice exported during 1890, unless the market price falls considerably.

The export of wheat in 1889 exceeded considerably that of the preceding 12 months; the figures being 34,648*l.* in 1889 against 23,989*l.* in 1888, being an increase of 10,659*l.* in favour of 1889. The increase in tonnage exported to 2,895 tons. Owing to the floods in the Yangtze Valley in China, and the great destruction of crops, prices in Amoy advanced from 1*d.* 80*c.* (5*s.* 7*d.*) to 1*d.* 35*c.* (7*s.* 4*d.*) per picul.

The export of coal from Nagasaki shows a decrease compared with that of the previous year. The figures for the last three years are appended:—

1889.	1889.	1889.
Quantity. Value.	Quantity. Value.	Quantity. Value.
Tons. Tons.	Tons. Tons.	Tons. Tons.
641,150 403,543	770,710 353,994	586,567 288,146

There is, however, an increase of nearly 50,000*l.* in the value. Following the plan adopted in last year's report, I give below a memorandum of the stock, supplies, and sales of the Takashima coal during the past year together with a list showing the highest and lowest prices obtained for lump and dust coal, at that various ports where it was sold:—

Stock in hand January 1, 1889	Tons.
Takashima, a net output for 1889	368,434
Nakanoshima, a net output for 1889	85,831
Total	401,907
Shanghai	Tons.
Hongkong	58,023
Yokohama	82,914
Kobe	98,670
Singapore	7,668
Nagasaki	3,408
Total	385,889

Stock in hand December 31, 1889, 16,018 tons.

PRICES.

Port.	Lump Coal.	Dust Coal.
	Highest. Lowest.	Highest. Lowest.
Shanghai ... Taels	6 75 ... 4 35	4 50 ... 2 50
Hongkong ... Dollars	8 75 ... 5 40	7 15 ... 3 70
Yokohama ... Dollars	6 30 ... 5 60	5 50 ... 4 00
Kobe ... Dollars	7 00 ... 6 30	5 00 ... 4 35
Singapore ... Dollars	7 60 ... 7 60	— ... —
Nagasaki ... Dollars	9 00 ... 4 25	4 50 ... 2 60

The decreased output of this mine during 1889 is accounted for by an epidemic which broke out among the miners lasting from July to November, during which time the output of the mine was reduced to half the usual quantity, and even less during August and September, when the epidemic was most severe.

The produce of the numerous mines in Chikuzen is estimated to have fully come up to, if not exceeded, a total of 720,000 tons. The prices averaged during the year 3*d.* 20*c.* (9*s.* 11*d.*) per ton for common, and 5*d.* 50*c.* (17*s.*) for best.

The owner of the Takashima mine have endeavoured to exploit other seams of coal, which are known to exist in the neighbourhood of that mine. Their chief undertaking in this direction was the opening of a mine at Matsushima, a small island about 20 miles from Nagasaki. A shaft was sunk, but serious difficulties were encountered owing to the ingress of large quantities of sea water through flaws in the seam. Work was, however, steadily progressed with till the latter end of April of last year, when a more than usually large flaw caused such an enormous inflow of water as to stop all further operations. In spite of the most approved pumping-machinery with which this mine was supplied, the water gained so rapidly that all hopes of this undertaking becoming a financial success were abandoned, and the machinery has since removed to other mines.

The export of camphor during 1889 was some 500,000 lbs. less than in 1888, and the value was 5,499*l.* under the figures for the previous years. Prices opened in January at 22*d.* 30*c.* (3*l.* 9*s.* 5*d.*) per picul of 133½ lbs.; but owing to the demand for the Chinese and Indian markets they continued to rise during the year, till early in December the highest figure was reached, 34*d.* 50*c.* (5*l.* 7*s.* 6*d.*) per picul. After this prices fell before the close of the year to 31*d.* (4*l.* 16*s.* 6*d.*). Adulteration, as mentioned in last year's report, was more systematically carried on than ever.

Under the heading grain, beverages, and provisions, there was a very considerable increase in the export during 1889, the figures having risen from 14,051*l.* in 1888 to 52,631*l.* during the year under review.

The total is made up of miscellaneous articles, such as flour, rapeseed, salt, potatoes, rice, beer, dried fish, sundry edible seaweeds, &c.

There has been a considerable increase in the export of copper, from 1,302*l.* 19*s.* 9*d.* in 1888 to 8,498*l.* 6*s.* in 1889. It was mostly in bars and slabs, with a small quantity of sheet copper; the balance of under 100*l.* being made up of a little lead and a few miscellaneous articles.

The remaining articles consist of the usual miscellaneous exports to the China markets, and do not need to be separately dealt with.

The general result of last year's trade, both in imports and exports, has been fairly satisfactory. The trade with Vladivostok was about the same as in 1888, with a tendency to increase, but there was no special development. The exports consisted of rice, wheat, flour, both Japanese and American, coals, and miscellaneous Japanese produce.

The trade in piece goods with Korea mentioned in the last two reports has greatly fallen off in 1889; roughly, not more than half the former amount was taken by that country. Nearly everything in Korea is bought with produce, and trade suffered in consequence of the bad harvest. The falling-off was partly due to the constant interference with trade by the Korean Government. It is said that most of the Japanese engaged in the trade have lost money during 1889.

During the year under review a flour milling company was formed amongst some foreign residents at this port. The mill is constructed on the latest roller principle, and, when working to its full extent, will be capable of producing over a ton of flour per hour. The mill was completed and commenced operations towards the close of the year. The grain used is exclusively Japanese, and it is hoped that the flour produced by this mill may gradually supersede American in the Vladivostok market, and for local requirements.

The dredging of the harbour of Nagasaki has proceeded more or less steadily during the whole of last year. The mud and deposit removed are all taken to a small bay which is being reclaimed a couple of miles distant outside the harbour. The cost of these operations amounted to 25,775 dol. (5*s.* 16*d.*).

The first section of this railway from Hakata to Kumme, a distance of 22½ miles, was commenced in September, 1888, and was completed and opened to traffic on December 11, 1889. Work on the other sections is not yet begun.

In 1887 several instructors in the mode of raising silk worms and reeling silk were engaged, and since then this industry shows signs of increased vitality. The wages of the instructors are paid partly by local taxes, and the cost of the schools defrayed by the villages of the neighbourhood and by those persons who are desirous of promoting the industry. New mulberry gardens are being planted, and increased attention is being given to the cultivation of those now existing. There was a marked advance in prices in 1889. In the latter part of October of that year 670 dol. (10*l.* 6*s.* 9*d.*) to 680 dol. (10*l.* 17*s.* 11*d.*), were paid per picul of 133½ lbs., and in November 730 dol. (11*l.* 15*s.* 7*d.*) to 740 dol. (11*l.* 45*s.* 9*d.*). The outlook is consequently improving for silk manufacturing companies. Hand-reeled silk for export to foreign countries did not exceed 2,000 lbs., but large quantities were manufactured for home consumption. It is hoped that this industry will be favourably looked upon when the old fashioned methods are abolished and a good article is placed on the market. The best cocoons are sent to Nagasaki to be reeled, but those of lesser quality are reeled in the villages. Experiments in reeling by machinery are shortly to be made with machinery which has just been finished. The Nagasaki silk factory has increased its capital and extended the area of its buildings in order to carry on large operations.

The brick manufactory at Inasa, on the opposite side of Nagasaki harbour, and a glass blowing firm are supplying local requirements. Other new

enterprises are a flour mill, ice making, and electric light companies.

After considerable opposition in the local assembly, it was decided to carry out of a system of waterworks for the town of Nagasaki. The works are calculated to supply a population of 60,000 inhabitants, with a maximum average rate of 20 gallons per head per day or a total of 1,200,000 gallons, for ordinary domestic, public, manufacturing, and shipping requirements. The actual census of the town and foreign settlement on December 31 last was 44,921 persons; consequently there will be an ample supply of water even if furnished to the suburbs of the town, or in case of future increase of the population.

The storage reservoir is constructed at the junction of two valleys, 232 feet above the level of high water in the harbor, and the water will flow into the town by gravitation alone, without the use of any pumping-engines. The reservoir dam will be 55 feet high at the deepest part of the valley, 20 feet wide at the top, and about 520 feet long. The reservoir is calculated to hold 90,000,000 gallons of water when full, equal to a reserve of 100 days' supply for the present population of the town. This is estimated to be ample enough, even at the time of the heaviest drought in Nagasaki, the calculation being made with the annual rainfall and the drainage area for the reservoir.

Close to the outer slope of the reservoir dam three filter beds will be constructed, rectangular in shape, and measuring 120 feet by 80 feet. The dimensions have been calculated, so that two of the beds working at a time will be sufficiently to filter in 24 hours the necessary quantity required for a day, with the moderate velocity of 6 inches per hour, the one in reserve being kept as a provision for sand, cleansing, or repairs.

The service reservoir, or pure water basin, measures 150 feet by 80 feet, and having a depth of 13 feet 6 inches, holds about 900,000 gallons of filtered water. It is built below the ground level, and is covered with brick arches to prevent dust from falling in and to check the growth of vegetable matter to some extent; it will also serve to keep the water cool in summer.

The distribution of the water will be by a principal main of 14 inches in diameter from the service reservoir to the entrance of the town, where it will branch into two secondary mains of 12 inches and 9 inches diameter. From these again, service mains of diameters varying from 8 inches to 4 inches will branch off to supply the whole of the town. The total length of the pipes is about 25 English miles.

The supply in the foreign settlement will be by means of service pipes branching from the street mains into the houses or premises of all who may wish to use the water, paying a moderate sum for such connection. However, in the Japanese town, and also in some parts of the settlement, it will be difficult to resort to a universal house to house supply, or to avoid having recourse to the far less satisfactory plan of public standposts, or street fountains. These will be fitted with self-closing valve at top, from which the public may draw their water.

Fire hydrants are to be placed at intervals of about 300 feet, both in the Japanese town and the foreign settlement, and as the supply of water will be constant, they are available at all times for extinguishing fire by simply screwing on the hose.

The total cost of the waterworks is estimated to be 300,000 dol. (46,252L.). The works were begun in April, 1889, and are expected to be completed in April, 1891.

The foreign shipping trade of this port amounted to 779,501 tons, including all those which called at Kuchinotsu for coals, and the total shipping including Japanese foreign going vessels, but excluding local coasting trade in small steamers, schooners, &c., amounted to 1,011 vessels of 1,079,437 tons, being an increase of 119 vessels and 100,616 tons over the shipping and tonnage of 1888.

English shipping has increased by 23 vessels and 46,982 tons, and German shipping has increased by 5 vessels, but has decreased in tonnage by 18,511 tons.

The foreign mail steamers which call here regularly are those of the Peninsular and Oriental Steam Navigation Company, the Canadian Pacific Mail Steamship Company, and the Nord Deutscher Lloyd Steamship Company.

The foreign population of Nagasaki on December 31, 1889, excluding Chinese, numbered 366 persons, with 16 firms. The Chinese community numbered 692 persons, with 59 firms.

The Japanese population of Nagasaki at the close of the year was 54,502, but of these only 39,044, occupying 9,230 houses, were registered as belonging to the district.

In April, 1889, several outlying villages were incorporated in the urban jurisdiction, which accounts for the increase in the number of inhabitants.

I have, &c.,

(Signed) JOHN J. QUINN.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL"]

London, August 23rd.

The troops are again under arms in Buenos Ayres, and a fresh revolution is feared.

London, August 23rd.

New York is shipping silver largely to Brazil. The Queen has pardoned Dhuleep Singh.

London, August 24th.

The ironworks and factories in Victoria and New South Wales are being closed for want of coal, owing to the colliers ceasing to run through lack of hands and to the difficulties of other means of transport. A general paralysis of trade is the result, and provisions are only to be obtained at exorbitant prices.

London, August 26th.

Through the strike of the marine officers in Australia, there are now twenty steamers lying idle at Melbourne.

[FROM MADRID PAPERS.]

Madrid, August 5th.

Cholera has broken out in Badajoz and Toledo.

August 8th.

Cholera is increasing but slowly. In Madrid two cases were reported.

By consent of the President of the Council of Ministers, a fresh conference has been held with the Archbishop (Sr. Nozalea), and the Rev. Fathers representing the religious orders in the Philippines, during which subjects concerning the Archipelago were dealt with.

TIME TABLES AND STEAMERS.

PASSENGERS.

ARRIVED.

Per Japanese steamer *Kobe Maru*, from Kobe:—Miss J. Carr, Miss Atkinson, Mrs. Bonicaw, Mr. W. F. Sharpes, Mr. T. Walkinslaw, Rev. W. B. Bonnell, and Dr. J. Fields, U.S.N. in cabin; Miss Hirose Hide, Mr. Yamamoto, Mr. Sikida, Mr. Y. Sikida, Mr. Takano, and Mr. Baglay in second class, 34 passengers in steerage. For San Francisco: Miss W. B. Bonnell and 4 children, and Miss E. Allen in cabin.

Per British steamer *Glenarney*, from Shanghai:—Messrs. Kinear, Bevis, McGregor Grant, Duncan Glass, and Mrs. Allen in cabin.

Per Japanese steamer *Sagami Maru*, from Kobe:—Mr. H. Thompson in cabin; 1 Japanese in second class, and 78 Japanese in steerage.

Per French steamer *Sydney*, from Hongkong:—Mr. Shoulz, Mr. Hirota, Mrs. A. Ghirardini and 2 children, Mr. and Mrs. M. Casenave, Mr. S. Joseph, Mr. Hart, Mr. and Mrs. C. Palmer, Mr. A. Gregory, Colonel and Mrs. Fische and child, Miss Maud Jackson, Mr. A. E. Wetherston, Mr. Tottenham, Miss Vellop, Mr. W. Ruy, Mr. Dunn, Miss A. Werner, Messrs. J. Urquhart, E. S. Pernott, Shaw, R. Simpson, Alex. Price, Thomas Gastrell, Mr. and Mrs. Allan, and Mr. Fouseca in cabin.

Per American ship *Occidental*, from New York:—Mr. Swift in cabin.

Per Japanese steamer *Satsuma Maru*, from Hakodate:—Rev. and Mrs. Joseph Cosaud and Mr. Tsuruoka in cabin; 3 Japanese in second class, and 52 passengers in steerage.

Per Japanese steamer *Omi Maru*, from Kobe:—Mrs. A. Thomson, Mr. and Mrs. Nishikawa, Mrs. Tanimoto, Messrs. Holm, Nomura, Kawamata, and Yehara in cabin; Mr. and Mrs. Ranita, Miss Nishikawa, Messrs. Empson, Ramsay, Sekita, Tashiro, and Sato in second class, and 64 passengers in steerage.

Per British steamer *Mongkut*, from Hongkong via Kobe:—Mr. F. Schürch in cabin.

Per British steamer *Belgie*, from San Francisco:—Hon. Lee Chon Quon, Mrs. J. S. McShane, Miss Maud McShane, Miss Edith Leimbach, Mrs. S. Cash, Mr. and Mrs. W. J. C. Hill, Mr. Newman Cash, Miss A. R. Whitley, Rev. J. R. Wolfe, Mr. W. K. Post, Mr. H. de F. Lockwood, Mr. Robert Seales, Mr. and Mrs. Alfred Lemaire, Rev. and Mrs. J. Wallace Moore, Mr. and Mrs. A. C. Read, Rev. Jas. D. Butler, Mr. and Mrs. Henry W. Farnam, Messrs. Chester Holcombe, C. P. Low, Geo. C. Wood, and J. Crawford Lyon in cabin. For Hongkong: Lient and Mrs. W. E. Donohue, R.A., in cabin. For Shanghai: Dr. and Mrs. Thos. L. Brander in cabin. For Nagasaki: Dr. Wiles in cabin. For Kobe: Rev. C. K. Marshall in cabin.

Per British steamer *Sussex*, from Hongkong via Shanghai:—129 Chinese in steerage.

Per Japanese steamer *Yamashiro Maru*, from Hakodate:—Miss Porter, Miss Wilson, Miss Alling, Miss Vance, Miss Phelps, Miss Danforth, Messrs. Nishimura, Akakabe, Kawamura, and Tunga in cabin.

Per American steamer *City of Rio de Janeiro*, from Hongkong:—For Europe: Mr. J. S. Laprak and Mr. W. Gowings, R.N. in cabin. For San Francisco: Messrs. W. A. Whaley, P. Welner, H. L. Miller and servant, and Geo. Murray in cabin.

Per Japanese steamer *Nagato Maru*, from Hakodate:—Messrs. Yamada, Nagae, Tono, and Ishii in cabin; 58 passengers in steerage.

DEPARTED.

Per British steamer *Verona*, for Hongkong via ports:—Captain McCaslin, Mr. and Mrs. F. W. Campion, Mrs. Travers, 2 children, and amali, Messrs. Thos. Clark, E. Weissmiller, H. M. O'Kelly, Jean Webre, and Mrs. Ohtsune in cabin; 2 Chinese and 1 Japanese in steerage.

Per Japanese steamer *Kobe Maru*, for Shanghai and ports:—Mrs. Ringer and 4 children, Rev. and Mrs. Fulkerson and 2 children, Miss Garel, Captain Harvey, Messrs. Cheong Tap, H. D. Thorp, Ononye, Kasawara, J. Hodges, Yamamoto and child, Ichikawa, Obana and child, and Oia and child in cabin; Mr. and Mrs. Hirata, Mr. Manabe and child, Mr. Ah Sing and child, Mrs. Shimagi, Messrs. Manaba, Hirata, Ono, Yanigi, and Yotsunoto in second class, and 84 passengers in steerage.

CARGOES.

Per British steamer *Verona*, for Hongkong via ports:—Sak for France 29 bales.

Per Japanese steamer *Kobe Maru*, for Shanghai and ports:—Treasure \$3,586.

REPORTS.

The Japanese steamer *Tokio Maru*, Captain Drummond, reports:—Left Hakodate the 20th August at 11 a.m.; had fine weather and moderate south-easterly winds to Oginohama and arrived there at 7.55 a.m. on the 21st; met steamer *Maji Maru* twenty miles north of Kurosaki; while in Oginohama the weather changed and had some very heavy squall of rain. Left Oginohama at noon same day weather cleared and had fine weather and moderate S.E. wind to Inuboye; wind to Katsuta, E.S.E., moderate; thence to port heavy squalls of wind and rain strong E. wind and high sea. Reached Yokohama the 22nd August at 3 p.m.

The American ship *Eclipse*, Captain Shillabar, reports:—Left Kobe the 15th August; encountered light baffling winds with fine weather until evening of 17th off Siwo-misaki; when a fresh breeze sprung up which rapidly increased to a violent gale with fearfully heavy S.E. sea and terrific squalls from N.E.E.; sail reduced to lower main topsail, foresail being blown to pieces; the 18th wind and weather continued, lowest reading barometer 29.27; the 19th commenced with same wind, but weather moderated a little towards evening; the 20th squally unsettled weather, wind still from the eastward; the 21st similar weather; the 22nd weather unsettled, barometer falling rapidly and sea from S.E. increasing made for Owari Bay, however wind came out from northward and blew violent gale with blinding rain and terrific squalls, and enormously high sea; sail reduced to fore and main lower and fore staysail; topsails blew away; unable to show any canvas at all, lowest reading barometer 29.03; the 23rd wind moderated made all sail and cleared away debris of split sails, &c.

The Japanese steamer *Kobe Maru*, Captain Haswell, reports:—Left Kobe the 21st August at midnight; had fair weather with light S.E. to N.E. winds to Oshima; thence N.E. winds with heavy S.E. swell to Cape Sima at 4.21 went into Matoya Bay, glass falling and every indication of a typhoon; left Matoya at 4.50 the following morning with light W.S.W. winds and heavy swell; passed American ship flying JTBR. Arrived at Yokohama at 8 p.m.

The Japanese steamer *Sagami Maru*, Captain Kenderdine, reports:—Left Kobe the 23rd August at noon; had light southerly wind and fine weather to Oshima; thence light S.E. wind and fine weather with smooth sea to port. Arrived at Yokohama the 24th August at 9.40 p.m. Met the steamer *Omi Maru* at Tanabe Point (Kii Channel) towing a sailing ship.

The Japanese steamer *Omi Maru*, Captain Christensen, reports:—Left Kobe Pier the 25th August at noon; had light easterly winds and fine weather throughout the passage. Arrived at Yokohama the 26th August at 5 p.m.

The Japanese steamer *Satsuma Maru*, Captain Brown, reports:—Left Hakodate the 23rd August; had strong breeze which increased to moderate gale in afternoon fresh gale with high southerly sea; at 8 p.m. gale moderated to fresh breeze with hazy weather; the 24th moderate southerly breeze and fine weather. Arrived at Oginohama at 5 p.m. and left at 8 p.m.; had light southerly breeze and fine weather. Arrived at Yokohama the 25th August at midnight during the passage; passed steamers *Nagato Maru* and *Toyoshima Maru*.

The Japanese steamer *Yamashiro Maru*, Captain Young, reports:—Left Hakodate the 25th August at 8 a.m.; had light east to south-east breeze and fine cloudy weather right down to Inuboye at 8.30 p.m. on 26th; thence moderate northerly breeze, clear cloudless sky, and smooth sea throughout the passage. Arrived at Yokohama the 27th August at 8.50 a.m.

The American steamer *City of Rio de Janeiro*, Captain Austin, reports:—Left Hongkong the 22nd August at 3.32 p.m.; at noon on the 23rd met Co.'s steamer *China* for Hongkong; had fine weather the entire passage. Arrived at Yokohama the 27th August at 9 p.m. Passage 5 days, 3 hours, 46 minutes.

The British steamer *Belgie*, Captain Walker, reports:—Left San Francisco the 12th August at 5.35 p.m.; had fair weather and smooth sea with exception of the 27th when we had quite heavy sea. Arrived at Yokohama the 28th August.

The Japanese steamer *Nagato Maru*, Captain Ekstrand, reports:—Left Hakodate the 27th August at 8 a.m.; had light breeze and fine clear weather to Kurosaki; thence overcast and heavy east swell. Arrived at Oginohama the 29th at 7 a.m. and left at 0.30 p.m.; had fresh breeze from N.E. with drizzling rain and heavy easterly swell, at 6 p.m. weather clearing but sea increasing. Arrived at Yokohama the 29th August at 2.15 p.m.

LATEST COMMERCIAL.

IMPORTS.

The market during the week has remained very depressed under the effect of the high rate of exchange, but there seems more inclination at the close to do business in English Spinnings at the reduced rates. Bombays remain unchanged, with little animation. Shirtings and T. Cloths are without demand. Velvets and Italians have had some attention at lower rates owing to the rise in exchange. Sales for the week amount to 100 bales English and 150 bales Bombay Yarns, 2,500 pieces Italians, and 3,600 pieces Velvets.

COTTON PIECE GOODS.

Grey Shirtings—8 1/2 lb, 34 yds, 39 inches	\$1.35 to 1.90
Grey Shirtings—8 1/2 lb, 34 yds, 35 inches	1.05 to 1.57 1/2

Cake	3.70 to 4.10
Brown Takao	4.40 to 4.50

EXPORTS.

RAW SILK.

Our last issue was of the 22nd inst., since that date settlements amount to 263 piculs divided thus:—Hanks 17, Filatures 179, Re-reels 48, Kakeda 19. Again there has been no business for direct export this week.

As will be seen from the above figures, we have

had more trade in Silk; holders at last made up their mind to face the loss on some of their goods and shippers operated accordingly. Now holders are again encouraged by a fall in Exchange of 1 per cent, and are already anxious to raise quotations. Indeed, some of them to-day refuse to go on at late rates and are going to wait a little longer hopeful that exchange may further decline.

Most of the trade has been for America, although during the last two days European buyers have operated to some extent in Hanks and Filatures. Telegraphic intelligence from consuming markets does not improve, and the general out-look is not very cheerful.

Supplies have been somewhat retarded by wash-outs of railway, tramway, and other roads, but as repairs are made we may expect to see plenty of arrivals ere long. Stock in Yokohama is up to 8,600 piculs, but we learn there is considerable cargo expected when the roads are made good, especially from the Northern and North-western provinces.

There has only been one shipping opportunity, the English Mail of the 23rd, that vessel—the *Verona*—took 29 bales for Europe, thus bringing the present export figures up to 2,133 piculs against 5,206 last year and 4,882 at the same date in 1888.

Hanks.—There has been some buying during the last two days, fair to good *Hachof* bringing \$492 1/2. The stock in this department is light, and arrivals are scanty, it being understood that the Home trade is using this class of Silk pretty freely.

Filatures.—The bulk of the weeks' trade has been in this class, and the following sorts suitable for the United States have been fixed; No. 1 *Shinshu* \$630; No. 2 \$610, with one sale of *Hakutaru* \$635; *Kairos* \$625; *Hiranosha* \$620. In *Kosha* sorts various parcels have been settled at \$640, \$620, \$610, and \$600 according to quality and size. For European some No. 1 is said to have been done at \$640 with No. 2 at \$600. Quotations are somewhat irregular, some holders refusing to go on selling.

Re-reels.—Not much done in this department. Dealers persist in asking too high prices as compared with Filatures. Some fair No. 1 has been done at \$605, with No. 1 1/2 at \$595; also some No. 2 at \$580, with lower quality still at \$575.

Kakeda.—Some little business has taken place in common quality at \$535; beyond this nothing has been done. Stock is not large, and supplies are said to be blocked in the North by reason of the broken roads.

Oshu.—Nothing has actually been concluded, although a sale of *Hamatsuki* is being negotiated at or about \$545.

Available supplies to date	10,950	11,600	12,400

WASTE SILK.

There has not been a single transaction in this branch all the week.

Buying has been suspended owing to the rise in Sterling Exchange which prevents shippers operating at their customers' limits. It remains to be seen whether the present ease in Exchange will induce some fresh business.

The only shipment during the week was 5 bales of *Noshi* to Trieste by the P. & O. steamer *Verona*. Present export figures are therefore 765 piculs, against 521 last year and 1,160 on the 29th August 1888.

Pierced Cocoons.—Still no business; several offers have been cabled home, but consumers will apparently not give what holders here require.

Noshi.—Nothing whatever done. Sellers and buyers being too far apart. Same applies to all other departments.

QUOTATIONS.—(NEW WASTE.)

CONTRACTORS TO THE ADMIRALTY, LEADING STEAMSHIP COMPANIES, AND YACHT OWNERS.

STEAM LAUNCHES & YACHTS,

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 10 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. Illustrated Catalogue in English, French or Spanish. Send for Copy to

SIMPSON, STRICKLAND & CO.

WORKS:
BARTMOUTH, SOUTH DEVON (ENGLAND).
LONDON OFFICE:
161, QUEEN VICTORIA STREET, E.C.

MACHINERY.—Mr. ARTHUR WADHAM, proprietor of *The Machinery Market and Exporter* (illustrated)—the greatest machinery business journal published—(subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery and Engineering Materials. Mr. Wadham is open to act as sole Buying Agent in England for one of two good firms in Japan desiring to deal with a reliable house. Mr. Wadham's intimate knowledge of the English Machinery and Engineering Trades enables him to save large sums to foreign customers placing their orders in his hands. Firms dealing with Mr. Wadham may rely upon being served in a prompt and straightforward manner. Address:—Mr. Arthur Wadham, Engineering Offices:—131, Queen Victoria St., London. Registered address for telegrams—"Wadham, London." June 28, 1890.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

See SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahoney to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN! HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1877, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowl, butter, and horse feed poured in upon us, until at last a spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World. May 1st, 1889.

KEATING'S INSECT POWDER.

BUGS, FLEAS, MOTHS, BEETLES, and all other insects are destroyed by Keating's Insect Powder, which is quite harmless to Domestic Animals. In exterminating beetles the success in this Powder is extraordinary, and no one need be troubled by those pests. It is perfectly clean in application. Ask for and take no other than Keating's Powder, as imitations are noxious, and fail in giving satisfaction. Sold by all Chemists, in Tin and Bottles. May, 3, 1889.

NOW READY,

WITH COLOURED PLAN,
A FULL REPORT on the ERUPTION of BANDAI-SAN, being a reprint from the "JAPAN MAIL" of copious translations from Tokyo Journals, a Description by "Our Reporter," and an "Editorial," written after a visit to the locality. Price 50 Cents.

To be obtained at the *Japan Mail* Office, or to KELLY & WALSH, Limited.

YARROW'S SMALL STEAMERS AND STEAM LAUNCHES.

SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.

PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER.

Stern Wheel Steamers with very shallow draft especially suitable for river navigation.

MACHINERY CONSTRUCTED FOR BOATS BUILT ABROAD.

YARROW & CO., POPLAR, LONDON, E.

Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.

YOKOHAMA: SATURDAY, SEPT. 6, 1890.

MARRIAGE.

At No. 6, Bluff, Yokohama, on September 4th, by the Rev. J. C. Brand, in presence of G. H. Seimore, Esq., U.S. Vice-Consul-General, Rev. WILLIAM ASHMORE, D.D. of Swatow, China, to CHARLOTTE A. BROWN, of Yokohama.

DEATH.

On Saturday morning, at No. 86, Bluff, REGINALD WILLIAM, infant son of B. J. S. and Pattie Brinkworth, aged 19 months.

SUMMARY OF NEWS.

COUNT ITO arrived at Kobe on the 2nd instant from Odawara.

H.I.H. PRINCE KUNI arrived at Tokyo on the 29th ultimo from Kyoto.

COUNT KURONA will leave the capital shortly and proceed to Hokkaido.

COUNT INOUE, who had been staying at Hakone for some time, returned to the capital on the 31st ultimo.

H.I.H. PRINCE FUSHIMI, who had been staying in Chiba for some time, returned to Tokyo on the 31st ultimo.

COUNT ITAGAKI will proceed to Nagano Prefecture on or about the 10th instant to meet a number of his political friends.

THE line of the Japan Railway Company between Ichinoseki and Morioka will be opened for traffic on the 1st October.

MR. KATO MASANOSUKE, editor of the *Hochi Shimbun*, will leave Japan during the present month for America and Europe.

H.I.H. PRINCE ARISUGAWA TARUHIITO started from Tokyo on the 30th ultimo for Hamamatsu, leaving Shinjimbashi Station at 9.30 a.m.

A MEETING of the Tokyo City Assembly was held on the 30th ultimo for the purpose of discussing matters in connection with a municipal loan to be raised next year to cover the cost of the city water-works.

H.I.H. PRINCE ARISUGAWA TARUHIITO arrived at Kobe on the 2nd instant from Hamamatsu, and proceeded to Maiko on the same day.

H.I.H. PRINCE NASHIMOTO returned to the capital on the 28th ultimo from Nikko and Ikao, where His Highness had been staying for some time.

IN CONSEQUENCE of the heavy rains on the 30th ultimo, communication on the Tokaido Railway between Kambara and Okitsu was stopped.

THE Italian Minister, Cavalier R. de Martino, who has just left Japan for home, was received in farewell audience by the Emperor on the 30th ultimo.

A NOTIFICATION has been issued by Count Saigo, Minister of State for Home Affairs, closing the quarantine stations at Shimonoseki, Kobe, and Yokohama.

ACCORDING to a report by the Japanese Consulate at Fusan, from the 16th to the 22nd ultimo nine Japanese were attacked by cholera there, five of whom died.

MR. ASADA, Prefect of Kanagawa, accompanied by a few officials of the Kanagawa Prefectural Government, proceeded to the province of Sagami on the 2nd instant.

A SPECIAL meeting of the Cabinet was held on the 30th ultimo, and was attended by Counts Yamagata, and Goto, Viscount Aoki and Mr. Yoshikawa, the proceedings closing at 3 p.m.

RAILWAY communication between Shinmachi and Honjo, which had been stopped in consequence of damage done to the line by the recent heavy rains, was re-opened on the 1st instant.

RAILWAY communication between Shinmachi and Takasaki, which had been stopped in consequence of damage done to the line by the recent heavy rains, was re-opened on the 1st instant.

A SPECIAL meeting of the Cabinet was held on the 1st instant, and was attended by Counts Yamagata, Yamada, and Goto, Viscount Aoki, and Mr. Mutsu. The proceedings lasted till a late hour.

ACCORDING to information transmitted from the Japanese Consulate at Shanghai to the Foreign Department, from the 15th to the 21st ultimo four Japanese were attacked by cholera there, three of whom died.

AN ordinary meeting of the Cabinet was held on the 2nd instant, at which Counts Yamagata, Saigo, Yamada, and Matsukata, Viscount Aoki and Mr. Yoshikawa were present, the proceedings closing at 3 p.m.

A REPORT by the Sanitary Bureau of the Home Department shows that the number of persons attacked by cholera throughout the Empire from the commencement of the epidemic to the 30th ultimo was 10,758, of whom 6,244 died.

THE Regulations as to Colonial Troops, consisting of ten articles, were promulgated on the 29th ultimo over the signature of Count Oyama, Minister of State for War, by Imperial Ordinance No. 181. On the same day the

Regulations as to the Organization of the Administrative Court were promulgated over the signature of Count Yamagata, Minister President of State.

A REPORT by the Sanitary Bureau of the Home Department shows that the number of persons attacked by cholera throughout the Empire from the commencement of the epidemic to the 29th ultimo was 10,279, of whom 6,071 died.

ACCORDING to a report by the Sanitary Bureau of the Home Department the number of persons attacked by cholera throughout the Empire from the commencement of the epidemic to the 31st ultimo was 11,959, of whom 7,008 died.

AN outbreak of fire took place early in the morning of the 22nd ultimo in a house at Shinjimura, Aka gun, Okayama Prefecture, and ten dwelling-houses and three godowns were entirely destroyed before the flames could be got under control.

THE line of the Osaka Railway Company between Oji and Nara, now in course of construction, will be completed about the middle of September. The section of the Kyushu Railway, between Hakata and Moji, will be opened for traffic in February next year.

AN outbreak of fire took place early in the morning of the 22nd ultimo in a house at Shinomachi, Sanjo, Minamikambara, Niigata Prefecture, destroying one hundred and seventy-six houses, two godowns, a revenue office of the Niigata Prefectural Government, and four telegraph posts.

THE Peers who have been elected members of the House of Peers held a meeting on the 29th ultimo at the Nobles' Club, and the following members were elected a Committee for the investigation of political questions:—Counts Yanagisawa, Matsura, and Matsudaira, Viscounts Kageyukoji, Tani, Ogiu, and Kano, Barons Nagaoka, Senke, Iwakura, and Maki-mura.

ALTHOUGH perhaps there would not be a very brisk business in imports at the fall of the year under ordinary circumstances, the constant rise in silver has doubtless had the effect of accentuating the depressed condition of trade, and the present experience may be expected in a greater degree as the end of the year approaches. Buyers will not look at anything except at their own figures, and even then are not eager purchasers; consequently Yarns and Piece-goods meet with very slow sale and in quantities scarcely removed from retail. Metals have been taken in small lots at constantly diminishing values, and in some lines at very much lower rates. Kerosene has not been sold in sufficient quantity to make a trustworthy quotation, and the heavy stock of Oil on hand—750,000 cases—has a depressing effect on values. Sugar is unaltered, and only a little White has been taken. The Silk trade is much the same as last reported, and if a little more business has been done it has only been at advanced figures in proportion to the further rise in exchange, or thereabouts, many holders still declining to "part" at the prices offered. Small settlements of Waste have been effected, sellers appearing to be quite indifferent about business, though it is not easy to see how long this attitude can be maintained. Tea has been purchased rather sparingly, higher rates having been demanded for the leaf most in request, and the rise has kept off would-be buyers. Exchange has varied slightly, but is a shade lower than last week.

EDITORIAL NOTES.

ADVICE TO THE AUTHORITIES.

THE *Kokumin-no-Tomo*, which is one of the most enthusiastic advocates of the proposed coalition of the progressive parties, adopts a very outspoken tone towards the Ministry on the subject of the prohibition of the alliance of political parties. The vigorous step taken by the Authorities in this respect has, we are told, served simply to place an impassable gulf between the Government and the people. "Do not," the *Tokyo* magazine says, "do not try to pretend that this measure was not devised for the purpose of thwarting the alliance of political parties out of power. Say what you will to the contrary, the fact is known to the gods and to men who can see. . . . But has the Government been able to attain its object? Not in the least. . . . On the contrary, the result has been entirely the opposite of what was originally expected." Our contemporary then goes on to state that the prohibition of the law has driven the progressive parties to go a step farther; instead of a temporary alliance they are about to coalesce into an entirely new party—a result for which they ought "to thank the Yamagata Cabinet. Statesmen in office have failed to understand the tendency of the times. They probably thought that the various political parties having shown their willingness to form an alliance for the sole purpose of opposing the Government, the latter, on its side, was entitled, as a means of self-defence, to frustrate the scheme, and that, if such a state of things were suffered to continue, the results might be very mischievous. If such was their idea, they were grievously mistaken. The existing political parties must not be confounded with secret associations or treasonable combinations. Their object is clearly and openly declared in their political programmes. Even granting for a moment that the Authorities have been able to isolate the political parties, this circumstance cannot prevent those parties from uniting in the Diet. If they can combine in the Diet, what good purpose is served by impeding their alliance outside the doors of the Legislature? In point of fact, an unexpected result has been obtained; the combination of political parties has assumed a more hopeful aspect. Originally intending to form an alliance, they are now about to be united into one party." Under these circumstances, our contemporary advises the Government to think no more of suppressing political parties by unconstitutional means, but to resort to the only proper and legitimate policy, namely, that of controlling the situation by obtaining a majority in the House of Representatives. The *Kokumin-no-Tomo* says in conclusion:—"With no party supporting them, Ministers are driving the parties opposed to them to desperation. We do not blame them for contending with the parties out of power. . . . We only regret that they are following a course which is not exactly wise. If they desire to engage in a contest with political parties, why not pursue an open and manly course of action; why not strive to follow the constitutional method of obtaining a majority in the Diet? If they won the day in such a contest, nothing could be more glorious, while even defeat would still be manly."

Of course all this is very excellent advice in its way, but the defect of it is one common to much of the writing in the Japanese press—it does not go far enough. There can be no doubt that the step taken by the Government must force the hands of the opposition, and that it will have the effect of driving into actual combination whatever sections of the progressionists are capable of genuine fusion. But will that be a disadvantage? Will it even be regarded by the Government as a disadvantage? The law at present in force sanctions the foundation of political parties, but forbids their alliance or correspondence outside the Diet. It has evidently no power whatsoever to forbid such an alliance on the floor of the House. The distinction then is this—that the Government

regards as sedition any alliance formed at present, where no political issues are really before the nation, and where the sole object of such alliance must be to overthrow the Authorities. If the *Kokumin-no-Tomo*, or any other moderate representative paper, would tell us clearly and frankly what are the points of dispute between the present administration and the progressionists; what the aims which the latter really seek to compass by combined opposition, we should be in a position to distinguish between the honest and the purely fractious elements of the situation. But pretty platitudes and vague generalities leave us just where we were.

RESOLUTIONS OF "THE EQUAL TREATY ASSOCIATION."

ONE of the results of the meeting opened the other day in the Nakamura Restaurant to commemorate the "Anti-Treaty Revision Alliance," was the formation of a coterie under the high-sounding appellation of "The Equal Treaty Association." Organized by Messrs. Yagihara Hanshi, Inagaki Shimesu, Aya Takewo, Maida Kagaku and other politicians of their class, this coterie is generally regarded as a demonstration by which the inveterate foes of the *Kaishin-to* hope to prevent any amalgamation between the latter and the liberals, the *modus operandi* being to resurrect the buried issue of Treaty Revision. They held a meeting in the Koseikan on the 26th instant, and after some speechifying they adjourned to the Kaikutei, where about forty of them organized another meeting to deliberate upon regulations for their association. The following is the resolution adopted on that occasion:—The Association is formed for the purpose of investigating certain objects, meanwhile preserving an attitude of strict neutrality towards all political parties. The first object of investigation is the means by which this Empire's treaties of amity and commerce with foreign States may be revised on a basis of perfect equality, to the end that the sovereign rights of the nation may be completely asserted. The second object of the investigation will be the practical application of international laws, for which purpose bi-monthly meetings will be held and men of profound erudition well versed in diplomatic affairs will be invited to deliver lectures. The third object of investigation will be the relative positions of the rival countries in the world, in order to study the means by which the balance of power may be preserved between the Orient and the Occident. Persons desiring to become members of the Association are required to be recommended by more than two members. The expenses of the Association are to be met by contributions from the members, and the following officers are to be appointed for the conduct of the ordinary business of the Association; namely, five managers, five accountants, and one corresponding Secretary.

THE GALE.

THE gale on the 29th ult. and the heavy rain together wrought considerable damage in various parts of the Settlement in the form of flooding in the low lying parts, and by small landslips and injury to trees and fences on the Bluff. As might be expected from the direction of the wind, the Bund suffered considerably, the posts along which have been washed up into the middle of the road and much damage done to the sea wall. The Boat-house stood the gale well, but the top of the bathing barge was demolished, and lies in fragments behind the Harbour Works Office. The Creek at Yato-bashi has suffered, a portion of the retaining wall having been washed down. In the harbour of course minor damage was sustained among the shipping, one case unfortunately being attended with loss of life. The French mail steamer *Sydney* broke away from her moorings and drifted on to the U.S. corvette *Omaha*. Both vessels doubtless sustained some injury from the collision, but what is apparent from the shore is that the mail boat has lost her mizen-topmast. At the time of contact, the crew of the mail boat having been turned up as soon as she got adrift, four men were

knocked overboard, two of whom were drowned, one body having been washed on shore at the French Hatoba.

MEETING OF THE TOKYO CHAMBER OF COMMERCE AND INDUSTRY.

THE Tokyo Chamber of Commerce and Industry held a meeting in the afternoon of the 26th ult. The meeting was opened at 6 o'clock, twenty-three members being present. A report was read showing the business transactions of the Chamber for the first half of the current year, commencing in January and ending in June. After this formal business was over, the meeting was asked to discuss the proposed memorial for the issue of Chamber of Commerce Regulations. Without any debate beyond a few questions relating to the import of the draft, it was unanimously decided that the memorial should be presented. The meeting then passed on to consider the contemplated project of holding a joint meeting of the delegates of all the Chambers of Commerce in the country. In making this motion, Mr. K. Masuda stated that the original object which the projectors of the scheme had in view, was to invite the opinion of commercial and industrial circles throughout the country as to the expediency of postponing the enforcement of the new commercial code. But owing to shortness of time, it was found impossible to communicate with all those representing the commercial and industrial interests of the country, so that the Tokyo Chamber had been obliged to present a memorial on its own account. Thus the memorial was deprived of much of the weight which it would have carried had it been made under the joint representation of all their *confrères*. In view of this fact, Mr. Masuda suggested that a second memorial embodying the views of the commercial and industrial classes in respect of the amendment of the new code should be presented to the proper authority; and that the Tokyo Chamber should take upon itself the work of preparing the draft amendments before November next, when the general conference of the delegates of all the local chambers is to be held in the capital. Mr. Abe Taizo opposed this motion on the ground that it would be absolutely impossible to amend the code in any satisfactory manner within two months, and moved that the proposed meeting should be deferred until next year. After some debate, it was finally decided that the meeting should be opened in November and that a memorial should be presented, not for amendment of the new law, as contemplated in the original motion, but simply for the purpose of pointing out the more important defects in the code from a practical point of view. The third draft resolution was that an investigation committee be appointed in the Chamber. A standing committee consisting of fifteen members was appointed, and this committee was afterwards distributed into the five sections of foreign trade, home trade, finance, communications, and companies. We take this report from the *Jiji Shimpō*.

YATOI.

THE theories advanced by some of the writers who undertake to instruct the public about Japanese affairs are often very novel. Here is an example, which we quote from the columns of a local English contemporary:—

The poverty of the English language has necessitated the adoption of a word from the French, viz., *employé*; but to translate *yatoi* by *employé* is to beg the question, and to deceive ourselves, and others. *Yatoi* means a hired person, or hireling; and to avoid the discourtesy of the term, the Japanese instead of borrowing a word, as we have been obliged to, prefix the honorific *o*, and speak of *o-yatoi*. To drop the honorific, and allude to an *employé* as *yatoi*, *tout court*, is to be guilty of an intentional rudeness.

Now the truth is that when a Japanese speaks of *on yatoi* or *o-yatoi*, he uses the honorific prefix not for the purpose of softening the term *yatoi*, but simply out of respect to the Government in whose service the subject of reference is employed. If he addresses the *employé* direct, the prefix *o* or *on* has a divided significance; it refers primarily to the Government and se-

condarily to the person employed. But even in this case the use of the prefix is not dictated by any peculiarity in the import of the word *yatoi*. The speaker simply follows the general rule of the Japanese spoken language, namely, that honorifics are not prefixed to names of offices—as *hanji* (a judge); *kyoku-cho* (head of a bureau)—but that they are prefixed to substantive terms having a general significance—as *sewa-yaki* (assistant), *nakodo* (go-between), and so forth. We do not say, *anata wa o-hanji de irasshaimasu ka*, but we do say, *anata wa o-nakodo de irasshaimasu ka*, though it need scarcely be observed that *nakodo* is not a word which in itself conveys any depreciatory significance. In the extract quoted above, however, there is no question of direct address; the writer speaks of “alluding to an *employé* as *yatoi*,” and in that sense he seems to us to put the saddle on the wrong horse. If we speak of an *employé* in a Government Department to an official of the Government, we should, of course, say *on-yatoi* or *o-yatoi*; but officials of the Department where the *employé* serves, would not be guilty of any rudeness whatever if they dropped the honorific in speaking of him to one another. As to the *ex cathedra* assertion that “to translate *yatoi* by *employé* is to beg the question and to deceive ourselves and others,” we must be permitted to deny it altogether. “*Employé*,” or “person employed,” is the correct translation of the word *yatoi*. The writer in our local contemporary’s columns appears to labour under the curious hallucination that some refined or courteous significance attaches to the word *employé* because it is French. The unfamiliarity of the foreign language preserves it in his eyes against the contempt attaching to its domestic equivalent. Yet we venture to assert that, in respect of politeness towards the person alluded to, there is nothing to choose between the three phrases:—“He is employed by;” “he is in the employment of;” or “he is an *employé* of.” We use *employé* because we have no equally short English expression, and for that very reason “*employé*” is the proper translation of the Japanese word *yatoi*. Take up any Japanese official roll showing the *personnel* of a Department of State and you will find several names placed under the section “*Yatoi*”—not “*o-yatoi*” or “*on-yatoi*,” but simply “*yatoi*,” *tout court*. Would you, in translating that list into English, render “*yatoi*” by “hiring,” or would you render it “*employé*”? The truth, we think, is that precisely the same shade of derogation attaches to the anglicised word “*employé*” and the Japanese word “*yatoi*.” We do not, in polite English, ask a man whether he is an *employé* of such and such a Government, or such and such a Department; we distinctly prefer to ask him whether he is “in the service of” that Government or Department. Complaints have often been made about the application of the term “*yatoi*” to foreigners in the service of Japan. Will anybody acquainted with the Japanese language tell us what he would substitute for the term?

CHINESE DIPLOMATIC REPRESENTATION ABROAD.

An interesting correspondence has taken place in *The Times* respecting Chinese Diplomatic representation abroad. A correspondent having criticised the manner in which Chinese Ministers abroad are selected, and having referred especially to the new Minister in London, replies have now been published from General Tchong Ki-tong and Sir Halliday Macartney. The General, by the way, when we first knew of him ten or twelve years ago, was a Captain; since then he has ascended, in popular appellation at least, through the ranks of Major and Colonel to that of General. We are informed as to the history of this correspondence, that the new Minister in London felt hurt at the original criticism, and in discussing the matter with his military attaché in Paris, was advised by the latter—who, as he says himself, has some connection with the press—to answer it. He accordingly instructed the General to write a reply, but being dissatisfied with the military man’s essay, he directed his English Secretary to undertake the task, and so the two

answers appeared together in *The Times* and are quite obviously inspired from the same source. The General’s communication is so funny that we reproduce it:—

Paris, June 26th.

While travelling recently, I read in *The Times* of May 29, an article entitled “Chinese Diplomatic Representation Abroad.” Although I am not pointed to in that article, I think it a duty, as a member of the diplomatic representation of China in foreign countries, to point out some inaccuracies of the correspondent who writes it. Having some connexion with the Press, I know that the most widely circulated of newspapers will readily insert a few true statements in reply to errors that have been made. The criticisms of the correspondent refer chiefly to the following points:—The Chinese Ministers are selected from any functionaries who will consent to go abroad. The new Minister in Paris and London, M. Sieh Fu-cheng, had no other relations with Europeans than a rather short residence at Ningpo. M. Sieh Fu-cheng was the author of a paper, in which he dwelt on good relations, especially with Russia, attaching small importance to the friendship or enmity of the other powers. The office of a representative Minister is not a stepping-stone to an important position. Chinese Ministers leave their Governments in ignorance of what takes place abroad. They select secretaries and attachés from their relations and friends. Chinese diplomatists would find it difficult to adopt the customary forms of Western diplomacy.

Such are the statements of the correspondent. Let us see what foundation there is for them. When the new Minister of China to Paris and London, his Excellency Sieh Fu-cheng, arrived here, several members of the Press came to me to ask for his biography. Acting in conformity with the precept of Confucius which teaches that modesty is a corollary of virtue, I would not grant their request. Their very imperfect judgment, now, I think, justifies me in abandoning this reserve. It is true that his Excellency Sieh was for five years Tattai of Ningpo; but he had been for ten years secretary of the Viceroy of Hankin, the superintendent of the maritime commerce of the south of China, Tseng-Kouo-zeng, the father of the late Marquis Tseng. After the death of this great man he filled the same place under the Viceroy Li Hung-chang for an equal number of years. It was thanks to the knowledge of foreign affairs acquired by him in the discharge of these duties, which brought him at every moment into communication with the European world, that he received the appointment of Tattai at Ningpo, a post opened to international commerce. He was there at the time of the Franco-Chinese difficulties, and, as a patriot, organized the defence there. At the same time, he was able to protect so well the persons and property of foreigners that the Europeans, when peace was concluded, expressed their gratitude to him in an address published at the time in a London newspaper.

He was then promoted to the office of Chief Judge of the province of Hunnan. This important office is equivalent to that of High Treasurer, filled by his Excellency Lew Shui-fun, at the time of his appointment as Chinese Minister to London and Paris. When the appointment of his Excellency Lew to the Government of Canton caused a vacancy in the diplomatic post considered by the Chinese Government to be the most important in Europe, Sieh Fu-cheng, in consequence of the services he had rendered, his long experience in international affairs, and his diplomatic capacity, was naturally appointed to succeed his Excellency Lew. I may add that it is not uncommon for a great Judge to pass to the rank of Governor or Under-Secretary of State. I may refer, as an instance, to his Excellency Kwoh, the first Minister of China and London and Paris. The accusation brought against our Ministers of leaving their Government in ignorance of what is passing abroad has as little foundation. Such silence would be less intelligible than elsewhere in a country where young *liberals* who have just left school frequently address long papers to the Emperor. Of this there is no occasion to say more. The complaint carries its own refutation.

Another point. I have before me the paper by M. Sieh. I have looked through it in vain for the extraordinary position which M. Sieh is said to have given to Russia. I only find in Chapter II, relating to the defence of the Chinese frontier, a passage advising the Government to select carefully the governor of the countries bounded by Russia, so as to maintain good relations with our neighbour, and avoid in future the misunderstandings which might arise between the subjects of the two nations daily in contact with each other. In Chapter V, M. Sieh recommends in the same way a good understanding with the other Powers. I must add a word on the subject of the secretaries and the attachés, who have also been somewhat maltreated by the correspondent. It would be somewhat difficult for me to remember that I have been Secretary of Legation for 13 years, and that I have acted in that capacity under five different Ministers without being either the relation or even the friend of any one of them. I will add, in conclusion, that the adoption of the usual forms of Western diplomacy does not inspire us with any aversion, and I prove it by not sending this letter to the government of *The Times*, but by transmitting it through the good offices of its Paris representative.—TCHONG KI-TONG, Chinese Chargé d’Affaires.

The gallant writer quotes Confucius in a curious connection. “When the new Minister first arrived, I was asked for some details of his biography, but I refused, acting in conformity with the precept of Confucius which teaches that modesty is a corollary of virtue.” The General acts modestly in refusing details of Hsieh’s biography! If he had refused details of his own (which by the way he has never done) one could understand his practice. It seems, however, that in the General’s ethical code a modest because he refuses to blow B’s trumpet. Bless thee, Confucius, how thou art translated! However, the correspondence established this much;—Hsieh has had experi-

ence of foreign affairs in the Yaméus of Tséng Kwo-fan and Le Hung-chang, and his pamphlet on the Kuldja question has been misunderstood. At any rate, it is a sign of grace that he takes so much notice of western criticism.

* * *

The mention of Sir Halliday Macartney’s name reminds us to note that the Vestry of Marylebone have abandoned their appeal in the action which he brought against them for trespass, and which he gained. But the consequences of the action do not stop there. It appears that the discussion of the matter by the members of the diplomatic corps in London amongst themselves revealed some causes of dissatisfaction, and advantage has been taken of the clear decision of the judge in the case to endeavour to get these removed. It will be known to our readers that Ambassadors or Ministers and their secretaries, servants, &c., are free from all liability to rates and taxes in the country in which they perform their functions. Now, in London the local rates on the occupants of houses are very large in amount, and usually come to a third of the gross rent. They include rates for police, school-board, poor, sewers, lighting, and half a dozen other things, and are collected—though not wholly expended—directly by the vestries. Now if an occupant of a house is exempt from the rates, the Vestry would lose them altogether, for the law distinctly says the occupant not the owner—in other words, the tenant, not the landlord—is liable for them. To prevent this, and looking at the matter wholly from the point of view of Bumble, the Vestry of Marylebone, in which parish most of the Legations in London were situated a century ago, and in which many of them are now, did a very cunning thing. A most voluminous private Act was passed through Parliament in, we think, 1798, for the purpose of consolidating all the various powers and duties of the vestry. It was of course drafted by the vestry and passed through Parliament as an ordinary private bill. It contains some hundreds of clauses, and is a small volume in itself. Somewhere in the middle of this mass of stuff was slyly inserted a clause which altered the law of the land. It provided that where houses in the parish were let to ambassadors or others who were not liable to the payment of rates by reason of their diplomatic privileges, then the vestry could come upon the superior landlord for them. The consequence is that the ambassador who is exempt by the law of Vestries and the law of England from the payment of rates is, by means of an obscure clause in a private Act, which naturally passed unnoticed, compelled in fact to pay the rates. This is how the matter works out; an ambassador sees a house which suits him and asks the rent; the owner says it is £600 per annum; the ambassador meaning business, explains who he is, whereupon the owner or his solicitor promptly replies, “Oh! £600 is the rent the tenant paying rates and taxes. If you take the house you are not liable for them, and the Vestry will come upon me. Now the rates are about £200; therefore the rent to you is £800.” This is not a matter of speculation but of actual fact, and sometimes landlords absolutely refuse to let their houses to a foreign minister at all. Thus the French Embassy at Albert Gate is not let to the French Ambassador, or his Government. The owner insisted on having as tenant a person who could be sued in British Courts and who could be forced to pay a British Vestry’s taxes. Accordingly, Rothschilds are the tenants of the Embassy and responsible to the landlord. So in half a dozen other cases the houses are nominally let to British subjects—banks, financial agents, and what not—while the real tenants are members of the diplomatic corps, all because of this wretched sneaking clause about rates. Now, against this the Foreign Ministers have at last risen in revolt. The Dutch Minister took the matter up after Sir Halliday Macartney’s case, and induced all his colleagues to sign a *note identique* or kind of round robin, on the subject to the Foreign Office in London, pointing out the grievance and suggesting the repeal of this humiliating and discreditable clause, which is

now to be found in the acts of various vestries in the West End of London. What the result of the appeal will be remains to be seen, but we are privately informed that the Ministers will go farther if necessary. They say—this is the gossip—that while no Minister abroad is so sensitive about his privileges and so ready to fight in defence of them as a British Minister, there is no capital in the world where the diplomatic corps is treated so scurvily as in London. In many other capitals a local authority which played such tricks as some London vestries have done in this instance would find its members by the heels in prison, or paying a heavy fine. It is a curious business altogether.

THE RICE CROP.

THE *Hochi Shimbun* confirms what we have written as to the effects of the recent storm upon the rice crop. Enquiries addressed to an agricultural expert by that journal, elicited the reply that the critical period for the rice crop is when the flowers are coming into bloom and the ear is forming. This process commences about the *uhyaku-toka*—210th day from the commencement of spring (*setsun*)—and continues for some three weeks. Thus the first twenty days of September are the really important time for the farmer. Previous to that period rain and storm can do little damage, unless deluges occur sufficiently heavy to bury the crop altogether. The typhoon of the 22nd instant consequently came too soon to accomplish any serious damage. The same authority explained that cold inclement weather is far more injurious to the rice than wind or rain. All the great failures of crop have happened in years remarkable for the raw, unseasonable weather prevailing throughout the summer. Floods and drought are by no means so formidable to the Japanese farmer as most people imagine: his really dreaded enemy is insufficiency of heat.

SECEDEES FROM THE "DAIDO DANKETSU."

AT the Koseikuan Meeting of the *Daido Danketsu*, held on the 24th ultimo, fifteen persons, offended by the disposition of the majority of the members to admit the *Kaishin-to* and the *Kiushu Doshi-kai* into the proposed amalgamation, withdrew from the deliberation and held a separate meeting in the Fujimi-ro. The list of the seceders contains the names of Messrs. Inagaki Shimeshi, Yagihara Hanshi, Inouye Kakugoro, Maida Anzanshi, Maida Kagaku, and others of lesser repute. These ardent gentlemen formed a coterie named "The Sunday Club," and elected Messrs. Yagihara and Maida executive officers. They published a declaration of some length, but which can be succinctly summed up as follows: We regard the policy bearing on foreign relations to be a national question of the greatest importance. We stand in diametric opposition to the *Kaishin-to* and the *Kiushu Doshi-kai* on this important question. Consequently we feel constrained to protest against the general opinion of the *Daido Danketsu*.

UNDER WHICH KING?

SADLY perplexed the Japanese must be if they are still sanguine enough to attempt the Sisyphean task of reconciling the arguments advanced by the opponents of Treaty Revision. As the times change, so do these scribbles change also, swallowing their own words without a wry face and calmly advancing statements the diametrical reverse of their previous contention. There was a day when everything depended upon fostering the spirit of opposition among foreigners themselves. Then the cry was all *cui bono*? Then the futility of hoping that the opening of the country would create any opportunities for the employment of foreign capital and foreign enterprise, was stoutly insisted on. Long articles were written to prove that Japan was played out; that her measure had been fully taken, and that she was found wanting; that only the tourist, the scientific explorer, or the invalid cared to be allowed free access to the interior; that for the practical merchant, manufacturer, agriculturist, or

capitalist, nothing more offered. It was all moonshine, we were assured, to expect that by freeing foreign trade, travel, and residence from the restrictions now imposed on them, any solid advantage would accrue to foreigners. Therefore these were urged to let well alone; to stick to their consular courts, their exemption from Japanese jurisdiction, their narrow settlements, their isolation and their ostracism. Such was the cry for many a year. But by and by a time came when it seemed essential to check the ardour of the Japanese themselves; when a probability presented itself that the Japanese nation, tired of being treated as a semi-civilized inferior, might strike off its own fetters unconditionally. What course did the unblushing opposition then pursue? Here are the *ipsissima verba* of one of their organs:—

Suppose Japan were thrown open as the happy-hunting ground of the Foreign Capitalist, what would the result be? She has abundance of cheap labour, and that is to the Capitalist what honey is to the buzzing flies. Now we must not lose sight of the fact—(we are still speaking from a Japanese standpoint)—that in these days of companies and pools and trusts and syndicates, the Occidental can simply as yet run rings round the Japanese in the management of capital. Besides, the command of the former over its amount is much greater than that of the latter, and everybody knows that the sort of law of gravitating applies to capital, its attractive power being in proportion to its mass. At present there is a very considerable number of capitalists in England on the outlook for profitable investments, as witness those Transatlantic trusts, buying up Mills and Hotels and almost everything else they can lay their octopus-like tentacles on in America,—and which, by the way, these cousins do not by any means regard as a great and unmitigated blessing. Open the country, and the chances are there is an immediate descent of these gentry upon the soil and resources of Nippon. This means, of course, that Japanese factories, on account of their smallness and limited command of capital, become simply unworkable, that they either close, or fall into the hands of the exploiters, and that the whole manufacturing industry of the country passes into the hands of these tremendous corporations,—which, be it recollected, have neither bodies to be kicked nor souls to be damned. In short, admit the foreign capitalist at the present stage of the country's industrial development and the proximate outcome of the step will be the nation's industrial slavery and consequently social degradation.

How is the position here taken to be reconciled with the contention that the opening of the country signifies nothing to foreign capital and foreign enterprise? Impossible, of course: the two contentions are utterly at variance. We hold this a small matter; however, having long ago ceased to look for logic or consistency among the mass of confused verbiage and inconsequential persiflage that is suffered to disfigure the cause of the opposition. Foreigners averse to any sweeping scheme of Treaty Revision have many excellent and sound arguments to advance, but they are not arguments advanced by such writers as the conservative we have quoted above. Be this as it may, however, what are we to say when an English journal sets itself to incite the Japanese to hug their semi-seclusion by warning them that if they abandon it, the result will be "the nation's industrial slavery and consequent social degradation"? The cowardly conservatism which ventured to raise its head last year in a season of political agitation so intense that men were ready to grasp at any straw of succour—that craven sentiment is now adopted and fomented by an English journal! Strange times these in sooth!

THE WRECKED CHINESE RAILWAY.

REFERRING to the case of the Chinese railway recently destroyed by the wanton cutting of its embankments in a time of flood, the *Chinese Times* says:—It becomes more and more patent that the general destruction of the railway on the Tongshan branch proceeded from the antagonism of the military officials, especially those stationed at the great camp of Lutai. These gentlemen have been in the habit of making most extravagant demands on the Company in the way of free passes, special cars, etc., and even insisted on being supplied with refreshment while travelling gratis. Free passes have been too lavishly granted by the directors of the Company to the whole tribe of military parasites, but the officers of the Company have required them to accommodate themselves to the

rules and regulations established for the preservation of order on the line, and for the convenience of the general public. The restraints of decency and order did not, however, suit the Lutai heroes, and because they were not allowed to subordinate the arrangements of the traffic to their barbarous military disorder, they have nourished resentment, and, an opportunity presenting itself, they seized upon it to wreak a revenge that would have brought upon them most severe punishment in any civilized country, and possibly even in China at another time. At the head of those swashbucklers is of course the General Yang, very locally yclept the Bismarck of China. When it became known that his proceedings were reported, he sat trembling in the midst of his "braves" in a condition of what is known in the West as "funk," but when the attitude of the higher authorities was found to be not unfavourable to the wreckers of the railway, the gallant General recovered, and he and his band of heroes are celebrating their triumph over that great enemy of misrule, the railway. H.E. the Viceroy has given orders to the military at Lutai to replace the railway embankment which has been destroyed. But no materials are obtainable, the country being under water, and the portion of the rolling stock accidentally left on the Tongshan section when the breach in the railway was made being quite inadequate to transport the requisite materials—estimated at half a million tons—within a less period than six months.

PROJECT FOR THE CONSTRUCTION OF WATER WORKS IN OSAKA.

THE first step towards the construction of water-works in Osaka was taken in 1885, when the city was suffering from cholera. The estimate then made for the necessary outlay was 2,500,000 yen and the city was to be supplied with water from the river Yodo by means of iron aqueducts, whose mileage was estimated at eighty-four *ri*. But the needed money was not forthcoming, and the work was dropped, the city not having subsequently suffered from any visitation of epidemic disease. The prevalence of cholera this year, however, resulting in more than a hundred new cases every day, and above all, the fact that the great majority of the cholera victims are residents of districts using bad water, have afforded a most cogent argument for the speedy construction of water-works. Some of the most influential citizens have been exerting their efforts to carry out the project. The delay has, indeed, been a subject of surprise to all observers. It is true that so long as Tokyo remained without a proper water supply, Osaka could not be greatly blamed for a similar want of enterprise. But the admission now made by the vernacular press, that an epidemic of zymotic disease is necessary to rouse the people of Osaka to a sense of the necessity which all civilized cities admit and act upon now-a-days, is decidedly humiliating. It must be a curious reflection that the only places which can boast the possession of water-works completed or in process of completion, are three out of the five foreign settlements.

ADVICE TO KOREA.

A KOREAN statesman, whose name is not given, is reported by the *Nichi Nichi Shimbun* to have had an interview lately with a Japanese General, concerning whose identity also we are told nothing. The Korean had been travelling in Europe and America, and returning home, brought with him large aspirations on the subject of reform. These he seems to have communicated to the Japanese General, and it is the advice tendered him by the latter that our Tokyo contemporary reproduces. The General seems to have been a strong conservative in one sense. He held that national reforms should be worked out, as far as possible, by the unaided strength of the nation concerned. If, he said, it were possible to employ foreigners and to use their brains without taking them into confidence, well and good. But in respect of this he invited his Korean friend to reflect carefully. What had been Japan's experience?

Before the Restoration, and especially since it, she had taken into her service many foreigners, in the capacity of military advisers, legal advisers, and so forth. Unquestionably she had profited largely by doing so, but, on the other hand, her private affairs had all become known abroad, with very inconvenient results in a military sense. Hence the General came to the not entirely relevant conclusion that national reformers should carefully and minutely examine the customs, traditions, history, and habits of their countrymen, with the view of preserving the good and altering the bad; that the duty of a small State placed between large ones should be confined to defending itself against aggression; that for such a purpose a standing army of thirty thousand men would suffice in Korea's case, inasmuch as neither China, nor Japan, nor Russia was likely to interfere with her; that she ought not to adopt the liberal policy of Western countries, but should in all reforms, foster her attachment for Oriental conservative patriotism; should encourage trade; should develop her commercial communications with China and Japan, and think chiefly of getting rich. "Otherwise she would fall a prey to the sharp foreigner."

Whoever this General may be, we cannot admire his capacity for casting up a balance. It seems to us very superficial to compare any infinitesimal and transient inconvenience which Japan may have suffered by taking foreigners into her confidence with the solid and permanent advantages she has derived from their assistance. But for her foreign employes she would still be a long way from attaining the point which she has now reached. Judged by its results, the policy that led her statesmen to resort freely to foreign aid was eminently wise and patriotic.

CHOLERA IN OSAKA.

THE cholera this year appears to show more virulence in Osaka than in any other of the localities cursed by the presence of the epidemic. Scarcely had the disease obtained a foothold in the city before it began to spread with alarming rapidity. The *Jiji Shimpō* attributes this to the general dampness of the soil in the city, the abundance of paupers, and above all to the circumstance that the Osaka folks depend upon the river for their drinking water. "Osaka," says our contemporary, "is intersected everywhere by canals, from which the greater part of the inhabitants obtain their supply of drinking water, and consequently when the virus is once communicated to the water, it speedily finds its way into every household. When the epidemic was first imported from Nagasaki this year, there were only two or three patients in Osaka, but in a very short time, five adjacent families fell victims to the disease in rapid succession. On carefully investigating the cause, it was found that the excreta of some of the first patients had been thrown into the river and that the people who caught the disease had all drunk the river water."

THE ROKUGO OVERFLOW.

COMMUNICATION by rail with Tokyo was again interrupted on Sunday in consequence of the unusually heavy rain of Saturday, and travellers between the two places had to find their way from the north side of the Rokugo to Tsurumi and *vice versa* as best they could, the trains from Yokohama going no further than the last-named station. Many persons from Tokyo returned to the capital when they beheld the condition of the river at Kawasaki, where the current ran at such a rate as to make the passage across it highly dangerous. The village of Kawasaki was of course flooded, and those acquainted with the lay of the land about there will understand to what extent when it is stated that the water flowed over the Tokyo road bridge several feet deep and with such force as to render the bridge useless as a means of crossing. The river at Tsurumi had also overflowed in places, though not sufficiently to cover the rice crop, which nowhere in that district has been injured in the slightest degree, the overflow being

generally back water. There has been no interruption of mails from Tokyo, though some delay would of course result from their transfer to and carriage in jinrikisha from Kawasaki to Tsurumi. The rainfall was evidently enormous along the course of the Rokugo, as the river rose more rapidly than usual, but one dry day in the neighbourhood of Futago and the hills beyond has reduced it to proper limits.

An incident, somewhat dramatic, though extremely inconvenient and disagreeable to the parties concerned, occurred yesterday in connection with the overflow of the Rokugo. M. Fédérici and his bride, the daughter of M. Boissonade de Fontarabie, were on the way to Yokohama to join the out-going French mail steamer. On arriving at the river it was seen that the passage across was decidedly dangerous, but M. Fédérici's duties demanded his presence in France, and he was compelled to proceed, leaving his bride to follow by the next mail. M. Fédérici got safely across, and waving a final "adieu" to the disconsolate lady on the northern shore, was soon on his way to Yokohama. M. Fédérici was married little more than a week ago, and his anticipated honeymoon has thus been very much curtailed.

MR. YOSHINO SEIKI.

CONSIDERING that a powerful section of the members elect of the Diet is endeavouring to have Mr. Yoshino Seikei appointed President of the House of Representatives, it may not be without interest to reproduce an open letter addressed to him in the columns of the *Roku-Hon*. The gist of the letter is as follows.—There are few who can surpass you in assiduity, sobriety, and justness. Since you were first elected member of the Tokyo City Assembly, you have discharged the duties of your position with unvarying devotion for the past ten years, during which interval you are reported to have absented yourself from the Assembly on two occasions only. From this circumstance alone, some idea of your character may be formed. You are a Chinese scholar, and are distinguished for simplicity of life. You still affect the *chon-mage* (the old manner of dressing the hair), but you are by no means one of those impractical scholars who abound in the community. That you are not an ordinary Chinese student, is evident from the skill with which you keep order in the local Assembly of the capital, while your unimpeachable integrity may be judged from the fact that on a notorious occasion certain bribers did not dare to approach you. No wonder, then, that you were elected to the Diet without spending a *sen* in canvassing the constituency. You are now pointed at as the most suitable candidate for the Presidency of the House of Representatives by members who do not wish to see that position occupied by a man without official experience. We also think that you are just the man to fill the important post. We do not indeed consider you a great man, nor do we think that you have the qualifications requisite for statesmen or administrators. But as a candidate for the position of President of the House of Representatives, you possess three important qualifications, viz., justness, impartiality, and skill in keeping order in debates. There are men who object to your want of experience, but your high moral character will have the effect of enhancing the weight of the Diet. In short you are the very man for the position in question.

DETERMINED SUICIDE.

A SUICIDE of a most determined character occurred on Sunday in Yokohama, the unfortunate victim of the rash act being Lieut. W. C. Turner of the U. S. Marines, recently serving on board the corvette *Omaha*. It appears that about half-past nine the deceased officer went to the store of the American Trading Company, and, having procured a small rifle, loaded the weapon, and there and then shot himself, the bullet taking effect in his brain, and causing almost instantaneous death. Lieutenant Turner, who joined the *Omaha* in April, 1888, was, with his wife,

who resided in the Club Hotel, well known in Yokohama, and both were much esteemed by a large circle of friends. Mrs. Turner was to have gone to the United States with her children by the last mail, starting on the day of the unhappy occurrence. According to original arrangements, her husband should have accompanied her, but it was found impossible to carry out this plan, and the frustration of his expectations is believed to have preyed greatly on the deceased gentleman's mind. On Sunday morning his behaviour attracted the attention of several persons, but though some notice was taken of his movements, no deliberate attempt seems to have been made to control them. On Saturday evening he had promised to see his wife again on Sunday morning, but instead of going off to the steamer he left the Hotel and proceeded to No. 28, where he asked the *banto* to let him have a revolver. The man replied that all the pistols were locked, but proceeded to Mr. Sargent's residence and told the latter of the request. Mr. Sargent at once started for the office, but before he reached it Mr. Rice had arrived and found Mr. Turner lying on the floor of one of the rooms with a rifle under him which he had obtained in the *banto's* absence. Medical assistance was at once summoned, but was of course useless. The body was removed to the Hospital. Deep sympathy is felt and expressed for Mrs. Turner, who had come ashore from the steamer to see her husband before the sad news was communicated to her. No cause for the unhappy occurrence can be assigned beyond the disappointment we have already mentioned.

The remains of the late Lieut. Turner were interred on Monday afternoon in the General Cemetery, being followed to the grave by a large number of mourners. Services were conducted at half-past five in the American Naval Hospital by Rev. W. F. Morrison, chaplain of the *Omaha*, after which the coffin was carried to the cemetery by eight men of the deceased officer's corps, accompanied by a firing party of 15 files of marines, and about 80 blue jackets from the *Omaha*, the fellow officers of the deceased being largely represented. The cortege was headed by the *Omaha's* band, playing appropriate music, while in the rear were the civilian mourners who had assembled. On the coffin were borne the shako, sword, and belt of the deceased, and these were covered by many beautiful wreaths, the offerings of brother officers and of other friends. At the grave, the firing party and accompanying detachment of seamen were formed up, and, the concluding part of the impressive service having been gone through, the usual volleys were fired. Lieut. Commander W. W. Reisinger was in command of the companies from the *Omaha*, Lieut. Cook acting as adjutant.

THE CUSTOMS RETURNS.

THE Customs returns for July furnish the following comparative figures:—

	1889.	1890.
Exports during first seven months of year	¥31,445,456	¥31,635,194
Imports during first seven months of year	¥35,536,155	¥49,455,557
Totals	¥66,981,611	¥81,090,751

Two features of these returns are remarkable: first, that the total trade is greater by ten millions this year than it was last year, and secondly that whereas exports and imports were virtually equal for the first seven months of 1889, the latter exceeded the former by no less than 17,820,363 *yen* for the corresponding period of the present year. This second fact is in great part accounted for by the one item of rice. In round numbers, the export of rice last year during the period we are examining amounted to 6,793,971 *yen*, whereas the staple was imported during the same period this year to the extent of over seven million *yen*. This represents a difference of nearly 14 million *yen* in favour of the import trade as compared with last year. Excluding rice altogether from the account, we find that the export trade for the first seven months of the present year amounted

to 31½ millions, in round numbers, the corresponding figure for last year being 28½ millions, while the import trade amounted to 42½ millions against 35½ millions for last year. There has consequently been an increase of 9½ million yen over the total normal trade, of which increase 6½ millions stand to the credit of imports and 3 millions to that of exports. These are remarkable figures. During the past three months the sterling value of the silver yen has appreciated by more than twenty per cent., which means that persons importing goods from gold-using countries and selling them at the same prices as before to Japanese consumers, make an additional profit of twenty per cent., while Japanese staples bought at the same rates as before in Japan and sold at the same rates as before abroad, return twenty per cent. less than before to the merchants engaged in the transaction. Evidently the effect of such a fluctuation ought to be almost crippling to the export trade and correspondingly encouraging for the import. Such indeed has been to some extent the case. The quantity of silk sent out of the country up to the end of August was only one-third of the quantity exported up to the same date last season. Japanese holders have not apparently realised that the situation imperatively demands concessions on their part. It is very probable that some of them are in a tight place, having taken the staple from the producers at prices that included no margin for serious fluctuations in exchange. But however this may be, there is no manner of question that unless Japan adapts her rates—as she can very well afford to do—to the altered silver price of the sovereign, the European and American markets cannot take her staple. Out of such a dilemma there can be but one exit, and during the remaining months of the year we shall probably see very large shipments of silk, especially since the stocks available for export are much larger than they were last year. That the export trade up to the end of July increased by three million yen in the teeth of such deterrent conditions speaks volumes for its vitality. With regard to imports, on the other hand, it would probably be unsafe to assume that exchange influenced them greatly during the period we are considering. The fact of American legislation seems to have been always regarded with distrust in Yokohama, and its consequences were greatly under-rated. Even when the Bill had become law, many people here believed that its effects had been fully discounted so soon as the dollar was driven to 3/5, and that a decline from that point rather than an advance was to be looked for. We ourselves never shared these views. Writing in the first week in June, we expressed the conviction that the contemplated action of the American legislature would send the silver dollar to four shillings, approximately, and that any fall for below that point need not be anticipated for a considerable interval. If any import merchants shared this conviction, they probably imported large stocks of goods before the upward movement of silver became very marked. But we do not think that such was the case, and under any circumstances only a small part of the increased imports can be attributed to this cause. It will be a matter of much interest to analyze, by and by, the influence really exercised upon the import trade by the rise in exchange. From Shanghai we learn that importers have fared sumptuously. In some cases, of course, rates were settled at the time of shipping the goods, and embarrassment rather than benefit was the result. But most of the large houses, appreciating the situation, left themselves a free hand, and have reaped fine profits. In Yokohama a more cautious policy appears to have been pursued with, of course, proportionately disappointing results. But as yet we have no returns which enable us to speak with confidence.

HOW TO GET TO NIKKO.

INQUIRIES have been addressed to us with regard to the best way of reaching Nikko during the break-down of the railway, and with regard to the probable time that must elapse before the

line is reopened for traffic. As to the latter point, our information is to the effect that the road will not be brought into working order before the middle of this month. The section beyond Omiya has been completely inundated by the water of the Tonegawa, which at its time of greatest flood, rose to a height of 20½ feet above its usual level. Looking at the map and remembering that the ordinary highways must have suffered nearly as much as the railroads, the best plan of procedure seems to be a journey by water from Tokyo to some point on the line beyond the breakage. There is, indeed, under normal circumstances, a service of steamers on the Tone river from Tokyo to Koga, but owing to the swollen state of the river and the consequent rapidity of the current this service is now suspended. Returning from Nikko to the capital the river route is of course available, but the up journey seems scarcely practicable until the volume of water is somewhat reduced. Just at present, we believe that the best, indeed the only, plan, is to proceed by train as far as Kumagaye, and there take *jinrikisha* to Ashikaga. The latter lies on the Ryomo Railway from Mayebashi to Oyama. The distance to be traversed by *jinrikisha* is only six ri at the outside, but the roads are exceedingly bad. At Oyama the train can be taken to Nikko. The only chance of accomplishing this journey satisfactorily would be to leave Tokyo by the first train, starting from Ueno at 6 a.m. Kumagaye would then be reached at 8.05, and since the train from Mayebashi to Oyama passes Ashikaga at 12.12, the traveller would have about 4 hours for the *jinrikisha* journey of 15 miles. Reaching Oyama at 1.06, he would leave that station at 2.15 and be at Nikko at 4.40. It ought to be possible to accomplish the 15 miles between Kumagaye and Ashikaga in 4 hours, but as the passage of the Tonegawa is included and as the roads are greatly cut up, nothing can be predicted with certainty.

ELEMENTARY EDUCATION IN FRANCE.

SIR B. SAMUELSON M.P., who has lately been studying technical education on the continent of Europe, has written an extremely interesting report on elementary education in France, which has been printed by order of the House of Commons. It seems that for more than twenty years every commune in France of not less than 500 inhabitants has been compelled to provide at least one public elementary school for boys and one for girls, but if the commune contains less than this number the school may be mixed. Since 1881, however, there have been so many extensions in the system of education that it may be said to be completely transformed. By successive Acts elementary education was made gratuitous, compulsory, and strictly secular; but, to enable the parents and guardians to provide religious instruction for the children outside the school, one day in the week in addition to Sunday is reserved for this purpose. In France the cost of primary instruction is generally defrayed by the Central Government, by the departments, and by the communes in varying proportions, but the schools of Paris are maintained entirely by the municipality. How sensible Paris is of the importance of giving children the benefit of a good education is strikingly apparent when we consider the amount of money expended and the extent and quality of the instruction given. There are 111,112 children on the books of the primary schools of Paris, for whose education the city annually pays nearly £800,000, which means, if we exclude rent, interest, and repairs of buildings, £5 18. 7d. per head. This is much higher than the rate in the Board schools of England and Wales, where the average cost is only £2 48. 7d. The courses of instruction are, however, very different in Paris. Even in the infant schools "the instruction comprises the first principles of moral education, rudimentary lessons on common objects, the first elements of drawing, writing, and language, "notions" of natural history and geography, stories within their comprehension, manual exercises, and graduated gymnastic ex-

ercises." In the schools for elder children the courses are, it need hardly be stated, much more advanced and comprehensive. Since 1882 the distinction between compulsory and optional subjects has been abolished, and the ordinary curriculum of the primary schools of Paris now includes "moral and civic instruction; reading and writing; the French language and the elements of French literature, geography, history, elementary notions of public law and political economy; the elements of science and their application to agriculture, health, and the industrial arts; manual instruction and the use of tools in the principal handicrafts; the elements of drawing, modelling, and music; gymnastics, and for boys military exercises, for girls needlework." This programme, Sir B. Samuelson says, includes all the fundamental notions of moral, intellectual, and physical instruction, with the exception of religion, which is left to the direction of the child's natural guardians. The variations in the distribution of these subjects with respect to the time devoted to them are very sensible, and for the older scholars much more time is devoted to technical education. Sir B. Samuelson was, however, less satisfied with the elementary science teaching than with other branches, though he adds that in the advanced schools for scholars above the age of thirteen "science is taught under the best conditions." For the teaching of geography, arithmetic, and geometry he has nothing but praise. Home lessons are seldom given; when they are, they only consist of exercises of the memory in the form of short pieces to be recited which can easily be learnt in twenty minutes. Moreover, in all the primary schools throughout the country corporal punishment is absolutely prohibited. The salaries of the teachers are not so high as in the London Board schools, so far as the highest positions are concerned. In Paris the maximum is £212 for male and £180 for female teachers, but the average is for the former between £108 and £144, and for the latter between £94 and £124 per annum. The statistics which give the occupations of the parents of the children in the primary schools are also very interesting. Of the professional class there are 3,000, of officials 7,000, of clerks and shopmen 16,000, of tradesmen 20,000, of domestic servants 4,000, and of workmen 63,000. The results of the examinations testify to the general efficiency of the instruction, and the health of the children in school is carefully inquired into. Twice in every month there is an inspection of every school, and for this work 120 salaried medical practitioners are engaged, who inquire into the lighting, heating and ventilation of the buildings; and in addition to this the children are individually examined once a month, while the head teachers receive from the inspectors such instructions as enable them to detect the earliest symptoms of infectious diseases.

THE IMPERIAL UNIVERSITY.

LAST April there was much talk of the advisability of separating the University from the Government and attaching it to the Imperial Household Department. By journalists and many other folk this idea was attributed to a sense of the expediency of removing the financial affairs of the University beyond the control of the Diet, it being anticipated at the time that the tendency of the Diet would be strongly in the direction of cutting down all grants of public money in aid of education, and that the University would probably fare ill during the first exercise of this economical mania. We never, for our own part, attached much importance to the apprehension. The representatives of the people are likely to be at least as solicitous as the Government about the success and prosperity of the National University, and it would surprise us greatly if they were so shortsighted and unpatriotic as to cut down the appropriation for its support. Such seems to be the impression in other quarters also, for the subject has now been revived, and we read in the *Mainichi Shimbun* that the dominant idea of its originators last April was, not to secure the University against unwise retrenchment on

the part of the Diet, but to increase its functions and add to its resources. Prince Sanjo, Counts Yamada, Matsukata, and Saigo, and among the Privy Councillors Counts Higashikaze and Soyejima, Viscounts Fukuoka and Sano and Mr. Motoda are said to be now in favour of the project. If the thing is to be done at all, the sooner it is done the better, for all such changes, if effected on the eve of the assembly of the Diet, are likely to be regarded with disfavour by that body.

THE MAGAZINES.

AMONGST articles in the magazines last month which will interest our readers is one by Mr. F. H. Balfour formerly of Shanghai, in the *National* called "Angelic Immorality." The subject is Goldsmith's "Vicar of Wakefield," and the title is derived from the famous line "He wrote like an angel, and talked like poor Poll," or as Mr. Balfour, in Johnsonian phrase puts it, "not only did he write like an angel, but talked, actually talked, like one of those accomplished creatures which, in their jewelled ornate and power of soaring heavenward, resemble angels quite as nearly as any other beings upon our globe." Mr. Balfour thinks the morality of the famous novel is abominable, and attacks poor Dr. Primrose in the most violent fashion. One wonders why Mr. Balfour thought it worth while to write the article, and why Mr. Alfred Austin thought it worth while to insert it. In the *New Review*, Mr. H. M. Moore writes on "The first General Election in Japan," and gives a sketch of the different Japanese political parties, for the information in which, unless we are greatly mistaken, he is indebted to certain recent articles in the *Japan Mail*. Sir Alfred Lyall in the *Nineteenth Century* discourses on "Official Polytheism in China," basing his observations on the *Peking Gazette*. He has compiled one or two similar articles already with materials obtained from the same source. They appeared, we believe, in the *Fortnightly* ten or twelve years ago and are reprinted in his volume of "Asiatic Studies," published by Mr. Murray.

THE USUI PASS.

News published by the vernacular press from Uyeda, in Shinshu, says that owing to a violent storm of rain and wind on the 21st, 22nd, and 23rd ultimo, the new road over the Usui-toge was rendered impassable by landslips of considerable magnitude, by which also seventy telegraph-poles were thrown down and the section of the Shinyetsu railway between Myoda and Karuizawa became unfit for the passage of trains. Even the carriage of mail matter seems to have been stopped from the 23rd to the 28th. It is further reported that considerable damage to houses and crops has been caused by the flooding of the Chikuma river. Evidently the elements have conspired to imprison the good folks who have fled to Karuizawa to escape the mid-summer heat of the capital. Nikko, too, still remains cut off, so far at least as communication by railway is concerned. It is possible, of course, to make the journey to and from Tokyo by steaming down or up the Tonegawa, but the operation is tedious, and somewhat expensive, a shrewd individual having bought up all the available boats and fixed the tariff at twenty yen for the down trip.

THE "INQUEST" ON MONDAY.

THE coroner's inquiry held last Monday to investigate the circumstances under which Lieutenant Turner of the United States Marines met his death, seems to have been conducted in a remarkably perfunctory manner. We have no doubt that the verdict of temporary insanity was correct, but the evidence on which it was founded can only be described as very meagre. Of the two witnesses who saw Lieut. Turner on the morning of his unhappy death and who deposed that he failed to recognise them and appeared to be more or less distraught, one had known him for two years and had been frequently in his company. Yet no question was put to this witness with reference to the habits of the deceased or his

general condition. It is stated, too, that Lieutenant Turner had been in hospital and that he was about to return thither. Yet no evidence was sought from the hospital as to the nature of his ailments and the state of his mind. Reading the account of the inquest, we are almost constrained to think that the jurors were influenced rather by their own knowledge than by the evidence submitted for their consideration. Of course something of that kind may be expected to happen frequently in a place like Yokohama. It is practically impossible to find a jury here the members of which can approach an inquiry with their minds in the ideal condition of neutrality and ignorance contemplated by the law. The original function of the jury was not to determine the facts of a case according to evidence, but to deliver an opinion in the absence of evidence. The jurors were, in short, expected to pronounce their idea of the affair from their previous knowledge of the parties concerned and from their conception of what local public opinion thought about it. A jury in Yokohama or any other small settlement, is apt to revert unconsciously to the pristine type of this great institution. But there are considerations which make for the advisability of avoiding the semblance of such a tendency, and in the case we are considering, since evidence might easily have been procured to render the inquiry complete and independent, it seems a pity that the effort to procure it was not made.

NAGASAKI AMENITIES.

SOME time ago a certain Mrs. Schroder, who had arrived recently at Kobe from Shanghai, died of cholera in the former settlement. It was at first supposed that the deceased was identical with a Japanese lady of the same name who resides in Tsukiji; and we accordingly wrote that "we believed" her to be Japanese. Subsequently inquiry showed, however, that the victim of cholera was not Japanese; that she had been at one time a nurse in Shanghai; and that she had left that settlement in a state of considerable prostration from diarrhoea. Europeans and Americans in Japan have hitherto enjoyed comparative immunity from cholera, and when cases occur there is natural anxiety to ascertain any explanatory particulars. Hence the publication of details which would otherwise seem superfluous. The *Nagasaki Rising Sun* re-produced our original expression of belief as to Mrs. Schroder's nationality. Thereupon a person calling himself a friend of the deceased, waited upon the editor of that journal and gave him a broken head. It is impossible to conceive any reason for the assault, since however proud of his nationality and civilization this truculent individual may have been, he can scarcely have deemed it an insult to Mrs. Schroder that she should be supposed a Japanese lady. At all events, he was summoned before the United States Consular Court by the victim of his assault and fined twenty-five dollars. How the amount was assessed we do not know, but that it is a ludicrously small sum, will be admitted by every one. If Occidental *soshi* can purchase for twenty-five dollars the privilege of entering a man's house and laying his head open, it will behave people to take measures on their own account for punishing such lawlessness.

TERRIBLE INUNDATION IN SAITAMA PREFECTURE.

THE heavy storm of the 22nd ult. caused serious flooding of the rivers Arakawa, Ichinokawa, and Tokigawa in the Yokomi District of Saitama Prefecture. The inundations resulted in a total loss of crops over an area measuring more than two thousand *cho* of farms and rice-fields, and in the flooding of more than one thousand dwelling houses, three of which were completely swept away. There were five persons drowned. Where the flood was deepest, the roofs only of houses could be seen, and in other places the water stood at a height of four or five feet above the floors. Thus about 3,500 people have been reduced to a state of great distress, almost to starvation indeed; and though no effort is being spared by

the local Authorities to afford speedy relief by the distribution of boiled rice and other food, the continuance of the floods makes it a very difficult task to carry out the work of succour effectually. The cause of this disastrous catastrophe is attributed to a weak spot in a dyke which was in course of construction. The dyke yielded readily to the pressure of the flood at this point, and was speedily demolished altogether. Among many hair-breadth escapes, illustrating the extraordinary rapidity of the water's rise, we read of a man named Shidzokura Jiro, who, perceiving the muddy stream mounting towards his dwelling, hastily led out his two children, a girl of seventeen and a boy of twelve, and fled to a boat. The next moment the boat, struck by a surging rush of water, heeled over and was whirled away like an arrow over the turbulent flood. Two boatmen plunged into the boiling stream to save the young people at the imminent danger of their own lives, but all in vain. One of the boatmen, after being swept down for a couple of miles, was fortunately washed ashore upon the roof of a temple and the other succeeded in raising himself into the branches of a tree, where he passed a very uncomfortable night in the company of snakes. He was picked up by a relief boat in the morning.

SPECIAL COMMITTEE OF THE PEERS.

ON the occasion of the meeting of the five orders of peers, convened by Prince Iwakura in the Rukmei-kan, on the 24th ultimo, it was resolved that a special committee of fifteen should be appointed. In pursuance of this resolution, another meeting was held on the 28th ultimo to elect the committee. The total number of votes cast was eighty, and the result was the election of the following noblemen:—Marquis Hachisuka, Count Yanagisawa, Viscount Tani, Baron Makimura, Viscount Kageyukoji, Viscount Nabeshima, Baron Senke, Viscount Kano, Prince Iwakura, Marquis Asano, Baron Nagaoka, Count Matsura, Viscount Matsudaira, Prince Tokugawa, and Viscount Ogiu. This committee has nothing in common with the so-called "Committees for investigating Political Matters" so much in vogue among political parties. It was appointed for the sole purpose of deliberating in a convenient manner upon the different rules which the House of Peers may be called upon to make in accordance with the provisions of Art. 51 of the Constitution, which says:—"Both Houses may enact, besides what is provided for in the present Constitution and in the Law of the Houses, rules necessary for the management of their internal affairs."

SILVER COIN IN CHINA.

"At last," writes the *Chinese Times*, "after many false starts and much delay, a silver coinage for at least so much of China as is comprised within the jurisdiction of the Governor-General of the Liang Kuang is an accomplished fact." A proclamation has been issued by the Shanhou Chu (the provincial administrative board), intimating that large and small silver coins have been minted in adequate quantities for general circulation, and calling upon merchants to take them at the current rate and in every way place them on the same footing as the foreign dollar. The coinage consists of dollars, half dollars, twenty, ten, and five cent pieces, and very handsome coins they are, bearing on the one side the Imperial Dragon surrounded by an inscription in English setting forth the value of the coin, which in the case of the dollar is seven mace two candareens. On the reverse side the centre of the coin has inscribed on it the four characters "Kuang-hsi Yüan-pao" in Chinese and Manchu, surrounded by the Chinese version of the English words on the face. (Kuangtung Sheng-tsao; K'u P'ing Ch'i Ch'ien Eih Pen.) The weight of the dollar very closely approximates that of the Japanese yen, being, if anything, a trifle heavier. It contains 90 per cent. pure silver, the half-dollar containing 86 per cent., and the other coins 82 per cent. It seems a pity that the Governor-General did not take advantage of the

opportunity thus afforded him to take steps to suppress the very objectionable habit of chopping dollars, so much in vogue in the South of China. If energetically taken up it ought not to prove a difficult undertaking, and it would certainly confer a great boon on the foreigners as well as on the Chinese themselves. His Excellency having made a beginning of what we fear will to him not be a very profitable enterprise, it is to be hoped that the Imperial Government will be brought to see the great necessity that exists for a national coinage, and will themselves take charge of the mint. It is much too large and costly for the requirements of the provincial government, but in the hands of the Central Authorities would prove an important factor in the great work of fusing the Empire into one homogeneous whole."

KOREA AGAIN.

SOMETIME ago the *Hochi Shimbun* and some other vernacular papers published a statement that the Korean political refugees, Kin-o Kiun and Boku-yei Ko were contemplating a return to their peninsular home and had asked for the pardon of the King of Korea through the Korean Minister to Japan and an American Councillor in the employment of the Korean Government. This little item of news seems to have created quite an alarm in the Hermit Kingdom, especially among the clansmen of Bin, now in power. Orders are said to have been at once issued and actually carried out for arresting some fifty men and women having relations to the family of Kin. The Minister in Tokyo was removed from his diplomatic office and sent to some unimportant post in a remote part of the Kingdom, and the American Councillor lost much of his influence with the dominant Bin clan. On being interviewed, Mr. Kin-o Kiun, who is now sojourning in Tokyo, told the *Yiji Shimpō's* reporter that he had no knowledge whatever of the act ascribed to him by the vernacular papers. In fact he affirmed that he had no idea of returning to his country, and that he intends to devote the remainder of his life to the reclamation of some land in Hokkaido. He said with great feeling that it caused him bitter grief to find himself thus unwittingly made the cause of suffering to his friends at home. In this context, our contemporary remarks that undue importance was purposely attached to the statements of the Japanese papers by some political wire-pullers at the Korean Court, with the object of undermining the growing influence of Mr. Kin Ka-chin, the Korean Minister to Japan.

A PROBLEM IN JAPANESE POLITICS.

UNDER this heading, the *Koku-Hon* of a recent date discusses a question which, though at present attracting little notice, is destined sooner or later to become very important under the new régime. Suppose that any statesman in the Opposition has been called upon to form a Ministry, what will he do with the crowd of his followers who made politics their livelihood and who, therefore, expect to be rewarded by their leader for their services? In Japan, an official career is one of the best paying professions, and ambitious young men naturally seek in most cases to enter the civil service. Such being the case, the reward to which the majority of the professional politicians in any party look to is an official position. Our contemporary tells us that a large number of men have special claims on their leaders for rewards in the shape of official posts, as they have sacrificed their fortune in the cause of their party to such an extent that they are on the verge of ruin. The Tokyo magazine thus thinks that any party leader, on being required to assume the responsibility of constructing a Cabinet, will be placed in an embarrassing situation. He must either satisfy his needy followers by admitting them into officialdom, or disregard their claims. If he follow the first course, it will be necessary to dispense with the existing system of competitive examinations, a step which is incompatible with the progressive spirit of the time. On the other hand, the pursuance of the second course would involve a serious rupture between the leader and majority of his followers.

The *Koku-Hon* illustrates this point by referring to the case of Count Goto. Since his entrance into the present Government, he no longer possesses the same influence which he formerly wielded over the members of the *Daigo Danketsu*. As to Count Okuma's case, our contemporary observes that he was able to maintain his power over his party while he held the portfolio of Minister of Foreign Affairs, solely because his Ministerial position was a secondary one. Had he been Minister President of State, the case would have been entirely different; it would, then have been extremely difficult for him to preserve the allegiance of his party without giving a share of the official honey to a large number of his followers. Count Itagaki being the first statesman in the camp of the Opposition, our contemporary addresses itself chiefly to him, and asks him to consider the means which he would employ to satisfy his followers, should he ever find himself in a position to form a Cabinet.

CUSTOMS RETURNS.

THE following is a summary of the Customs Returns for July, showing the foreign trade of Japan for the month:—

	EXPORTS AND IMPORTS.	
	1890. KIYOKU YEN.	1890. SILVER YEN.
Exports	4,638,839,500	5,258,875,370
Imports	5,190,625,000	8,857,832,720

Total exports and imports	14,116,708,090
Excess of imports	3,598,957,350

	CUSTOMS DUTIES.	
	1890. KIYOKU YEN.	1890. SILVER YEN.
Exports	162,377,281	255,977,508
Imports	255,977,508	11,218,382

Total	429,573,261
-------------	-------------

TOTAL VALUE OF EXPORTS TO AND IMPORTS FROM VARIOUS FOREIGN COUNTRIES.

	Exports. Silver Yen.	Imports. Silver Yen.	Total. Silver Yen.

THE CONSTITUTION AND TREATY REVISION.

"It is reported" says the *Nippon*, "that the Minister for Foreign Affairs is determined to suffer no interference of the Diet in any matter connected with treaty revision. Viscount Aoki seems to attach to article 13 of the Constitution, saying 'The Emperor declares war, makes peace and concludes treaties,' a meaning sufficiently extensive to render all matters appertaining to treaty revision wholly independent of the Diet."

But as article 37 of the Constitution provides that 'every law requires the consent of the Imperial Diet,' the Viscount's opinion is entirely untenable. That the power of concluding treaties belongs to the prerogatives of the Crown is beyond any possible doubt. It is also true that no express provision is made in the Constitution defining the powers of the Diet in regard to matters of this kind. But as the conclusion of treaties is a national affair of the gravest importance, it behoves a Minister of State to avail himself of every possible means to ascertain the view entertained by the people. True statesmanship requires him to base the conclusion of treaties upon the consent of the nation. That legerdemain policy which shuns public observation and tries to work in darkness should no longer be resorted to by statesmen of the present day. However, the report concerning the determination of Viscount Aoki may possibly be a mere groundless rumour: its accuracy cannot be vouched for." We (*Japan Mail*) venture to assure our contemporary that it is a groundless rumour. No one acquainted with the present Minister for Foreign Affairs could suppose for a moment that he contemplates any course of action likely to conflict with the provisions of article 37 of the Constitution. The *Nippon* and its fellow-thinkers had better give themselves no further concern about phantoms of their own creation.

MR. KANEKO AND THE NOBLES.

On the last day of July a social gathering of the Nobles was held at the Kazoku-kaikan, Ueno. Some speechifying took place, among the speakers being Mr. Kaneko, who returned recently from a tour in Europe—whither he went to investigate the practical details of parliamentary work—and who, after his return, received the appointment of Chief Secretary to the Upper House. The subject of Mr. Kaneko's address was "The Responsibility of the Nobles," and his manner of handling it gave rise to much comment. Unfortunately no detailed report of the address has been published, but the gist of it, so far as we can gather, was very unfavourable to the Nobles. Mr. Kaneko began by comparing the share taken by the nobility in England with the share taken by the nobility in Japan in bringing about constitutional government, and if we may trust the published version of his words, he affirmed that whereas the nobles of England had contributed largely to the result, the nobles in Japan could not claim any credit at all for a work which had been accomplished entirely by the *Shizoku* and the commoners. Contrasting the two Houses of Parliament, Mr. Kaneko went on to say that the advantage in respect of ability and experience lay plainly with the lower House, and he then proceeded to ask the Nobles what they meant to do in return for the favours bestowed on them by the Emperor, and how they intended to secure their own future. It may well be supposed that such harsh speaking gave no little umbrage to the Nobles, but Mr. Kaneko's utterances were nevertheless left unnoticed publicly until a few days ago, when at a social gathering of the five orders of nobility in the Rokumei-kan, under the presidency of Prince Shimadzu Tadayoshi and Shimadzu Tadanari, the well known Senator Viscount Kayada seized the occasion to utter a very strong protest on behalf of his peers. His speech is given in several of the vernacular journals. It ran thus:—"At the Kazoku-kaikan, the other day, Mr. Kaneko, Chief Secretary of the House of Peers, gave an address in which he pronounced the Nobles to be nationally useless, and spoke of them as a body in terms of great contempt. On what grounds did he found this condemnatory estimate? A man of his knowledge and information cannot surely be ignorant of the services formerly rendered by the Nobles to the Imperial House and to the country. In the sixth month of the sixth year of *Kayei* (1853) when the American Commodore Perry came to Japan, and when the officials of the Bakufu Government were thrown into a state of confusion, it was the Prince of Mito who rose to the situation and sent the two Nobles, Fujiwara and Toda, to the various fiefs to arrange matters."

Again in the *Ansei* (1854-1859), *Genji* (1864), *Keio* (1865-1867) and *Meiji* eras, in the Fushimi war and the Oshu campaign it was the Princes Shimadzu, Mori, Nabeshima, Tosu, Li, Date, and their illustrious retainers, Yoshida, Hashimoto, Saigo, and Okubo who did everything. Then in the story of the great work of the Restoration, where do the names of Princes Sanjo, Konoye, Kuno, Nakayama, and Iwakura stand? Without the aid given by the bearers of these great names, the *Shizoku* and *Heimin*, whatever their abilities and earnestness, could not have accomplished the national reform. In a word, the services rendered by the Nobles are great. On what pretext does Mr. Kaneko despise them? Is it because they have made themselves little heard since the Restoration and the fall of feudalism? They have only been silent because the occasion to speak did not present itself. But Mr. Kaneko also declared that as the chief function of the Nobles is to uphold the Throne, they ought to remain a separate body and have no intercourse with the commoners (*Heimin*). This is an error. It is true that distinctions of *Kazoku*, *Shizoku*, and *Heimin* exist in Japan, but from the day that parliamentary institutions are adopted, nobles and commoners are placed on the same level as subjects of the empire, and are equally called on to maintain its independence by their exertions. Most unreservedly do I condemn the opinions expressed by Mr. Kaneko on these points."

THE AMALGAMATION OF POLITICAL PARTIES.

THE amalgamation of all the progressive parties continued for many months to be an absorbing topic of political discussion, and now that the Constitutional Liberal Party has been organised, the political prophets are busy forming conjectures as to the cause of the movement. The *Yiji Shimpō* advances an interesting hypothesis, not vouching for its accuracy, but simply giving it as a theory entertained in certain quarters. Its gist is that Counts Kuroda and Okuma are the actors behind the curtain, Messrs. Kawashima Jun and Taketomi Tokitoshi being also assigned very important rôles in the drama. Indeed, the connection of these gentlemen with the movement is assumed as strong circumstantial evidence of the truth of the conjecture. Mr. Kawashima, our contemporary says, had long been known as one of the most confidential lieutenants of Count Matsukata, but after his return from Europe, he attached himself to Count Kuroda more intimately than to his former chief. Mr. Taketomi enjoys the special confidence of Count Okuma. This much premised, the Tokyo journal refers its readers to the resignation of Counts Kuroda and Okuma on the treaty revision question of last year. It assumes that Messrs. Kawashima and Taketomi shared in full the mortification of their respective chiefs, and that this feeling exercised a powerful influence in shaping their future course. Mr. Kawashima organized the *Doshikai* in Kagoshima, his native country, while Mr. Taketomi's section of the *Kiushiu Kaishin-to* became more enthusiastic than ever in their support of Count Okuma. Ere long, these two parties combined to form the *Kiushiu Shimpō-to*, the avowed object of which was uncompromising antagonism to clan government. The predominance of *Choshu* statesmen in the Cabinet,—we are quoting from the *Yiji Shimpō*,—must have been very offensive to the catholic views of these gentlemen. At all events, the *Kiushiu* party took the initiative in bringing all the progressionists into one political camp. The *Kaishin-to* was the first to concur in the project, but the *Aikoku-to* was by no means less distinguished for zeal in promoting the proposed union. In regard to this attitude of Count Itagaki's party, the following conjecture is advanced:—A little prior to the collapse of last year's treaty revision programme, Count Kuroda tried to induce Count Itagaki to enter the Cabinet, in order to consummate his pet scheme of bringing together all the noted men of the Restoration. Count Okuma was a warm supporter of the admission of the Tosa statesman into the Cabinet. A meeting was held between the three Counts, and everything was appa-

rently arranged upon a satisfactory basis, but before their resolve could be translated into action, the Minister President and the Minister for Foreign Affairs resigned their portfolios. Now Mr. Kataoka Kenkichi, one of the leading spirits in the amalgamation project, is to Count Itagaki what Messrs. Kawashima and Taketomi are to Count Kuroda and Count Okuma respectively. Nothing was more natural, says the *Yiji Shimpō*, than that a good understanding should spring up between these three lieutenants. Of course the upshot of these conjectures is that, should political power fall into the hands of the amalgamated party, Count Kuroda will be the future Minister President, Count Itagaki the President of the Privy Council, and Count Okuma the Cabinet Councillor, while to Messrs. Kawashima, Taketomi, Kataoka, Kono, Oi, Hayashi, Oye, Shimada, Tanimoto, Take-mouchi, and other satellites will be assigned the Ministerships and Vice-Ministerships of the different Departments of State.

THE GENERAL MEETING OF THE "KAISHIN-TO."

THE long expected general meeting of the *Kaishin-to* came off in the afternoon of the 1st instant at the Nakamura Restaurant near Ryogoku-bashi. The meeting was formally opened at 2 o'clock with Mr. Nakano Taketomi in the chair, according to a motion made by Mr. Shimada Saburo. As the first business of the meeting, a report was read by Messrs. Shimada, Kato, and Yoshida, detailing the steps taken by these gentlemen in pursuance of the instructions they had received on the subject of amalgamation. After the report had been read, Mr. Okano moved that the party should be dissolved, which motion was supported by a few members. After a spirited debate the motion was lost. The meeting then passed to the consideration of the rules of the party. A draft resolution was submitted changing the number of the councillors of the party from 25, as prescribed in the original rule, to 30, and providing expressly that "In case of urgency, the thirty councillors should be authorized to hold a 'representative meeting' invested with the full powers of a general meeting, to take any step that may be deemed necessary, two-thirds of the whole number of councillors being regarded as the quorum for holding such a meeting." After three hours of animated debate, the resolutions were carried by a large majority. The election of the councillors then took place, with the following result:—Kato (105 votes), Ozaki (104), Fujita (104), Yoshida (102), Nakano (101), Koizuka (101), S. Shimada (100), Tsunoda (95), Tanaka (93), T. Shimada (98), Aoki (85), Yamada (82), Tachibana (76), Kotakagari (74), Kondo (73), Shindo (72), Naido (72), Takahashi (71), Hatano (70), Ikano (67), Kajima (63), Okano (61), Yokowo (58), Naka (58), Minoura (58), Nanjo (58), Irokawa (57), Takaki (56), Kirihara (53), Ida (45). It is thus clear that, for the present at all events, the *Kaishin-to* has abandoned any idea of amalgamating with the *Rikken Jiyu-to*, a result which became tolerably apparent some time ago, and upon which, we think, the nation may congratulate itself.

BRITISH ORDERS.

WRITING recently about British Orders and their recipients in Japan, we expressed the hope that the good beginning now made by the presentation of the Grand Cross of the Bath to Prince Komatsu might be followed ultimately by the presentation of the Garter to his Majesty the Emperor, whenever "the requisite train of circumstances" should be accomplished. This expression seems to have puzzled some of our Japanese friends, and for their information, as well as to remove a feeling of dissatisfaction that the Emperor wears the best Orders of all the Great European Powers except England, we may explain that chief among the train of circumstances alluded to would be a visit of his Majesty in person to Great Britain. The rule has never been departed from that the Garter is presented only to sovereigns and dignitaries who have been present at the British Court. All the Great Potentates of Europe wear this much

valued Order, but every one of them, either before or after accession to the Throne, has been the guest of Her Majesty the Queen. That the Garter has not been presented to the Emperors of Japan is, therefore, no evidence whatever that Great Britain is less courteously disposed towards his Majesty than are the other Sovereigns of Europe.

A MURMURING MOUNTAIN.

IN the province of Iwami there stands a mountain called Mikame-yama, or the hill of the three tortoises, because its three peaks are supposed to resemble to backs of those sacred animals. Between two of the peaks there is a hot spring known as Shigaku-no-Onsen. It was a feeble sort of spring in former times, but the big earthquake in 1872 roused it into vigorous life and it became thenceforth a place of considerable note. Seven or eight years ago it earned an additional title to public notice by being the scene of a very heavy snowstorm, which resulted in landslips that overwhelmed a number of houses and buried sixteen people. Since last June, says the *Nichi Nichi Shimbun*, the heat of the spring has gradually increased: it now amounts to a hundred and seventy or eighty degrees Fahrenheit, and cannot be used for bathing purposes without considerable addition of cold water. As additional evidence of the region's volcanic activity, the Three Tortoise Mountain has lately begun to emit sounds which throw dwellers in the neighbourhood into great alarm and threaten to depopulate the district.

THE REV. MR. SUMMERS.

A CORRESPONDENT writes from London:—"Mr. Summers has reached this country during the past fortnight, and I believe intends returning to Japan about the end of the year. I am told that he has no intention of making public representations of any kind in regard to the events which led to his departure from Japan unless he is compelled to do so by statements adverse to him being published here. He seems to take a very sensible and unsensational view of the position, and he is naturally anxious to do nothing that might excite hostility or render his future residence in Japan uncomfortable. The statements which have hitherto been published on the incident have been very few and have been confined, as far as I have seen, to a bare report of the facts. Telegrams did, in the first instance, come from Yokohama, announcing that he had left the country, and these were repeated from San Francisco, but I cannot perceive that the matter has excited any public interest, although it has been discussed by persons acquainted with Japan."

LEGAL CONSERVATISM.

MR. MASUJIMA and his fellow-thinkers have told us that the new Commercial Code would inconveniently disturb Japanese trading customs. Are the customs described by our correspondent, "An Import Merchant of 25 years experience in Japan," among these to which the learned gentleman refers? We freely admit that sound and properly enforced laws of contract and bankruptcy would greatly interfere with the continuance of these bad practices, and it is for that very reason that we have advocated the speedy enactment and operation of such laws. Every measure that tends to remove differences between Japanese and Western commercial methods, ought to be advocated and promoted by patriotic Japanese, instead of being criticised and thwarted.

THE CHINESE MINISTER.

THE present Chinese Minister to Japan, writes the *Choya Shimbun*, will finish the term of his office by December next. Rumour says that Mr. Li Haku, the adopted son of the renowned Viceroy Li, will be appointed as his successor. Mr. Li is a gentleman of dignified carriage and fine address, very skilled in the use of foreign languages. These excellent qualities added to his relations with the influential Viceroy, and his past diplomatic service in the capacity of Secretary of the Chinese Legation in London, eminently qualify him for the post. But in

some quarters, an objection is raised on the ground that he is yet too young to fill the position of Minister with dignity. Mr. Den Unryo, who, was formerly dispatched to Japan and other foreign countries to make investigations into political affairs, is also said to have a good chance of securing the coveted prize.

UNION CHURCH ORGAN.

LOVERS of music in general, and church-goers in particular, will be glad to hear that the fine organ recently purchased in England for the Union Church has arrived. It is being set up, and its myriad pipes voiced, tuned, and regulated under the expert supervision of Mr. W. A. Crane, who expects to have everything in perfect order before the end of the present month. We learn that the quality of tone is particularly good, the diapasons, flutes, gamba, etc., being uniformly excellent; while the grand display of reeds (no less than four—oboe, clarinet, corneopane, and trumpet) give a brilliancy to the "full" organ seldom attained in an instrument of ordinary church dimensions. The post of organist has been offered to Mr. Griffin, who we are sorry to say, has declined the honour. He has, however, promised to play at one or two opening performances (which the committee have arranged to give early in October), and will then exhibit the organ in its capacity for solo-playing, as well as in its use for the accompaniment of vocal music of all descriptions. The chorus work is already in rehearsal under the direction of Mr. C. V. Sale, organist of the Church, and we may look forward with anticipation to an organ-recital in about a month.

THE HARVEST.

It is pleasant to read in the *Hochi Shimbun* that the prospects of the rice crop this year are everywhere excellent. In Echigo above all—which is one of the great rice-producing districts—there has not been promise of such an abundant yield for the past century. The length of the ear in some places is said to be 21 inches, and 460 grains have been counted on one stalk. The maximum number of grains in ordinary years is about 200, so that the farmers are naturally much excited about the result. More convincing than this report, the details of which sound almost apocryphal, is the fact that the price of rice fell nearly seventy *sen* per *koku* in the Tokyo market yesterday. Dealers and speculators alike have evidently made up their minds that all serious danger of an inferior harvest may be considered past.

SERICULTURE IN NAGANO PREFECTURE.

OWING to the moderate amount of rainfall and the generally favourable temperature this year, says a report from Nagano Prefecture, the farmers are expecting to have twice as large a crop of rice as last year. In regard to sericulture, one of the principal local industries, the summer crop was a great success, but fears are entertained about the autumn yield. The worms are now in their third or fourth sleep, but owing to the unseasonably cool weather which has prevailed during the past few days, they are beginning to show signs of sickness. The sericulturists are said to feel very uneasy about the result. Should the weather improve, however, the crop may yet turn out a great success.

ERUPTION OF A SULPHUR MOUNTAIN IN HOKKAIDO.

THE *Official Gazette* of the 25th ult. contains the following report of the Hokkaido Administration Board in regard to the eruption of a sulphur mountain:—"The Shiridoko Sulphur Mountain near Tone-mura, in the province of Kitami, broke out into violent eruption in August last year, but subsequently lapsed into a state of comparative calm, only emitting white smoke from its crater. Lately, however, the mountain was observed to throw out ash-coloured mud at intervals of twenty-four or thirty hours. The height of these muddy ejections gradually increased until it attained an elevation of fifty or sixty feet, the ejected matter

falling at a distance of four or five hundred yards when blown by the wind. As the liquid mud poured down into the gorges below, a large quantity of sulphur deposited by previous eruptions, was washed away. From the 18th of July last, the emission of the mud ceased altogether. The mountain remained in this state till the 28th of the same month when an eruption attended by a loud report took place. Sulphur of dark greenish colour was thrown out and covered about five thousand *tsubo* (four acres) round the crater, being deposited in a new layer of thickness varying from five to eighteen inches. The greater portion of the ejected sulphur, however, flowed down into the sea while yet in a liquid state." No injury was suffered by men, animals, or houses."

CHOLERA RETURNS.

THE latest cholera returns derived from official sources are as follow:—

Prefecture or City.	Date.	New Cases.	Deaths.
Osaka	28th	148	59
	29th	141	21

The numbers of cases and deaths since the commencement of the epidemic, inclusive of the above figures, appear in the following table:—

Prefecture or City.	New cases.	Deaths.
Osaka	2,047	1,004
Nagasaki	2,803	1,868
Hyogo	432	240
Yamaguchi	1,264	712
Fukuoka	2,040	1,330
Oita	491	114
Saga	501	288
Kumamoto	679	494

The total number of cases and deaths in the following Cities and Prefectures since the commencement of the epidemic to the 2nd instant, not included in the above, are:—

City or Prefecture.	Cases.	Deaths.
Tokyo	991	519
Kanagawa	930	606
Chiba	293	107
Chiba	10	3
Rechi	10	5
Shimane	53	33
Okayama	21	8
Nara	13	7
Kagawa	8	4

Shizuoka	28	12
Iwate	17	11
Fukuoka	24	13
Hiroshima	259	83
Mayasaki	7	7
Kagoshima	181	118

THE HOKKAIDO TANKO (COLLIERY) RAILROAD.

PREPARATIONS have been going on steadily for the construction of the Hokkaido Colliery Railroad. According to latest reports the first cargo of rails, for one hundred and twenty-eight miles,

ordered from England, has already arrived at Otaru, and a further quantity is expected to follow shortly. The work of laying the rails will be begun between Iwamizawa and Sorachi-futo with the first and second arrivals, while the third cargo will be landed at the ports of Mororan and Otaru to be used for the section between Iwamizawa and Mororan. The first section is expected to be completed by next October, but it will not be opened to traffic until the spring of 1891. We take these particulars from the *Jiji Shimpō*.

SHIRANE-ZAN.

THE *Official Gazette* says that the well-known volcano of Shirane, in Gumma Prefecture, has been again giving evidence of activity. On the 22nd of last month, during the storm of wind and rain then raging, the mountain burst into eruption. This event occurred at eleven o'clock in the forenoon, and at half-past four the same afternoon, the water of the Higashi-ko river was observed to be discoloured with ashes. In respect of violence and the quantity of matter ejected, the eruption is said to be only about two-thirds of that which occurred last year. No lives were lost.

THE "QUARTERLY REVIEW" ON CHINA.

THE last *Quarterly Review* contains a very long article from Mr. Archibald J. Little to which we have already referred. The title is "Western China, its products and trade." The author is full of hope for the future of Western China, but he throws a little cold water on so-called Chinese progress. He evidently has no great faith in the Chinese Government or in their desire to carry out trade obligations, a view perhaps which is not surprising when we remember the negotiations for the past two years for opening up the Upper Yangtze in which Mr. Little was so deeply interested.

THE TELEPHONE EXCHANGE.

THE work of setting up telephone posts in Tokyo has made steady progress. So far as the main lines are concerned, the task is nearly completed. At present experts are engaged in planting posts for branch lines to the different postal and telegraphic offices. This part of the undertaking is expected to be finished within the present month, when the company will set about extending the lines to the residences of persons desiring to avail themselves of the convenience. The whole system, says the *Jiji Shimpō*, is expected to come into full operation about the 20th of September.

THE EMPEROR OF CHINA'S FATHER.

NEWS was received by wire yesterday (27th ult.) says the *N.-C. Daily News*, from Peking of the death, on Monday, the 25th instant, of I-huan, Prince Ch'un, the Seventh Prince, Father of the Emperor of China. The following day the same paper says:—A later telegram, dated Tientsin, 25th August, has been received this morning, contradicting the report of Prince Ch'un's death, but adding that he is very ill.

THE DIET.

IN regard to the convocation of the Imperial Diet, the *Nippon* says that, after various discussions, the date for this important ceremony was finally fixed for that auspicious day, November the 3rd, the birthday of His Imperial Majesty. The election of the Presidents and Vice-Presidents will be held on the 1st November and the Imperial confirmation will take place on the following day.

THE RAILWAYS.

VARIOUS sections of the lines north of Tokyo are declared to be re-opened, but the fact signifies little to tourists, inasmuch as Nikko, Karuizawa, and Ikaio remain inaccessible except at the cost of a journey which few people would be disposed to take. It is expected that at least a week must elapse before all the roads are again fit for traffic.

THE steamer *Nestor*, from Singapore to Hong-kong, is reported on shore on an island about twenty miles from Hoihow.

JAPANESE IN THEIR DEALINGS WITH FOREIGNERS.

JAPANESE who care to see their foreign trade prosper and the good name of their people established will read with very great regret the letter published to-day in our correspondence columns. The statements made by the writer are neither partial nor prejudiced: he represents the best class of foreign import merchants in Yokohama, and his account must be accepted as a trustworthy description of what actually occurs. It is a disheartening account. What it tells us is simply this—that in transactions with foreign importers the Japanese merchant is indifferent to the dictates of good faith. If, in the interval between ordering goods and their arrival, or between signing a contract and the date of its implement, the market happens to go against the Japanese, he contrives to evade his obligation by subterfuges against which the foreigner has practically no redress. In cases where the law ought to provide a remedy, the foreigner shrinks from any appeal to it, knowing by dearly bought experience that, in the present state of Japanese bankruptcy law, the expense and delay of pursuing a debtor are generally the only results a creditor has to show. On the other hand, if the foreigner seeks to take advantage of the market, the Japanese strenuously protests. Even where exchange is in question, although the native dealer will not hear of making any concession should rates have gone against the foreign importer, he fully expects to share whatever advantage may have accrued from a rise in the sterling price of silver. In short, an entirely one-sided state of affairs exists. It is all take and no give on the part of the Japanese.

One marvels, of course, that trade can be carried on under such conditions, or that the shrewd and helpful foreigner submits to be treated in such a fashion. But on the whole it must be presumed that the balance is on the side of transactions conducted with tolerable punctuality on the Japanese side and leaving a fair margin of profit to the foreigner. What chiefly interests us, therefore, is the question, why should Japanese commercial morality be so low at the principal emporium of the country's foreign trade, and why should Western merchants be unable to devise a means of protecting themselves against such selfish and unprincipled treatment? It has often been inferred, and we cannot be surprised at the inference, that the Japanese trader is everywhere as bad as his Yokohama representative; everywhere as grasping and everywhere as unscrupulous. It is not so, we think. No one will pretend that commercial morality in Japan stands at the level which it has reached among the most advanced Western peoples. It would be extravagant to look for anything of the sort. Commercial morality, like all

other products of high civilization, is a plant of slow growth, requiring special conditions for its development. Until recent times the conditions were unfavourable to it in Japan, and twenty years have not by any means sufficed to convert the despised and comparatively unscrupulous trader of feudal days into the respected and high principled merchant of nineteenth-century Europe. But it would be unjust to conclude that Japanese merchants, in their dealings with one another, show the same want of integrity and the same grasping selfishness that dishgure their conduct in transactions with foreigners. Even the strictest moral canons are not entirely proof against the influence of circumstances, and it is easy to see that circumstances in Yokohama are singularly favourable to the indulgence of faults such as our correspondent describes. The Japanese dealer is relieved from two restraints, in the absence of which honesty and fairness would be comparatively rare anywhere: he fears the law very little and public opinion not at all. Only the most flagrant fraud will drive a foreigner to native courts, and the Japanese tradesman knows this well. Equally well does he know that, whatever wrong he may do the foreigner, his own character will not be blasted among his people. For these can only learn just so much of his performance as he chooses to tell them: they do not hear the foreign version, and if they did they would naturally prefer that of their own countryman. Thus neither penalty of law nor punishment of public opprobrium stands in the way of chicanery. The absence of both these deterrents signifies a great deal in Yokohama, and would signify a great deal anywhere. It is supplemented, two, by other circumstances peculiarly convenient for the Japanese. The foreign community in this settlement is made up of a dozen different nationalities. Combination is impossible among such heterogeneous units. Competing keenly with a number of shrewd rivals, the foreigner is ready to extend every possible indulgence to the Japanese. Deceived, he will trust again; treated with the scantiest consideration, he will still be indulgent; his margin of profit reduced almost to a vanishing quantity, he is ready to make fresh concessions. And all the while he seems to prosper for he lives and fares luxuriously. Moral equilibrium much less stable than that of the Japanese trader might be shaken by such temptations. So the foreigner is mercilessly preyed upon. Probably the Japanese, when they combine to force his hand, or when they separately devise subterfuges to baffle and pretends to deceive him, laugh at the notion that he cannot and does not protect himself effectually. They estimate his shrewdness and fertility of resource so highly that even if the good rule of give and take occurs to them, they dismiss it with the thought that they them-

selves stand in more need of its application than the wily, hard-headed foreigner. A letter like that of our correspondent ought to open their eyes; ought to show them that their conduct has created an evil impression of Japanese character among foreigners, and is largely responsible for the reluctance shown by so many Yokohama folks to trust Japanese promises in any direction, or to admit that confidence may be placed in the integrity of Japanese tribunals and the impartiality of Japanese administration.

Is it inevitable that the foreign merchant should submit to this treatment? We fear so, for the present at all events. Any one of three remedies would be effectual, but all three alike are unavailable. The first is combination among foreign importers. A union the members of which pledged themselves to have no dealings with any Japanese who violated an agreement, would soon correct the situation. Such a union is out of the question. So too seems to be the second remedy, return to the custom of exacting bargain money. Apparently competition among foreigners is too keen to permit this, an obstacle to be regretted, for certainly no more effective check could be imposed on the loose practices now in vogue. The third remedy is partnership between foreigners and Japanese. On such partnerships, unfortunately illegal pending Treaty Revision, we base our chief hope for the inauguration of a wholesomer state of things. At present the hand of the Japanese is distinctly against the foreigner, and will remain so until the artificial partition now holding the two asunder is removed. There are undoubtedly many Japanese of honour and integrity who would gladly combine with foreigners for purposes of industrial and commercial enterprise if the law permitted such association. When, and only when, this is possible will it be practically understood that Japanese and foreigners are equally interested in developing the country's external trade and equally entitled to share its profits. At present it is idle to complain. Everything is in favour of crooked and selfish dealing on the part of the Japanese, and they will continue to deal crookedly and selfishly until their relations with foreigners are radically altered. Meanwhile we can only warn them that it will be difficult hereafter to wipe out the reproach which their present conduct is bringing on their nation.

THE NEW HOTEL IN TOKYO.

THE Tokyo Hotel—to be called we believe the Imperial Hotel—is now fast approaching completion, and will probably be opened for business on the 1st of October. It stands on a site perhaps as convenient as any that could have been chosen in the capital, being within five minutes drive of the Shimbashi terminus,

and inside the limits of the quarter where all the principal official buildings and the foreign legations lie. Immediately opposite is the moat, to the left stands the official residence of the Minister of State for War, and immediately behind is the Rokumei-kan. The hotel is another monument of Count INOUE's energy, influence, and progressive spirit. It was he who, during his tenure of office as Vice Minister of Finance, conceived and put into practice the scheme of rebuilding Tokyo in solid materials; a scheme which, owing to its planner's retirement, was not prosecuted further than the building of Ginza and its immediate neighbourhood in such a fashion that the incessant conflagrations by which Tokyo is devastated have failed, during eighteen years, to invade this district. Had Count INOUE's project been pursued, there is little doubt that fully one-half of the capital would ere now have been reconstructed in brick and stone. It was he, too, who conceived and carried to practical inception the scheme of making Hibiya and Nagatacho the official quarter of Tokyo, and constructing there for all the Departments of State and the Law Courts edifices worthy of modern Japan. It was he who conceived and executed the project of the Rokumei-kan and the Tokyo Club; a project which has immeasurably increased the pleasure of life in Tokyo. And it was he who, appreciating the need of a really fine, commodious hotel in Tokyo, used his great influence to persuade a number of capitalists to subscribe the required funds. For many years the Seiyoken, little better than a dingy pot-house, diligently modelled itself on the example of the shanties that did duty as inns in those early days of the foreign settlements, and disgusted the tourist by its dirt and discomfort as much as it disgraced the capital by its monopoly. By and by the Tokyo Hotel sprang up, a nominal rival, but in quality an imitator, its arrangements and service suggesting more wants than they satisfied. Meanwhile Japan year by year attracted an increasing number of visitors, and foreign enterprise, eagerly seizing the occasion, provided hotels in Yokohama which speedily became known in Europe and America and as speedily enriched their proprietors. Yet it was evident that tourists, coming to Japan to see the country and its people, would not, of deliberate choice, lodge in one of the foreign settlements could they find suitable accommodation in the capital itself. A first class hotel in Tokyo ought, therefore, to succeed as a financial enterprise, and was certainly called for in the interests of the city's reputation. But to build such a hotel would involve heavy expenditure; too heavy to be faced without some exceptional ability of promotion. Count INOUE became the promoter. He laid the situation before several of the leading merchants in Tokyo—men like Messrs. IWASAKI, SHIBUSAWA, MASUDA, OKURA, HARA ROKURO, and so

forth—with the result that they agreed to subscribe the necessary funds. Twenty shareholders were induced to come into the project. They purchased forty-two shares at five thousand *yen* a share, and the Imperial Household Department subsequently took ten shares. Thus the capital reached two hundred and sixty thousand *yen*, the whole of which has been spent upon the building, furniture, and grounds. Unfortunately, owing to a false calculation on the part of the original architect, a European, some twenty thousand *yen* were wasted on the foundations, a discouraging *début*. From this difficulty the projectors were rescued by Mr. J. CONDER, architect to the Japanese Government, who devised foundations suitable to the ground, and moreover carried into practice an excellent principle expounded by the Seismological Society of Japan for minimizing the effects of earthquake shocks. The edifice itself was designed and its construction has been superintended by Mr. WATANABE, a graduate of the former Imperial Engineering College, where he enjoyed the advantage of Mr. CONDER's instruction. It is a handsome and imposing building, at once solid and picturesque, its wide verandahs and finely arched façades showing that climatic exigencies have been considered as carefully as architectural beauty. Fortunate in the possession of spacious grounds, the directors have decided that lawn tennis courts shall be laid out at the back of the building; that is to say, on the south side. They have further provided roomy coach-houses and stables, where forty horses and twenty-four carriages will always be at the disposal of guests. There is also ample jinrikisha accommodation, and the residence of the managers as well as the quarters of the staff all lie within the enclosure. The interior arrangements, however, are of chief importance, and concerning them it will be agreed, we think, that they deserve the highest encomiums. Nothing could be more commodious or better planned than the suites of bed chambers and sitting rooms, the baths, the dining and breakfast salons, the billiard and reading rooms, the bar, the manager's and porter's offices, and so forth. All this, however, might have been anticipated, since the best arrangement of rooms dictated by Western experience would naturally be adopted in a hotel of such dimensions and on such a scale. But what we were not prepared to find was a combination of richness and artistic beauty rarely seen in foreign buildings in Japan. We know what incomparable work Japanese carpenters can do if they please, but we know, too, that they cannot be induced to put their strength into a building where the grain of the wood is to be covered with paint and defects of joinery are to be concealed by putty. They have, however, done themselves justice in the new hotel. The mouldings of the doors and windows,

the parquetry of the floors, the plaster—and what achievements the Japanese plasterer is capable of!—the decorative designs, the ceilings, the proportions of the rooms, the panelling, the carving of the staircases, and so forth, are of such a character that the building takes rank at once among the handsomest structures in Tokyo. Whether in Yokohama or elsewhere in Japan, there is nothing worthy to be mentioned in the same breath with it as a hotel. We shall not attempt to speak in detail of the interior arrangements, or of the sixty rooms which will be available for guests. But the principal dining room—which is also to serve as a ball-room if required—deserves a word of special mention. It is a noble chamber, 60 feet by 45, lofty, beautifully decorated, and opening into an immense stone verandah where alone there is space for several dining tables. The band-room communicating with this salon is on the floor above it, and is so contrived that the sound of the music will pass through an arch opening into the salon at a point a little below the elaborate network of carved beams and girders constituting the ceiling. The verandah of the salon abuts upon the tennis lawn, and will be a charming place for dining in summer. The furniture is all made in Japan—by Messrs. SUGITA-YA and Company, Tsukiji, the designer being Mr. YAMAMOTO, a well known painter. Japanese furniture has not proved itself possessed of very durable qualities, but these pieces of SUGITA-YA's manufacture look serviceable and are undoubtedly very handsome. The one uncertain point in the hotel's vista—a vital point, however—is the management. Let the building be ever so commodious, the furniture and decorations ever so handsome, unless the management is efficient the hotel cannot succeed. At present the intention of the directors is to have Japanese management only, and undoubtedly they have been fortunate in securing the services of such a gentleman as Mr. YOKOYAMA. If any Japanese can conduct the hotel satisfactorily, he seems to be the man. But does any Japanese possess the experience and knowledge requisite to direct a hotel for foreign use? A foreigner attempting to manage a Japanese *yado-ya* without Japanese assistance, would be deemed a singularly sanguine and self-reliant person by his countrymen. The difficulties in the way of a Japanese managing a foreign hotel are certainly not less, and if the Imperial Hotel, under purely Japanese direction, gets the better of its foreign competitors, we shall be greatly surprised. The organization must include banking facilities, guides, communications with the steamboat companies, advertising on an extended scale, and the furnishing of a thoroughly good cellar, not to speak of the cuisine, the waiters and the multitude of peculiar services which make all the difference between comfort

and discomfort, and which can only be learned by experience. Bad foreign management would be ruinous, but there ought not to be much difficulty in procuring a Swiss or a Frenchman thoroughly versed in hotel affairs, who, acting as second to Mr. YOKOYAMA, would supplement the latter's business aptitude and knowledge of Japan by practical experience and special qualities of which we cannot conceive any Japanese as yet possessed. If successful, the Imperial Hotel will be a credit to Tokyo; if it fails, the pecuniary loss will represent only a small part of the misfortune.

JAPANESE IN THEIR DEALINGS WITH FOREIGNERS.

DISCUSSING, in a recent issue, the bad practices attributed by a correspondent to Japanese tradesmen in their dealings with foreigners, we said that "sound and properly enforced laws of contract and bankruptcy would greatly interfere with the continuance of these bad practices." It appears to be thought by some people that the laws alone are in fault. Indeed a writer in a local contemporary, who would doubtless be very indignant were he pinned to the logical issue of his contention, claims that the situation would be radically corrected could the foreigner appeal to proper laws justly administered. If this be so, it follows of course that the laws are entirely responsible, and that the morality of the Japanese merchant is as good as the morality of merchants in the West—a proposition which we cannot endorse, inasmuch as tradespeople in Japan have always been a despised class, standing at the bottom of the four-fold division of the people—*Shi-no-ko-sho* (*Samurai*, farmer, mechanic, and merchant)—and not expected to shape their conduct in accordance with any high principles of probity and integrity. The *Samurai* was taught to despise money and all money-getters, and he naturally learned, at the same time, not to look for admirable qualities among folks condemned to a contemptible calling. The farmer might and often did become a *Samurai*. Under any circumstances, he ranked next to the *Samurai*, and the latter, whenever he was obliged to lay aside the sword, turned to the hoe and the harrow. Therefore Japanese farmers as a rule were men of sturdy integrity, simple-minded, loyal in public and in private, and comparatively free from avarice. As for the artificer, we have only to remember two things; first that the forger of swords and the maker of sword furniture were included in this class; and secondly that the great majority of artificers consisted of those remarkable artizans whose ability and character have justly elicited such high encomiums from foreigners. The skilled swordsmith might surely count on admission to the ranks of

the *Samurai*. No man was more honoured, and a wholesome though romantic tradition taught him that not deft hands alone but also nobility of mind were needed to produce a really fine blade. The chiseller of sword-furniture, the forger of armour, the potter, the lacquerer, the decorative designer, the weaver, the joiner—all there were artists rather than money-earners. Their representatives to-day need not shrink from comparison with artizans anywhere in respect of skill, capacity, and integrity. It is true that the traditional, gain-contemning creed of the *Samurai* and the peculiar nature of the patronage bestowed by him on the artizan class, taught the latter to undervalue time and to be indifferent about organization. But for the rest the Japanese artizan is an honour to his country, and will yet be the means of enriching it. It is not so with the merchant. He was always treated as a person of mean instincts and unscrupulous methods, and the shadow of old times lies upon him still. There are indeed merchants in Japan who may properly be ranked with the best representatives of their class in the West, and we are glad to think that their number is constantly increasing. But of Japanese tradesmen in bulk, the most lenient critic cannot speak well. Laws alone, however strict, however ably administered, will not check the inherited failings of those people. It is not the fear of incurring legal penalties that has made the typical British merchant what he is. Something over and above any such restraint is needed, and that something can only be supplied in Japan by experience, by the operation of new social creeds, and by the contact of Western civilization. We may observe, *en passant*, that too much stress seems to be laid on faulty administration of the present law. Is the administration so defective? Is it not rather the fact that the foreign suitor generally obtains a verdict in the lower Courts, but that undue facilities of appeal and the failure of the law to provide means for restraining or tracing a debtor's disposal of his property, ultimately render the verdict fruitless? In this form the foreign creditor's complaint is always couched, so far as we know, and the inference of course is that the law, not its administration, is to blame. Apart from this, however, we are persuaded that good laws, well administered, would offer only a partial remedy for the state of affairs complained of. Two reasons lead us to think this. The first is that we doubt whether foreign merchants would have recourse to the law: their competition appears to be too keen. According to the account of our correspondent, they are perpetually victimised, yet they adopt no measures of protection. Bargain money they will not exact. Simple and efficacious as that remedy seems to be, it would evidently produce discriminating effects unless all agreed to apply it uniformly, and competitors so ardent will not consent to

combine permanently for any purpose. Even the much simpler step of posting the names of defaulting Japanese is not taken. It is asserted that Japanese import dealers have been practising chicanery for the past twenty-five or thirty years. Now the number of Japanese import dealers is limited. Obviously one of two things must be true: either the same unscrupulous tradesmen have been playing their game of fast and loose over and over again during this long interval, or else pretty nearly all the import dealers are tarred with the same brush. In either case, why does not the foreign merchant, when he finds himself deceived, post the name of the dishonest Japanese at the Chamber of Commerce, so that every member of the Chamber may be warned against exposing himself to deception at the hands of the proclaimed rascal? Such a process, we venture to think, would soon eliminate the knaves. But nobody inaugurates it. The foreigner is deterred by the same apprehension that restrains him from demanding bargain money: he fears to take any step which might prejudice his Japanese customers against him, and he dares not trust the good faith of his foreign colleagues to support him. In short, cut-throat competition places the foreigner at the mercy of the Japanese. That we are justified in employing the epithet "cut-throat" is proved by a portion of our correspondent's letter:—

And another instance I may quote: the Japanese will go to a foreign firm and get them to telegraph home about some special business, and when he has got the foreigner down to the last cent he will withdraw under pretence of seeing his "client in the country," and will go to a foreign competitor, and say, "Mr. — will do this business for so much, but you shall have it if you will do it for so much less," and the competitor, knowing probably that Mr. — is a careful man and not likely to make a mistake, will accept, which he can probably afford to do, he not having disbursed in telegraphy, &c., the amount Mr. — has spent and which the dealer never thinks of refunding! This is not at all an uncommon case, and can be borne out by any foreign firm here, for lucky is the one that has not had this experience!

A singular state of affairs is here disclosed. The foreign merchant, to whom the Japanese applies in the second place, is represented as undertaking the business because he is saved the preliminary expenditure which another foreign merchant, whose name he knows, has been dishonestly betrayed into incurring. Yet this, we are told, "is not at all an uncommon case." Obviously if foreign merchants treat each other with such exceedingly scant ceremony—to use a mild expression—it is quite hopeless to expect that they will combine in any manner against Japanese chicanery. We cannot pretend to determine which is more to blame, the Japanese who cajoles the foreigner into sending telegrams and making estimates of which another is to reap the benefit, or the foreigner who wittingly associates himself with this Japanese rogue. Indeed, we take it upon ourselves to assert that the second foreigner in our correspondent's case is never a British merchant. Be that as it may, however, the conditions described re-

present a community which, owing to the exigencies of sharp competition, offers its own throat to the knife of the Japanese operator, and is incapable of any effective measure of self-defence. We cannot believe that the members of such a community would resort freely to the protection of laws, however good and well administered. The same considerations that bar recourse to other preventive measures at present would operate to keep men out of court. Besides, it is in the isolation of the foreign merchant that the root of the evil lies. His position invites the Japanese to take advantage of him. They may exploit him to their heart's content without incurring any risk other than the loss of his esteem, which they do not value, believing probably that it is beyond their reach. There is no radical remedy except to free the foreigner from ostracism and enable him to secure the co-operation of the hands now clutching at his throat. Unless such co-operation be possible, the future of the Western merchant, manufacturer, and capitalist in Japan is very gloomy. He cannot punish his deceivers by the aid of the law; he cannot appeal to public opinion to discredit them; he cannot secure the assistance of his fellow-sufferers to drive them from business. His one hope is to obtain the aid of Japanese against Japanese; to make common cause with those who now regard him simply as an alien with hostile interests, the legitimate prey of every shrewd native.

JAPANESE MERCHANTS IN THEIR DEALINGS WITH FOREIGNERS.

IT is greatly to be regretted that the moderate tone adopted by a correspondent, who recently addressed this journal on the subject of dealings between Japanese and foreigners in Yokohama, should have been quickly exchanged for an extreme form of the violent and abusive language unfortunately habitual with certain writers when Japanese subjects are discussed. The "Importer" who now takes the field in the columns of a local contemporary, charges Japanese merchants with "barefaced robbery;" calls them "scoundrels and burglars," and speaks of "the loathing and contempt" felt towards them by foreigners. He is careful, too, to assure us that the persons to whom he applies this vehement language are "some of the leading merchants of the capital of the empire." We need scarcely observe that the rude exacerbation betrayed by this gentleman is entirely out of tune with the self-contained moderation of sober business-men, and that it has doubtless been severely condemned already by public opinion in Yokohama. One does not expect any exercise of judgment or discrimination on the part of a writer so plainly carried away by his feelings, and we shall, therefore, take no notice of sneering allu-

tions to this journal made by "Importer." But the incident he describes is sufficiently interesting and important to justify a few comments. He tells us that he has been waited on by a deputation representing "some of the principal Japanese houses in the fancy piece-goods trade," who informed him that, in consideration of the extraordinary rise which has taken place in exchange since spring, Japanese dealers have "decided to demand" an allowance upon contracts made with foreign importers but not yet implemented, the rates of allowance being ten per cent. upon contracts made between January and April; five per cent. upon contracts made between May and June, and two and a half per cent. upon contracts made in July. This "demand," according to "Importer," is backed by a threat that unless the foreign merchant complies, he will "be visited by direct vengeance in the boycotting or similar lines." Now from January to the middle of April the sterling value of the *yen* averaged less than 3s. 1½d. It is now 3s. 10d. In other words the sterling value of the coin in which the importer receives payment to-day is 22 per cent. more than it was at the time of making the contract. During the second half of April the average value of the *yen* was 3s. 3½d. approximately. It has therefore appreciated by 16½ per cent. since then. These figures enable us to comprehend the position taken by Japanese merchants. Speaking broadly, they ask the foreign importer to share equally with them the gains which have unexpectedly accrued from exchange fluctuations. Now it seems to us that this proposal cannot be dismissed by merely calling it "a cool specimen of barefaced robbery," and stigmatizing the Japanese as "scoundrels and burglars." Neither can we agree that "there is no earthly justification for their demand." Looking at the matter calmly, the first point to be noted is that the Japanese merchant has made a hard and fast contract in definite terms, and that by all the principles of honour and legality he is bound to carry out his contract. Whatever unforeseen advantage may accrue to one side or the other after the signing of an agreement, it is the plain duty of both as honest men to abide by the terms of the covenant. If exchange had behaved in exactly the opposite manner; if the sterling value of the *yen* had depreciated as much as it has appreciated, would the foreign importer have asked his Japanese customers to bear one half of the loss? We do not think so. He might have been greatly crippled, nay even ruined, by the catastrophe, but as an upright, honourable trader he would have fulfilled his obligation to the letter. It must be noted, too, that fluctuations of exchange are nothing new. We who write can remember when the dollar was worth 4s. 10d. or even 5s. During the twenty-four years

the course of exchange has been steadily against the foreign importer. He has always been in the position of receiving payment for his imports in coin less valuable than it was at the time of contracting for them. Against this evil state of affairs he has had to struggle as best he could. Naturally, so far as competition permitted, he indemnified himself by the prices at which he made his contracts; for it is the consumer eventually who suffers by obstructions to trade. But it happened many a time that a sharp downward movement in the sterling price of the dollar converted the slender profit anticipated by the foreign importer into a heavy loss, and this risk he had to bear single-handed for many years. Is it not natural, then, that when exchange favours him signally for the first time, he should strongly resent the idea of being required to divide his gains with men who have never helped to lighten his losses? Besides, what assurance have we, how can Japanese merchants know, that the difference in the sterling value of the *yen* goes into the pocket of the foreign importer? The Banks may possibly be the only gainers. It is a common habit with foreign importers to fix the rate of exchange at the time of making a contract. An importer who adopted that course during any of the first three months of the present year, and who is now required to choose between making a reduction of ten per cent. on his contracted prices or being boycotted, may justly be indignant. We are told that "some of the leading merchants of Tokyo" are offering this harsh and unscrupulous alternative. If so, we can only hope that the foreigner will not tamely submit. His difficulty in respect of legal redress has hitherto been that the defective processes of Japanese civil law enable a debtor to make away with all his property in the interval between the delivery of a judgment in a lower court and its confirmation on appeal. Presumably this danger need not be apprehended where "leading merchants of the capital" are concerned. We trust, therefore, that the aid of the law will be resolutely invoked.

"Importer," however, angry as he evidently is, seems to see no prospect of resistance. "The probabilities are," he writes, "that this plant will prove successful; foreigners will suffer, and add something to the loathing and contempt they feel for the scoundrels they have to deal with." We are not accustomed to regard the Western merchant as a passive victim of Oriental chicanery, content to exchange feelings of loathing and contempt for the coin out of which he is cheated. That is not his character. If he submits in the present case, it must be because there is another side to the question. And so there is undoubtedly. Fancy piece-goods now offered for sale in the Japanese market, or on their way hither from the West, are not confined to articles contracted for

during the first six months of the year, or even to articles imported, at any time, under contract with native dealers. It is morally certain that some foreigners have been shrewd enough to take advantage of the state of exchange, and that piece-goods are consequently purchasable by Japanese at silver prices greatly reduced on account of the appreciation of the *yen*. If this be so, the position of Japanese traders who have signed contracts without sufficient consideration for exchange, may be very embarrassing. They may find themselves saddled, or about to be saddled, with goods which are selling at ten or twelve per cent. less than contract prices. That is not a valid reason for shirking their contracts. But it is an excuse, and throws a new light on their contention. Instead of saying to the foreigner, "Share with us the profits which you ought to have made if you had been prescient," what they say is, "Help us to bear the losses to which we are exposed by the competition of your clever nationals, who are now underselling us in the Japanese market." If between the date of signing a contract and the time of its implement, the articles contracted for become ten or fifteen per cent. less valuable for selling purposes, we imagine that most foreign importers would willingly do everything in their power to ease the situation for the Japanese signatories of the contract. But if, as is probably the case in many instances, the foreigner himself has avoided risks by fixing his exchange, then instead of having unexpected profits, a part of which he may be content to spare rather than drive his Japanese client to the wall, he has no margin at all to draw on, and is confronted by a heavy loss unless the contract be implemented. After all, the thing resolves itself into the old fact, that the competition among foreigners places them at the mercy of the Japanese. The latter are masters of the present situation. They know that, failing a law-suit, the foreign importer must accept their terms, or find himself saddled with goods unsaleable even at the prices they offer. Is it necessary that foreign merchants should be exposed to this kind of thing? Have they no resource except to rail at Japanese bad faith, and to complain that they are the victims of that sharp practice which invariably disfigures trade when opportunities are inviting? It is tacitly assumed that foreigners in Yokohama are incapable of combination. Is that so? We remember two notable instances where the foreign merchants engaged in the silk and tea trades combined successfully to resist obnoxious action on the part of the Japanese. Certainly in these cases the foreigner occupied the position of buyer, and could therefore show a stronger front. But if the import merchant suffers as we have been told that he suffers, it is hard to believe that no remedy is within his reach. The export merchant has planned and carried

out his own system in the teeth of the Japanese. He takes silk into his warehouse and treats it in a fashion against which, rightly or wrongly, the Japanese protest strongly; he purchases tea, re-fires it in his own godown, exports it under his own "chops" and eliminates the Japanese producer altogether. His reason for these unusual methods is that neither the Japanese sericulturist nor the Japanese tea-grower can be trusted. But the foreign import merchant, though he prefers equally sweeping charges against his Japanese clients, submits to be the victim of their sharp practices. The contrast seems to us very remarkable.

FAMINE RELIEF FUND.

LAW No. 47.

We hereby give our sanction to the present Regulations relating to Law No. 3 of the 23rd year of Meiji, and order the same to be duly promulgated.

[His Imperial Majesty's Sign Manual.]

[Great Seal.]

Dated August 27th, 1890.

(Countersigned)

COUNT YAMAGATA ARITOMO,
Minister President of State.
COUNT SAIGO TSUKUMICHI,
Minister of State for Home Affairs.
COUNT MATSUOKA MASAYOSHI,
Minister of State for Finance.

Law No. 3, of January, 1890, shall be abolished as to the localities where the Law relating to the organization of Cities and Prefectures are carried into practice. In cases where a contract to borrow from a famine relief fund was already entered into in accordance with Article 2, Law No. 3, before the Law relating to the Organization of Cities and Prefectures came into force, even if the loan was not actually made, the contract may be continued.

LAW OF BANKRUPTCY.

LAW No. 69.

We hereby give our sanction to the present Regulations relating to Law of Bankruptcy, and order the same to be promulgated. We also order the same to come into force on and after the 1st day of the 1st month of the 24th year of Meiji.

(His Imperial Majesty's Sign-Manual.)

(Great Seal.)

Dated August 20th, 1890.

(Countersigned)

COUNT YAMAGATA ARITOMO,
Minister President of State.
COUNT YAMADA AKIYOSHI,
Minister of State for Justice.

Article 1.—All Courts having the necessary jurisdiction shall be competent to issue decrees in bankruptcy by decisions *ex officio*, in accordance with a petition by or against debtors who are found to be insolvent and in accordance with the provisions of the Code of Civil Procedure.

A decree in bankruptcy may be pronounced without oral pleading, and objections to the decrees may at once be taken.

Article 2.—Petitions in bankruptcy may be documentary or oral.

Article 3.—A decree, as referred to in Article 1, shall be made public by posting the same on the public board of the Court or at the office of the municipality, town, or village.

Article 4.—Bankrupts shall be deprived of electoral rights on the day on which the decree of their insolvency is issued.

Article 1055 and succeeding articles of the Commercial Code shall be applied as to the restitution of the rights of insolvent persons.

Article 5.—Paragraphs and articles of former laws which regulate the deprivation of public rights as against persons who have been adjudged bankrupt, shall have effect against those who shall become bankrupt or insolvent on and after the day on which the Commercial Code or this law shall come into force.

THE LICENCES OF VETERINARY SURGEONS.

LAW No. 76.

We hereby give our sanction to the present Regulations relating to amendment of the Law as to the Licences of Veterinary Surgeons, and order the same to be duly promulgated.

[His Imperial Majesty's Sign Manual.]

[Great Seal.]

Dated August 27th, 1890.

(Countersigned)

COUNT YAMAGATA ARITOMO,
Minister President of State.

MUTSU MUNEMITSU,
Minister of State for Agriculture and Commerce.

Article 1.—Practice by Veterinary Surgeons shall be limited to those who obtain licences from the Minister of State for Agriculture and Commerce:—

Article 2.—The following persons only shall be granted a licence to practice as Veterinary Surgeons:—

- (1.) Persons who have duly passed the examination and obtained a certificate.
- (2.) Persons who have specially studied veterinary science at a veterinary or agricultural school established by the Government in Cities or Prefectures, and have obtained its diploma.
- (3.) Persons who have specially studied veterinary science in accordance with the rules sanctioned by the Minister of State for Agriculture and Commerce at a public or private school, and have obtained a diploma.
- (4.) Persons who have specially studied veterinary science in foreign countries in accordance with rules similar to, or higher, than those of veterinary or agricultural schools established by the Government in cities or prefectures, and have obtained a diploma.

Article 3.—Should persons who have qualified according to Article 2 desire a licence, they shall petition the Minister of State for Agriculture and Commerce through the local office, sending with their petition a copy of their certificate or diploma.

Article 4.—The names and registered residence of persons holding licences shall be registered in Veterinarian's Record of the Agricultural and Commercial Department and be also publicly announced.

Article 5.—A veterinary on ceasing to follow his occupation, or in case of death the surviving members of his family, shall, within 30 days, return his licence to the Agricultural and Commercial Department through the local office.

Article 6.—Persons on obtaining a licence shall pay a fee of *yen* 1 when the licence is delivered.

Article 7.—Should a license be destroyed or lost, or when a registered residence is changed, a petition for a new licence, with the reasons for the same, shall be sent to the Minister of State for Agriculture and Commerce through the local office.

Persons who obtain a new licence shall pay *sen* 50 as fee when the licence is delivered.

Article 8.—Should a veterinary be found guilty of neglect or incapacity, the Minister of State for Agriculture and Commerce may suspend him from following his occupation in his district for not less than 5 days and not more than 50 days, according to circumstances; he may also prohibit the veterinary from following his occupation altogether in a case where the circumstances are aggravated. Persons so prohibited shall within 10 days return the licence to the Agricultural and Commercial Department through the local office.

Article 9.—The prohibition mentioned in Article 8 may be withdrawn, according to circumstances, after 3 years have elapsed.

Should a Veterinary be reinstated, a new licence may be granted according to Articles 3 and 6.

Article 10.—Persons practising as a veterinary without a licence shall be punished with fines not less than *yen* 5 and not more than *yen* 50.

Article 11.—Should a veterinary practice during suspension, he shall be punished with fines of not less than *yen* 1 and not more than *yen* 25.

Article 12.—Should a veterinary refuse his assistance without proper reason, he shall be punished with penalties of not less than *yen* 1 and not more than *yen* 1.95.

Article 13.—Rules for examination for a licence to practice as a veterinary shall be laid down by the Minister of State for Agriculture and Commerce.

SUPPLEMENTARY RULES.

Article 14.—The Minister of State for Agriculture and Commerce may grant temporary licences in places where veterinary surgeons are scarce for limited periods and in certain districts, in view of

the former occupation of petitioners, though they may not possess the qualifications mentioned in Article 2, according to recommendations from the Superintendent of the Hokkaido Administration Board and the Governors of cities and prefectures.

Article 15.—These Regulations shall apply to persons who obtain temporary licences in accordance with Article 14.

Article 16.—Rules for the examination of veterinary surgeons, Notification No. 17 of the 18th year of Meiji, and other regulations which are in conflict with this law, shall be abolished.

WAR MATERIAL AND STORES.

LAW No. 76.

We hereby give our sanction to the present regulation relating to examination of war material and stores for the Army and Navy, and order the same to be duly promulgated.

(His Imperial Majesty's Sign Manual.)
(Great Seal.)

Dated, August 20th, 1890.

(Countersigned)

COUNT YAMAGATA ARITOMO,
Minister President of State.
COUNT OYAMA IWAO,
Minister of State for War.
VISCOUNT KASUYAMA SUKENORI,
Minister of State for the Navy.

The Minister of State for War and the Minister of State for the Navy shall be responsible for the examination of all war material and stores for the Army and Navy, and the Law relating to the Auditor's Board shall not apply.

PUBLIC NAVAL LOAN BONDS.

We hereby give our sanction to the present Regulation for an alteration in the Regulations concerning the Public Naval Loan Bonds, and order the same to be duly promulgated.

(His Imperial Majesty's Sign Manual.)
(Great Seal.)

Dated August 15th, 1890.

(Countersigned)

COUNT MATSUKATA MASAYOSHI,
Minister of State for Finance.

Paragraph 2, Article 8, of the Regulations concerning to Public Naval Loan Bonds, Imperial Ordinance No. 47, the 19th year of Meiji, shall be expunged.

LIMIT OF DEPOSIT IN SAVINGS BANKS.

LAW No. 75.

We hereby give our sanction to the present Regulations relating to limit of the sums to be deposited in Savings Banks and to the purchase of Consolidated Loan Bonds with the money so deposited and order the same to be duly promulgated.

(His Imperial Majesty's Sign Manual.)
(Great Seal.)

Dated August 27th, 1890.

(Countersigned)

COUNT YAMAGATA ARITOMO,
Minister President of State.
COUNT MATSUKATA MASAYOSHI,
Minister of State for Finance.

Article 1.—Should the sum deposited in a Savings Bank, according to (2) and (3) of Article 1 of the Rules relating to the deposit of money, reach above yen 300, Consolidated Public Loan Bonds may be bought at the request of depositor and be handed to him.

Article 2.—Should the sum deposited, as mentioned in the last Article, exceed yen 2,000, the manager of the Savings Bank may purchase Consolidated Public Loan Bonds with the amount in excess and hand them to the depositor.

Article 3.—Consolidated Loan Bonds purchased in accordance with the two preceding Articles may be kept by the Savings Bank at the request of the owner, except in cases where the entire sum deposited has been withdrawn.

Article 4.—This law shall come into force on and after the 1st day of the 1st month of the 24th year of Meiji.

CORRESPONDENCE.

CONTRACTS BETWEEN JAPANESE AND FOREIGNERS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have often wondered that amongst the many writings about the relations of Japanese with foreigners so little appears to have been said on the subject of contracts between the two, and how they are kept by the former; and as my experience has been probably as great as most import merchants here, my views on the subject may be interesting as regards the Japanese brokers, dealers, or merchants, with whom we have to do business at the treaty ports. Perhaps when the new treaties are carried through, and we have more access to the native merchants or consumers, we may find things different, but I can only write as they are now, and I feel sure my opinions will be endorsed by the majority of my fellow merchants.

In the first place, I may mention that the dealers in question almost invariably buy goods professedly for account of a third person, whom they never declare; at the same time they use this anonymous client as a scape-goat for any shortcomings, and whatever happens, on him is laid the blame, although we know (and this is probably the rule rather than the exception), that they often buy on their own account speculating on the turn of the market.

Taking first contracts for goods to arrive by a given date, the sale note has usually on it the clause that if the goods do not arrive by a certain date the contract is to be cancelled. When the market goes against the buyers, if the goods arrive even a single day late, the contract is invariably cancelled, on else an allowance has to be made to meet the fall in the market:—there is no hardship in this, it being as fair for seller as for buyer, but on the other hand if (the goods arriving late) the market has advanced and the seller wishes to use his privilege of cancelling the contract, the Japanese dealer thinks himself very hardly treated, and will combine with other dealers to boycott the goods, so that in nine out of ten cases the foreign importer, knowing this, lets the original buyer have the goods at the arranged price, and thus the dealer gets the advantage both ways. But should the goods arrive by the proper time, the market having gone down in the meantime, the native dealer makes every frivolous excuse possible to get off his bargain, declaring the goods not up to sample &c., &c., and generally ends in the long run in getting a reduction fully equal to the decline in market value, it being far easier for the importer to do this than to fight the question, and have the contract thrown up, and then probably have the goods boycotted in the same way as mentioned above. For this reason, since the good old days when bargain money was invariably received on signing a contract, I may safely say that no foreign merchant looks upon a contract as a writing that will be carried out in its integrity by the native dealer, but merely as a memorandum of his "intention" at the time of making it, and so one rarely hears of a suit against a Japanese for breach of contract, as it would be only time wasted, and even if judgment were obtained, experience has shown that by that time the native is only possessed of a soroban, hibachi, and a few mats. Where his other assets have vanished to in the meantime is a mystery that has yet to be solved!

Taking next contracts for sale of goods arrived to be delivered by a certain time:—these are usually made verbally, although sometimes in writing, for delivery 10, 15, 20, or 30 days as the case may be, and in many cases I have known it has been particularly explained to the native dealer that the goods are only sold at this price because the money is wanted by a certain date for a special purpose to meet a draft or to remit by mail, &c., and the dealer replies with a light heart that this is perfectly understood, and that the goods will be cleared by the stipulated time. But if the market goes against the dealer, what is the result? He simply never comes near the importer, who has to send down to him for the money, getting always the same answer, that the (undeclared) country buyer has not sent down the cash, but it will certainly come "to-morrow," and so it goes from day to day, week to week, month to month, and sometimes from year to year. I am not exaggerating this, for I know it will be found that there are now in godowns here goods that should have been cleared more than a year ago by dealers who have never been made bankrupt but are doing fresh business all the time! It may, of course, happen to any one in business that it is not always convenient to take up a contract immediately, and there is no disgrace in it. It happens every day to foreigners, say in the matter of drafts with their

bankers, but then a few days before the acceptance falls due they make the necessary arrangements for renewing it, and replacing the transaction on a sound basis as may be agreed upon. Did they not do so, the acceptance would be protested and the foreigner made bankrupt, or at least he would be able to do no more business with the bank he had treated in so unceremonious a fashion.

As I have said above, there is no disgrace in a Japanese or foreigner not being able to implicitly conclude a contract or, say, to his having reasons for wanting to extend it, but I wish to impress upon the Japanese dealers that it is a disgrace and dishonest to shun the other party to the contract and not to make the necessary arrangement before the contract expires. But as it is, the native dealer allows the foreign merchant to think that "to-morrow" the goods will be taken delivery of, whilst he knows well he has not the slightest intention of such being the case, and all this time he is using *gratis* the foreigner's capital, godowns, &c., until such time as the market turns in his favour, or for some other reason it suits him to take away the goods. He never by any chance offers to pay interest, godown charges, &c., and when at last the foreign importer loses patience and says "well, take away the goods and get a loan on them from your own bankers," the answer is generally (accompanied by a pleasant smile), "oh, then I should have to pay interest and charges!" I am not now speaking of the small dealers, but the large buyers of staples, such as yarns, shirtings, metals, woollens, sugar, &c., and I may safely say, what will be confirmed by all my fellow importers, that not one of them, the largest as well as the smallest (when the market goes against him), will be found to complete his delivery of goods by the stipulated time. They will sometimes take delivery of say half the quantity in good time, leaving the other half for an indefinite period, and if by any chance the foreigner has so far got to windward of them as to be in a position to insist on being paid interest, godown charges, and for other expenses incurred by the dealer's breach of contract, he, the native, thinks it very hard, and will come to the foreigner with tears in his eyes begging him to forego the money actually lost to the foreigner by the other's breach of good faith. Goods imported are as a rule drawn against, and it seems impossible to get into the native dealer's minds the fact that until the whole parcel is cleared the drafts cannot be retired, and so interest is running on the whole amount, as the banks only allow 3 per cent. interest on part payments, the current rate on the bills being 6 per cent. I have several times enquired of Japanese what is the rule amongst themselves: i.e. when a contract to be closed on a stipulated date is entered upon, whether that date sees its closure, supposing of course no other arrangement is mutually made, but the answers I get are very conflicting. Some say it must be carried out or the breaker "loses face," and others that a few days more or less make no difference. I should very much like to have the opinion of some leading native merchant or banker on this subject, as to the custom, say, with the banks about acceptances, and whilst a few "days" may not matter much, I am sure that in their business intercourse one with another the native merchants never act as the dealers at the treaty ports do with foreigners, where it is not a question of days but of weeks and months, to say nothing of years (but we will hope this last is somewhat exceptional). It has always been a surprise to me, now that the country has been opened for foreign trade for some thirty years, and so many Japanese have been educated abroad and studied commerce in the great cities of Europe and America, that those dealing with foreigners, of whom a new generation has sprung up, have not become more exact in their dealings, if only from a sense of policy and seeing what advantages accrue to a business man who is known to be honest and whose word is his bond. Those who have been abroad must have been witnesses of the gigantic transactions entered into amongst foreigners by word of mouth or telegram without the slightest question arising, and I should have thought that by this time at least some of the native dealers would have discovered that honesty is the best policy. Of course one great trouble lies in the competition amongst foreigners, and again in the fact that sellers are, as all over the world, more numerous than buyers, but I am sorry to see, as time goes on, instead of there being any improvement in the way the native dealers treat foreigners the contrary seems to be the case, and the sad and undoubted fact remains that no foreign importer looks upon a Japanese contract as more than a memorandum, and it is only when the last goods are delivered and the cash received that he can feel that the stipulations of the contract will be carried out and the transaction finished. And I am sorry to say the native dealer is the reverse of grate-

ful for any concessions that may be made, for if he is once allowed to get behind hand, whether in paying money or taking delivery of goods, he will not come in a straightforward manner and arrange to let that particular transaction stand and in the meantime do other business, but for anything fresh he will go to some other house and start a fresh account. And another instance I may quote, he will go to a foreign firm and get them to telegraph home about some special business, and when he has got the foreigner down to the last cent he will withdraw under pretence of seeing his "client in the country," and will go to a foreign competitor, and say Mr. — will do this business for so much, "but you shall have it if you will do it for so much less," and the competitor, knowing probably that Mr. — is a careful man and not likely to make a mistake, will accept, which he can probably afford to do, he not having disbursed in telegraphy, &c., the amount Mr. — has spent and which the dealer never thinks of refunding! This is not at all an uncommon case, and can be borne out by any foreign firm here, for lucky is the one that has not had this experience!

Again, I have noticed the native dealer as a rule is very much annoyed when he thinks the foreigner has made what he considers a good thing out of any transaction, whatever he (the native) may make out of it, and he seems only to be happy when he knows goods are sold at a loss! Now amongst foreigners I think it will be admitted that if the buyer or seller has made a fair profit, he is only too glad when the other party does the same. It makes things pleasant all round, and paves the way to other transactions. The native dealer seems to have an idea that on every transaction the foreigner makes an inordinate profit, although this is generally soon dispelled when he enters into "direct importation" and takes all the risks borne by the foreigner. This idea is no doubt brought about by the style of living of the foreign merchant, but he forgets that the transactions of foreigners here being large, a very small percentage amounts up in the course of the year, neither does he think of the stock the merchant carries, and on which in nine cases out of ten the apparent profit is all eaten up by interest, godown charges, &c., &c. In the present case of rise in exchange the native dealer thinks that the foreigner is making a large profit on goods sold to arrive, but as a matter of fact in a great many cases the latter reaps no benefit by the advance in exchange, as where profits are cut as fine as they are with most goods sold to arrive, the importer fixes his exchange at the time of making the contract, since with such a fine margin any drop in silver or exchange would turn the transaction into a positive loss, and he cannot afford to run any risks. Of course with the advance in exchange and the competition of foreigners the native dealer or his (mysterious) client gets the benefit of lower prices for all goods not actually contracted for. During the last few weeks with contract goods all foreigners have been importuned by the native dealers to make a reduction in price because exchange had advanced! and in many cases this has been done as a matter of policy, otherwise the goods would have been found fault with and not perhaps have been taken delivery of for months. But I would ask the native dealers what they would think of a foreign importer who should ask the dealers to give a higher price for goods sold under contract because exchange had meanwhile declined? The question has been sometimes put to the dealers, when they laugh and think it a fine joke! Yet they, even the best amongst them, do not for a moment hesitate to ask for a reduction because the goods can be brought here cheaper than at the time of making the contract, although for reasons already stated the foreign importer may not have benefited by the advance in exchange.

Finally, it resolves itself into this, in my opinion, and I think it is that of the merchants here generally:—that, as trade is now carried on at the treaty ports, all contracts entered into by Japanese and foreigners are entirely one-sided. If the former sees a profit he takes it, but if there is a loss the latter has to bear it, perhaps not by an actual breach of contract on the part of the Japanese, but by their delay in taking delivery of the goods and loss of interest, &c., &c. Goods cost roughly 1 per cent. per month to hold, calculating interest, godown charges, &c., so it will be seen if they are left undelivered for, say, three months (a not at all unusual time) there is actually a loss on them, for as things are now it is very rarely that a 2 to 3 per cent. profit is seen on a transaction when it is entered into. I have not in any way exaggerated the present position of affairs at the treaty ports, and have written this to show how foreigners look upon the way in which the native dealers keep their (so-called) contracts, and I shall be glad if it may serve to show them it will be to their advantage to deal more honestly with foreigners, or, in other

words, to do as they would be done by. It would be interesting to hear the dealer's own account of such transactions as I have mentioned above, and what excuses they can give for their continued breach of faith in keeping contracts.

One of the chief causes of England's great commercial success has been the integrity of her merchants, and if the Japanese have any wish for their country to attain a corresponding position, the first thing they must do is to honourably keep their contracts, whether written or verbal, and not, as at present (with foreigners at least), to take every possible opportunity of getting out of them when affairs have taken a turn they did not anticipate at the time of entering into them. They would do well to remember one of the sayings attributed to Confucius, which runs somewhat as follows:—"A man who enters into a speculation and sees only the profit and not the loss, is like unto a fish which sees only the bait and not the hook."

Since writing the foregoing there has appeared in the *Japan Mail* of 23rd August an article on the new Commercial Code which ends up with the following sentence:—"Is the Japanese trade system so very unlike the American or European? Many people would be pleased to have instruction upon this point." I venture to think Sir, that what I have written above may be to a certain extent an answer to this question.

I remain, Sir, your obedient Servant,

AN IMPORT MERCHANT OF 25 YEARS
EXPERIENCE IN JAPAN.

Yokohama, 26th August, 1890.

THE KOBE SECULARIAN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Kobe undoubtedly is the most progressive town of the most progressive country in the Orient. Amongst the infinite number of objects for which its inhabitants have ample reasons for self congratulation, there are two which stand pre-eminently above all the rest on account of their intrinsic value. A more judicious method of their utilization, however, might bring an ocean of blessings not only to the town alone but to the whole of humanity at large. Hence I hope, any suggestions made for the consummation of such a sublime ideal will be gladly welcomed, especially when they are sincerely made and freely offered.

The first one of these two objects in point of priority, is that extraordinary child of humanity whom the tales of Christianity have been unable to choke: I mean "Secularian." The depth of thought, the insight of human nature, the superhuman mental productivity, the retrospective knowledge of the universal affairs which this wonderful being has lately displayed, place him far above all. In fact he has discovered new regions, invented new criteria of criticism, hence exalted it to its highest ideal, of which Mr. Matthew Arnold never dreamed.

The second in this order is that—he it far from me to call it a "pestiferous advertising sheet"—unsurpassable institution for human education called the *Hyogo News*. The high and admirable position which this paper is gradually taking is simply beyond any human expectation and ambition. Its editor—who I hope is not the same person as "Secularian"—fool that I am to think that such superhuman qualities can be combined in one human being!—has called before the bar of his paper every rank of mankind indiscriminately. He has fearlessly rebuked emperors, kings, presidents, bishops, poets, missionaries, merchants, and what not?

But as our superstitious ancestors have taken the number three as the symbolical representation of perfection, hence to perfect these two additional objects is required. For a long time I have given this matter my weighty consideration, and finally have reached the conclusion that the being who has rechristened himself "Agnostic" has the highest claim for this position of honour. Of course, his claim rests solely upon his personal adaptability and not upon any airy sentimentalism. The manner in which he has handled every recalcitrant problem of philosophy has not surprised the whole world?

In the persons of these three worthies humanity would possess a perfect Trimurti before whose infallible tribunal every problem of human affairs, whether concerning religion, science, international politics, jurisprudence, &c., could be presented for final settlement. As all these three worthies have been pleased to keep themselves unknown to their fellow mortals, they would make, I should think, a fair representation upon our terrestrial sphere of the great "Unknown" of modern Agnosticism.

Moreover, as a fit residence for the Trimurti, I should suggest, that the grandest temple ever

built upon this globe should be erected upon the highest peak of the mountains backing Kobe. The money needed for this grand superstructure should be raised by voluntary subscriptions from all nations under the celestial orb. Upon its portals should be carved in gigantic gold characters so that all vessels coming to the East could read from a long distance:—

"What fools these mortals be."

And as the atmosphere of the country is usually hazy and misty, by the help of some artificial ingenuity the temple could be kept perpetually surrounded by an impenetrable darkness—a condition indispensable for all similar oracular manifestations.

Enthroned in the natural altitude of the temple, with the *Hyogo News* as its organ, the Trimurti would infinitely surpass the Oracle of Delphi which was so venerated by the most civilized nation the earth has ever seen. In the innermost sanctuary of this shrine of humanity "Secularian," with Mephistopheles, could sing:—

I am the spirit that denies!
And justly so: for all things from the void
Called forth, deserve to be destroyed:
'T were better, then, were naught created.
Thus, all which you as sin have rated—
Destruction—naught with evil blent,—
That is my proper element,
Chorus by the Trio.

Black spirit and white,
Red spirits and grey;
Mingle, mingle, mingle,
You that mingle may.

Your obedient Servant,

THE RAILWAYS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As the whole of the railway line between Tokyo and Matsuida, via Takasaki, is now again open to traffic, any remarks on the working of the line in connection with the points at which it was obstructed have no immediate practical interest for the public, but as a warning to travellers of the inconveniences to which, under similar circumstances in the future, they may be possibly subjected, the experience of a traveller on this line yesterday (the 1st instant) may be useful.

On arriving at the station of Shimmachi at 10.35 a.m. the passengers proceeded to make their way as best they could to Honjo, whence the train to Tokyo was timed to start at 12.48. After a 10 minutes' ride in jimikisha we came to the first obstruction in the shape of a stream over which we were carried by coolies. A few minutes afterwards we came to the river Kanogawa, which was flowing in two streams. The first was fordable by coolies, but the second, the main stream which was running in flood, could only be traversed by a ferry boat. There were some 300 passengers in all, a proportion of whom consisted of women and children collected on a little island a few yards square in the middle of the river bed. For the transport of these to the opposite shore one ferry boat capable of accommodating at a pinch some 20 or 25 people, was the only means available, and when I add that the same boat was also charged with the task of conveying people from the opposite side of the river to a point some little distance down the stream on its return journey, it will be understood how long an interval necessarily elapsed between each trip made. There were no police on the island to regulate the traffic, and much delay was caused by the struggle on the part of the crowd to get seats in the boat each time it called for passengers. The boatmen behaved exceedingly well, but it was of course impossible for them to control the rush made for the boat by passengers anxious not to lose the connecting train. Fortunately some of those on the island, realizing the situation and the danger to the women and children in the front ranks who were forced by those behind into the stream, and some of whom remained for over an hour knee deep in water, lent their assistance to the boatmen and in this way some semblance of order was maintained and the eager rush to the boats in a measure controlled. In the midst of the confusion an officer of the Takasaki Garrison, Colonel Uyeno, appeared on the island and holding up a piece of silver money in his hand shouted to the boatmen to give him the next boat for himself and his family, six persons in all alone, adding that he was proceeding to Tokyo on urgent Government business. In spite of murmurs on the part of the crowd, this officer was allowed to take the boat to himself. Had the police been present this would hardly have been permitted, at least, had precedence been granted to him, some of the lady passengers who had been waiting before his arrival would certainly have been allowed to share his boat. It was not until more than an hour and three quarters had elapsed from the time that the passengers by the train from Takasaki had reached the river that all of them had reached the opposite bank, and conse-

quently not one in three was able to reach Houjo in time to catch the connecting train. Moreover very few indeed, if any, of those who crossed escaped a serious wetting.

The circumstances I have related may possibly form one of those cases in which responsibility rests with nobody, but it seems to me that if it was no part of the duty of the railway company in its own interest, to facilitate the conveyance of passengers by its trains in places where the line is temporarily obstructed, it was clearly the duty of the Police Authorities in the interests of the public to take the necessary steps to regulate the traffic over the river.

Your obedient servant,
Tokyo, September 2nd, 1890.

VACATION RAMBLES IN IBARAKI.

About 35 miles south from Mito is a place called Kashima. It is the seat of one of the oldest temples in Japan, and is the centre of many interesting traditions. A branch of that temple was established by Naritaki (Rekkō), Prince of Mito, in connection with the Kōdōkan, the school organized by him for the instruction of his *samurai*; and near the temple was set up a stone containing the following inscription:—"Ever to tread without deviation the way of Akitushina Yamato [Japan] is necessary (*baname*)."¹ Having thus seen and heard much about Kashima, I determined that a trip to that old and historical spot should be among my summer recreations. I found a Yokohama friend, Mr. D—, who was glad to participate in such rambles, and invited Prof. T—, of the Ibaraki High School, to accompany us as guide and interpreter.

We started from Mito in *jinrikisha* about half-past five in the morning of Monday, August 11th. The road to the sea-shore had just been repaired with gravel, and was so rough that our progress was slow; and it was about eight o'clock when we reached Onuki, only 3 *ri* distant from Mito. Here our coolies stopped a little while to satisfy their hunger, and then coolly informed us that it would be impossible to make Hokoda in time to catch the steamer for Kashima. Vexed at this turn of affairs, and disappointed in not being able to find extra coolies to assist, we nevertheless decided to keep on our journey as rapidly as possible. But just out of Onuki we came upon a long stretch of sand, and then to a place where the road was broken up for repairs. Through those places we walked to a village called Natsumi, about a mile distant; and then, hearing that the road ahead was in a very bad condition, we dismissed the *jinrikisha* men, and engaged pack-horses.

This change delayed us a half or three-quarters of an hour, and did not prove as beneficial as we had expected. In some places, it is true, the road was impassable for *kuruma*; but most of the way it was only tolerably bad; so that, by walking a little now and then, we might have made it without changing. At noon, the hour for the steamer to start from Hokoda, we were about a *ri* distant; but kept on to that place in the hope of being able to find a sailing-boat to take us down the lake to our destination. If we had been only ten minutes earlier, we should have gone into Hokoda without any mishap; but, just as we had reached the hill above that town, heavy rain came on suddenly, and compelled us, in a pretty wet condition, to seek shelter in a hut by the road-side. When the rain subsided a little, we descended to Hokoda, and, finding an inn, proceeded to get into dry *kimono*, and to "cloy the hungry edge of appetite" by something more substantial than the "bare imagination of a feast." Satow and Hawes, on page 475 of their "Hand-Book" (second edition), describe Hokoda as "a dirty, tumble-down fishing town, with narrow streets," and having "no good inns." The lapse of several years, and the rebuilding made necessary by a large fire, have improved somewhat the condition of the place; so that, although it is not pretty, and the inns are not extra good, the language quoted above is now out of date.

While the maids were drying our garments over charcoal fires, we had a *sōdan* about the situation of affairs. We could get no sailing-boat; and we disliked to wait there till the next noon for the steamer, as that would delay us exactly one day. On the other hand, as the road between Hokoda and Kashima is ordinarily not very good, and was then much worn on account of recent rains, the *jinrikishi* men demanded "double teams" and exorbitant prices. After a great deal of parleying, the other side "came down" a little, so that we decided to push through that night at all hazards.

We started out in flying style about half past four o'clock, and, as long as day-light lasted, had

a delightful ride. The road wound up and down along the east shore of the Kita Uta, or North Lake, and ran, now through the fields, now at the base of the hills, now high upon the hill side. Our six *kuruma-ya* were a rapid and lively set, and carried us along in fine style, with the evident desire of making as much ground as possible in the day-light. After darkness set in, the road grew more and more romantic, and more and more dangerous. It seemed as if we were cutting across the fields by "unbeaten paths," so that we had to pick our way very slowly. Sometimes we came to little ditches, where the yelhide and its occupant had to be carefully let down and pulled up, or even lifted across. It, however, partook considerably of the ridiculous to hear the coolies call a little brook *ōtōi kama*! Occasionally we passed through a small village with a few stores, in which, by the dim light of lamp or *andon*, we could just see boxes inscribed with "oil-115° fire-test," "Comet-oil," "New York City,"—words, which, simply because they were English, had a talismanic influence in making us feel that other "things American" besides ourselves were in those out-of-the-way places among "things Japanese." The darkness and the stillness of the night would have been intolerable to a single traveller; but, as there were three of us, even though we might not often speak out, we could at least feel each other's presence. The shouts of the coolies were almost the only sounds which broke the stillness; but these were really delightful. "*Abunai yo*," "*massugu ka*," "*migi da*," "*hidari takai*," "*mattare yo*," and other unclassical phrases sounded as pleasant that dark night as many a charming song. Finally, about half-past nine o'clock, we reached Ohnatsu, where we could obtain better accommodation at the inn called Daikoku-ya than in Kashima, about a mile distant. Thus ended the first day's story, which is a tale of vexing delays and disappointments, and "extraordinary expense."

After a fairly good night's rest we were up early the next morning, to see the sights of Kashima before noon, as the returning steamer was scheduled to leave about two p.m. It did not take long to inspect the temple and its surrounding objects of interest; and then we set out to find some one who could give us a little historical and mythological information. The chief priest of the temple happened to be about; but, when we called on a High School pupil, named Hanawa, we found that his family was a part of the priestly house, and obtained a great many "points." The materials which we obtained from the elder Hanawa's reminiscences and books, and from other sources, are compiled into the following paragraphs.

Although a few think that the word "Kashima" is an abbreviation of "Kamishima" ("the Island of the Gods"), the best authorities say, that it means, as now written, "Deer Island." It is certain that from ancient times deer abounded on the island, and, being held sacred as messengers of the gods, "used to wander freely through the groves around the temple." Even till the Revolution they were quite numerous; but they have since been gradually killed, until now probably not one remains. It is also stated on good authority that, when that district was really an island, the Kita Uta extended northward beyond Hokoda to a lake called Hinuma, 5 miles or more from Mito, and emptied its waters into the Pacific Ocean through the valley between Onuki and Oarai. In fact, Kashima *gun* of Ibaraki *ken* extends at present just about to those limits.

Concerning the temple and the deity worshipped, we may first borrow the account given on page 474 of the "Hand Book of Japan," as follows:—"The principal deity worshipped here is Take-mika-zuchi no Mikoto, one of the three gods who originated from the blood of Kagu-tuchi, the god of summer-heat, as it dropped from the bill of his father Izanagi's sword on to the storm in the 'River of Heaven,' i.e. the Milky Way. According to the ancient myth, Taka mi musubi no Kami (one of the creators) assembled the gods in council, to choose a leader who should be sent to subdue Japan, when the choice fell upon a certain 'Futsu-nushi'; but Take-mika-zuchi advanced and said: 'Futsu-nushi is not the only brave man; am I not one also?' The assembly was so impressed by his noble language and air that he was joined with Futsu-nushi in the expedition. The two gods descended into the province of Izumo, where they received the submission of Onamiji and his son, Koto-hiro-nushi, the rulers of the country. The way was thus prepared for the advent of the Sun-goddess's grandson, from whom the Mikado is said to be descended. Probably Take-mika-zuchi, which seems to mean 'Stout-big-hammer,' was the name of the sword carried by a chieftain to whom the epithet Futsu-nushi (Owner of Sharpness) was given. The

temple is usually said to have been founded in the "age of the gods," and certainly dates from the prehistoric epoch; it is, with most probability, to be ascribed to the reign of the Mikado Sujin Tennō [97-30 B.C.]. Besides the principal god, there are three other *at dono* gods worshipped jointly with him, namely Futsu-nushi, Amaterasu Koyane-no-Mikoto, and his wife. These last two are the remote ancestors of the family which was appointed to be hereditary high priests of the temple.

The documents ("History of Kashima" and "Famous objects in Kashima") which we were allowed to investigate, differ in some respects, especially in ascribing greater antiquity to the temple. According to the "official records" Take-mika-zuchi no Kami, the son of Nigi-hayashi no Kami, advised O-ama-mutsu no Mikoto, who held "the middle countries," to surrender his dominions to the grandson (?) of Amaterasu O Mikami (the Sun goddess). Afterwards, when Jimmu went on his eastern expedition, "the spirit of Take-mika-zuchi" sent his sword, named Futsu-no-Mitama-no-Tsurugi, and in such a way helped Jimmu very much. It seems that Take-mika-zuchi had travelled east and north, even so far as Shiohana (near Sendai), for the subjugation of various tribes, and finally came to Kashima, where he probably passed his life. In the first year (660 B.C.) of Japan, the Emperor Jimmu built there a temple dedicated to Take-mika-zuchi.

All the succeeding emperors paid great respect to this god; and, among military men, he was known as the god of military art. It became a place of great resort for the purpose of offering up prayers, and also thanks, for victory. There was a prevailing custom, called *Kashima-tachi* (starting-out from Kashima), according to which, when men set out on any great enterprise, they came first to worship at Kashima. It is said that the Empress Jingū did so, before she left to subjugate Korea. We are also informed by Satow and Hawes, that the famous Kamatari, the fabled founder of Kamakura, undertook "a pilgrimage to the temple of Kashima in Hitachi in performance of a vow." In very ancient times the annual contributions of land, money, crops, &c., were large, and sometimes amounted to 100,000 *koku*. In the time of Hideyoshi the regular annual contribution from the Government was only 500 *koku*; under the *Bakufu* it was increased to 2,000 *koku*; now it amounts to 1,600 *yen*.

It is reported that, in the second year of Jingū Keimū (768 A.D.), Take-mika-zuchi manifested himself in the capital (Nara), so that the Empress Shōtoku dedicated to him in that city a temple still existing and known as Kasuga, which is more generally popular than that of Kashima. "It is said to have been founded in the year 767 [768?] at the desire of Take-mika-zuchi, who rode up to Nara on a white deer in search of a new residence" (Satow and Hawes). Around the Kasuga temple in Nara there are yet many deer, which are reported to have been transferred from Kashima.

When Shōnin, the founder of the Buddhist sect, called Shinshū, came to Kashima, probably in the early part of the thirteenth century, to worship Take-mika-zuchi, the supply of water was very scanty; therefore, he brought water from a well in a village near Kasama. On that same day (the fifteenth day of the sixth month) of every year, the well at that village become empty, while the seven wells of Kashima rise very high. These seven wells are included by some among the "seven wonders" of Kashima; it requires just a day's walking to visit them all.

Before the Revolution there were 80 priests; now there are only 6. The family of the high priest is named Kashima, and is said to have descended from Sayama-no-mikoto, whoever he may be. The present head of the family is named Noribumi, who has been promoted to be a priest of the famous Ise temples.

A temple was built at Kashima by Hideyoshi on the site of the present temple, but was removed to a little distance, when the present temple was built in the second year of Genwa (1616). The temple differs from other Shintō temples in that it faces the north; but "the box containing the sword which is the embodiment of the god, faces east, i.e. toward the Pacific Ocean." The orthodox style is for a Shintō temple to face either east or south; and the irregularity of the Kashima temple is explained by Satow and Hawes as follows: "We may suppose that this temple was founded to symbolize the extension of the Mikado's rule to this part of the country, and that its facing to the sea typified his claim to dominion at least as far as the shore."

There are many festivals, the chief of which are the Spring Festival (March 9th) and the Autumn Festival (September 1st). The latter is called *Jinkōsai*, or the Festival of the Divine Visit, when

there is a large procession, the chief feature of which is the yells of victory.

There are many relics preserved in the storehouse, and exhibited only once a year, when they are taken out to be exposed in the sunshine. Of these it will be sufficient, perhaps, to mention only two, one is a model of a bell, called *Ekiro no Susu*, or the Post Road Bell, which was the emblem in ancient times of the chief commander, who, with it in his hand, could collect an army. This bell, which had a very high tone, is singular in form; the larger end is shaped like the human face. The other relic is a model of the sword, *Futsu-no-Mitama*, which is about ten feet long, and like Chinese swords, double edged. Indeed, the *samurai* of very ancient times always used two-edged swords.

Kashima boasts of "three excellent places," "eight views" (comparatively insignificant), "seven famous wells" (already mentioned), and "seven wonders." The "three excellent places" are the *Kaname-ishi*, *Mi-tarashi*, and the *Takama-ga-hara*, of which we were to see the last, which was too far distant for us to visit within our prescribed time.

The first in order and in fame is the *Kaname-ishi*. Some authorities say that the word *Kaname* is an abbreviation of *Kani-no-me* (crab's eyes), and the *Kaname-ishi* means "round stone." The ordinary interpretation, however, is that *Kaname-ishi* means "rivet-stone," or "pivot-stone" (Saw and Hawes). In a certain book it is said that the god of Kashima made a pillar of this stone which rose from the centre of the earth, and to this pillar bound Japan (Hondo?) with the roots of the wistaria; hence Japan is sometimes called "the country of the wistaria-roots." Saw and Hawes, in their "Hand Book," refer to another tradition, that "it was sanctified by the local god taking his seat on it directly after his descent from heaven." In verification of this tradition we were informed, that the stone was at first called *mi-mashi* (honourable seat), and that another proof may be found in this poem:—

Tazune-kane
Kô mitsuru kana
Chihayafuru
Mi-yama no oku no
Ishi no mi-mashi wo.

"After diligent search I have this day seen the honourable seat in the midst of the holy mountain."

The most interesting tradition is that this stone holds down the head of the enormous catfish (*namazu*), "whose contortions are the cause of earthquakes." For, just as the giant Euceladus was supposed to be buried underneath Mount Etna, and "as often as he changes his weary side, to make all Trinacria [Sicily] to tremble," so a huge fish is fabled to lie underneath the islands of Japan, and as often as it moves, to make all Nippon tremble. But, whatever tradition may put forward in explanation, it is at any rate a fact that earthquakes are very scarce and very light in Kashima. And this granite stone may furnish us with a scientific, as well as a mythological, explanation. So far as it is visible above the ground, it is exceedingly insignificant, being only about four inches high, and one foot or so in diameter across the top. But, as you dig down deeper, it becomes very large; in fact, Mitsukuni, the second Tokugawa Prince of Mito, had workmen dig for seven days and seven nights [not "six," as Saw and Hawes state it], "without finding the lower end. This may possibly indicate a foundation of old volcanic rock, on which the sand of the ocean was gradually deposited. This same granite rock is found farther south around Chôshi, and as far west as Mount Tsukuba; and such a foundation would naturally render that portion of the country less susceptible to earthquake shocks.

But now, after trying to explain away an interesting tradition by dry facts of science, let us pick up another fable,—one which was told us by an old woman who kept a little booth at the side of the path, and one which will, perhaps, defy a scientific explanation. We noticed that the earth all around the stone was mud, and bore the appearance of frequent digging. This is done, it seems, by childless women, because, if one finds a round, white worm, about an inch long, she will surely be blessed with a child. The efficacy of this performance was proven to us by the fact that many women, who found such worms, have afterwards returned there to render thanks for being blessed with progeny, while those who were so unfortunate as to find no worm never return!

Near by the enclosure containing the *kaname-ishi* is set up a stone, inscribed with a poem by Bashô, the founder of the *haikai* style of poetry of seventeen syllables. The poem reads as follows:—

Kare-eda ni
U no tomai keri
Aki no kure.

"On an autumn evening a crow perches on a withered branch."

The second "excellent place" is the *mi-tarashi*,

or "honourable spring," the waters of which are collected into a reservoir. This reservoir is divided by a *torii* into two parts, into the larger of which visitors are allowed to enter, but the other in kept "holy" to the god. There is a "story" that the water of this reservoir always reaches just to the breast of the bather, whether that individual be short or tall. A huge oak (?) tree grows out horizontally from the side of the hill, and rests on the *torii*. It is, indeed, a very picturesque spot.

The third "excellent place," *Takama-ga-hara*, is a sand-plain about a mile east of the temple. It is said to be the place where the god used "to engage in frequent contests with foreign demons"; and "in the middle of the moor is the *oni-suka*, a mound which marks the grave of a demon slaughtered by the god." Not only is it true that "stone arrow-heads are often found here," as we are informed by the "Hand-Book" of Saw and Hawes, but there are also found stone and copper swords, which are thought to be relics of the stone age and the bronze age of Japan. The sand of the plain is red, made so, according to the tradition, by the blood of the demons, or of the hostile tribes, whom *Take-mika-zuchi* conquered. But the inevitable scientist steps forward to state that iron enters largely into the composition of the soil, and that "iron-sand" (*tessha*) is one of the famous products of that locality.

When we were informed that Kashima has its "seven wonders," we were not a little surprised, that the Caucasians and Mongolians should both have hit upon the number "seven" in the same connection. It must be left to the anthropologist to ascertain whether this coincidence is only accidental, or had its origin in a common source. A clue toward the opinion of a common origin, possibly in Hindostan, may be found in the fact that "seven" is one of the Buddhist sacred number. The masses for the dead are held on the seventh, twenty-first, thirty-fifth, forty-ninth days, etc., after death; there are seven gods of fortune, and seven passions; and one kind of a Buddhist cathedral originally consisted of seven temples. But, however, we may explain the coincidence, it is a fact that the Japanese have their *nana-fushigi* (seven wonders).

Of the "seven wonders of Kashima" the first two have already been explained (the *kaname-ishi* and the *mi-tarashi*). A third is found in certain pine chopsticks containing no resin. The superstition says that, if the pine trees are cut to make chopsticks with which to eat *mochi* and *ôdori* during the festivities of the New Year, they will be free from resin; but, if cut at any other time, or for any other purpose, resin will be abundant. Science, however, again comes forward with iconoclastic axe to chop up this nice story by informing us, that pine-trees do not yield sap in cold weather, which happens to include the time of that festival.

The remaining four wonders we cannot describe from the personal experience of seeing or hearing, and shall mention more briefly. One is "the sound of the waves," which when heard from the north, is a precursor of fair weather, but, when heard from the south or east, is a sign of storm. We have tried, but in vain, to find a satisfactory explanation of this.

Another "wonder" is found in the wistaria, which, by the quantity of their leaves, foretells the kind of each year's harvest.

Still another is an "endless river," the waters of which seem to be lost in the sand; but, as only a few *chô* beyond water suddenly gushes out of the sand, we may naturally conclude that the stream is only a miniature Acherusa.

The seventh and last "wonder" is found in "the second growth of pines" of *Takama-ga-hara*. It is ordinarily true, that, if a pine tree be cut down, the stump will not sprout again; but the pines of *Takama-ga-hara* produce a second growth. We were shown in Mr. Hanawa's yard such a stump, which had sent out several shoots with leaves.

A few short items, which have come by mail from Mr. Hanawa, while I have been writing, I must mass into one paragraph, regardless of connection. Those who killed deer were banished for three years. In the rear of the temple is a round, flat stone, which, possibly from its polished condition, was called *kagami-ishi* (mirror stone). Near the temple at Kashima, just the same as near the temple of Kasuga at Nara, is a so-called "Three Hat Hill" (*Mikasayama*). From a distance it looks as if the trees on the summit were arranged in three groups, each of which resembles a broad-rimmed hat made of split bamboos. That hill abounds in flowers, especially azaleas. As Kashima was the domain of the gods, it was politically independent; and its priest always had great influence in political affairs. In the times of Suikô Tennô (593-628 A.D.) a Buddhist temple called Shinguiji, was built at the foot of the hill on which Kashima is situated. The priest of this

temple was one of the few honoured with the privilege of holding direct converse with the Shôgun. Five *chô* south-west of Kashima is a bridge called *Katai-hashi*. At the bridge all pilgrims, even the Emperor himself, must dismount from horses or carriages, and proceed on foot across to the temple, and must return from the temple, on foot, till they have again crossed the bridge. There is a "story" that Mitsukuni, Prince of Mito, passed over that bridge on a horse, and became a leper (*Katai* or *Katai*), hence the name; but this is probably pure fable, invented, perhaps, to account for the name.

There are many other traditions more or less interesting, perhaps, but comparatively insignificant; therefore, for fear this contribution, though it cannot, by omitting them, be called exhaustive, might, by including them, be called exhausting, we shall be content with what has been thus far noted. Only pausing a moment to examine these traditions as a whole, we shall then proceed on our homeward journey, at the end of which the tired reader will likely be as willing to rest as were the weary travellers.

From an examination of the preceding stories, it will be readily seen that almost all are purely fabulous. Many of the tales have basis in geological and geographical facts; and others are certainly fabrications out of "airy nothings." All the references to *Take-mika-zuchi*, *Jimmu*, etc., are evidently pure myths; and we can not find any firm basis of historical truth, till we come down to the sixth century A.D. and thereafter. Even the traditions about Shotoku and Shinran Shonin, who were historical characters, are disfigured by fable. It is a greatness that the Imperial claim to an "unbroken succession" should rest upon such incredible tales. But, studying Japanese mythology as we would study Grecian and Roman mythology, we must admit that it is exceedingly interesting, and, in many points, astonishingly like the mythology of those two Caucasian peoples.

As stated above, the steamer for Hokoda was due at Ofunatsu at two p.m. Just at noon we all returned from Kashima to the inn, and ordered our meal set before us. We had only just begun to eat, when the maid, looking down the lake, suddenly exclaimed, "The steamer is coming," and exhorted us to make haste. We had no recourse but to shovel down the victuals with undue speed, or lose a good share of them; and, even as it was, we had hardly time to eat in a rush, pack in a hurry, and get out to the little steamer. To have a boat arrive more than an hour ahead of time, was decidedly a new experience for Japan, where "behind time" is so much more likely to be the fact.

The steamer was not large or elegant: there were two cabins, the larger of which is "third class," and the smaller "first class." There were a number of passengers, though not a crowd, in the third class; and in the first class cabin, which boasted a carpet on the floor instead of mats, there were besides ourselves, only two passengers. We preferred to sit most of the time on the deck just outside of the cabin, where we could better enjoy the breeze and the "pretty" scenery. We failed, however, to discover the "numerous small islands" which, according to the "Hand Book," "dot the surface of this inland lagoon." It is true, that "boats have to wind in and out through a channel traversing the reed-grown marsh in front of the town [Hokoda], and then by a wide canal penetrate into its very centre"; but the steamer could enter the channel only a little way. Then the passengers were transferred to a scow, crowded together into one small, close room, and pushed up to town.

Having reached Hokoda somewhat earlier than we expected, we conceived the idea of pushing ahead about five or six *ri* to Oarai, a pleasant sea-shore resort, to spend the night there. But the *jinrikisha* men said that, as the road was very muddy, they could not go, except in "double teams" at high charges, and, as we did not like the idea of being "gouged" again in that way, and could not find any horses, we concluded to foot it to the next "station," where we thought we could get pack-horses. We started out in gay spirits, but had not gone far, before we found that the road was "awfully" muddy. It was, in fact, impassable for *kuruma* and exceedingly unpleasant for foot-travellers. But being too proud to give up beaten and turn back to Hokoda, we trudged on for about a mile through the mud, and then tried, but in vain, to hire pack-horses. Taking off our shoes and stockings, putting on *waraji*, and rolling up our trousers above our knees, in native style, we kept on, and at six p.m. reached Momiyama. It was then out of the question to try to reach Oarai or even Onuki that night; and it was "in the question" only to stop at Momiyama, or to go ahead one *ri* to Konashi. Saw and Hawes describe Momiyama as "a very

poor village" with "no inns, no *kuruma*," and add: "If the unfortunate traveller be absolutely forced to halt for the night, there is a small inn at Benten, just beyond Konashi, called Ebi-ya, but the accommodation here only consists of two very small uncomfortable rooms." The present condition of both places is somewhat better than described above; for they have inns and *kuruma*, though the quality of the former is nothing extra. The inn (Koji-ya—Yeast House), where we were resting, present a little better appearance than we had anticipated; so that we finally decided to try our chances by halting there for the night.

The landlord was a little nervous, because it was the first time foreigners had stopped with him; but he did his best to entertain us. We ordered pack-horses for the next morning at five o'clock; got into the *o-ya*, which made us feel very comfortable after our tramp; were supplied with the best water and the best rice we had found on our trip; and went to bed early. We had joked a little about the name of the inn, and its probable "rising" qualities; but we did not fully appreciate our own jokes, till about eleven o'clock, when we began to "rise" in turns, step out into the corridor, to shake our night-clothes and bed-clothes, in the hope that the "*numi*" would "flee" away to "fresh fields and pastures new." I need say no more, except that we did not oversleep, but had dressed and eaten our breakfast before the horses came. A little before six o'clock we mounted to leave Moniyama (Fir Hill), which we had taken the liberty to change only a little into Noniyama (Flea Hill).

When we passed by the inn Ebi-ya, recommended above by Satow and Hawes, we concluded from an outside survey, that it might not be any better than the inn at Moniyama, unless perchance the fleas should be scarcer. Just beyond that inn we turned off from the road, cut through the woods down to the beach, along which we travelled the remainder of the way to Onuki.

Right here I make bold to correct the itinerary given on page 475 of the "Hand-Book." Those distances are stated as "only approximate," and are not far out of the way, except in one case; but the following are nearer the truth:—

Kashima to	8	Kashima to	81
Hokoda	8	Narumi	13
Moniyama	9	Onuki	15
Konashi	10	Mito	16

The direct road from Kashima to Moniyama would shorten the distance from one to two *ri*; but, as that road is more or less sandy, it is pleasanter to go via Hokoda and the steamer, especially as the boat is much quicker than *junkishia*.

In conclusion, as our packhorse men did not wish to go beyond Onuki, we hired an *obaa-san*, who offered herself, to carry our baggage in the basket in which she is accustomed to collect shells, and walked bare-footed along the beach about half a *ri* to Oarai. Having rested there a few hours, and enjoyed a salt-water bath, we walked a short mile to the Nakagawa; and, there hiring a sail-boat, had a pleasant ride of about three hours up to Mito, which we reached at six o'clock. Thus ended a three days' trip, which had given us a great variety of experiences. We had travelled early in the morning, at mid-day, and late at night; in sunshine, rain, wind, and darkness: by *junkishia* (single and double teams), by horse, by steamer, on foot, by sail-boat; over gravel, through sand, through mud, on lake, sea-beach, and river; in "full dress" and bare-footed; and we had been bitten by fleas, mosquitoes, and coolies; but we had seen a good deal of country scenery and country life, obtained much interesting information, and gained strength for body and mind. CLEM.

Mito, Aug. 30th, 1890.

INQUEST.

An enquiry was held on Monday afternoon in the U.S. Consular General Court before G. H. Scidmore, Esq., Vice-Consul-General, and Messrs. J. K. Goodrich and O. H. P. Noyes, Associates, into the circumstances attending the death of Lieut. W. C. Turner, of the corvette *Onuma*, which took place on Sunday, the 31st ult.

Dr. Stuart Eldridge deposed that at twenty minutes or a quarter to ten on Sunday morning he was called to No. 28. He met Mr. Rice, who told him that there was some man in the sample room, either dead or in a fit. On entering the room witness found a body lying in a rather inconvenient corner of the room amongst some papers, with a large pool of blood around. A small rifle was lying under the leg of the man. On examining the body witness found that life was extinct. Not recognizing the body, witness examined it and found a paper addressed to W. C. Turner. The

result of death was from shooting. The bullet entered a little above, and behind, the right temple. Such a wound could be easily self-inflicted with a rifle of no greater length than the one found. Witness examined the rifle; it had a cartridge in it recently discharged. Witness found a memorandum which looked as if some one had been writing something and had stopped, and a note of the amount of Mr. Turner's indebtedness to the Club Hotel to the 28th ult. He examined the body, and finding it that of a naval officer communicated with Dr. Gravatt. The rifle was a short one for shooting at targets in rooms. The size of the cartridge corresponded with the size of the wound. The wound was powder-singed, and the weapon must have been held in very close proximity to the head of the deceased. There was no other wound.

Geo. E. Rice deposed—About half-past nine I left my house to go to the office, and it probably took me ten or fifteen minutes to get there. On entering the compound I saw the back door of the office open. I asked of the boy's wife who was there, and his wife replied that there was an *o-kyaku* upstairs. I went up expecting to find in the *banto's* room the boy with a friend of his, as it did not occur to me that the person she referred to was a foreigner. On reaching the *banto's* room I was surprised to find no one there, nor in the next room. The sample room door was open. I stepped in there and looked around, but saw no one. Just then I heard a sound as of very deep breathing coming from the adjoining sample room, which I entered and after a search found in the western corner the body of a man lying on the floor, with his back to me so that I could not distinguish who it was. I went round to the other side of the body to ascertain who it was, and what was the trouble, but could not see who it was, the head being under the body. I then returned to my first position and discovered a small rifle under the body, and at that moment, another deep breath taking place, I connected this sign with the presence of the rifle. I at once went over to North and Rae's for assistance, and sent for Dr. Eldridge, who came in about ten minutes. I ought to have said that when the boy's wife mentioned about the visitor, she said the other boy had gone to Mr. Sargent's. When Dr. Eldridge came I took him to the room and pointed out the body to him. He at once made an examination and pronounced life extinct. When Dr. Eldridge turned the body over I recognised it, partly from a document found on it. Before it was taken from the premises I had recognised it clearly as that of Lieutenant Turner.

E. A. Sargent deposed—About half-past nine yesterday morning one of the boys of the office came to my house, and told me there was a foreigner in the sample room at No. 28, who wanted a pistol. I enquired who it was, but he could not tell me more than that he was from the Club Hotel. I asked if the visitor was sober and a gentleman in appearance, and he said he was. I rather resented the idea of any one coming into the place on Sunday, especially if he came in the back way, so I did not hasten, but finished my breakfast. I then went to the office, arriving there at ten minutes past ten. Mr. Rice met me at the door and said poor Turner was there, dead. I went in and found Dr. Eldridge, who assured me he was dead. Everything subsequent has been detailed by previous witnesses. When I went in the rifle was lying on the body, on the ribs. The deceased gentleman was quite familiar with our premises, and had been there frequently during business hours. During his visits there he had handled firearms. We have small saloon rifles and have often fired at the target there, and he has done so also. He knew where the rifles were and where the cartridges were kept. The cartridge that he used was a 22-calibre short, in-fibre cartridge, not the kind usually employed when we have shot at the target.

Nakaamura Takajiro deposed—I am employed at No. 28. I was there between 8 and 10 o'clock yesterday morning. A foreigner whose name I do not know came while I was there. He asked me to sell him a pistol, as I understood him, though he spoke in English. I told him that as this was Sunday, no one, not even Mr. Sargent, was there. He produced 20 cents and asked me to pay the *junkishia*. I did so, bringing back 10 cents change. He then gave me 2 yen 20 cents to give to Mr. Sargent on the following day. As I did not know his name I asked him to write his name, but he only wrote "Club Hotel." He asked me to give him a pistol, but I told him that all the doors were locked. I asked him to call on the following day. He went to the next room, where he saw a small air gun. He asked me whether there were any bullets, and I said there probably were some, somewhere. The bullets were on a raised stand; he loaded the gun and fired a trial shot. I do

not know whether the gun would fire bullets by means of powder. I do not know much of the working of such guns. He handed the rifle to me, and I went outside with it and asked the other boy whether he had gone for Mr. Sargent. He said he had not gone as he could not get a *junkishia*. I told him that I would go myself, and asked him to look after the premises upstairs. I placed the gun in the stair way and walked over to Mr. Sargent's. As I could not make out what the foreigner's intention was, I asked Mr. Sargent to come to the office. On my return, I met Mr. Rice, who asked me whether I had been to Mr. Sargent's, and I said I had. Mr. Rice told me to send Reikichi for the Doctor, and when the latter came he and Mr. Rice, Reikichi and I went into the room, where there was some one. The foreigner who came to purchase the pistol was there; dead as I supposed. Reikichi was the only person on the premises besides myself when the foreigner was present. I do not remember exactly, but think there were three or four other gus of the same kind.

Mr. Rice re-examined, deposed—The gun was called an air gun, but I think it fires cartridges as well. I have seen Mr. Turner shoot with the gun at the target in the office.

Kaneko Reikichi deposed—I was at No. 28, yesterday morning between 8 and 10. A foreigner, whose name I did not know, came while I was there. He did not speak to me. Takajiro got 20 cents from the foreigner to pay the *junkishia* man, but I took the money to the coolie and brought back the 10 cents change. I went out to the front of the office to send a *junkishia* man for Mr. Sargent, but finding none there returned, and Takajiro started off himself to find Mr. Sargent. I went upstairs and began to write, but came down soon expecting to find that Mr. Sargent had come. The foreigner had gone into the sample room at the beginning with Takajiro. The door was open; I presume it was opened by Takajiro when he went upstairs to clean the premises. The room in which I was writing was separated from the sample room by one wall. On going downstairs I went to another part of the premises, and on my return saw Mr. Rice. The only time I went to the sample-room was when I took back the change.

Mr. Rice here produced in Court the rifle found lying across the deceased's body, the discharged shell, and a box of similar cartridges.

T. W. Kennaway deposed—I am familiar with the gun now produced. With these cartridges it makes a very slight report. In the *banto's* room they might hear the report, but not downstairs.

Takajiro, recalled, deposed—The gun produced in Court is not the gun the deceased was handling at the time I was there. I think it was in the sample room together with the one he handed to me.

M. H. Robertson deposed—I last saw Lieut. Turner alive yesterday morning about nine o'clock. I saw him at the Club Hotel. I had seen him about seven or half-past seven. When I went to my bath I stopped at his window and called to him. He answered, and I opened the door and entered. He lay in bed with his eyes open, and said to me "Who are you? What's your name?" I told him, and asked him to get up and go off to the *City of Rio de Janeiro*. He refused at first, but finally consented. I got my bath and breakfast, and was passing through the side passage of the hotel when he called me by name, and said he wanted to talk with me for a few minutes. We went into a small room, and I asked him then to go off to the ship, and said I would go with him. He refused to go, and putting out his hand said "Good bye. When you see me again I'll be a dead Turner." He went back to his room, and laid down on the bed. I asked Mr. George to go for his friend Mr. Charlesworth, who I thought might have some influence. As he did not come for some time, I went myself—telling Mr. Hearne of Mr. Turner's condition. When I returned I went to the *Onuma* to notify Dr. Brush that the deceased was crazy. His eyes were wild, but his speech was perfectly cool, measured, and regular. He did not recognise me when first I awakened him. I noticed his eyes then. I have known Lieut. Turner nearly two years, intimately. I came directly back from the ship when I learned that deceased was at No. 28.

Charles George deposed—I saw the deceased yesterday morning between half-past four and five. I last saw him at from five minutes to nine to a quarter past. When I said "Good morning" to him, he did not know me. I said to him "Good morning, Turner; how are you getting along?" He said "Who are you?" I then asked, "Are you sick, Turner." I stayed with him till about five minutes to nine, when Mr. Robertson asked me to go round and get Mr. Charlesworth. He continued in the condition I have described. He was very quiet.

I went for Mr. Charlesworth, and as I came back called for Paymaster McDonald. I did not see Lieut. Turner afterwards, until yesterday afternoon, when I saw the body. From what I observed of his demeanour that morning there was every indication that deceased was out of his mind. He said—"Next time you see me I'll be a corpse."

The Court then retired for five minutes.

On resuming, Mr. Sculmore read the finding of the Court as follows:—

"(1.) That said William C. Turner was at the time of his death a citizen of the United States of America.

"(2.) That he died at Yokohama, Japan, Aug. 31, 1890, from the effects of a gunshot wound in the head, which wound was inflicted by his own hands.

"(3.) That at the time of inflicting said wound he was suffering from temporary insanity."

THE INDUSTRIAL TRANSITION IN JAPAN.

The political and social history of Japan during the past thirty years is one of the marvels of the nineteenth century. A feudal system which had lasted for several hundred years has been overthrown, and the country is now about to enter on an era of constitutional government, with all its possibilities for good and evil. Under the feudal system Japan was divided into sixty-four provinces, each having its own government, its own finance, its own money, and every one of those provinces constituted an organism which was independent industrially as well as politically. Each produced and consumed, flourished and declined, independently of the others. Over each was a feudal lord, with his body of retainers. Below these were traders, artisans, and farmers, who worked primarily for the welfare of the ruling classes, by whom they were held in contempt. The land was burdened with heavy taxes, and industry was held subservient to military purposes. Under such a system no large or varied industrial and economic activity was possible. In the short space of a single generation all this has been changed. The feudal system has been swept away, and the country consolidated under one central government, and the change in political conditions has brought with it a change in economic conditions. Japan is now undergoing an industrial revolution, and the country is in a state of industrial transition, the study of the evolution of which forms one of the most interesting problems of the age, and by no means a simple one. Not only is it affected by political conditions, but it also in turn reacts on them, for whatever affects the methods of production and distribution tends, not only to revolutionise politics, but also to change existing social arrangements and to modify ethical ideas. A glance at the history of Britain shows how the development of machinery profoundly modified social conditions. The yeoman disappeared, large factories arose, and the population crowded into large towns, new industries were organised, and the commercial spirit began to dominate the nation. Large fortunes were accumulated, and the working classes as now known became an important social factor, and the evolution of the industrial system brought us face to face with those problems which are now engaging the attention of economists and philanthropists. The period of the industrial revolution has not been very long in Britain, but it seems as if Japan were destined to go through the same stages at a much more rapid rate. What it will all lead to, either in this country or Japan, is hidden in the future, and all that students of the subject can do is to study the conditions of the past and the signs of the present, so that from these they may be able to give some little guidance for the future. The spirit of economic and sociological inquiry is stronger in Japan than almost any other country with which we are acquainted. Years ago earnest students were found spelling their way through Buckle, Herbert Spencer, and John Stuart Mill, and the results were crude theories of government and of economics. Now, however, there are to be found men in Japan who have undergone a thorough training in their own and in foreign countries, and their opinions and writings are worthy of the most careful consideration. One of these, Mr. Yeihiro Ono, Ph.D., has published, through the American Economic Association, a very thoughtful monograph on "The Industrial Position in Japan," and to a few of his chief points we propose to briefly direct attention.

Mr. Ono begins a sketch of the present industrial status of Japan, and gives interesting information regarding the population and the effects of recent changes on its amount and distribution, the methods

of agriculture and the systems of land tenure, the chief manufactures, and means of transportation. Mr. Ono remarks that, industrially as well as politically, Japan has developed independently of foreign influences. Of course this can only apply to purely native industries, for every one knows that Western influence has, in recent years, profoundly modified industrial methods, and displaced the domestic system by that of the factory. With few exceptions, the purely Japanese manufactures were carried on in the houses of the master workmen. Establishments were usually small, having at most not more than twenty or thirty employes, some of them being hired by the day and others being taken as apprentices during a certain number of years. As in all branches of industry appliances were very meagre, a long term of apprenticeship was required to develop the necessary skill. In gold lacquer painting, for instance, a young artisan required eight or nine years of training, aided by unmistakable natural talent, before he could succeed in working as a master in his department. Even in the common trade of a carpenter, five to seven years of apprenticeship is required. But no law existed touching the subject of industrial organisation, as was once the case in Europe. While Japan was passing through the period of handicraft industry, industrial matters were wholly regulated by customs, which, in many cases, were peculiar to each house and to each community. In such a state of affairs, it is not at all strange that art products reflected the individual characteristics of the artists. As in Europe, many of the industries had their guilds, by which they aimed to secure the good quality of their work, a feature which seems to show that human development tends to move along the same lines in all parts of the world.

The first industry in which the factory system was introduced in Japan was that of silk, as the extension of foreign demand for fine and uniform silk yarns called into existence many silk-reeling factories. For the first time in the history of Japan, women and children were employed in factories side by side with men, and the price of their labour was calculated according to the number of hours worked, the majority of the workers, however, being women and girls, adult men forming only 5 per cent. of the whole. The number of working hours varies from nine to fourteen per day, twelve hours being the most common. On account of the specially artistic nature of Japanese silk cloth, power looms have not been introduced to any great extent except for the most common fabrics. For many years it has been the policy of Japanese Government, either local or central, to encourage private industries of all kinds. Loans were made on liberal terms, and land granted with or without nominal rent. Cotton spinning and weaving factories, gas works, electric light plants, engineering and shipbuilding works, chemical manufactures of all kinds, water works, street cars, and many other industrial arrangements are rapidly increasing in Japan, and society is growing in activity as well as complexity. Mr. Ono gives a return of the Department of Agriculture and Commerce for 1886, showing that at that time the number of steam engines used for industrial purposes was 311, and the principal industries in which they were employed were as follows:—

Engines.		Engines.	
Silk factories	82	Shipbuilding	16
Coal mining	47	Cotton spinning ...	13
Rice hulling	44	Printing	6

Since the above-mentioned date there has been quite a "boom" in company promoting, and the number of engines must have increased to a very considerable extent. In addition to those just mentioned, the industries in which steam power is more or less used are iron smelting, sugar refining, paper manufacture, and chemical manufactures.

The means of communication and of transportation have been very much improved and extended. Roads are now greatly improved in condition, and coast navigation has been very much developed. The Japan Mail Steamship Company, which is under the supervision of the Government, has established regular communication, not only with the chief ports of the country, but also with China and other countries. Besides these there are many smaller companies trading between the different ports. In 1886 the whole tonnage of Japan, including steamers and sailing ships, was 117,303 tons, and the number of Japanese junks was over 727,000. To crown these improvements the expansion of telegraph lines—which in 1887 was over 16,000 miles in extent—and the establishment and development of the postal service deserve special mention.

One of the most important factors in the industrial development of Japan has been the rapid extension of railways. The first line was only constructed in 1872, between Tokyo and Yokohama. The next was between Kobe and Osaka. The total length of lines then was not more than

eighty miles. In 1881 "The Japan Railroad Company" was chartered, with a capital of 30,000,000 dollars, for the purpose of building a railroad between Tokyo and Aomori, in the north, a distance of 529 miles. This was the first instance in which such an enterprise had been undertaken in Japan by a corporation. About the same time the Government built a line of eighty-five miles in Yezo. But it was in 1885 that the true importance of railroads was realised by the people, and that a railroad mania began to spread throughout the country, and in 1886-7 thirteen new companies were created. About the same time the Government decided to build a railroad between Tokyo and Kyoto, along the eastern coast, and this was opened in June of last year, and at the same time a meeting was held to celebrate the completion of the first 1,000 miles of railroad in Japan. We may add that the private lines obtain charters from the Government, and are subject to its general supervision as regards details of working. It is hardly necessary here to go into the details of the various schemes for extending the railway and shipping facilities, and we refer such of our readers as are specially interested in the subject to the yearly reports issued by the Imperial Railway Department of the Japanese Government.

The facts we have mentioned are sufficient to give some idea of the great industrial changes which have taken place in Japan, and at another time we may consider some of the conditions which Mr. Ono considers necessary for the continuous industrial development of his country.—*Industries.*

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, September 1st.

A detachment of artillery has been brought into Melbourne as a precautionary measure. The coal supplies at the gas works having been exhausted and no further cargoes forthcoming the city is almost in darkness.

London, September 2nd.

A demonstration has taken place at Melbourne in which forty thousand strikers took part. The excitement was intense, but has since calmed down. Trade, however, remains at a standstill.

London, September 3rd.

Since Friday last the United States Treasury has purchased five hundred thousand ounces of silver at 119 to 119½.

The King of Portugal is ill of typhoid fever.

London, September 4th.

The miners' strike is extending in Australia, and it is expected will shortly spread to New Zealand.

[FROM MANILA PAPERS.]

Madrid, August 15th.

There is a suspicion that cholera has invaded Tortosa.

Sr. Canovas has left for San Sebastian, where the French and Austrian squadrons are expected.

PASSENGERS.

ARRIVED.

Per British steamer *Aucania*, from Hongkong:—Mr. and Mrs. G. F. Prevost, two Misses Russell, Mr. E. Stoner, Mr. F. Collins, Hon. G. H. Cox, two Misses Cox, Mr. J. Gribbon, Mr. P. H. Schmid, Mr. Chong How Keong, Mr. Ah Sam, Miss Eyre, and Miss Hamper in cabin; 28 passengers in steerage.

Per British steamer *Gaelic*, from Hongkong:—Messrs. W. Wotton, M. Argenti, M. Palmer, M. Wilkinson, E. George, Lieut. Vignoles, and Mr. M. O. Diocoll in cabin. For San Francisco: Lieut. Colonel J. Stevens, Messrs. O. Chadwick, H. Budler, S. Hancock and servant, O. Lloyd Owen, and Mr. and Mrs. Salvador Roa in cabin.

Per Japanese steamer *Satsuma Maru*, from Kobe:—Mr. Peebles, Mr. Forbes, Rev. Mr. and Mrs. Chapbell, Stanley's opera troupe (31 members) in cabin; and 25 passengers in steerage.

Per Japanese steamer *Yokohama Maru*, from Shanghai and ports:—Prince and Princess de Carati, European nurse, and 3 children, Mr. and Mrs. Hy. Edgar, Mrs. T. Jordan, maid, and 3 children, Mrs. H. T. Lee, Miss Shed, Mr. J. M. Birch, and Mr. J. R. Black in cabin.

Per British steamer *Straits of Belle Isle*, from Vancouver, B.C.:—5 Japanese in cabin; 28 Chinese in steerage.

Per Japanese steamer *Omi Maru*, from Hakodate:—Mr. Blakeway, Miss Blakeway, Mrs. Scott, Mr. and Mrs. Fujie, Messrs. Kondo, Katayama, Saito, Hiraoka, and Fushibato in cabin; 4 passengers in second class, and 62 passengers in steerage.

Per German steamer *Bellona*, from Europe:—Mr. von Farp in cabin. From Singapore: Mr. Fied in cabin.

Per Japanese steamer *Nagato Maru*, from Kobe:—Messrs. Bergman, Schmeier, and N. Wilson in cabin; 35 passengers in steerage.

Per French steamer *Saghalien*, from Hongkong via ports:—Messrs. Tsubaki, John Timke, V. Gans, Hanson, Mr. and Mrs. Siloiya, Mrs. Von Hemert, Messrs. Hart, Clinard, Bunnah, Saino Yomio Shoude, Marie Olier, Mr. and Mrs. Douglas Jones, amah, and infant, Messrs. Douglas J. Pince, Kuchedia, and John Roberts in cabin.

Per Japanese steamer *Tokio Maru*, from Hakodate:—Mrs. Holms and 3 children, Mr. Hainki Yoshiaki, and Mr. Sone Seizo in cabin; 6 passengers in second class, and 38 passengers in steerage.

DEPARTED.

Per American steamer *City of Rio de Janeiro*, for San Francisco:—Mrs. W. B. Bunnell and six children, Miss E. Allen, Mrs. G. W. Donald, Mrs. M. Allen, Mrs. Bowyer, child, infant, and Japanese servant, Mrs. Wex, Dr. H. Smith, U.S.N., Dr. J. S. Owens, Messrs. Gen. Fillard, Jas. Larty, I. Wallace, Jas. Bissett, A. J. Macpherson, E. Wex, Chas. Flynn, G. Gowers, R.N., Kirk Kinney, T. P. Lightfoot, H. Falch, H. T. Fink, Mrs. Jas. Slauson, Messrs. P. Welner, H. I. Miller and servant, and Geo. Murray in cabin.

Per British steamer *Belgie*, for Hongkong:—Messrs. A. G. Stephen, Ho Ming Sam, C. M. S. Bryant, and Mrs. C. George in cabin.

Per French steamer *Sydney*, for Shanghai via Kobe:—Miss Scott, Mrs. G. J. Brocklinder, Mrs. C. C. Marsh, Messrs. Ch. Haenni, H. W. Sale, Wagner, F. Palmer, Uguhart, E. S. Perrot, Mrs. S. P. Campbell, Mr. Shaw, Mr. and Mrs. J. Aranger, 2 infants and amah, Mrs. Ward Hall, Mr. Henry R. Kinneal, Mr. J. P. Donovan, Mr. Thomas Gatwell, Mr. and Mrs. Romer, 2 infants and amah, Mrs. A. Werner, Miss Yellop, Mr. K. Kimball, Mrs. J. Darryll, Mr. Fedérick, Mr. L. Muraour, Mr. and Mrs. P. Muraour, Mr. Wadagaki Yasuzo, Mr. Yamada Saku, Mr. Hirai Raikichi, Mr. Arisaka Shozo, Mr. J. Siebenmann, Mr. A. Lentz, Mr. L. Abrahamson, Mr. Mo-guer, Mr. J. M. Mur, Mrs. Rocher, Mr. Clister Holcombe, and Mr. Geo. W. Donald in cabin.

Per Japanese steamer *Yokohama Maru*, for Shanghai and ports:—Dr. and Mrs. Kimball and infant, Dr. and Mrs. Brander, Mr. and Mrs. Moore, Mrs. Morrison, Mrs. F. A. Carroll, Miss Allen, Miss Simons, Rev. C. H. Marshall, Dr. Max Fesca, Dr. Miles, Archdeacon Wolf, Messrs. Isaac Meyer and Lee Te-za Kwai in cabin; Miss Yamamura, Messrs. Yoshida, Fujino, Matsun, Kato, Ando, and Tashiro in second class, and 127 passengers in steerage.

Per British steamer *Gaelic*, for San Francisco:—Messrs. O. Chadwick, Sydney Hancock and Chi-

nese servant, H. Budler, O. Lloyd Owen, Mr. and Mrs. Salvador Roa, Mr. and Mrs. H. Edgar, Messrs. S. B. Samuels, L. Schneider, Jas. Taylor, S. Sakata, John Woodward, Mr. and Mrs. J. Hutchinson and three children, Mrs. Jordan and two children, Messrs. W. Roth, J. H. Twigg, Chevalier de Martino, Dr. K. Rathgen, Mrs. Turner and two boys, Lieutenant Nakamura, Mr. S. C. Healing, Mrs. Thellaf, Miss Thellaf, Mr. J. M. Birch, Dr. G. Wagner, Messrs. S. Kasai, J. A. Greenwood, E. A. Brocklehurst, W. M. Abbot Anderson, C. E. Lehmann, J. S. Lapraik, H. J. Hunt, Rev. and Mrs. W. R. Clancy and three children, and Captain W. G. Walker in cabin.

CARGOES.

Per French steamer *Sydney*, for Shanghai via Kobe:—Silk for France 71 bales. Waste Silk for France 38 bales.

Per Japanese steamer *Yokohama Maru*, for Shanghai and ports:—8042.50.

Per British steamer *Gaelic*, for San Francisco:—

	SAN FRANCISCO.	NEW YORK.	OTHER PORTS.	TOTAL.
Shanghai	2,177	1,833	2,252	6,262

REPORTS.

The British steamer *Gaelic*, Captain Peaine, reports:—Left Hongkong the 24th August at 6.04 a.m.; had light N.E. winds and smooth sea. Arrived at Kobe the 28th at 6.30 p.m., and left the 30th at 12.15 a.m.; had westerly winds and cloudy weather. Arrived at Yokohama the 31st August at 5.22 a.m.

The Japanese steamer *Yokohama Maru*, Captain Swain, reports:—Left Shanghai the 22nd August at 2.30 p.m. Arrived at Nagasaki the 24th and left the 25th at 5 p.m. Arrived at Kobe the 27th at 8.20 a.m.; had fine pleasant weather throughout the passage. Left Kobe the 28th at noon; off Ooshima had light variable winds with heavy easterly swell. On 29th weather very threatening; stood up Shimizu Gulf for Shimizu, where anchored at 1 p.m. At 6 p.m., began to blow hard from N.E. with falling barometer and rain. On 30th blowing a heavy gale with squalls of hurricane force; lowest reading of barometer 29.10. Left Shimizu at 10.20 p.m. Arrived at Yokohama the 31st August at 8.40 a.m.

The Japanese steamer *Yamashiro Maru*, Captain Young, reports:—Left Kobe the 1st September at noon; had light south-easterly winds and overcast weather and rain at intervals to Hamisaki at 4.5 p.m.; thence E.S.E. to E. and moderate breeze and rainy weather to 2 p.m.; when the weather cleared, easterly wind holding but no rain till 8 a.m. on the 2nd off Omisaki; thence E.N.E. to N.N.E. gentle breeze and occasional smart showers to Sagami at 4.10 p.m. when the wind came light from N. with fine cloudy weather, and so to port, heaviest easterly swell off Sagami. Arrived at Yokohama at 6.15 p.m.

The German steamer *Bellona*, Captain Haesloop, reports:—Left Hamburg the 12th July and Hongkong the 29th August; had fine weather to Ku Channel; thence to Rock Island strong easterly wind and high southerly sea.

The Japanese steamer *Tokio Maru*, Captain Drummond, reports:—Left Hakodate the 3rd September at 8.15 p.m.; had fine weather and light southerly winds; passed Suiza-saki at 11.53 a.m.; abreast of Kuro-saki at 7.42 p.m. with moderate S.S.W. winds. Arrived at Oginohama the 4th at 6.20 a.m., and left at 10.20 a.m.; had light to moderate south easterly winds; passed Imbays the 5th at 1.42 a.m., weather still the same; rounded Susaki at 9.35 a.m. with fresh to strong N.N.W. winds, which continued to port. Arrived at Yokohama at 6.30 p.m.

LATEST COMMERCIAL.

IMPORTS.

At the moment the Yarn Market is quite demoralized: buyers do not seem to know how low to offer for goods, and are sometimes surprised that the very cheap prices offered by them for English Yarns are taken. Prices are very irregular. Bombays are nominally lower, with nothing doing. Piece goods are also quiet. Sales for the week amount to 500 bales English, and 50 bales Bombay Yarns.

Sheet Iron	3.30 to 3.50
Galvanized iron sheets	6.00 to 6.50
Wire Nails, assorted	4.70 to 4.60
Fin Plates, per box	4.80 to 5.40
Pig Iron, No. 3	1.20 to 1.25

KEROSENE.

Very few sales reported of late, and the deliveries have not been sufficient to counterbalance arrivals. Quotations are nominally unchanged, but there is really no business to test them. Stocks are heavy, being in the neighbourhood of 750,000 cases.

QUOTATIONS.

Chester	Nom. \$1.75 to 1.77 1/2
Comet	Nom. 1.70 to 1.72 1/2
Devoe	Nom. 1.67 1/2 to 1.70
Russian	Nom. 1.65 to 1.67 1/2

SUGAR.

Next to nothing doing in Sugar, the sales noted below being confined to White sorts. Sales are 1,339 piculs at \$6.42 1/2 per picul, 702 piculs at \$6.20, and 280 piculs at \$5.75; total, 2,321 piculs.

White Refined	\$5.80 to 8.40
Manila	3.80 to 4.60
Taiwanfoo	—
Pentama	3.00 to 3.40
Namiida	2.90 to 3.20
Cake	3.70 to 4.10
Brown Takao	4.40 to 4.50

EXPORTS.

RAW SILK.

Our last issue was on the 29th August, since which date settlements are entered as 450 piculs, divided thus:—Hanks 55; Filatures 220; Re-reels 155; Oshu 20. In addition to this direct export has been 64 bales, making the total business of the week equal to 520 piculs.

The Market has been much more active European buyers entering pretty freely; shippers for the United States also have not been idle, and with higher Exchange holders are asking and obtaining a rise of \$10 per picul on some descriptions of Silk. Japanese are encouraged considerably by this little turn in their favour; and many holders refuse to sell at all, having made up their minds to wait a little longer and see what the future brings forth.

Business done has been pretty equally divided between America and Europe, and the last few

days buying has become more general; telegraphic news from consumers is not very brilliant, although some shippers appear to think that the worst is past.

Supplies during the past week have been very meagre owing to the detention of Silk en route from the country by the broken down roads; in consequence of this our stock list shows a slight reduction upon that of the 29th August, but there is no doubt we shall again see ample Silk when the railways are once more mended.

There have been five shipping opportunities during the interval: no less than four steamers leaving on the 31st August. These carried the following Silk:—Sussex, 35 bales; Mongkut, 70 bales; City of Rio de Janeiro, 109 bales, all for the American market; while the French mail boat Sydney carried 71 bales for Lyons. On the 31st inst. the Gaelic left for San Francisco taking 315 bales for the New York market. These departures bring present export up to 2,767 against 7,085 last year and 5,214 on the 5th September, 1888.

Hanks.—There has been a fair amount done in these, several parcels being taken for Europe, and at the close prices are strong, tending upwards; the transactions done include Shimomita at \$550; Maibashi, \$540; Hachoji, \$510 and \$500. Stock is small and well held.

Filatures.—These have hardened considerably, and holders have managed to find buyers at quotations. On the 1st inst. Tokusha and equal quality were done at \$615; they are now held for \$625, \$620 having been refused. Hakuonru has touched \$635, and owners would not go on unless at an advance. Some Matsumoto Silks have been hooked at \$625, and the large Filature men have practically withdrawn from the Market for the time being. Some nice parcels of fine sized Silk have been taken for France at prices ranging from \$610 to \$650 according to quality.

Re-reels.—These, already too dear in comparison with Filatures, have again advanced and business has been done at the advance; considerable parcels of Kanrakusha have been booked at \$612 1/2 for No. 1 and \$590 for No. 3. These prices with present rates of Exchange look dear. Various lots of common Bushu and Yechigo with Hitachi have been taken at \$585, \$570, \$565, and are probably destined for Europe.

Kakeda.—No transactions at all this week; prices nominally the same.

Oshu.—The sale foreshadowed in our last was completed at \$545, and the goods shipped to Europe by the French Mail.

QUOTATIONS.—(NEW SILK.)

Available supplies to date	11,450	13,100	13,500

WASTE SILK.

Settlements in this branch have been 133 piculs of Noshi, nothing done in other kinds.

The Market is very dull, and shippers get but very little encouragement from their clients abroad.

Japanese on the other hand appear to be listless, not caring whether they sell or no.

The only export during the week has been per steamer Sydney, which vessel took 18 bales Noshi for Marseilles and 20 bales for London. Shipments to date are therefore 908 piculs against 1,217 last year and 1,294 in 1888.

Pierced Cocoons.—No business as yet; the stock is not very large, and holders seem quite content to wait.

Noshi.—The only sales this week have been in this department, and they include Oshu at \$127 1/2 and \$132 1/2, with Joshu assorted at prices ranging from \$75 to \$80.

Kibiso.—No business at all in this, although the stock is very large being over 5,000 piculs; dealers must come down in price if they want to do any considerable business.

QUOTATIONS.—(NEW WASTE.)

Pierced Cocoons—Good to Best	—

Oshu	195	Sundries	190
Taysam Kinds	5		
Total piculs	8,550	Total piculs	9,850

TEA.

Business no doubt would have been larger if the brokers had not demanded higher prices for Common to Medium grades. These grades are now one dollar per picul higher all around. Settlements for the week are 3,615 piculs, making a total of 195,045 piculs, as compared with 160,150 piculs in 1889. At the close the market is quiet, with scarcely anything doing.

CONTRACTORS TO THE ADMIRALTY, LEADING STEAMSHIP COMPANIES, AND YACHT OWNERS.

STEAM LAUNCHES & YACHTS,

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Mid-rate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 15 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. Illustrated Catalogue in English, French or Spanish. Send for copy to

SIMPSON, STRICKLAND & CO.

DARTMOUTH, SOUTH DEVON (ENGLAND).
LONDON OFFICE:
101, QUEEN VICTORIA STREET, E.C.

MACHINERY.—Mr. ARTHUR WADHAM, proprietor of *The Machinery Market and Exporter* (illustrated)—the greatest machinery business journal published—(Subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery and Engineering Materials. Mr. Wadham is open to act as sole Buying Agent in England for one or two good firms in Japan desiring to deal with a reliable house. Mr. Wadham's intimate knowledge of the English Machinery and Engineering Trades enables him to save large sums to foreign customers placing their orders in his hands. Firms dealing with Mr. Wadham may rely upon being served in a prompt and straightforward manner. Address:—Mr. Arthur Wadham, Engineering Offices:—101, Queen Victoria St., London. Registered address for telegrams—"Wadham, London." Jan. 28, 1890.

THE GREATEST WONDER OF MODERN TIMES. HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SYDNEY BAKER, in his work entitled "The Nile Tribunes in Abyssinia," says—"I ordered the druggist Maffomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In 1 short I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful in an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect on the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN! HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It is miraculously healing and ulcerations, curing skin diseases, and in arresting and curing inflammation. Mr. F. C. GOSSET, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tremendous quantity of Ointment was worth a fresh and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1889.

KEATING'S INSECT POWDER.

BUGS, FLIES, MOTHS, BEETLES, and all other insects are destroyed by KEATING'S Insect Powder, which is quite harmless to Man, the Animal, and the Inflammation. The success of this Powder is extraordinary, and no one need be troubled by these pests. It is perfectly clean in application. Ask for and take no other than "KEATING'S POWDER," as imitations are numerous, and fail in giving satisfaction. Sold by all Chemists in Tins and Bottles. May, 3, 1889.

NOW READY,

WITH COLOURED PLAN.

A FULL REPORT on the ERUPTION of BANDAI-SAN, being a reprint from the "JAPAN MAIL" of copious translations from Tokyo Journals, a Description by "Our Reporter," and an "Editorial," written after a visit to the locality. Price 50 Cents.

To be obtained at the *Japan Mail Office*, or to KELLY & WALSH, Limited.

YARROW'S SMALL STEAMERS AND STEAM LAUNCHES.

SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, SEPT. 13, 1890.

SUMMARY OF NEWS.

COUNT YANAGIWARA will, it is said, be nominated by the Emperor Vice-President of the House of Peers.

H.I.H. PRINCE KOMATSU, who visited Yokosuka on the 4th instant, returned to the capital on the following day.

BARON H. VON SIRBOLD, Secretary of the Austrian Legation, will leave Japan on or about the 15th instant for home.

H.I.H. PRINCE ARISUGAWA TARUHIRO arrived at Kyoto on the 3rd instant, and proceeded to the Arima Hot Springs on the following day.

DURING the month of August last the amounts of coins struck in the Osaka Mint were yen 87,510 in gold and yen 1,185,473 in silver.

PRINCE MORI, ex-chief of the Choshu clan, proceeded to the Imperial Palace on the 6th instant, to pay his respects to the Emperor.

H.I.H. PRINCESS KITASHIRAKAWA returned to the capital on the 8th inst. from Tochigi Prefecture, where she had been staying for some time.

THE line of the Osaka Railway Company between Kashiwabara and Kamegase, having been completed, was to be opened for traffic on the 8th instant.

It is commonly reported that Mr. Shibusawa Eichi, President of the 1st National Bank, will be nominated by the Emperor a member of the House of Peers.

THE receipts of the Tokyo Tramway Company during last month amounted to yen 12,054.80, showing a decrease of yen 2,513.82 as compared with the previous month.

NEWS from Sapporo dated the 9th inst. announces that in consequence of recent heavy rains the Toyohira River has overflowed. Great damage has been done to embankments; about

three hundred houses have been submerged, and thirteen buildings carried away.

THEIR MAJESTIES THE EMPEROR AND EMPRESS have been pleased to grant a sum of yen 1,000, towards the fund for the relief of sufferers by the recent conflagration at Osaka.

RAILWAY communication between Shiraishi and Okawara, which had been stopped in consequence of damage done to the line by the recent heavy rains, was re-opened on the 8th instant.

THE number of visitors to the Botanical Garden of the Imperial University during August last totalled 463, of whom 5 were foreigners, and 9 special, the remainder being ordinary visitors.

THE ordinary meeting of the Cabinet was held on the 9th instant, and was attended by Counts Yamagata, Yamada, Matsukata and Saigo, and Viscount Aoki, the proceedings closing at 4 p.m.

THE receipts of the Patents Bureau in the Agricultural and Commercial Department during the month of August last were yen 1,194.175, showing a decrease of yen 392.55 as compared with the previous month.

ON the 25th ultimo two men were killed by lightning at Tomiokacho, Amakusa-gun, Kumamoto Prefecture. On the 1st inst. a man was killed by lightning at Tanabecho, Nishimuro-gun, Wakayama Prefecture.

H.I.H. PRINCE KACHO, who leaves Japan on the 14th inst. for Germany to complete his studies, was received in audience by the Emperor on the 9th inst. Afterwards His Highness paid a visit to the Imperial Sanctuary.

ACCORDING to a report by the Sanitary Bureau of the Home Department, the number of persons seized by cholera throughout the empire from the commencement of the epidemic to the 8th inst. was 16,804, of whom 10,152 died.

IT is commonly reported that the Senate will be abolished on the 30th instant, when twenty Senators will be nominated by the Emperor as members of the House of Peers, while the remainder will be placed on the retired list.

TWO Chinese, named Ah Ro and Ah Chu, employed on the *Saito Maru*, were arrested by the Japanese Authorities on the 7th instant at Yokohama, on a charge of having smuggled sixteen tins of opium, and were handed over to the Chinese Consulate.

A TYPHOON swept over the island of Yonakuni, Okinawa Prefecture, on the 17th ultimo. It raged from morning till evening, destroying a hundred and thirty houses. On the 25th of last month a whirlwind visited Fukunamimura, Kamizaga, Fukuoka Prefecture, and destroyed two dwellings.

AN outbreak of fire took place early in the morning of the 5th instant, in a house at Shimomachi Ichome, Nishiku, Osaka. The wind being very strong at the time, the flames spread quickly, and some eighteen hundred houses were destroyed before the fire could be got under control. About a hundred and fifty police and firemen were injured.

AN earthquake was felt in the capital on the 5th instant at 7h. 57m. 19s. The duration was three minutes, the maximum horizontal motion

being 0.8 millimetre in 2.4 seconds. A shock was experienced on the 6th instant at 1h. 11m. 55s. The duration was one minute and forty seconds, the maximum horizontal motion being 0.6 millimetre in 1.0 second.

AT Osaka, a Chinese firm has been robbed of the sum of \$150,000 by one of its Chinese employees, known among the Japanese workmen as "Tama-san," who absconded. A reward of \$1,000 was offered for his arrest, or for information leading to the same, by the Chinese Consul at Kobe. The man was finally arrested by Messrs. Miura and Morita, Osaka detectives, on the 4th instant, in Fukui Prefecture, where he was hiding.

ACCORDING to a report issued by the Home Department there occurred in the empire during July last, 56 earthquakes, felt on 23 different days; the day on which the largest number was felt being the 8th, when there were 8 shocks; while on the 4th, 10th, 19th, and 25th there were 4 shocks each day. The hour during which the greatest number of earthquakes was felt was between 2 and 3 a.m., and the most severe oscillation took place between 11 p.m. and midnight. The hours free from earthquakes were between 11 a.m. and noon, and between 6 and 8 a.m. The provinces which were visited by shocks during the month were Iwaki, Iwashiro, Echigo, Kozuke, Shimozuke, Hitachi, Shimoda, Kazusa, Musashi, Sagami, Izu, Suruga, Ise, Kii, Iwami, Aki, Suo, Higo, Satsuma, Bungo, Hizen, Buzen and Hyuga, and the Kurile Islands. The earthquake of widest effect was that of the 19th, which extended to eight provinces and affected an area of 2,010 square *ri*. The provinces which experienced shocks most strongly were Suruga and Hitachi.

THE Import trade has increased largely in volume, but prices have seen a considerable decline, and business can only now be done on a much reduced scale of rates. The large sales of Yarn have been nearly all English spinnings—3,700 bales, against 120 bales Bombay. A small business has been done in Shirtings and T.-Cloths, the remaining principal item being Italians, of which 14,000 pieces have been taken. Metals all round have been dealt in, and the total is considerable, but at another smart drop in prices. Deliveries of Kerosene have been fair, but values are almost nominal, though unchanged, and the stock still continues in the neighbourhood of 700,000 cases of all brands, though there have been no arrivals during the week. Sugar is a drug. Business in the principal Export still hangs fire, and holders of Silk appear to be as strong as ever. It is now generally admitted that reellers paid very high prices for cocoons, and that the growers are reaping the benefit. Last year this was reversed: the country people sold their produce at low rates, the reellers and middle-men getting the "pull." Stocks are heavy, and there is a large quantity of good Silk on the market, and as arrivals are on the increase as communication with the interior is restored, it is difficult to see how holders can relieve themselves from the tight place into which they have fallen. If they rely upon any considerable drop in exchange, they are surely depending upon a rotten reed. There has been some business in Waste Silk, though not much, prices asked being still high. The Tea trade is gradually narrowing, and this week grades above Good Common and Medium have received slightly more attention, though the bulk of the business has been in Common to Medium. Prices tend upwards. Exchange has fluctuated slightly, the latest movement being a further drop to-day.

EDITORIAL NOTES.

THE "KEIZAI ZASSHI" ON THE EXHIBITION.

THE *Keizai Zasshi* declares that the Exhibition of 1890 has been in many respects a failure. The want of system in the arrangement of the exhibits, the difficulties that have arisen between the assessors and the exhibitors, the singular circumstance that a large number of articles which were relatively moderate in price were sold during an incredibly short period after the opening of the Exhibition—these are but trifling, in our contemporary's opinion, when compared with some of the fundamental mistakes that have been committed by those connected with the Exhibition. In the first place, the Tokyo magazine alludes to the circumstance that the sale of the articles has been extremely unsatisfactory. While the exhibits sold at the Exhibition of 1881 amounted to yen 160,000, the amount in the present case has been only yen 150,000, out of which about yen 30,000 represents the amount realized by a special public sale held after the formal closing of the Exhibition. Taking the amount of sales in 1881 as a criterion, the sales of the present year's exhibits ought to have been upwards of yen 400,000, the total number of exhibits having been exceedingly numerous this year. Now, this result is attributed by the authorities, or at least by some of them, to the general depression of trade in the country. The *Keizai Zasshi*, however, while acknowledging in part the truth of this contention, is inclined to place a considerable portion of the responsibility on the shoulders of the Exhibition authorities, as well as on those of the exhibitors themselves. The latter and those who encouraged them made a fundamental mistake in giving an undue share of their attention to those objects of art which there is least prospect of disposing of in the present state of the country's economical development. To take a few practical examples: our contemporary mentions that there were screens and other furniture costing many thousands of yen. Now, to use such articles, the house and all the other accessories must be correspondingly luxurious in style. Yet how many persons are there in Japan who can afford to spend several hundreds of thousands of yen in the construction and furnishing of their dwellings? In short, our contemporary is of opinion that the majority of the objects of art exhibited in the 1890 Exhibition were above the purchasing capacity of the Japanese. The *Keizai Zasshi* attributes this to the indiscriminate encouragement given by the authorities to art and art manufactures. There is now a strong movement both within and without the Government for the purpose of reviving and developing the country's art, but the Tokyo journal deprecates strongly the injudicious encouragement given to artists and art manufacturers. If any special art is really capable of development, it will advance even under unfavourable circumstances, and too much encouragement is very often highly injurious to its natural and legitimate development. Our contemporary thus calls the attention of the Government and the exhibitors to the importance of devoting in future more of their attention to the development of arts of practical utility.

PERSONAL NEWS.

MR. YANO FUMIO, formerly one of the leaders of the *Kaishin-to*, now devotes himself to literary pursuits. He is contributing a series of literary jottings to the columns of the *Hochi Shimbun*. Unfortunately, however, he has become the subject of general mirth on account of several absurd blunders which he recently made in his criticism of celebrated poems—and also in a historical criticism. He pointed out supposed blunders in the poems, whereas the blunders were entirely the fault of his memory, the phrases pointed out by him never having been used by the poets. His mistake in historical criticism was of the same nature, and need not be explained here.

Mr. Kusumoto Masataka, Vice-President of

the *Geuro-in*, and member elect of the Diet, is now reported by some journals to be in no enviable situation. He is understood to be desirous of being appointed President of the House of Representatives, but it is rumoured that there is little hope of his ever obtaining the position, as he has offended a large majority of his fellow members by his "tall" stories and his haughty manners.

Mr. Hatoyama, formerly director of the Bureau of Investigation in the Foreign Office, is reported to be canvassing the suburbs of Tokyo, with a view to filling the vacancy which is likely (almost certain as some persons say) to occur on account of the legal disability of Mr. Mori Tokinosuke. Mr. Hatoyama has to contend against a host of antagonists of no mean ability. Mr. Tsunoda Shunpei, a distinguished barrister who was defeated in the urban division of Kanda at the general election, and Mr. Masuda Kokutoku, younger brother of Mr. Masuda Takashi of the *Mitsui Bussan Kaisha*, are the more prominent of the five or six gentlemen now reported to be in the field against Mr. Hatoyama.

Count Ito has often been mentioned as the most likely person to receive appointment to the Presidency of the Upper House, and the report has as frequently been contradicted. It is again rumoured in certain quarters that he has at last consented to accept the offer. We believe the Count is now recruiting his health either at Kobe or Kyoto.

Mr. Kaneko Kentaro, Chief Secretary of the House of Peers, who, as we have already stated in these columns, seems to hold no very high opinion of the nobility, will, if we may credit a rumour, be transferred to the Chief Secretaryship of the House of Representatives. At any rate, Mr. Kaneko is now believed to have got himself into difficulties with his superiors.

Mr. Snematsu Kencho, who lately resigned the Directorship of the Bureau of Local Government on his election to the House of Representatives, applied for admission to the *Taisei-kwai*, and the application was accepted. It is now reported, however, that he has since reconsidered his position, and declines to avail himself of the favourable reception accorded to his application. He has not declared himself in favour of any of the existing parties. His successor at the Home Office has not yet been appointed. Mr. Oseko and Mr. Oki (formerly Governor of Kanagawa) are mentioned as probable candidates.

DIFFERING DOCTORS.

We have lately received a European merchant's account of the manners and customs of Japanese tradespeople in their dealings with foreigners. Let us now see what a Korean has to say of these same Japanese—an anonymous Korean, whose words are reproduced by the *Choya Shimbun*:—"Commerce has not yet made much progress in my country. The only foreign merchants doing business there are Japanese and Chinese. Of Western traders we see nothing. The chief staples of import are camlets and kerosene, together with tea and matches. The articles of export are gold dust, hides, and cereals. Japanese carry on seven or eight-tenths of the business; Chinese, the remainder. If you ask why the Chinese, whose shrewdness and perseverance in matters of trade are proverbial, should be thus distanced by the Japanese, I reply that the Chinese merchants do not possess skill to distinguish the quality of gold dust, Korea's principal article of export; they are taken in by the Koreans and lose money. The Japanese, on the contrary, are very expert in judging its quality, and the same is true of hides and cereals, which long practice has qualified them to handle without risk of loss. Another reason is that the Chinaman allows himself to be carried away by the prospect of immediate gain: he takes advantage of the Koreans' simplicity, and by deceitful prac-

tices forfeits the goodwill of the people of the country. It is not so with the Japanese. A man of integrity, he does not seek to take undue advantage of a customer, and the consequence is that he is everywhere preferred by Korean dealers. Many ancient objects of Korean art are carried to Japan by Japanese merchants, and on the whole one may almost say that the whole of Korea's foreign trade is in Japanese hands. But if the Chinese acquire skill to judge gold-dust, they may take their place of the Japanese in respect of this staple. The Japanese merchant is a clever buyer; the Chinese, a clever seller. If the Japanese desire to retain their supremacy in the Korean markets, they must combine against the Chinese. I believe that some Koreans have lately exported rice to Japan. This is the first instance of Korean merchants engaging directly in foreign trade."

THE "TAISEI KWAI."

THE *Taisei-kwai*, the new political body formed by the so-called independent members of the Diet, is the subject of decidedly unfriendly criticisms among a certain section of the metropolitan press, especially the twin journals *Kokumin-no-Tomo* and *Kokumin Shimbun*. The former, writing on this subject in a recent issue, goes so far as to express the suspicion that the new party may be in reality an instrument in the hands of wily statesmen of either pro-conservative or pro-government tendency. Nobody, our contemporary observes, has as yet been able to take the measure of the new political association, but, as it contains one-fourth of the whole number of members of the House of Representatives, there can be no question as to its influence in the Diet. Our contemporary remarks that, although Viscount Tanaka, the Metropolitan Inspector-General of Police, is reported not to regard the *Taisei-kwai* as a political association, there is no gainsaying that it is an association organized for political purposes, as is evident from the publication of its manifesto and the manner in which its meetings are conducted. The Tokyo journal goes on to ridicule the idea of independent members forming a political party, for the essence of independence consists in keeping aloof from every party in the Diet. Copious illustrations are taken from the history of political parties in England and America, in order to show that the first condition of a political party is that its members should unite for the attainment of common objects. Our contemporary entertains strong doubts whether this primary condition has been fulfilled in the case of the *Taisei-kwai*. What is certain is, the *Kokumin-no-Tomo* says, that this party is composed of heterogeneous and apparently incongruous elements. In its ranks are seen (1) the members of the aristocratic *Fichto*, (2) secularized Buddhist and Shinto priests, (3) the members of the *Kokusai Hozon-to* or *Shin Hoshu-to*, (4) retired officials on the *hishoku* list, (5) a few business men who owe everything in their possession to the liberality of the Government, (6) some politicians who entertain no fixed opinions, (7) several genuine lovers of their country and of liberty, who are truly independent in their opinions, and (8) some who, for business reasons or other motives best known to themselves, do not think it advisable to attach themselves to any of the existing parties. With such heterogeneous elements, our contemporary thinks it impossible to expect any real movement from the new party, either in the country or on the floor of the Diet. The manifesto of the new party, which is reproduced, runs as follows:—"We make it our object to promote the prosperity of the country and the welfare of the people, and we propose to attain this object by making justice and righteousness our guiding principles. In our eyes there is neither a Government nor an anti-Government party. Progress is our object, but we will not be betrayed into radicalism; neither shall our love of order make us conservative. We propose to pursue a sound, unbiased, and middle course, our sole concern being as to the interests of the country and the happiness of the nation. Under present circumstances, the lightning of the

public burdens of the people is an urgent necessity, but this consideration ought not to make us niggardly of expense when the extension of the national rights is concerned. Laws and legal institutions must be provided, but at the same time due consideration must be given to the claims of national customs and the actual condition of the people. The carrying out of the principle of a responsible Cabinet is, no doubt, important, but it is at the same time important to be on guard against the inauguration of the evil practice of transferring or accepting political power from motives of ambition and self interest. It is, beyond doubt, necessary to revise the treaties, but we cannot approve any policy the tendency of which is to hurry the consummation of the immediate object of revision without regard to the true interests of the country. In short, so called "principles" (*shugō*) and "platforms" (*kōjō*) are but shadows; practical questions form the substance. We therefore make no declaration of our principles. We mean to determine our views on practical questions as they may arise from time to time, and in this way we hope to assist in the completion of Parliamentary Government. Such is the *raison d'être* of our association." The *Kokumin-no-Tomo* compares this manifesto with the advertisement of a patent medicine, and observes in a contemptuous way that the effect of trying to please everybody will be to please nobody. Our contemporary next proceeds to reproduce the rules of the association in question. In Article 3 it is provided that "the members of the present association shall institute investigations on practical questions, and shall determine their course in debates by reference to the results of such investigations." From this provision our contemporary infers that the members of the *Taisei-kwai* do not as yet possess any definite opinion on any subject. It is indeed strange—the Tokyo journal continues—that the organization of a party should precede the determination of its aims and principles. "Who knows," says the *Kokumin-no-Tomo*, "who knows that the independent party under consideration may not in reality be either a conservative or a Government party, that it may not be a monster called into being by a few unknown but cunning statesmen desirous of using it as an instrument for the attainment of their political purposes?" In conclusion, our contemporary warns the members of the association to be on their guard against being sold by astute statesmen.

Such is the view taken of the *Taisei-kwai* by one of the journals unfriendly to it. Let us now see what an equally powerful but friendly magazine says on the subject. An anonymous writer in the *Nippon-jin* takes an entirely opposite view of the question. He maintains that what is of the most urgent importance is that there should be men of independent opinion in the Diet—men who are ready to take just and unbiased views of every political question, and who are not bound to vote with any of the existing parties. Now that the representatives of the people are about to assemble in the Diet, the heat of party strife cannot but increase day after day. In outward appearance, every political party seems to make justice and reason the springs of its action, but, when looked at more closely, it is discovered to be guided in many cases not by reason but by passion. Passing on to speak of future political parties in the Diet, the writer says that, judging from past experience, all the existing parties will sooner or later undergo a thorough process of separation and amalgamation, and that there will arise two antagonistic parties, the negative (Conservative) and the positive (Progressive) parties. If there were no third party between them, those two might sacrifice the interests of the country for the attainment of supremacy. The writer, therefore, thinks it important that there should be a third party, which, keeping itself independent of either of the other two, will be able to hold the balance of power in its own hands. In such a state of affairs, if the

independent party fulfills its mission by giving its support only to that party which it thinks takes the correct view of any particular question, then many of the evils inseparable from the competition of two parties struggling for power would be avoided, or at least largely mitigated. Our author observes that it is the intention of the *Taisei-kwai* to occupy the position attributed to the independent party above alluded to.

As to the question whether the *Taisei-kwai* falls under the scope of the Law of Political Associations, the *Nippon-jin* observes in an editorial note that, being an association exclusively of members of the Diet, the *Taisei-kwai* is not a political association in the sense of the law.

THE TOKYO WATER WORKS BILL BEFORE THE MUNICIPAL COUNCIL.

SOME reference has already been made in these columns to the project of constructing water-works in the capital. As the bill for raising the requisite funds by a municipal loan is now before the Tokyo Municipal Council, we are in a position to give a fuller account by reproducing a detailed report of the deliberations of the council meeting held in the afternoon of the 24th ultimo, at which the water-works bill passed the first reading. It ran thus:—

DETAILED ESTIMATES OF THE EXTRAORDINARY EXPENDITURES OF THE TOKYO CITY IMPROVEMENT WORKS FROM THE 24TH FISCAL YEAR TO THE 28TH FISCAL YEAR.

	Yen.
I.—Total Expenditure	10,000,000
(A). Cost of Water-works Improvement	6,500,000
1. Cost of Pipes, &c.	3,332,462
2. Cost of Settling Pond, Filtering Pond, and Reservoir	1,906,161
3. Expense of the Purchase of lands for Works	255,000
4. Cost of Pumps, Steam Engines, Boilers, and Buildings	285,000
5. Salaries	140,000
6. Remunerations and Allowances	25,000
7. Expenses for Surveying	30,000
8. Fund to be reserved for lending* and for Expenses for Constructing Branch Pipes	200,000
9. Reserve Fund	328,075
II.—Cost of improving Streets, Canals, Bridges, and Parks	3,500,000

* The original is ambiguous.

Upon Mr. Kuroda Tsumahiko asking for an explanation of the bill, Mr. Ginbayashi, the Secretary of the Tokyo Fucho, who attends the Council *ex officio*, made a speech in support of the bill. The following is the gist of his statement:—At present the city of Tokyo is supplied with drinking water by three different aqueducts, to wit, the Tamagawa Josui, the Kanda Josui, and the Chikawa Josui. According to statistics compiled in February, 1886, the city contains 52,654 wells, of which 7,755 are directly supplied from the aqueducts, the rest being ordinary wells. Of this latter class, 3,825 have undergone tests as to the fitness of the water for drinking purposes. The testing has shown the alarming fact that in "the lower town," eighty per cent. of these wells give water entirely unfit for drinking. Now the population of "the lower town" is estimated at 1,025,000, and this large portion of the metropolitan population is almost cut off from wholesome water. Besides, owing to the faulty construction of the aqueducts, the water, which can be drunk with safety in the higher part of its course, gets very soon contaminated and is thus made wholly unfit for drinking. In case of fire, moreover, the want of a sufficient supply of water is keenly felt. All these disgraceful circumstances existing in the capital of the Empire demonstrated the imperative necessity of improvement to the Tokyo Fucho as early as the tenth year of Meiji (1879). But financial considerations prevented the inception of an undertaking requiring so large an outlay. Meanwhile, the population of the city has increased with astounding rapidity, the increment being forty thousand during the last five years. The necessity of improving the aqueducts has thus become more imperative than ever, and since the project of city improvement was practically entertained the Fucho has taken many steps for accomplishing its object in respect of water-works. Some-

times the opinions of foreign employes were taken on the subject, and official experts when going abroad were asked to make full investigations in foreign countries. Even the views of the Chief of the Bureau of Aqueducts in Berlin were asked. After careful consideration of all the information obtained from various sources, the Fucho has decided to carry out the work in the form now submitted to the municipal council. To say nothing of the sanitary point of view, the work when completed will be found to render inestimable service in case of fire, as, according to the plan, three wells are to be made in every *cho*, each affording eighty cubic feet of water. The secretary also stated that upon this bill being passed by the council, application will be made for a subsidy of 150,000 yen from the national treasury. After some debate by the members of the council, the motion was made and carried by a large majority that the second reading of the bill should be shortly proposed.

THE SOY SUIT.

It appears probable, from what the *Nichi Nichi Shimbun* says, that the suit instituted by the manufacturers of the well-known Yamaju soy against the Exhibition Jurors—on the ground that the latter had judged incorrectly and thus injured the reputation of the soy—will be settled out of Court. The Vice-Minister of Agriculture and Commerce is said to have exerted himself strenuously to bring about an arrangement, believing that if the case came into Court, it would have an injurious effect on the manufacturing industry in Japan, though what the grounds of such an apprehension may be, we cannot clearly perceive. After various visits between the plaintiffs and the other side, Mr. Ishida succeeded, on the 13th instant, in finding a basis of arrangement. In one sense this is fortunate, but in another we almost regret that the suit will not be proceeded with, for it certainly seems desirable that the conception of its instigators should be legally dealt with. To us it has always appeared incredible that any remedy should be obtainable in a court of law against the award of jurors at an exhibition. The position of a juror is virtually that of a private arbitrator, to whose judgment the exhibitors agree to submit from the moment when they send in their exhibits. It does not lie within the province of the law, as we think, to take any cognisance of such matters.

SIR JOHN POPE HENNESSY.

Now that Sir John Pope Hennessy is clear of official trammels, he is giving scope to his literary tastes and talents and is discussing topics on which his mouth has hitherto been shut. In the *Nineteenth Century* a short article of his, entitled "The African Bubble," fills the place of honour. It has not been received very favourably, however, and no wonder, because what he proposes is that the greater part of our African territory "Spheres of influence," and the like, should be bartered off to France and Germany in order to get the former out of Newfoundland and the latter out of New Guinea. He does not believe that Africa will be of any service, or that the new chartered companies will be able to do anything with their acquisitions. A more interesting article, which however is anonymous, but which is generally attributed to Sir John, appears in the *National Review*, and is entitled, "His Excellency, the Governor, by an ex-Governor." If he is the writer, he has certainly made a clever effort to conceal his identity. The substance of this article is that the policy of the Colonial Office in its recent appointments of Governors to the Australian Colonies is wrong. This policy is not to promote men who have spent their lives in the administration of Crown Colonies, but to send out young men, mainly peers, who have had some acquaintance with public life at home. "Ex-Governor" laughs at the coronetted governors, their inexperience, their incapacity for dealing with the wily Colonial politician, and so on, and suggests that a wary old Colonial administrator would be able to form a better judgment on Australian affairs and to advise

both the Secretary of State and the Colonial Governments in matters of difficulty. To this as to every other question, there is, of course, another side, and the Colonial Office's answer to these criticisms would be that no Australian Governors have been anything like so successful or so popular, nor have administrative matters ever gone as smoothly as under these young peers from home. In the hands of the regular Colonial Governors constitutional crises were constantly taking place. For instance, there was the trouble during the régime of Sir George Bowen in Victoria, and only a couple of years ago that under Sir Anthony Musgrave in Queensland, whereas under Lord Carrington, Lord Kintore, and Lord Ouslow everything went with perfect smoothness, while as for personal popularity there is no comparison. And after all, when one comes to think of it, there are reasons why a good Governor of a Crown Colony should make a very bad Governor of a self-governing colony, for in the former he is the be-all and the end-all; his finger is in everybody's pie; nothing can be done without his direct approval. It is not surprising, if he carries these habits into a self-governing colony, that he should soon set everybody by the ears. By the way, we believe that Sir John Pope Hennessy was once grievously disappointed that he did not get Queensland; the Colonial office was inclined to send him, but the Colonial Government raised an objection.

TWO ADDITIONS TO THE SCIENCE OF DESTRUCTION.

THE science of destruction has been carried a step farther by two inventions, of which one is the Walkin position-finder, the other the Brennan torpedo. The position finder is a device enabling a commanding officer at a distance from a battery to accurately direct the fire of the battery upon any desired point. It is particularly useful for the direction of fire at high angles, as it renders it possible for guns so fired to be mounted altogether out of sight of an enemy. The Brennan torpedo is a hollow steel spindle. "In its head is a charge of gelatin; in its body are a hydrostatic device for regulating its depth, a mass of delicate machinery, and two reels, upon each of which is wound a great length of strong steel wire. Erect on the summit of its back is a steel flag-staff 8 ft. high, surmounted by a little flag. The torpedo having been launched, motion is imparted to its two screws by the simple operation of rapidly unwinding by means of the engine on shore the wire from the reels in the body of the machine. The more quickly you unwind the more speedy becomes the motion of the torpedo away from you. The more you pull, the more you accelerate the runaway; and, meanwhile, you guide it whether you will by unwinding one wire more rapidly than the other, and by so giving a greater number of revolutions to one screw than to the other. The interior of the Brennan torpedo is an unknown territory to all but a very few people; but such is its general geography." On the 5th of July an experiment was made with the torpedo at the mouth of the Solent. "An old merchant-ship was towed at a speed of nine knots, and at a distance of about twelve hundred yards, past the fort. When she was nearly abreast of it a Brennan was launched. At an immense rate of speed the torpedo, leaping like a great fish in the water and then settling down to a depth of six or seven feet, darted into the channel, got into the wake of the ship, rounded her stern, and went plump into her on the starboard quarter. A great jet of black and white smoke, a violent upheaval of smashed spars and a dull report followed; and, as the smoke cleared, the unfortunate ship, which seemed to be absolutely shaken to pieces, slowly sank. Four minutes after she had been struck she was beneath the water, which all round was covered with her wreckage."

BURGLARS IN TOKYO.

ANOTHER burglary has been successfully effected in the house of a foreigner in Tokyo, the victim in this instance being Professor Clay McCauley, who resides at 29, Shinzaka-machi,

Akasaka. The circumstances attending the breaking into the house, and the thief's methods, all point to the fact that the burglar is an old and accomplished cracksmen. Mr. McCauley had returned from the country on the night of the robbery, and his luggage had been put into the library for the time, where it remained unpacked until discovered by the burglar, who made a clean sweep of all that he could lay his hands on, including the whole of Mr. McCauley's summer clothing and other property. Having arranged this outside the house ready for removal, the thief paid a visit to Mr. McCauley's bedroom, and whilst he was collecting the clothing worn that day, the Professor woke up just in time to see the thief dash out, pick up the property arranged outside, and disappear with his arms full of articles including a valuable watch and chain, a small sum of money, and various memoranda and papers of no use to any one but the owner. As the watch bears a monogram, and much of the clothing is marked, these may possibly lead to the capture of the thief; and the police are now at work on the case.

THE MEMBERS OF THE HOUSE OF PEERS AND A NEW JOURNAL.

WE are informed by the *Choya Shimbun* that some of the Peers elected to the Diet have the intention of publishing a journal which will serve as the organ of the Upper House. The object of the projectors is said to be to convert the *Official Gazette* into their organ. "Previous to the publication of the *Official Gazette*" they are represented as arguing, "the public expected it to be a medium by which they might obtain some idea of the general line of policy adopted by the Government, and learn, to some extent at least, the reasons dictating the enactment of the various laws and regulations published in the *Gazette's* columns from time to time. People were, however, entirely disappointed in their expectations, for the *Official Gazette* in its present form is nothing more than a mere medium for promulgating official orders. True, it contains various reports on foreign affairs, agricultural, commercial, industrial matters, &c., &c., but they are mostly out of date and cannot serve any practical purpose. For these reasons, the *Official Gazette* is very far from giving satisfaction to the general public. Under these circumstances the Nobles think that, if they decide to have an organ, they will have good grounds for asking the Authorities to entrust to them the publication of all matters at present appearing in the columns of the *Official Gazette*. The contemplated paper would thus serve as the medium by which not only administrative measure would be made known, but also the affairs of the Government would be made public, so far as they are not secret, and the views of the peers would, at the same time, find expression. A newspaper so edited could not fail, in their opinion, to merit public approval, so that there would no longer be any necessity to resort to a system of compulsory subscription, as is done at present for the maintenance of the *Official Gazette*. Since the paper would take the place of the *Official Gazette*, it is a matter of course that it should be placed under the official supervision of the Government, to some extent at least.

JAPAN ART PRODUCTS.

WE have often wondered where all the imitations of Japanese Art products, especially lacquer and porcelain, come from. They are obviously imitations, and do not pretend to be anything else. But how it could pay any one to imitate things which can be obtained genuine for so little, is past comprehension. It appears now that, in some cases at least, it does not pay. Sir Arthur Nicolson, the British Consul-General at Buda-Pesth, in a recent report on Hungarian trade and industry, says that there is only one porcelain factory in Hungary. While it was in private hands it occupied itself chiefly with some successful imitations of Chinese and Japanese porcelain. In 1884 the factory was taken over by a company, and it was found useless to continue the imitations of Oriental China, as the

original article found its way to Hungary, and was sold at prices which rendered competition impossible, so the factory is now attempting to make stone-ware instead. We wish that the German factories manufacturing imitations of Japan lacquer would also take to making stone-ware.

Talking of Consular reports reminds us to mention that the British reports want proof-reading very badly, for they sometimes come out with the most outrageous misprints. One can scarcely take up a Consular report from China without finding absurd mistakes which very ordinary proof-reading would obviate. It is not long since a report, from Ichang we think, in which detailed reference was made to the trade of Szechuan, came out with Chinkiang in place of Chung-king, which of course made nonsense of the whole report. Another report spoke throughout of the "Tonnosan" railway and "Tonnosan" tea and "Tonnosan" sugar, and it was only after a little investigation that one discovered the mysterious word to be *Formosan*. These stupid blunders are probably the effects of bad handwriting plus careless proof-reading, but also, we fear it must be said, of crass ignorance somewhere. Consular reports, we believe, are supposed to be edited by Mr. Willoughby Maycock of the Chief Clerk's department of the Foreign Office. It is pretty evident that he does not know as much about the Treaty Ports of China as about celebrated English trials, for he has been writing a series of very interesting papers on the latter in the *Sporting Times*, or "Pink-Un," a weekly paper which is very clever, very witty, and shockingly disreputable. No doubt it is difficult to turn from such spicy compositions to things so dry as Consular reports, but it is to be hoped that Mr. Maycock, if it is still his duty, will make the effort. We have just received the report from Newchwang in which the Consul, Mr. Walters, is made to sign his name "Walters!"

MR. DALGLEISH'S MURDERER.

THE story of the pursuit and capture of the murderer of Mr. Dalgleish in Central Asia two years ago, appears to be exciting considerable interest in Eastern circles in London. As the details may have escaped the attention of our readers and as the story is exceedingly dramatic, we will briefly recapitulate it. Mr. Andrew Dalgleish was in his early years a sailor. Having given up the sea, he settled in Bombay in business and, being of a roving disposition apparently, he travelled for trade purposes into Cashmere and later on into Eastern Turkestan. He seems to have spoken several of the dialects of that region, and to have travelled regularly between the Punjab and Kashgar. In the spring of 1888, he was on one of these journeys with a caravan composed of thirteen baggage animals, their attendants, and five Yarkhandi servants, and had traversed Cashmere to the foot of the Kara Korum Pass where, on the 8th April, he encamped for the night before ascending the pass. Some time previously he had been joined by a small Pathan Chief named Dad Mahommed with a few followers. Dalgleish had known this chief before, and treated him as a friend, and they travelled together from stage to stage. On the night of the 8th, the Pathan for some reason shot Mr. Dalgleish dead in his tent, killed his favourite dog, and seized his goods. He took the caravan over the mountains while Dalgleish's servants carried their master's body to Ladakh. The Pathan made no secret, once he got into Chinese territory, of what he had done, believing no doubt he was perfectly safe there, and in fact to a considerable extent he appears to have been right. But the murder of a *Kafir*, as he called poor Dalgleish, was not a matter to be passed by lightly. The Indian Government demanded his extradition from Peking, and the Chinese Government sent instructions into Central Asia for his arrest. As might have been expected, when the distance from Peking to Kashgar is considered, he was not arrested, the local mandarins always giving him a hint to make himself scarce and then

reporting that he was not to be found. The Indian Government suspecting this, had him tracked for two years by spies, and from time to time kept informing the Chinese Government where he was. Again he was warned, again he would fly followed by the spies, and so it went on for many months, every town being made gradually too hot to hold him, until at last he fled across the Chinese frontier into Russian territory and reached Samarcand. Here no doubt he thought he was safe owing to the hostility of England and Russia in Central Asia, but his arrival was soon made known by the Indian spies to the Russian Authorities and he was promptly arrested and put in jail. His extradition was requested, and the Russian Government, feeling no doubt that in such a matter the interests of all Europeans were identical in Central Asia, greatly to their credit made no difficulty about the matter, as they might well have done, seeing that the murder had not taken place on strictly British territory. The formal papers were on their way to St. Petersburg and in a short time Dad Mahommed would have been on his way under escort to Cashmere, but he balked justice by committing suicide in prison. For two years the ruffian must have led the life of a hunted dog in Chinese Turkestan, and his crime and his fate are now known throughout the length and breadth of Central Asia. Meantime, the site of the murder is marked by a cairn and cross set up by the Indian Authorities. A picture of it is published, with the road over the desolate Kara Korum in the immediate back ground. Dalglish seems to have been one of those men whose character and career teach us that the age of romance and adventure are far indeed from being past. No doubt some such fate as that he met must have been frequently present to his mind while he traversed remote regions through turbulent tribes composed of men of whom his murderer was a type.

A LUCKY POLICEMAN.

If we may believe the *Yomiuri Shimbun*, a policeman of Nara, named Nagamine Takejiro, has just come into a snug sum of money. This lucky individual has long been the possessor of a figure of Amida Nyorai, about fourteen inches high, said to have originally come from India. The idol was considered to have no particular value, except that it was a relic of ancient times, its age being accepted as fifteen hundred years at the least. It was suffered to lie for years buried in the dust of a shelf. Recently, however, it occurred to the owner to give the relic a cleaning, and, wiping off the dust, he had his attention attracted by a bright spot on the smoke-begrimed brow of the idol. Led by curiosity more than anything else, he proceeded to rub it very carefully, when he found that it omitted a light of uncommon brilliancy. On showing the strange relic to a virtuoso, he was agreeably surprised to learn that the brilliant light came from a diamond set into the forehead of the figure. According to the opinion of the expert, the idol is said to be an article of rare value, not only on account of the precious stone it bears, but especially from the fact that it is evidently the work of some Buddhist saint.

MEETING OF THE INDEPENDENTS.

THE third meeting of the elected members of the Diet professing independence, came off as expected in the afternoon of the 20th last in the Yaroisha, Shiba Park. The meeting was called to order at three o'clock and on the motion of Mr. Sugiura, Mr. Yoshino took the chair. Mr. Oyagi then addressed the meeting, saying:—"Gentlemen, we meet here to-day for the third time, but as we have no regulations whatever to conduct the affairs of an organized body, our meetings have thus far been only of a social nature. In regard to the formation of an organized body, I presume that you have various views, which it will be impossible to discuss on the present occasion without any kind of rules whatever. Under these circumstances, I beg to move that a committee be appointed for preparing draft of the rules of the association." Messrs. Mori Taichiro, Hashiyama

Chuzaimon, and others, members of the Diet from Aichi Prefecture, opposed this motion on the ground that, in view of the fact that the persons assembled had not yet had any opportunity to ascertain their mutual political views, it would be a very rash step to take measures pointing to organization into an association. These members urged, therefore, that full expression should first be given to political views before appointing a committee to draft rules. Mr. Okata Ryoichiro, a member from Shizuoka, remarked that as strict neutrality *vis-à-vis* existing political parties is the principle of all present, he deemed that principle a sufficient basis for forming the new association, and therefore he saw no need of discussing the various opinions that might be entertained by different members. Mr. Kitagawa Morikatsu, from Miye Prefecture, declared that while they profess at present no attachment to any of the existing parties, they are not pledged to adhere to this neutral position for ever. After these discussions had continued for about two hours, the original motion was put and carried by a large majority. The following resolutions were then adopted:—

Resolved: That a committee of twenty-one be appointed for preparing a draft of the rules of association and choosing its name. This committee shall be elected, one by each prefecture represented, the three prefectures of Aichi, Fukuoka, and Gifu, which have more than five independent representatives, being entitled to elect two.

2. That the committee appointed in the above manner shall hold a meeting at the residence of Mr. Oyagi on the morning of the 21st instant.

3. That another general meeting shall be held on the 22nd inst. in order to discuss the draft prepared by the committee.

The meeting was then adjourned.

The attendance at the meeting was sixty-five, all elected members of the coming Diet. We take this account from the *Choya Shimbun*.

DISSECTION OF CHOLERA SUBJECTS.

A MAN named Kato Takizo, one of the victims of cholera, left a will requesting that his remains might be dissected for the promotion of medical science. An anatomical examination was accordingly conducted on the 29th ult. in the Medical College, in the presence of the professors of the College, the medical staff of the Metropolitan Police Board, and others. Dr. Miura, one of the professors, performed the operation. Objections had at first been raised in some quarters, on the ground that the dissection of a choleraic subject, even though at the request of the deceased, would bring about injurious results by confirming the fears of those ignorant people who look upon the cholera hospital as a place where people are sent to be murdered, and thus lead probably to further concealment of cholera seizures. On account of the above objection, some sixty hours were suffered to elapse after the death of the man, and, consequently, the dissection showed no remarkable symptoms characterising the disease in the stomach or intestines.

APPLICATION FOR PERMISSION TO EMIGRATE TO IWOJIMA (SULPHUR ISLAND).

WE are informed by the *Kokumin Shimbun* that Mr. Arai Yoshikuni and three residents of the Bonin Islands have sent an application to the Minister for Home Affairs for permission to emigrate to Iwojima. This island, our contemporary informs us, is celebrated for sulphur deposits, as its name indicates. A few years ago when the Government sent the *Meiji-maru* to explore those regions, Iwojima was thought not to be rich enough in sulphur to make emigration profitable. But Mr. Arai subsequently sailed there and conducted more careful investigations, the result being that he discovered in the interior of the island two sulphur beds each about sixty square yards in extent and one foot in thickness. The mineral proved to be of very fine quality. On removing a portion of the bed, he found to his great delight that a new deposit was quickly formed in its place. Subsequently he despatched a few labourers armed with no better implements than common spades, and succeeded in digging up about 3,000 bales of sulphur

which he exported to Osaka. But sulphur is not the only inducement the island offers to immigrants. One half of it is covered with a luxuriant growth of vegetation, while the other half is a sandy desert, which affords a most convenient place for making salt by the solar process. The soil in the interior is very fertile, especially well adapted for the cultivation of sweet potatoes, pumpkins, &c. Different kinds of fowls abound in the island and furnish palatable meat, while thermal springs bubbling up in all directions give bathing facilities. In consideration of these inviting conditions, Mr. Arai and others are said to have determined to settle there permanently. For the sake of those among our readers whose geography is not strong, we may mention that Iwojima is one of the Bonin Islands. As these islands belong to Japan, we fail to see why any permission should be required by a Japanese subject to emigrate thither. What seems more probable is that Mr. Arai has petitioned the Government for a grant of land in Iwojima.

INDUSTRIES IN JAPAN.

MR. TAKAI SUKETARO, an engineer, has compiled some interesting statistics showing the growth of industrial enterprise in Japan during the three years 1886, 1887, and 1888. The figures are given in the *Fiji Shimpō*. They do not include manufactories employing less than ten persons or having a capital below a thousand yen. We translate them as follows:—

	1886.	1887.	1888.
Number of companies	1,000	1,440	1,365
Number of artisans	75,708	131,633	159,633
Number of employees	200,162	280,015	355,489
Number of steam engines	424	630	698
Horse-power	3,633	5,182	7,362
Number of water wheels	539	755	754
Horse-power	990	1,415	1,668
Capital, in yen	13,713,662	21,885,974	29,641,369
Income, in yen	14,745,858	18,943,002	20,155,219
Expenditure, in yen	13,549,434	18,005,627	17,857,641
Profit, in yen	1,210,424	937,974	2,297,578

As to the manner in which these undertakings are distributed among the various cities and prefectures, we learn that Gifu Prefecture has the greatest number (133), of factories; Nagano Prefecture the next greatest (119) and Tokyo City the next (95). With regard to the amount of capital embarked, however, Tokyo (with 2,781,110 yen) heads the list; Akita Prefecture, Osaka City, and Nagano Prefecture follow in order. But these distinctive figures relate only to 1886, and are therefore of comparatively little interest.

KEROSENE AS A RELISH.

TASTES are strange things. There is a young lady, says the *Suga Shimbun*, in Udomachi, Kumamoto Prefecture. She is seventeen years of age, and endowed with the charms usually observable in her sex at that tender time of life. But she has a quaint fancy, a love for kerosene oil. Its odour is perfume to her. She puts it on her hair; she makes little rolls of paper, steeps them in the pungent liquid and stuffs them up her nostrils; she drinks one or two cups full every day and feels bad if she does not. In vain her parents reprove her: the habit is incurable, and apparently harmless also, for though she has been sniffing and sipping the nasty stuff during several months, she shows no signs of ill-health. But if some mischievous lad should put a match to her one of these fine mornings!

HARVEST PROSPECTS.

THE vernacular press continues to speak hopefully of the rice crop. It would be difficult to exaggerate the anxiety with which the crop has been watched this season. The year will undoubtedly rank among the most unhappy of Japan's modern experiences. It opened with a feeling of much anxiety in the money market. Securities of all kinds fell, and for a time a crisis seemed inevitable. By clever financial management, however, this catastrophe was stayed off, only to be succeeded by a sudden and sharp rise in the price of rice. If well-to-do folks had been disturbed by the condition of the Stock Exchange, the middle and lower classes were thrown into a state of consternation by the rapidly increasing cost of living. Rice, as we have often explained, is a staple of wide influence.

Dear rice means that those whose incomes are not elastic must curtail their daily allowance of bread, as we may call it, or else must reduce their expenditure in other directions. Naturally they choose the latter alternative; dismissing their employes, postponing every undertaking that involves outlay, and refraining from making any additions to their wardrobes. Labour thus becomes a drug in the market, and the demand for manufactures declining, their price suffers proportionately. It is a time when the expense of living increases, on the one hand, and the difficulty of earning money is enhanced on the other. We cannot easily discover how much distress and sorrow Japan has experienced within the past eight months, but it is pretty certain that had the rice harvest this year been a failure, or even a partial failure, the people must have been reduced to serious straits. Fortunately the fear of such a catastrophe is now virtually past. The 19th of July, the *Doyo-iri*, or beginning of the dog days, passed favourably, and the Japanese farmer, to whom certain days in the year serve as almost infallible landmarks, began to breathe freely. It is true that his anxiety was roused for a time by the severe rains of last month, but these resulted in nothing worse than some flooding in the Kwantō, a district where rice is not largely grown. Meanwhile, from other and more important parts of the empire highly favourable reports were received, and when the vital *niyaku-toka* (September 1st) brought with it universal calm, and glorious sunshine except in a small district to the west of Nagoya, it was felt that the evil times might fairly be considered over. Add to this, as the *Shogyo Shimpō* says, that the high price of the cereal prompted its cultivation on an exceptionally large scale this season, and that the early rice, of which about fifty per cent. more than usual has been grown, was for the most part saved before the rains and winds of August could injure it seriously—and it would seem that there is reason from every point of view to anticipate a season of plenty. The 14th of this month is the *hassaku* of the old almanack. If the weather remains tolerably fine until then, the country may once again look forward to cheap food and general prosperity.

THE SILK MEN.

THE unfortunate silk men are beginning to reap the whirlwind. Exchange, leaping upwards some fifteen per cent. during the early days of the silk season, has virtually paralysed the hands of exporters. There is no margin of fifteen per cent., or even five per cent., on the export business done by foreign merchants in Japan. Every *yen* that they pay for a bale of silk this September costs ninepence more than it cost last September; and, unless the Japanese silk men consent to reduce their figures so as to bring the silver price of the silk at this end within a reasonable distance of the sterling price obtainable for it beyond the water, business must cease. The *Shogyo Shimpō* says the dilemma is serious, and well it may be. There are sixteen thousand bales (Japanese) stored in Yokohama, and it is becoming almost impossible to hold them any longer, while to sell at the prices offered by exporters would be ruinous. There is talk of an appeal to the Minister of Finance, and of official assistance through the medium of the Bank of Japan. But, what has the Minister of Finance to do with the matter? If the causes operating to check exportation were of a temporary character, we do not say that the Bank of Japan might not be justified in assisting the silk men to tide over the crisis. But this exchange trouble is not going to disappear in a month, or even in a year. America has pledged her credit to restore the white metal to its old place of honour, and American credit is a very big thing. Nobody can gauge its dimensions, or pretend to estimate the sort of strain that would prove too heavy for it. What is quite certain is that Congress is not going to stultify itself by repealing the tremendous measure it has just passed. A strange measure it may be; an exceedingly disturbing measure it undoubtedly is to commercial men; but it will be in operation next year just as it is

now, and the effects upon silver must be reckoned with for many a day to come. Everybody sympathises heartily with the silk men, but every one sees also that the longer they hold their silk, the greater loss will they have to suffer in the end. There is only one sensible course for them to pursue, and that is to make up their minds to the inevitable, and take what they can get at once. If they wait until the number of bales offering for sale grows larger, they may suddenly find themselves in the midst of a *débacle* where no control of any kind will be possible.

ENGLAND'S POETS AND THE UNITY OF THE BRITISH EMPIRE.

A propos of the erection of a monument to Walther von der Vogelweide at Bozen, one of our German contemporaries has an article, by Karl Blind, touching the influence of English poets on the solidarity of the British empire. Karl Blind reminds his readers that Walther von der Vogelweide lived at a time when the Fatherland was exposed to perils from within and without, and when it was as much as a man's life was worth to write courageously on political subjects. Yet the writings of Walther von der Vogelweide lacked none of the boldness that characterised the great German reformer of a later age, Martin Luther. To the ardent patriotism which in the latter part of the twelfth century permeated the poems of Walther von der Vogelweide Germany owes much of the prosperity which she now enjoys. At that time Germany had to cope with the machinations of Romish priests who were ever trying to sow seeds of discord among her rulers, in order that they might reap the benefit of the anarchy which would follow their disunion. England for some years, observes Karl Blind, has had to deal with a somewhat similar difficulty in the case of the Home Rule party, and it is at this juncture an interesting inquiry what is the position assumed by modern British poets on this question. Do they or do they not contribute to the preservation of the unity of the British empire? The first poet referred to by Karl Blind is Sir Edwin Arnold, "No one," says Blind of Sir Edwin, "has become so absorbed in the life of Easterns as Sir Edwin. His 'Light of Asia' we hold to be the greatest English poem of modern times. His warmest sympathies are given to the East. But as editor of the *Daily Telegraph* he has always figured as a liberal and as essentially anti-Russian. As the subjects of his poems show, he is given to dreary reflection on the primeval cause of things, and is fond of drawing attention to the various riddles of existence, yet when the interests of his Fatherland are at stake he becomes practical and displays great courage. He thus expresses himself to the Americans on the Irish question:—'My conviction is that Ireland has no just complaint. Therefore I am a staunch unionist. Every road to success, all offices of State are open to the Irish. The names of some of our most distinguished men such as Wellington, Wolseley, and Dufferin are Irish. . . . We have done all we can to conciliate Ireland. One of our greatest difficulties is that American statesmen are opposed to us on the Irish question.'" Karl Blind then goes into the causes of the action of America on the Home Rule subject. He attributes this action partly to jealousy of England, and a desire to see her embroiled in civil strife, and partly to the trouble which the immigration of Irish roughs by the thousand is causing America, and the hope that Home Rule, if established, would tempt a large number of the otherwise would-be immigrants to remain in Ireland. Karl Blind then proceeds to show how inconsistent it is that America should express approval of a policy being adopted in a European State which they would not hear of at home. That a people who preferred to endure the horrors of a long civil war rather than allow disunion should argue in favour of Home Rule is astounding. "It is a remarkable fact," says Blind, "that nearly all England's modern poets are on the side of the unity of the British empire." He then proceeds to point out how the spirit of Walther von der Vogelweide moves them all. "Alfred Tenny-

son," he remarks, "the poet Laureate, though a personal friend of Gladstone, is a decided Unionist. Algernon Swinburne, who ranks next to Tennyson, in his 'Songs before Sunrise' attacked the enemies of the State with extraordinary fervour. Of William Morris. Blind says:—'An exception to what we have said is William Morris. That the man who once called himself 'the idle bard of an idle day' should turn his attention to questions of State and develop into a communist has astonished everybody. He began by a thorough study of the North German songs, the legends of the Nibelungen and the Wölfungen.'" Karl Blind goes on to show that Morris' action in reference to the Home Rule question is to be attributed to the fact that he sees in it an element of revolution and anarchy, which latter he deems to be the inevitable prelude to a better state of things; a point of view that Ray Lankester, among others, is known to take. "Turning," continues Karl Blind, "to the stately row of scientific men who are at the same time free-minded nationalists, with Huxley and Tyndall at their head, at least nine-tenths of them are on the side of the unity of the British empire. Tyndall, who was born in Ireland, has even declared publicly that he would, in spite of his age (69) in case of war be prepared to use his rifle against the Parnellites." "Amongst historians," continues Blind, "the three best known, Froude, Seeley, and Lecky are on the side of the union. The views on the Irish question to which Lecky gave publicity when a young man of 25 have long since been abandoned. E. A. Freeman, the friend of Russia, and whose theological propensities lead him to take special interest in 'Eastern Rome,' is on the side of Home Rule, though he does not favour the present Gladstonian attempts to bring it about. He fails to perceive that a disintegrating process once commenced could not be stopped at will." Karl Blind concludes his article by congratulating England on the fact that her great literary leaders are deadly opposed to the dismemberment of the United Kingdom. He regards this as calculated to contribute in no small degree to the future stability of the British empire.

AN ELECTRIC LETTER CARRIER.

WE read in the *Hochi Shimbun* that Mr. Shida, the well known electrician, has, after many experiments, devised an electrical letter carrier which promises to be a great success. A brief description of the instrument is given by our contemporary, but we can only gather that it is a box supported on wheels which run on two wires. The speed is said to be about twelve miles (English) per hour, and the cost of the instrument, twenty thousand *yen*, details which are almost valueless without further data. We shall not be at all surprised to learn that Mr. Shida has really accomplished the feat attributed to him by our contemporary, but with such a very vague account before us, we must remain for the moment sceptical.

JAPANESE VERSUS FOREIGN COSTUME FOR LADIES.

THE *St. James's Budget* says:—"Whether the dress of European or of Japanese ladies is the more becoming is a problem which happily we need not attempt to decide. Probably each is equally becoming to those who are accustomed to wear it. The vesture of Japanese ladies is undoubtedly highly pleasing, and some at least of those who were in such a hurry to follow the example of the Empress and discard it, seem to think that they have been too hasty. The admiration for the 'Kimono,' the 'obi tabi,' and the rest of it which was expressed by the Duchess of Connaught during her recent visit, has given them pause. The Duchess, when she was at Kyoto, bought the complete outfit of a Japanese lady, to the huge delight of the patriotic party, which seems to have expected that she would make a public appearance in the silken raiment of old Nippon. They claim that European skirts, shoes, and bonnets are 'less comfortable and less becoming' than the native costume, and for the pleasingly diminutive

Madame Crysanthèmes it no doubt is so." There does not appear to be much chance any longer that foreign costume will be largely adopted by the Japanese ladies of the present generation. The mania which threatened its wholesale introduction is now a thing of the past. Japanese ladies have discovered that the mere cut of a dress is not the main question. Far more important is the knowledge how to wear it; which knowledge cannot be imparted, like arithmetic or spelling, but must be acquired by custom. Present indications suggest that, by-and-by, foreign costume will become the dress of society, Japanese costume still holding its sway in domestic circles. But even this will not happen until the children of to-day attain to years of maturity.

STRATEGICAL RAILWAY IN CHINA.

It is confidently asserted that the Chinese Government has decided to build a line of railway connecting Chili with the north of Manchuria. Such a line would be over eight hundred kilometres in length and would cost thirty millions of taels. It seems to us that a good deal of credulity is needed to believe China capable of any such effort. The uses of the railway would be purely strategical. Its prime object would be to convey troops and war material to the Russo-Chinese frontier. For such a purpose the Peking Government might be induced to sanction the building of a line of rails which would practically connect the capital with the sea as well as with its northern boundaries. But where is the money to come from, and when has China shown herself sufficiently resolute to take so great a measure of precaution against peril still distant and undefined? If she can really be roused to action of such a radically vertebrate character, the thing will be one of the wonders of the nineteenth century, and will, at the same time, furnish a very signal warning to her possible aggressors. As for Russia, however, against whom the railway would be chiefly designed to serve, we are disposed to think that the news of its construction will please rather than disconcert her. For should Russia's destiny drive her southward upon Manchuria, as probably will happen one of these days, every additional means of communication which brings her within striking reach of the vital parts of her foe, will be so much solid gain to her. Inaccessibility appears to be China's best protection in her present condition.

KARUIZAWA.

KARUIZAWA continues to grow in favour as a summer resort for foreigners. New houses have been built by Tokyo residents, and next year probably more will be erected. The village lately had unwelcome visitors. Last Saturday night a watch and some articles of clothing were stolen from an inn in New Karuizawa. The same night a thief got into the chief inn in the old village. He opened the *shoji* of a room on the ground floor and peeped in, but a dog in the room barked at him and awakened the inmate, a foreigner's servant. An alarm was given, and, search being made about the village, a man was found sitting outside a small detached house coolly ransacking a bag, beside which he had had the fool-hardiness to place a lighted lamp. However, he escaped, leaving behind him an umbrella and a hand-bag. In the latter were found a few *sen* and a list of probably stolen articles. In an adjoining field was found a large trunk stolen from the same house. The lock had been broken open and the contents scattered about, but nothing of value was taken. The occupant of this house, a foreign gentleman, had not been aroused by the entry of the thieves, for at least two must have been needed to move the heavy box. As yet the thieves have not been caught.

THE CONSTITUTIONAL LIBERAL PARTY AND THE PROGRESSIONIST PARTY.

BEARING in view the birthplace of the editor of the *Kokumin Shimbun*, it may not be amiss to infer that that paper reflects the opinions entertained by the Kiushiu wing of the newly amal-

gamated party. It has always been a most strenuous advocate of the amalgamation scheme, and even now it appears to hope against hope that the *Kaishin-to* may yet be reconciled with the Constitutional Liberal Party. The Constitutional Party, says our contemporary, in its usual nervous style, "entertains no narrow sectarian view, but flings wide open all its four gates and invites the *Kaishin-to* and others who may be found to be of the same political conviction." In order to declare to the public this catholic view, the party has appointed a committee, consisting of Messrs. Nakaye, Kawashima, Kuriwara, &c., to prepare a manifesto couched in language that is calculated to remove the stumbling block in the way of the *Kaishin-to*. The Tokyo journal informs us, further, that in the camp of the Progressionists nearly all the leading members are for union, but have come to the determination to hold aloof from the amalgamated party, simply because of sectional prejudice and the want of good understanding between them and their liberal friends. If certain concessions be made by the Constitutional Liberal Party, they will be most willing to pass over into the new party. On the side of the Liberal Party, all the prominent members are willing to make as many concessions as they can without losing their self-respect, but at the same time they do not think it possible to yield to all the demands of the *Kaishin-to*. They are, therefore, represented as hoping that the *Kaishin-to* will make their claims as moderate as possible. Indeed, they trust that their friends will unite themselves with the new party previous to the general meeting to be held on the 15th inst., when they will have a happy chance to carry out their views. Should there be any attempt on the part of the hostile section in the Liberal Party to reject the *Kaishin-to's* claim by sheer numerical force on the occasion of the meeting, other members are said to have pledged themselves to come to the rescue. But the *Kaishin-to* members remain firm in insisting that, unless the word *Jiyu* is stricken out from the appellation and principles of the new party, they cannot enter into amalgamation. Thus matters are at a dead-lock at present.

SALE OF GOVERNMENT LAND AT KAMIKAWA, HOKKAIDO.

THE selection of Kamikawa in Ishikari, Hokkaido, for the site of a detached palace to be hereafter erected, has naturally given rise to a good deal of real-estate speculation in that vicinity. Not only local business men, but many Tokyo merchants, have turned eager eyes towards the place. The *Choya Shimbun* transcribes from the *Hokkai Shimbun*, the local paper, a statement purporting to give trustworthy information as to the sale of Government land in that district. It says that the Authorities intend to sell the lots destined to be enclosed within the limits of the future city, and that, in the event of applications to rent land outside the city limits for purposes of reclamation, or for the erection of factories and so forth, the Government will give the matter favourable consideration provided that satisfactory information is furnished as to the nature of the enterprise, the amount of capital required to carry it on, and such matters.

THE RESULTS OF THE HAWAIIAN EMIGRATION.

THE Hawaiian Emigration under governmental auspices was inaugurated by Count Inouye, while he held the portfolio of Foreign Affairs. In inaugurating this system, the Authorities had two objects. The first was to enable the poor classes to enjoy the fruits of their labour in a fuller measure than is possible in Japan, and the second was to introduce among Japanese farmers habits of regular work and thriftiness. The latter object necessarily requires a long time for its accomplishment, in a tangible form, but it is not to be doubted that emigrants returning after years of regular work in Hawaii have produced a leavening effect on the habits of the people among whom they live. In regard to the former object, the wisdom of Count Inouye in encouraging the emigration has been proved in

very tangible form. Here is one instance of it: "We are," says the *Jiji Shimpō*, "informed by the Chief of the Kuga District in Yamaguchi Prefecture, that the three districts of Oshima, Kuga, and Kumage in the same prefecture have derived great benefit from the Hawaiian emigration. All the labourers, he tells us, who have returned after the expiration of their three years' contract term, have brought with them a considerable amount of savings, while those still working there have been in the habit of remitting money to their relatives at home. Thus poor farmers who did not own any property at all are now placed in a position to purchase land of their own. To such an extent is this the case that the price of land has been raised twenty per cent. Beside this, emigration had the effect of raising the wages of agricultural labourers generally. Thus the Oshima District, which, being very densely peopled, might naturally be expected to suffer keenly from the appreciation of the price of rice, is to-day much better off than other districts. These facts, says our informant, are inducing many people in the prefecture to become emigrants."

THE OSAKA FIRE.

FROM a translation in the *Hyogo News*, we learn that the *Asahi Shimbun* states that the corrected returns of the houses burned in Osaka on Friday put the number at 1,893, including two Buddhist temples and a bridge. The total number of firemen injured has now been ascertained to be 157. The same paper tells us that as soon as the bell sounded, twenty postmen were despatched to clear all the letter-boxes in the locality threatened, and by this means no small portion of the city's letters were saved. The total money loss occasioned by the fire does not seem to be yet known, but the loss to the timber merchants, of whom two or three were burned out, is placed at *yen* 40,000. The fire has resulted in public attention being drawn to the condition of the city's Fire Brigade, and the matter is to be brought forward at the next meeting of the City Assembly. The question to be discussed is, "Is the Fire Brigade of Osaka, in its present condition, equal to any emergency which may arise? If it is not in such condition, what reforms and improvements shall be introduced?" Another question which is to come forward for discussion has reference to *geisha* houses in Shinmachi. The question has arisen whether their reconstruction on the old site shall be permitted, or whether the quarter shall be suppressed. The Emperor and Empress have jointly forwarded the sum of *yen* 1,000 for the relief of the homeless, who are stated to number between 16,000 and 18,000. The *Shinonome Shimbun* places the number of houses destroyed at about 3,000, and states that the money loss is variously estimated at from *yen* 2,000,000 to *yen* 5,000,000.

THREE PARTIES IN THE HOUSE OF PEERS.

THE political complexion of the House of Representatives is now tolerably well known, but how the members will group themselves in the Upper House remains yet to be seen. The vernacular papers in their latest issues contain a report to the effect that three parties, the Progressive, the Conservative, and the Independent, will manifest themselves on the floor of the House of Peers. Our contemporaries take it for granted that in that case Marquises Saionji and Hachisuka, and Count Yanagiwara, will range themselves with the Progressive Party, and Marquis Asano and Viscount Tani with the Conservative Party, while the Independents will be led by Prince Sanjo. According to another rumour, it is predicted that the Peers will be divided into the Tani, Torio, and Aoki Parties. In regard to this latter report, however, a peer is represented by the Tokyo papers to regard it as a random guess on the part of persons not well acquainted with the situation of the Nobles. He is of the opinion that, while Viscount Tani may have some followers among the Peers in consequence of his past career as President of the Peers College, neither of the other two Viscounts has a sufficient number of adherents to constitute a party of his own.

Viscount Torio will belong either to the Conservatives or the Independents, while Viscount Aoki will take his seat with the Progressive Party. Our contemporaries further state that the Progressionists in the Upper House will take steps to act in concert with their political friends in the Lower House, but it is doubted whether Marquis Hachisuka, Viscount Aoki, and others can bring themselves into harmony with the Progressive members of Parliament.

STANLEY'S BOOK.

The latest home papers to-hand contain accounts of Stanley's book, entitled "In Darkest Africa." *The Times* says of it "Mr. Stanley's narrative of his adventures, privations, sufferings, trials, dangers, and discoveries during his heroic quest and rescue of Emin Pasha is as moving and enthralling a tale as ever was told by man. It is, moreover, told with so genuine a modesty of temper, so transparent a fidelity to fact, so generous and eager a desire on the part of the leader of the expedition to give their due meed of praise and recognition to each and all of his subordinates, not excepting the humblest of his African followers, that the critic's task becomes merely one of unstinted admiration of the almost unexampled greatness of the deeds accomplished and the profound ethical interest of the narrative which describes them. Nor does the interest of the book depend only on the thrilling nature of its subject matter; of its purely literary merits we can speak in terms of high commendation. The style of the narrative is direct, vigorous, and incisive, as becometh one who is a man of action rather than a man of letters; but in many of the descriptive parts Mr. Stanley shows that, consummate man of action that he is, he is a born man of letters as well."

A WRINKLE FOR HORSE OWNERS.

CAPTAIN HAYES, writing in his journal of the 2nd ult., gives a very simple remedy for a condition of horseflesh not at all uncommon in Japan, the cause of which in this country is partly due to the method of feeding. He says:—"I read a short time ago in some medical journal that bicarbonate (washing) soda, when given internally, has the effect, like antipyrine, phenacetin, quinine, etc., of reducing the temperature of the body. At the time I had just bought at a long price, a newly imported Arab pony, which was suffering very much from the heat; his skin being dry and hot, his respiration hurried, and his internal temperature persistently from one to two degrees higher than normal. Although this state could scarcely have been called fever, still it was evidently impairing the animal's health and would predispose to disease. I accordingly gave him for ten days, in his drinking water, an ounce of bicarbonate of soda daily, with the very best results. His temperature is natural; his skin is cool to the touch, and has acquired the gloss and bloom of health; his spirits, which were depressed, are now buoyant; and he perspires freely, which he would not do before. I need hardly say that I had him kept in the open as much as possible, and that his box was particularly airy one. If the soda did not effect all the good, it certainly materially aided in obtaining the desired result."

THE CASE OF THE YAMAJU SOY.

It is now denied that the Vice-Minister of State for Agriculture and Commerce acted as mediator between the proprietor of the Yamaju soy and the Exhibition Judges. Several of the vernacular journals published a statement to that effect, but the details given by the *Koku-min Shimbun* show that Mr. Ishida did not really play the part assigned to him. What happened was that a mutual friend of the Vice-Minister and of Mr. Iwasaki, the proprietor of the Yamaju soy factory, chanced to call upon the former, and in the course of conversation the suit instituted against the Judges at the Exhibition by Mr. Iwasaki—not, of course, the well-known Mr. Iwasaki Yanosuke—came up for discussion. The Vice-Minister, who during his official residence in Chiba Prefecture had

become intimate with Mr. Iwasaki, explained to his visitor that from every point of view the suit was a great mistake, and that, however it terminated, the result must be bad for all the parties concerned. These arguments having been laid before Mr. Iwasaki privately by the mutual friend, led to the abandonment of the suit, a happy issue to an ill-considered and unreasonable procedure.

CHOLERA RETURNS.

THE latest cholera returns derived from official sources are as follow:—

Prefecture or City.	Date.	New Cases.	Deaths.
Osaka	4th	212	175
	5th	158	175
	6th	170	123
	7th	195	170
	8th	201	67

	13th	19	12

The numbers of cases and deaths since the commencement of the epidemic, inclusive of the above figures, appear in the following table:—

Prefecture or City.	Cases.	Deaths.
Osaka	3,371	2,215
Hyogo	782	490
Nagasaki	3,153	1,060
Yamaguchi	1,427	855
Fukuoka	2,357	1,500
Saga	326	236
Naga	754	433
Kumamoto	773	461

The total number of cases and deaths in the following Cities and Prefectures not included in the above, since the commencement of the epidemic to the 10th instant, are:—

City or Prefecture.	Cases.	Deaths.
Tokyo	3,371	220
Ibaraki	10	4
Kanagawa	1,359	913
Mitsushima	418	135
Tokushima	151	45
Elime	5	5
Kochi	51	19
Kagoshima	201	122
Kagawa	124	43

THE GREAT FIRE AT SALONICA.

A TERRIBLE calamity has overtaken Salonica, the Thessalonica of the ancients, a city of European Turkey, the capital of Macedonia, and an archbishop's see. According to Reuter's telegram, published in this issue, a conflagration of unusual dimensions has laid an enormous area of this city in ashes and rendered homeless 12,000 of its inhabitants. Salonica is about five miles in circumference, though not all built over within the space. It is a place of considerable trade. The Greeks have 30 churches, and the Jews nearly as many synagogues. The inhabitants are computed at about 70,000. It is surrounded by walls, and is defended on the land side by a citadel, and near the

harbour by three forts. Some of its architectural remains, lately existing in its mosques and churches, were very interesting. It is seated at the head of a noble gulf whose waters wash the Grecian Archipelago, and lies about 310 miles west of Constantinople.

GOLD AND SILVER RATIOS.

THE *Official Gazette* gives the following table of comparative values of gold and silver coins and of the pound sterling for the week ended the 6th instant, as derived from the returns of the Bank of Japan and the Yokohama Specie Bank:—

Days	Gold Coin. (Per yen 100)	Pound Sterling. (Per £1)
	Silver Yen.	Silver Yen.
1st	105.300	A.M. 5.2173 P.M. 5.1612
2nd	105.000	A.M. 5.2173 P.M. 5.1612
3rd	105.300	A.M. 5.2173 P.M. 5.1612
4th	105.300	A.M. 5.2173 P.M. 5.1612
5th	105.000	A.M. 5.2173 P.M. 5.1612
6th	105.000	A.M. 5.2173 P.M. 5.1612
Averages	105.150	5.2034

The above averages show for gold coin a decrease in value of yen 0.750, and for the pound sterling a decrease in value of yen 0.0402, compared with the previous week.

THE BANK OF JAPAN.

THE amounts of convertible notes and reserves in the Bank of Japan for the week ended the 6th instant were as follows:—

Convertible Notes.	Reserve and Securities.
Yen.	Yen.
Notes issued	Gold coin and bullion, 24,205,247
74,035,000	Silver coin and bullion, 24,407,000
	Public loan bonds, 13,470,450
	Treasury bills, 1,000,000
	Government bills, 1,000,000
	Other securities, 4,732,182
	Commercial bills, 9,034,055
74,035,000	74,035,000

Of the above total issue of notes, the sum of yen 4,227,646 is in the treasury of the Bank, and yen 69,807,354 in actual circulation, the latter showing an increase of yen 426,256 as compared with yen 69,381,098 at the end of the previous week.

THE AMOUNT OF MONEY TAKEN FROM THE FAMINE RELIEF FUND.

"WHEN the Government decided to use the Famine Relief Fund for the purchase of foreign rice," says the *Choya Shimbun*, "the public entertained grave doubts as to the advisability of making such a use of money set apart for a definite object. This doubt was, however, dispelled for a time by the hope that the condition of the rice market would probably bring about a very favourable result. But we regret to learn that, according to the present prospect, about 200,000 yen of the fund will be lost." And this despite all the talk about the Government having sold the imported rice at prices highly remunerative.

SHINSHU SILK MANUFACTURERS.

IN consequence of the extraordinary rise in the rate of exchange, says the *Choya Shimbun*, the price of silk has been lowered so much that all the silk manufacturers are said to have incurred heavy loss. On the other hand, the cocoons continue everywhere to command their original price. This state of things has led the *Kaimisha*, the *Kairyosha*, the *Hakkusha*, the *Ryujokwan* and other noted silk-manufacturing firms in Suwa, Shinshu, to form a mutual agreement that they shall desist altogether from further manufacture, so soon as they have used the cocoons they have in stock at present.

INFORMATION has been received in Yokohama to the effect that the name of a successor to Mr. Greathouse as U.S. Consul-General was sent to the Senate for confirmation on the 15th August. The new Consul-General, whose name is Govey, is Mayor of Olympia, Washington, and President of the first National Bank there. If his appointment is confirmed, he may be expected in Japan about the end of October.

FASHIONS OF OPPOSITION.

IF anyone had foretold, a dozen years ago, the nature of the opposition that would be raised to Treaty Revision in these latter days, he would have been treated with derision. That there should be a strong dislike to surrender the privilege of Consular Courts and to submit to Japanese jurisdiction, was a natural and by no means unreasonable feeling. The higher the value men attach to the efficient and pure administration of justice, the less disposed are they to place their persons and properties under the control of tribunals concerning which they know little, and against which they entertain a prejudice partly racial and partly founded on experience. This fact has never been lost sight of, we presume, by the negotiators entrusted with the task of Revision. If it was essential that any new system substituted for the old, should have the endorsement of the Japanese nation from the outset, scarcely less essential was it that the reasonable and well-founded reluctance of foreigners should not be treated with indifference. Both sides must be considered, for if a radically obnoxious programme were forced upon either, the revised treaties might only have the effect of accentuating and perpetuating the very conditions they were intended to remove. It was of this wholesome view that the celebrated "guarantees" were begotten: they supplied materials for a compromise acceptable to both sides, as it was hoped, and workable in practice. We know how the guarantees fared. Representing originally the general limits of Japanese concession, they underwent such a process of elaboration and expansion at the hands of the negotiators that Japan finally revolted against them, broke off the conference, and sent into retirement the able and liberal-minded statesman who first had succeeded in bringing the Revision problem within sight of solution. Then, after an interval, came the amended guarantees—amended so greatly that the principal of them could no longer compare with its original in respect of the solid, practical security it offered to litigants. None the less these amended guarantees represented the maximum concession of which Japan was capable, in that direction, at the time. They represented, indeed, more than she could subsequently bring herself to concede, for in the interval of unexpected delay that succeeded their acceptance by four of the Great Powers, the whole question had time to be dragged into the arena of party politics, and once more the prospect of a speedy settlement was marred by Japan's constantly growing sense of what she thought herself entitled to claim. Now no one pretends to think that foreigners can be induced to accept this situation as final; to admit that Treaty Revision must either be removed from the field of negotiation

altogether or accomplished by piecing together the shreds that remain of the old guarantees. It has been pointed out by several writers—this journal among the rest—that the practical value of the foreign-judge guarantee—in its latest form—bears no sort of comparison with the national umbrage which would be excited in Japan by any attempt to enforce it. In fact, the foreign-judge guarantee is dead and buried. No Japanese Cabinet dare revive it, and no sober Western Government would attempt to ask for its resuscitation. But what is not yet dead and buried is foreign distrust of Japanese judicial competence. That still lives; has nearly as much reason to live as it had two years ago, and must be seriously considered in any conference aiming at a mutually satisfactory settlement. The question of the laws themselves no longer deserves mention: such as remain of them will have been enacted and gone into full operation long before Consular Jurisdiction is abolished. The foreigner's unique faith in his own Judges, however, and his doubts, inbred as well as educated, as to the ability of Japanese Judges to administer full justice, are not modified or dispelled by the mere fact that Japan grows daily more intolerant of his conservative mood. So long, then, as he confines himself to a statement of his doubts and to a demand that due account be taken of them, he is treading reasonable ground and can reckon both on his nationals' support and on Japanese consideration. But of late his local representatives have resorted to methods as incredible as they are unscrupulous. When PERRY and ELGIN came here to open a trade route, they were constrained to be content with a very partial attainment of their object. If they could have persuaded Japan to permit unrestricted trade and intercourse between her people and the outer world, their achievement would have been universally applauded. But they only induced her to give a very limited consent. It remained for future effort to break down the remaining barriers of her isolation, and everyone, looking forward impatiently to that consummation, regarded it as a thing worthy of some sacrifices. As for Japan, however, when she had divested herself of her mediæval scruples, the only sacrifice she required was the restoration of her judicial and tariff autonomy. But among foreigners there were some so averse to such a sacrifice or so anxious to maintain a state of affairs which suited their own special interests, that they set about depreciating the value of everything Japan had to offer. They scoffed at the notion that the complete opening of the country would contribute to the development of foreign trade or furnish opportunities for the employment of foreign enterprise and capital. They declared that Japan was played out, and that anyone bringing his money here for investment, would exchange it for a

bitter experience. In a word, they argued that as the foreigner had nothing to gain by helping Japan to emerge from a state of isolation which he had himself denounced as barbarous when his interests seemed opposed to its continuance, the prudent and proper course was to leave her isolated. A quaint specimen of international morality was this contention, but morality seemed a small matter provided only that foreigners could be induced to regard the opening of the country with eyes of apathy and contempt. Suddenly, however, a new and diametrically opposite device has been adopted. Instead of proclaiming the barrenness of Japan and assuring foreign capitalists that they can find no investments of any kind here, the anti-revision agitators have gravely pirouetted, and are now warning the Japanese that if they open their territories, the foreigner, with his large capital, his wide experience, and his superior business methods, will step in, acquire possession of all the country's industries and reduce its people to a state of virtual slavery. Last year, in the excitement of unparalleled agitation, a little coterie of Japanese ventured to raise a similar cry of alarm. What reception did their utterances receive from foreigners? We all remember well. They were denounced as pusillanimous conservatives; their attitude was quoted as an evidence that Japan had not shaken off her mediæval tendency to isolation; they were accused of anti-foreign prejudice, and to cap all, they were laughed at for imagining that foreign capitalists or foreign industrials could be tempted to waste their money or their energy in such a place as Japan. But, since it seems desirable to play upon the apprehensions which were then ridiculed; since it appears possible that the best way to check the development of international intercourse is to revive in Japanese breasts the timidity and distrust which kept the country closed for so many years, the anti-revision agitators, with supreme effrontery and unscrupulousness, turn their backs upon their former utterances, and encourage Japan to shrink into her shell lest, by emerging from it, she become the prey of the masterful Occidental. Consistency, honesty, morality, the spirit of progress, the most rudimentary instincts of shame—we search vainly for any trace of such qualities in these chameleon-like arguments. It is simply a question of clutching at everything that offers any promise of aid. "We were always of the opinion," writes one of the agitators, "that about ninety-nine hundredths of the Japanese nation objected strenuously to the throwing open of the country to Europeans." How much respect, forsooth, was paid to such an objection thirty years ago when it suited Western convenience to open Japan? How much respect would the writer of the words quoted have claimed for it then? Does he even believe what he writes now?

Does he really imagine that the leading Japanese statesmen have been for the past ten years exerting all their energies to accomplish something to which ninety-nine out of every hundred of their countrymen are strenuously opposed? There does not exist one political party in Japan to-day which has not written "Treaty Revision" in the forefront of its programme. The five parties that combined to defeat Count OKUMA'S scheme last year, have they declared themselves opposed to the opening of the country? On the contrary, their cry is "a treaty on terms of absolute equality" (*taito-joyaku*), and such a treaty necessarily means the complete removal of all restrictions upon trade, travel, and residence. The one result of circulating these monstrous and palpable falsehoods, of lapsing into contradictions so flagrant and unscrupulous, of seeking to foster a narrow, illiberal spirit which every lover of progress should denounce, is to bring ridicule and contempt on the cause of the opposition. Never did a cause suffer so cruelly at the hands of its would-be supporters.

KOBE.

THE mental attitude of the foreign community of Kobe towards Japan and things Japanese has undergone a decided change for the worse during the past twelve-months. As a general rule, the state of commerce at a given time furnishes a pretty trustworthy index of the mood prevailing in any one of the foreign settlements. If trade is prosperous and money coming in easily, people are disposed to be good-humoured, and to take a pleasant view of the country where such success is attainable. But, when industry and perseverance bring no fruits, and losses are more frequent than profits, Japan is apt to receive a good deal of execration, and Japanese institutions have to run the gamut of ugly criticisms. Nothing could be more natural. The complexion of our circumstances depends largely on the temper with which we regard them, and, if the world happens to be using us harshly, it is our human privilege to abuse it. From this point of view Kobe ought to have been just what it was until the change of which we speak occurred—a genial, indulgent sort of place, where people saw the bright side of things, and were disposed to adopt a decidedly friendly tone towards the land that offered them good fortune. In those days, indeed, it was always pleasant to visit Kobe. A sunny, well-to-do atmosphere pervaded the settlement, and, though the streets could not be described as "bustling," the general aspect of the place suggested something of the remarkable commercial strides which were then rapidly bringing it within measurable reach of the principal open port in the empire. But the Kobe of to-day is not the Kobe

of last year. It has become captious and comparatively harsh, no longer turning to the better side of things, but disposed to search for the worse, and not to look beyond it when found. Possibly we may be mistaken in this judgment. Let us explain at once, then, that it is founded on the writings of the local foreign press, and not on any independent investigation or information. Kobe has now two newspapers, and its temper may not unreasonably be inferred from their tone. If they were illiterate and vulgarly scurrilous sheets, we should of course hesitate to consider them representative. But they are nothing of the sort. Their editors are evidently men of literary ability and considerable attainments, and their articles may be taken as fairly reflecting educated public sentiment. It is true that the conditions of journalistic existence in a foreign settlement in Japan are not conducive to independence or moderation. Every community, of Britishers at all events, resident in the Orient is permeated, to a greater or less extent, by a militant and masterful spirit. Against this there is nothing to be said in the abstract: it is the spirit that bears the English empire onwards; and, however unsightly its ebullitions may seem to other nationals, Anglo-Saxons know its value and the necessity of preserving it. But it is not everywhere appropriate and useful. In Japan, for example, the reign of arbitrary dictation is past and cannot be restored. Influence is no longer to be won and wielded here by the exercise of qualities serviceable thirty years ago, or by recourse to the methods of masters and victors. The number of those who recognise this fact, however, is still a minority, and newspapers of course seek to appeal to the majority. Their subscription list is their mentor, and, though an editor may laugh at the exquisite conceit of gentlemen who think it necessary to give detailed explanations of their reasons for ceasing to subscribe, or may marvel at the crooked morality and blind bigotry which impel them to decide that because a newspaper does not echo their sentiments they must abstain from purchasing it, he is not always happy enough to be able to set his conscience and his convictions above financial considerations. Especially, we take it, must this be the case in a small community like Kobe, where local circulation is nearly all that a journal can reasonably hope for, and where, if the editor wishes to lead an even tolerably happy life, he must adapt himself to the bent of a society with which he is in almost universal contact, both personal and journalistic. Under such circumstances, he is very prone to adopt the flippantly contemptuous tone and masterful spirit which, in their intercourse with Orientals, nine Englishmen out of every ten consider becoming, and regard as a proper evidence of racial superiority. But, when due allowance has been made for this, we still find that the

two Kobe journals display a bitterness and a harshness of criticism which would not have been tolerated by the community a year ago. If these newspapers are themselves conscious of the fact, they will doubtless explain it; but in the meanwhile we may note the conclusion suggested by our own enquiries, namely, that the behaviour of the lower classes of Japanese in the settlement, and the action of the police and local authorities, have roused a feeling of resentment and exasperation among foreigners. Several indignant and highly coloured accounts of fights between foreign sailors and Japanese mobs have been published of late, and in almost every case the police have been charged with wilful failure to protect the foreigner. Some features of these stories have been difficult of credence, but on the whole there is no closing our eyes to the fact that an unsatisfactory state of affairs exists, and that its existence tends to foster much ill-feeling. It is confidently asserted that the *jinrikisha* men are in collusion with the *sendoes*, and that, when the former bring a liberty man to the wharf, they demand from him an exorbitant fare, which he naturally refuses to pay, whereupon he finds that he cannot procure a boat to take him off to his ship. A European or American sailor placed in such a predicament, and being probably pretty "full," is prone to assert his rights in a violent manner, and the coolies and *sendoes* thereupon handle him very roughly. Representations are said to have been made without success to the local authorities, and the apparent apathy of the latter, combined with the official ill-will inferred from the police's supposed failure to protect foreigners, have greatly alienated foreign good will. It will be understood, of course, that we speak from hearsay only. Still, there cannot but be some truth in these various reports, and it is well that the attention of the Authorities should be drawn to them. Kobe's mood of resentment is not purely fanciful, and, as it is not a habitual mood, there should be the more anxiety to investigate and remove its causes.

THE ELEVENTH OF SEPTEMBER.

THURSDAY last being the Russian EMPEROR'S Fête, we are reminded of the important fact that the Crown Prince of that empire, accompanied by his brother, the Grand Duke GEORGE, is to visit the Orient next spring, and may be expected to arrive in Japan in May. From a European point of view the news is very interesting, since we may fairly infer from the Prince's tour that the maintenance of peace until the end of 1891 is regarded with entire confidence at St. Petersburg. It is evident that if any uneasiness existed on this score, the prolonged absence of the Heir Apparent would not have been contem-

plated by the TZAR. Not with Russia, indeed, does the final decision rest as to whether or no Europe shall be converted from an armed camp into a field of battle; but in a certain sense the great Northern Power may be said to stand between the probable belligerents, and she is plainly persuaded that for the next twelve months, at all events, her attitude of restraint need not be exchanged for one of alliance. When statesmen in Berlin or Paris tell the world that the forces making for peace are paramount at any particular time, the value of their assurances is discounted by the purpose evidently underlying them. Even a political forecast by the English Premier, though its comparative independence renders it more persuasive, cannot be said to furnish anything better than a strong basis of hope. But Russia, when she despatches her Crown Prince and the Heir Presumptive on an Eastern tour destined to last for many months, and when she detaches for their escort a squadron of ships the absence of which must materially weaken her navy, gives a practical assurance of exceptionally convincing character.

It has not yet been Japan's good fortune to receive the visit of the heir apparent to one of the Great Thrones of Europe. She will naturally, therefore, set much store by the event of next spring, and will seek to evince her appreciation of its import. Of course the idea most obviously suggested by the coming of the Czarewitch is that Russia's sentiments towards Japan are of a very friendly character. Of that fact, however, no further assurance was needed, we imagine. In all matters of public cognisance where Russia has had an opportunity of dealing amicably by Japan, she has not failed to show a kindly spirit. This has been conspicuously the case in respect of Treaty Revision. It is true that having comparatively small interests to safeguard, Russia could afford to accept terms proportionately liberal. But there is a marked contrast between mere indifference and active friendship. Russia has displayed the latter, and the credit it has won for her will doubtless be manifested in the nature of the reception accorded to her Crown Prince next year by the Japanese nation.

We are further reminded by this day of fête that the past twelve months have not been without the usual crop of disturbing rumours. Time and time again Russia has been represented as intriguing to obtain possession of Korea, now by diplomatic manœuvres, now by acts of aggression. Constantly discredited by events, these rumours ought to command less credence at each repetition. But the public, loving sensation, is always ready to listen to any story suggestive of stirring eventualities, and there is, moreover, a party of writers in the East who make it their business to seize every flying fable and invest it with

features of reality. Whether these men are the victims of honest credulity, or whether they are actuated by selfish motives, can only be matter of conjecture. They manage, at all events, to foster a spirit of doubt and international distrust which is in itself calculated to assist the events they describe. Sometimes, however, good comes out of even this evil. Such was notably the case in respect of the last report circulated, when the public was assured that this time, beyond all question, the inevitable island without a name had been annexed by Russia, and that now, if ever, grave complications were in store. Had it been apparent that this story emanated from the usual source, the Russian Government would probably have left it unnoticed. But, although published originally by Chinese newspapers, it found its way into the Japanese press in such a form that the latter became apparently responsible for its truth. The Authorities at St. Petersburg were therefore induced to take the decisive step of officially assuring Japan that Russia entertains no intention whatsoever of seeking to annex any part of Korea—a most important intimation, which, though communicated at the time to one of the leading Japanese journals, does not appear to have attracted the attention it deserved. There should be no difficulty in perceiving, as we think and have often said, that Russia's attitude towards Korea must be distinctly pacific for the present, and indeed for several years to come. Like her European neighbours and rivals, she is not exempt from the action of the law which decrees that empires must either wax or wane. By and by, therefore, supposing her vitality to remain unimpaired, we look to see her continue her advance southward along the Amur and into Korea. But the time for that movement has not yet come, and any attempt to precipitate it would inevitably bring Russia face to face with difficulties which she knows herself unprepared to overcome. When we are told that she is negotiating a protectorate over Korea, or that she has seized such and such a portion of Korean territory, we recognise at once a repetition of stories so groundless as to deserve only ridicule. Her present policy plainly is to preserve the *status quo* in the Orient, and to maintain with Japan relations of friendship which will doubtless be strengthened by the contemplated visit of the Crown Prince and his brother next spring.

ON THE PRONUNCIATION OF JAPANESE BY ENGLISH SPEAKERS.

(COMMUNICATED.)

WE suppose most people will agree that an exact pronunciation of a foreign tongue is, for those who want to speak it, of more practical importance even than grammar and idiom. Such being the case, it is somewhat surprising to observe

how few English-speaking people attain to any exactness in the pronunciation of Japanese, and yet how superficially the differences between the pronunciation of English and Japanese are dealt with in books relating to the study of the latter language. We are not here alluding to differences in tone and accent, but simply to the pronunciation of the letters or syllables of which words are composed.

It appears to us that two methods should in all ordinary cases be employed by those who wish to speak Japanese with a correct pronunciation; the first is *learning by ear*, the second, *learning by rule*.

The first method is followed by a man who, after the manner of a little child, simply imitates (or tries to imitate) the sounds that fall on his ear; the second is followed when a man enquires *how* those particular sounds are produced, and then follows such rules as result from his enquiries.

Most English-speaking people are content more or less exclusively with the first method only, that is they trust to the correctness of their own ear for rightly catching the different sounds, and to the natural power of their own mouth and tongue for rightly reproducing them. It is needless to say that (if used exclusively) such a method, with most men, ends unsatisfactorily, simply because few have that exact ear for sound which they credit themselves with; fewer still have the power of reproducing this or that sound exactly as it falls on the ear.

But if in addition to the first method—for the two should never be separated—the second method also be employed, the chances of learning to speak with a correct pronunciation are doubled; because by the second method we learn the principles which underlie right pronunciation, and the actual way in which each letter or syllable is formed.

If any one with a fine ear for sound listens carefully to a Japanese in conversation, he will find that there is probably no one Japanese letter or syllable pronounced in *exactly* the same way as the corresponding letter or syllable in English is pronounced; this is more easily noticeable with some Japanese speakers than with others, but it at least guides us to recognize what we now wish to explain, namely, that the Japanese method of speaking is fundamentally different from the English method. The fundamental differences may be summed up as follow:—

A Japanese in speaking shows a tendency to use his mouth as little as may be, keeping it almost closed, and to let his tongue do nearly all the work.

An English speaker on the contrary (if he speaks at he ought) shows a tendency to let his mouth do nearly all the work, and to keep his tongue quiet as far as may be.

These two fundamental differences between English and Japanese speakers in the use of the mouth and the tongue lead to, or possibly result from, a third which should be very carefully noticed, as it may

be called the key to the right pronunciation of Japanese:—

The tongue in speaking Japanese is invariably slightly more forward in the mouth, than in pronouncing the corresponding letters or syllables in English.

It will be found most useful for the English speaking student of Japanese to bear in mind these three general points of difference, for if observed, they will assuredly put him in the way of pronouncing Japanese correctly. It will also be both useful and interesting to trace out briefly the application of the last mentioned point—about the position of the tongue—in the pronunciation of the various letters and syllables.

The ordinary English speaker does not appear to touch the upper front teeth with his tongue to form any sound except *th*; but a Japanese touches (in ordinary cases) the upper front teeth with his tongue to form

t, including *ta*, *te*, *to*, and *tsu*,

d, including *da*, *de*, *do*, and *dsu*,

n, including *na*, *ni*, *nu*, *ne*, *no*;

almost, if not quite, for forming

s, including *sa*, *su*, *se*, *so*, and *ji*,

sh, including *sha*, *shu*, *she*, and *so*.

In other words, the tongue (even if it does not quite touch the front teeth) is slightly more forward in the mouth than it is for pronouncing the corresponding English syllables or letters.

Next take *shi* and *chi*;

to form these syllables a Japanese brings his tongue slightly more forward than an English speaker would, so as sometimes almost but not quite to exclude the sound of the middle letter *h*.

The same rule should be observed in the formation of the syllables

wa, *wo*; *ya*, *yu*; *ye*, *yo*.

it has the effect of weakening the full sound of the English *w* and *y*.

The following syllables seem to suffer the least change, but if the three general rules mentioned above are all borne in mind and followed, a slight modification will almost necessarily appear even in these:—

ba, *bi*, *bu*, *be*, *bo*,

pa, *pi*, *pu*, *pe*, *po*,

ma, *mi*, *mu*, *me*, *mo*.

There only remain the syllables formed with *k*, *g*, *h*, and *r*, and the five vowels *a*, *i*, *u*, *e*, *o*.

With regard to

ka, *ki*, *ku*, *ke*, *ko*,

the rule applies quite distinctly, but *k* being a guttural it is not so easy to form the modified sound as in the case of most of the other letters; instead of forming these syllables direct from the throat as in English, the tongue must be allowed to form an artificial throat as it were, and the sound be allowed to come from a point a little farther forward in the mouth than the actual throat; the effect produced is a softer, more aspirated sound, than in the English *k*; this is perhaps

more distinctly noticeable in the syllable *ki* than in *ka*, *ku*, *ke*, and *ko*.

For *ga*, *gi*, *gu*, *ge*, *go*, the same rule applies as for *ka*, *ki*, *ku*, *ke*, *ko*, and the result is to make *g* sometimes sound like *ng* in English "singer," especially when it occurs in the middle of a word.

And here it should be observed that with regard to *k* and *g* (and other letters also) a harder sound is heard in some parts of the country than in other parts; this harder or softer sound is regulated by the position of the tongue, which is slightly more forward for softer than for harder sounds.

Ha, *hi*, *fu*, *he*, *ho*.

For *h* the rule applies very clearly; we should especially observe that in the case of *hi* the tongue is sometimes so far forward as to produce a sound almost like *shi*.

Again *hu* (spelt *fu*) is generally but not always so pronounced as to sound like *fu*, but the lower lip must not be drawn in to touch the upper front teeth as in English; the effect is in fact produced by saying the English *hu* with the tongue well forward in the mouth (which remains nearly closed according to the rule).

Ra, *ri*, *ru*, *re*, *ro*.

For *r* also the same rule holds; in every case (for *ra*, *ri*, *ru*, *re*, or *ro*) the tongue is more forward than for the corresponding English sounds; consequently *ri* becomes quite naturally almost like *di*; and any roll of the letter *r* becomes a physical impossibility for polished speakers.

a, *i*, *u*, *e*, *o*.

If the principles of pronunciation given above and the application of them be carefully followed, it will be found that the vowel sounds will almost necessarily be modified in the same way as they are with a Japanese speaker; but of course there must be a constant application of the ear method as well as of rules, if final exactness of pronunciation is to be attained.

We may add in conclusion that for a Japanese wishing to pronounce English correctly, these same rules given above will be of the greatest service, if he will take the trouble to reverse them.

LOCAL GOVERNMENT CHANGES.

LAW No. 77.

We hereby give our sanction to the present regulations relating to changes in the names of municipalities, towns, and villages, as well as to changes in the locality of the offices of municipalities, towns, and villages, and order the same to be duly promulgated.

[His Imperial Majesty's Sign-manual.]

[Great Seal.]

Dated August 29th, 1890.

(Countersigned)

COUNT YAMAGATA ARITOMO,
Minister President of State.

COUNT SAIGO TSUKUMICHI,
Minister of State for Home Affairs.

Article 1.—Should it be intended to change the name of a municipality, town, or village, or to change a town to a village or a village to a town, the Council of the relative city or prefecture shall

decide the same after taking the opinion of the assembly of the respective municipality, town, or village, or the Council Board of the rural district, and shall thereafter obtain the permission of the Minister of State for Home Affairs.

Article 2.—Any decision of the Assembly of a municipality, town, or village to change the locality of the offices of such municipality, town, or village shall be subject to the sanction of the governor of the respective city or prefecture.

THE ADMINISTRATIVE COURT.

IMPERIAL ORDINANCE No. 192.

We hereby give our sanction to the present Regulations relating to the management of the affairs of the Administrative Court, and order the same to be promulgated.

(His Imperial Majesty's Sign Manual.)
(Great Seal.)

Dated August 20th, 1890.

(Countersigned)

COUNT YAMAGATA ARITOMO,
Minister President of State.

Article 1.—Judges to try each Administrative suit shall be appointed by the Chief of the Administrative Court.

Article 2.—Should any judge be required to act as chief judge in accordance with Article 8 of the Law of the Administrative Court, he shall be appointed according to the order mentioned in paragraph 2, Article 7, of the Law.

Article 3.—The Chief Judge may appoint one or two judges to conduct the preliminary process of a trial.

Article 4.—Should the Chief judge deliver sentence involving a penalty in the cases provided for in paragraph 2, Article 38, of the Law of the Administrative Court, he shall direct the clerk to enter the same in the record of cases.

Article 5.—The Administrative Court may from July 11th to September 10th in each year suspend suits already begun, or postpone the commencement of new suits, except in cases which the court deems to be urgent and important.

Article 6.—No decisions can be given in ordinary sessions of the Administrative Court unless above two-thirds of the total number of judges are in attendance.

Article 7.—The Chief Judge of the Administrative Court shall act as President of the ordinary sessions. Should the chief be prevented, the judge of highest official rank shall represent him.

Article 8.—The Administrative Court may serve writs or summonses, as well as other documents connected with proceedings, by process-servers or by post, or may serve them by entrusting the duty to an ordinary court of law.

Article 9.—The Administrative Court may issue notifications as to matters involving its official rights, within the limits of laws or ordinances.

Article 10.—The Chief of the Administrative Court may establish regulations relating to the order and mode of managing its affairs, within the limits of laws and ordinances.

Regulations relating to clerks shall be fixed by the Administrative Court.

CORRESPONDENCE.

JAPANESE IN THEIR DEALINGS WITH FOREIGNERS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have read with much interest and concern the correspondence and leading articles that have appeared in your paper on the question of the business morality of the Japanese import traders at Yokohama. I am in no way connected with the mercantile profession, much less with the particular class of merchants in question. I can not, therefore, answer for these men; but, the question having indirect bearings on the moral character of the Japanese nation at large, I think it may not be improper for me to offer a few remarks on the subject.

First, the Japanese import dealers at Yokohama (and at other open ports likewise) form a group distinct in many respects from the rest of the mercantile class in the country. The term *bōchi-shō* (men engaged in foreign trade) is associated in popular fancy with whatever is most disgusting in the character of the Japanese merchants—dishonesty, unscrupulousness, and faithlessness. They do not receive at the hands of their *confères* in the interior the consideration and respect which

the latter show to each other among themselves. They are rather regarded as dangerous men to be trusted. The fact is, the conservative, though sound and honest, merchants of the interior are in awe of these sharpers of the open ports. Why are the import dealers at open ports so bad in general? Because most of these men were originally desperate adventurers, who, having lost either fortune or character in the interior, repaired to the treaty ports as the last place where they could hope to better their condition. The majority of the genuine merchants being timid and ignorant, these unprincipled men have in time monopolized the foreign trade of the country.

Secondly, your correspondent speaks of the rising generation of import dealers. There is, however, no wonder that the younger dealers are no better than their elders, as they have been educated in the school of the latter. The generation to which we look for the improvement of the present state of affairs at open ports is yet to arise. The young men who are now undergoing training at the various business schools of the Empire will be found an entirely different set of men. They are sons of *shizoku*, farmers, mechanics, and merchants of the genuine sort.

Thirdly, as you have pointed out, the merchant class having been during many centuries despised by the ruling classes of the nation, it represents the lowest point in the scale of national morality. But, even among this despised class there is an aristocracy of its own, which is very careful of its honour, if not dignity. It is composed of the great hereditary commercial houses which are found in every town throughout the country. These houses are at least as trustworthy as any mercantile firms in Europe or America. The only difficulty is that these houses are extremely conservative, and cannot be induced by any argument to engage in foreign trade.

Fourthly, from what has been said thus far, it will be seen that, for many years to come, there will be no hope of the present state of affairs being remedied, unless, as you say, the foreign merchants either combine among themselves or with Japanese. But neither step is likely to prove feasible. What is, then, to be done? There is only one way in which the problem can be solved, and it is an extremely simple and easy one, if foreigners will only open their eyes. Revise the treaties and obtain free access to the whole interior of Japan. This and thus alone can foreign merchants rid themselves of the pests now preying upon them. When the country shall have been opened the situation will be reversed. The Japanese will then be the competitors, and foreigners the gainers by the competition. If foreign merchants choose to remain in the settlements, the present state of affairs is, in one sense, a just reward of their conservatism and race prejudice.

I am your obedient servant,

A JAPANESE WHO IS NOT A MERCHANT.

Tokyo, September 2, 1890.

(Our correspondent has slightly misunderstood our articles. The remedy indicated by us was combination between foreigners and Japanese, not under existing circumstances—such combinations being now illegal—but after the opening of the country. It will then be possible for upright, sound Japanese traders to go into partnership with foreigners, and by that means to eliminate the present injurious parasites. Practically our correspondent's view and our own are identical.—Ed. J.W.M.)

THE ROUTE TO NIKKO.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Unless the following information is already in your hands, it is now placed at the disposal of your readers. Having just come to Nikko *via* Kumagaye and Ashikaga, I speak wittingly. Taking the 6 a.m. from Tokyo, Kumagaye is reached at 8.05, though there is sometimes a delay at the station just before Kumagaye, waiting for the np train. From Kumagaye to Ashikaga the legal fare is 58 *sen* per man, but it will take some persuasion to get men for less than 1 *yen* apiece. We paid 75 *sen*. Two men are necessary. The entire distance is short 7 *ri*. The first half to the Tonegawa is rough and slow. The road is not flooded, but the holes are too frequent and deep for the men to keep up a trot. The ferry (10 *sen*) at the Tonegawa lands one on a mud island, about 3 *cho* wide and difficult to cross without getting shoe deep in mud. On the other side is a short ferry (5 *sen*). Thence to Ashikaga, 3½ *ri*, the road is ichiban, especially after passing Otamachi. Just beside Ashikaga there is the Watarasegawa, to be crossed by a swift but shallow ferry (4 *sen*). Then comes a rough walk of 2 *cho* over debris of the late flood, and then about two miles in *jinrikisha* through the town to the station. To make this distance between Kumagaye and Ashikaga in time to reach Nikko same day is possible, but not probable. The first half of the road is slow; at the ferries are delays. Three men for

one *jinrikisha* would make the connection more probable. By leaving Yokohama on the 10.22 a.m. *via* Kumagaye, spending the night at Ashikaga, a pretty and attractive town, Nikko may be reached by 11.40 a.m. next day. Ashikaga to Oyama, thence Utsunomiya and Nikko, all rail. The scenery from the Tonegawa all the way to Oyama is fine.

Yours, &c.,

Nikko, September 5th.

TRAVELLER.

TRIP DOWN THE TONEGAWA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have made a trip down the Tonegawa for about 75 miles, and a short account of it may interest your readers. My reason for going was that I wished to see something of the floods. I left Ueno station at 6 a.m. on Wednesday for Kumagaye, paying *yen* 2.20 for freight on a canoe. Had the canoe carted to Menuma Ferry, on the Ashikaga road, for 70 *sen*; launched bark on the Tonegawa at 10.30 a.m. About 2 *ri* down I came to a breach in the bank, on my right, at a place called Shikamura. I was told by a policeman that this breach is 67 *ken* wide, and was made on the night of the 23rd ult. at ten o'clock, and that 25 houses were then swept away. Even when I was there the water was rushing through, but there was a large force of men employed piling and filling the breach with sand bags, and they expected to get it closed that night. A policeman told me that the overflow water extended to Tokyo and ran into the Rikugo. This would mean about 50 miles. The width of the flood in some places, he said, was 25 miles. When the river burst through it was 15 feet above its normal level, but when I passed it was only 2 feet. The policeman said the farmers there were wild with their losses, and had shot at passers-by. I would like to have gone over the flooded district, but of course could never have found my way, under the circumstances without a guide.

About two *ri* above Koga I passed two breaches, each about 200 feet wide. Through the breaches the flooded country could be seen, in one direction for at least 10 miles. Nothing was being done to close these.

The suffering in this district must be intense. I passed the Railway Bridge at three p.m., and reached Sekiya about five. Here you turn nearly at right angles, and leave the main stream for the branch which flows into Yedo Bay, about six miles to the east of Tokyo. The current, at the bend, made things lively for a few seconds, and is so strong that craft bound up have to be hove through by ropes, I understand, for which purpose there are two craft anchored in the fairway with powerful windlasses on board. The ascending vessels are examined at Sekiya by a policeman stationed a little down the stream, for cholera victims, I presume. Coming down in the dark I passed several junks sailing up. They carried no lights, but the overhanging square bows as they surged through the water gave ample warning of their approach. I left the Tonegawa for the Sumida at 12.45, and arrived at the Tsukiji Custom House at 2.30 on Thursday morning, having had to paddle against the wind all the way.

I remain, Sir, yours faithfully,

TONEGAWA.

Tokyo, September 4th, 1890.

THE KOBE "SECULARIAN."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Again the saying "history repeats itself" has been verified. In "Secularian" we have a modern Gadarene, so true to the original type that his existence in the last quarter of the 19th century seems almost anachronistic. Could he be transported backward through eighteen centuries and placed on the shore of Lake Galilee he would find himself among congenial and companionable spirits. The story of the Gadarenes is familiar to all Bible readers, but I repeat it. Christ one day visited them, and his first act after landing on their shores was to cast out the demons from two men who were so fierce and refractory that they had become a terror to the community. By this act the two demons were instantaneously converted into peaceable, law-abiding citizens, and the country rid of a great pest. But in the meantime Christ suffered the demons to enter into some hogs that were feeding near by, and the hogs, becoming frightened, ran down into the lake and were drowned. The Gadarenes, on learning what had happened, ran out to meet Christ, but, instead of expressing their gratitude for the merciful deed that he had done in healing the mad men and thereby ridding the country of a public nuisance, they allowed the loss of a few hogs to embitter their souls, and

rudely ordered him to leave their shores. Ignoring the great public benefit that had been conferred, they allowed their personal prejudices, excited by the loss of a little pork, to move them to reject their benefactor. So "Secularian," passing by the innumerable blessings that Christianity has conferred upon the world and is now conferring, seizes upon the past blunders and inconsistencies of Christians and declares them to be the legitimate outgrowth of Christ's teachings. And when a Christian apologist, actuated by the love of truth and the good of his fellow men, and guided by a spirit of honesty and fairness, exposes the emptiness of his assertions, he immediately resorts to disgusting braggadocio, and tacitly arrogates to himself a monopoly of learning; and from the lofty height of his fancied erudition he condescendingly refers to the ignorance of his opponent, and with the kindness of a learned infidel freely offers that which is the cheapest of articles—gratuitous advice.

"Secularian" has also shown himself an adept in retreating and advancing, which is admirable in military movements, but unfair and condemnable in a serious discussion. In his first attack he alleged that "infidelity has quenched the fires of persecution lighted by Christians." This allegation was made in contradiction of Bishop Newman's remark that "infidelity has never given anything to the world." And fairness demands the same use of the word in both instances. Since Bishop Newman used it in the sense in which it is generally used by Christian apologists, viz., the sense in which I used it, I could only infer that "Secularian" used it in a similar sense; and indeed, as an honest controversialist, he could have used it in no other without clearly defining it. But when by historical reference I clearly demonstrated the inaccuracy of his allegation, he sought refuge behind a definition of the word so broad and comprehensive that it practically precludes discussion. His definition, framed to relieve himself of a dilemma, is worthy of repetition. Infidelity, says he, is a word "fairly descriptive of those who, on any particular point—slavery, or witchcraft, or persecution for example—laboured in direct antagonism to the teachings of their creed." Then the term is descriptive of such men as Wycliff, Tyndall, Luther, Melancthon, Zwingli, Calvin, Latimer, Ridley, and a host of others. With such a definition I certainly shall not dissent from "Secularian's" claims for infidelity, and, if he will emerge from behind his pseudonym and reveal himself to me, I should be happy to grasp his hand and say, *viad voce*, that we have one point of agreement. He practically admits that for which I have been contending, that the fires of persecution were extinguished by Christians themselves, for the words "their creed" in his definition plainly refer to religious creeds, and hence exclude all that are not, nominally at least, professing Christians. I am happy to note the spirit of progress which this admission denotes, though the admission is made rather indirectly.

"Secularian" labours industriously to refute the statement made by me that "there is not that in infidelity which makes martyrs," and devotes nearly a column to quotations that seemingly favour his position. But I ask in candour if the hardihood evinced by those whom he mentioned was due to the influence of infidelity *per se*. They were bold and laudably tenacious of their honest opinions, but did they possess boldness and tenacity because they were infidels? In other words is infidelity a mysterious, vital, transforming influence by which a man is regenerated and his hopes unalterably fixed upon a sustaining power beyond him? Is there in infidelity a great central, cardinal truth, wonderfully attractive and rich in promise of future bliss towards which the hearts of all infidels are turned, and which is so dear to them that they would sooner relinquish their claim upon life than upon it? If so, what is it? Let the diverse opinions of infidels themselves answer the question. A man's soul must be conquered by some over-mastering truth that is dearer to him than life before he will suffer martyrdom, and until infidelity can adduce some such truth it is superlative folly to speak of its producing martyrs. Examine the cases of persecution which "Secularian" alleges to be the legitimate outcome of infidelity, and what do we ascertain? We find men whose souls had been conquered by the truth that liberty of conscience and freedom of thought, which truth was first emphasized in the Bible, are the inalienable right of every man whatever his religion or nationality. These men chose to advance ideas contrary to the established religious system of their country, which they had a perfect right to do, and were classed as infidels. Because they advocated these ideas publicly they were persecuted, and perhaps bore their sufferings with becoming fortitude. But were they sustained and

comforted by infidelity in the hour of trial? Or was their fortitude in any way the product of infidelity? Nay, verily, they were brave men independently of infidelity, and suffered rather than renounce the privilege and right of free thought for which their Christian fathers, imbued with the spirit of the Bible, had bled and died. Then is it not absurd to ascribe their powers of creditable endurance to the influence of infidelity? Imagine them as they lay suffering in the dark and gloomy dungeons, perhaps hungry, sick, and sore, denied the pleasure of social intercourse, yet cheered and sustained by infidelity, and, oblivious of their discomforts, lifting their voices in hymning its glorious praises. The absurdity becomes ridiculous. And yet "Secularian" affirms that infidelity has that in it which makes martyrs, and when I affirm the contrary he assumes an air of great learning, and charges me with ignorance. "Better not know so many things than to know so many things that ain't so," I reaffirm that "infidelity has not that in it which makes martyrs." Men die for their beliefs and not for the absence thereof.

But my real purpose for entering into this discussion was not to spar with "Secularian," but to vindicate Christianity from the false and impious charges preferred by a ranting infidel. It is patent that "Secularian" hates Christianity with all the venom of his soul, and it appears that he is seeking to justify his hatred. In order to do this he must either prove that Christianity is an evil and vicious institution, or he found in bitter opposition to that which is pure and good. He chooses the former, and seeks to establish the fact that Christianity is an "unmitigated evil," by deliberately distorting various passages of Scripture so that they are made to foster and teach the most relentless persecution of unbelievers. His argument, if reduced to syllogistic form, would be: whatever system of doctrine teaches and enforces the persecution of its dissenters is an unmitigated evil; Christianity both by practice and precept is such a system, therefore Christianity is an unmitigated evil. The weakness of his argument lies in the falsity of his minor premise, though the truthfulness of the major itself needs to be established. But a failure to establish the minor would result in a complete overthrow of his argument and place him in a very unbecoming and disagreeable light before the civilized world. In order to prove that Christianity is by practice a persecuting religion, he affirms that persecution existed prior to the conversion of Constantine and the consequent coalition of Church and State, and still continues. The most decided traces of persecution that can be found before Christianity united with the State are found in the case of Victor, one of the Pontiffs of the last quarter of the second century, a man described as "rash and hot-headed" who excommunicated certain Asiatic bishops because they differed from him about the rule for observing Easter. His act was reprobated by the generality of Christians, and the letter of Irenæus, in which he offered a most vigorous protest, has been preserved for us by Eusebius. Lactantius, who wrote during and after the persecution of Diocletian, says, on the subject of Christians using coercive measures, "Religion is to be defended, not by murder, but by persuasion; not by cruelty, but by patience; not by wickedness, but by faith. If you attempt to defend religion by blood, and torments, and evil, this is not to defend, but to violate and pollute it; for there is nothing that should be more free than the choice of religion, in which, if consent be wanting, it becomes entirely void and ineffectual." And in so writing he expressed the sentiments of his Christian contemporaries, and his words still find a hearty response in the hearts of present Christians. Now in this case of inchoate persecution, what are the facts? First, we find already existing a hierarchy, with a recognized head, viz., Pope Victor, in whom had been concentrated supreme ecclesiastical power. This was unscriptural. No one from the teachings of Christ and his Apostles can successfully vindicate the existence of any permanent ecclesiastical judiciary. The centralization of power has been the bane of the Church of Christ, and the exercise and abuse of this power by unscrupulous men has been the prime factor in the dreadful work of persecution. The office of Pope, Cardinal, Bishop, in fact the whole system of practical authority, in whatever form it may exist, is unscriptural. In the second place, the celebration of Easter, concerning which the persecution arose, if indeed an act of excommunication may be called persecution, can find no justification either by precept or example in the whole of the New Testament, and therefore was unscriptural. Then the facts in the case are, the persecutor was holding an unscriptural office, exercising unscriptural authority, and prosecuted those who differed from him concerning an unscriptural festival. This

beginning of persecution which thus originated outside of Scripture was rapidly developed after the coalition of Church and State, which marked a still greater departure from the teachings of Christ and the Apostles. Still "Secularian" avers that persecution naturally issues from Scriptural teachings, wherein, as I have clearly shown, its genesis is directly traceable to the centralization of ecclesiastical power. And in his eagerness to establish his proposition that Christianity is essentially a persecuting religion he says, "If to one or two minor sects we add the Quakers, who have always been honourably distinguished for their tolerance . . . and the Unitarians . . . there is scarcely a sect from ultra Romanist to ultra Protestant, but has persecuted in its turn." I should like to know what is meant by the term "minor sects," and to know just how much influence must be exerted by a sect before the term "minor" becomes inapplicable. The Baptists have always been staunch advocates of liberty of conscience and religious freedom, and, while not persecuting, were themselves persecuted most bitterly. So early as 1611, in their Confession of Faith put forth in Amsterdam, the doctrine of religious freedom was emphasized. The nearest approach to persecution of which the Baptists have been guilty was in the days of Cromwell, when the commission of "Triers" was constituted for the examination of candidates for the ministry, and their chief offence then consisted simply in the fact that they were represented on that commission. Does "Secularian" mean to imply that the Baptists are a minor sect? So it seems, but perhaps he has been betrayed by his ignorance into this conclusion. According to the New York Independent, May, 1887, the entire membership of the Baptist Churches of America was 3,727,020, which is proof enough of their influence. Again, can he point to the time when the Methodists persecuted? But perhaps he also calls them a minor sect, and hence a glance at their numerical strength in 1887 is not inopportune. According to the same authority given above, their communicants numbered in 1887 no less than 4,532,658. Here then are some of the leading Christian denominations who not only have never engaged in persecution, but have always vigorously opposed it as unscriptural and un-Christian.

As to the statement that Christianity still retains its persecuting character, I reply that Christians to-day cannot be called a persecuting body, and this "Secularian" knows. Then, in view of the above facts concerning persecution, its origin, and the strenuous opposition that certain Christian sects have always offered thereto, can it be truly said that Christianity is essentially by practice a persecuting religion? Let fair-minded, intelligent judges decide.

Now let me consider the other part of the minor premise, viz., that Christianity by precept fosters persecution. "Secularian," with the whole Bible from which to choose, quotes only two passages in support of his assertion, passages that will not at all bear the interpretation that he gives. Let us examine these, beginning with Deut. 13:6-9. I quote it in full: "If thy brother, the son of thy mother, or thy son, or thy daughter, or the wife of thy bosom, or thy friend, which is as thine own soul, entice thee secretly, saying: Let us go and serve other gods which thou hast not known, thou nor thy fathers; of the gods of the peoples which are round about you, nigh unto thee, or far off from thee, from the one end of the earth even unto the other end of the earth; thou shalt not consent unto him nor hearken unto him; neither shall thine eye pity him, neither shalt thou spare, neither shalt thou conceal him; but thou shalt surely kill him; thine hand shall be first upon him to put him to death, and afterwards the hand of all the people." Such is the command in all its severity that God gave to Israel through his servant Moses. Enjoining as it does the necessity of brother taking the life of brother, parent the life of child, and husband the life of the wife of his bosom, in case an attempt is made to induce one to forsake God and worship idols, it is revolting to us and causes the most hardened nature to recoil. Therefore it invites earnest investigation. First, knowing that God is perfectly just and holy (Deut. 32:4, Lev. 19:2, Ps. 22:3, Is. 45:21, and many other passages), contrasting the severity of the command with his nature forces the conclusion that the reason for issuing it was based upon a dire necessity. Then let us inquire, that we may ascertain, if possible, what was this necessity. An historical review of the circumstances will help to right conclusions. But a few years had elapsed since Israel's release from bondage; Egypt and its idolatry were fresh in their memories, and now they were about to enter into the Promised Land and for the first time establish their national independence, while around

them lay idolatrous nations. And their past history bore unmistakable testimony to their own idolatrous tendencies. God had chosen them to be his own peculiar people, and made them the depositories of his truth. Knowing their natural tendency to mingle with other nations and adopt their practices, he hedged them about with separate laws, that they might be kept entire and distinct, and at the same time enacted very strict and rigorous laws against idolatry, thereby emphasizing its sinfulness. He furthermore established a Theocracy, with himself as the invisible yet omnipresent Head. His ultimate purpose in doing all this, as a comprehensive study of the Bible amply shows, was the preservation of his truth till the world was ready for the scheme of universal redemption through Jesus Christ which was to follow. Now then, had he allowed the sin of idolatry to go unpunished, indeed, had the laws against it been less severe, what would have been the result? His truth would have been buried beneath heaps of ignorance, superstition, and degradation, and the world would have suffered. Besides, under the existing circumstances the enactment and enforcement of such strict and severe laws were the wisest and most humane course possible. Turning to Deut. 12:31, we see the awful atrocities from which this law was directly intended to save Israel. Referring to the nations immediately surrounding the Israelites, Moses says, "for every abomination to the Lord which he hateth have they done unto their gods; for even their sons and their daughters do they burn in the fire to their gods." We then see the necessity for the existence of such a severe law in the duplex truth that God's ultimate aim was to preserve his truth inviolate, and to prevent Israel's lapse into such heinous crimes as those above mentioned. But "Secularian" seems to think that the law was given once for all, and hence is now binding. Is it not a pity that he will not use some common sense when he comes to read the Bible? The law was the outgrowth of the stress of existing circumstances. The stress removed, the law became null. While the Old Testament contains many moral precepts that will always remain in force, it is also a history of the Israelites, and contains many ordinances and commands that are purely national and temporal. And the particular law in question is not binding upon Christians to-day, any more than are the numerous sacrificial laws which the New Testament declares to be a "copy and shadow of the heavenly things," (Heb. 8:5), "and carnal ordinances imposed till a time of reformation" (Heb. 9:10). Paul in discussing the sacrificial law says: "It was added because of transgressions, till the seed should come to whom the promise hath been made" (Gal. 3:19), and again "the law hath been our tutor to bring us unto Christ, that we might be justified by faith," (Gal. 3:24). But perhaps "Secularian" will claim that he knows more about the subject than Paul.

Now let me briefly notice the other quotation which "Secularian" makes, to justify the assertion that Christianity is by precept a system of persecution. "And whosoever shall not receive you, nor hear your words, as ye go forth out of that house or that city, shake off the dust of your feet. Verily I say unto you it shall be more tolerable for the land of Sodom and Gomorrah in the day of judgment than for that city." Herein is the foundation of "the most bitter and intolerant persecution," according to "Secularian." In the first place nothing is said directly or indirectly, nor even by way of implication, about persecution, and in the second place God expressly reserves till the day of judgment the punishment which would follow the rejection of the Gospel, thereby teaching his disciples that it was their province to preach, and his to punish. The plain unmistakable teaching of the text is that God's people have no part in punishing those who reject the Gospel, but that a faithful and earnest declaration of the Word is all that is required of them, looking to God for results. But note "Secularian's" inconsistency. He is a stickler for literal interpretation, and rakes about Christians explaining Scripture in "a non-natural sense," and charges them with saying, "This doesn't mean what it says, but something quite different;" yet he himself, an avowed literalist, solemnly avers that shaking the dust from a disciple's foot means coercing, imprisoning, torturing, and burning, and that the priests who did those things were "entitled to respect as more logical, more honest, more straightforward than the present representatives of Christianity." Certainly he who is guilty of such glaring misrepresentations must either be wanting in integrity of soul and honesty of purposes, or is excusably ignorant and shallow. Now a few Scripture references, that Christ's teachings may be clearly seen, and I shall close. "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind. This

is the great and first commandment. And a second like unto it is this: Thou shalt love thy neighbour as thyself. On these two commandments hangeth the whole law, and the prophets." Mat. 22: 37-40; With this compare Rom. 13: 9 and 10, "Thou shalt not commit adultery, thou shalt not kill, thou shalt not steal, thou shalt not covet, and if there be any other commandment, it is summed up in this word, namely, Thou shalt love thy neighbour as thyself." Also compare Lev. 19: 18, "Thou shalt love thy neighbour as thyself." Again, "Ye have heard that it was said, Thou shalt love thy neighbour and hate thine enemy: but I say unto you, Love your enemies and pray for them that persecute you," Mat. 5: 43 and 44. Compare 1. Pet. 2: 20, "If, when ye do well and suffer for it, ye shall take it patiently, this is acceptable with God." Also compare Rom. 12: 14, "Bless them that persecute you; bless and curse not." I could multiply references, but will refrain.

Then, the allegation that Christianity is essentially by practice and precept a religion that persecutes has not been proved, and moreover, cannot be. Christians persecuted in the past, but the spirit of persecution was due to the absence of the Christ, the Christian lawgiver. Hence "Secularism" occupies the unenviable position of one who stands before the world as a bitter antagonist to the best, purest, and most benign system of truth that has ever been delivered to mankind.

In conclusion, let me ask him to read The Sermon on the Mount; Mat. Chaps. 5, 6 and 7; 12 Chap. of Romans, and 13 Chap. of 1 Corinthians, and then if he can pronounce Christianity "an unmitigated evil," I can only pray God be merciful to him.

Respectfully, JNO. A. BRUNSON,
Sept. 6th, 1890. 151, Hill, Kobe.

THE TREATY REVISION MEETING.

A public meeting of residents of Yokohama, of all nationalities, was held Thursday afternoon at 4.30 in the Public Hall, being convened by the following advertisement:—

Negotiations for the revision of the Treaties having been resumed, and there being grave reason to apprehend that Her Majesty's Principal Secretary of State for Foreign Affairs may be induced to concede the demand of the Japanese Government that British Subjects shall come under the jurisdiction of the Japanese Courts, without any of the safeguards that have hitherto been considered necessary for their protection, it is thought that no time should be lost in formulating and transmitting to Her Majesty's Government the views of British Subjects upon this very serious and momentous question. Another point calling for an expression of the opinion of those interested is the alleged proposal to interfere with the vested interests of land-holders, by altering the conditions of their tenure without their consent. A Meeting of British Subjects, at which all are invited to attend, will therefore be held at the Public Hall, on Thursday, the 11th instant, at 4.30 p.m. for the purpose of taking these and cognate matters into consideration, and of taking action thereon.

Yokohama, September 6th, 1890.

With reference to the above notice, as Citizens of other nations have signified their wish to join with British Subjects, it has been resolved to make the Meeting a general one of the whole Community, and to hold it at the Public Hall, at 4.30 p.m.

Yokohama, September 6th, 1890.

There was a large attendance, among those present being:—Messrs. G. H. Alcock, J. T. Griffin, C. Wilson, T. Rose, W. J. Cruickshank, M. T. B. Macpherson, F. Vivanti, C. J. Strome, L. Lichtenstein, F. Biagioni, A. O. Gay, A. W. Payne, A. Schmitze, N. P. Kingdon, Geo. Adams, M. Russell, J. E. Beale, W. J. S. Shand, J. Rickett, J. R. Merian, M. Kaufmann, F. Lowder, Capt. J. J. Eford, Messrs. W. Gordon, H. C. Litchfield, E. B. Watson, B. Gillett, X. Salabelle, E. Andreis, Capt. Wilson Walker, Messrs. J. de Becker, F. H. Bull, E. Leopold, E. A. Sargent, T. W. Kennaway, E. Beart, F. H. Grant, A. M. Forbes, F. Owston, J. Walter, A. W. Curtis, R. A. Wyllie, F. S. Schwabe, J. Diack, W. Bourne, James Martin Jun., J. R. Anglin, J. B. Maxwell, R. Johnstone, J. Bissel, B. J. S. Brinkworth, M. Engel, W. W. Tili, W. H. Taylor, H. Harding, E. A. Bird, Dr. Hall, Messrs. W. B. Walter, O. Schime, C. Ziegler, Capt. Geo. Walker, Messrs. A. C. Read, F. H. Olmstead, J. O. Averill, jun., J. Mendelson, M. J. B. N. Hegt, Gower Robinson, A. Brent, Otto Reimers, W. G. Bayne, A. Barnard, J. L. O. Eytan, B. H. Pratt, C. Weinberger, F. Townley, R. N. St. John, C. W. Arnold, T. L. Brower, J. P. Mullison, J. A. Fraser, R. M. Varnum, D. Fraser, H. V. Henson, J. H. Brooke, K. Crawford, A. Best, H. J. Goiman, E. C. Passey Adams, W. Brylus, P. Burside, A. Langfeldt, W. Paterson, J. T. Bag, C. M. Martin, H. Steele, G. N. Macdonay, P. Saida, W. Sutter, A. L. Robinson, F. Gillett, J. Witkowski, Baird, L. Pollard, J. W. Hall, C. H. Hinton, W.

Aitchison, W. H. Forbes, A. T. Watson, W. K. Treize, L. Davis, Dr. Vander Heyden, A. Motin, &c. About a dozen Chinese residents also attended the meeting.

Mr. J. A. Fraser, on the motion of Mr. Lowder, took the chair.

The CHAIRMAN said—Gentlemen, before proceeding with the business of this meeting, I had intended to state that although this was a public meeting it was neither expected nor desired that the reporters who are present on this occasion should take notes of the proceedings for insertion in the papers. But since coming up here I have learned that there is a very strong feeling among a number of those present that this course should not be followed, but that the proceedings of this meeting to-day should be reported in the usual way in the papers.—(Applause.) It appears to me that there is a considerable diversity of opinion on this point, and therefore I think the best course for us to follow is to take a vote.—(Applause.) I shall now put it to the meeting whether the proceedings on this occasion are to be reported and to appear in the press or not. I will ask those in favour of their being reported to signify the same by holding up their hands.—(Hands both for and against, held up.) There is a large majority, 121 for, to 39 against, their being reported, so that the reporters may stay and take notes.—(Cheers.) I have been asked, gentlemen, at rather short notice, to take the chair on this occasion, and I confess that I consented to do it somewhat reluctantly, feeling that there were many members of this community who could fill the post much better than I can.—("No, no.") Having yielded and given way, I shall only add that I must ask your indulgence and that you will kindly overlook any shortcomings on my part on this occasion.—(Applause.) I think the fact that so large a meeting has met here to-day shows that the question of treaty revision still possesses a deep interest for all the members of this community.—(Applause.) I am quite sure that had the occasion of this meeting been any other than this, we should not have seen one fifth of those present now attending it. I think it is further a subject for congratulation that this meeting which was originally projected to consist of British subjects only has been so enlarged and extended as to embrace members of all nationalities.—(Applause.) It is highly gratifying to find such a large number of the various nationalities comprising this settlement, and such a representative assemblage. Well, gentlemen, I am sure every one of you has come here to-day with a desire to obtain some information in regard to this question of treaty revision, and in regard to what is being done in connection with it. Well, I am sure that is a very natural wish and desire on your part, and I am only sorry that I am not in a position to satisfy it—that I am not in a position to give you the information you seek; for I am in the same position myself. I am in quest of information as to the subject of treaty revision, and what is being done in regard to it. But, gentlemen, there are some members of this community who are present to-day who will tell us that they have got information from a source which, unfortunately, they say they are not at liberty to divulge, but information which they say is of a trustworthy and reliable character, and it is to the effect that there is some risk in the negotiations which have been resumed now, that the proposals of the Japanese Government may be accepted, at least in the case of Great Britain by Her Majesty's Principal Secretary of State for Foreign Affairs, without any of those safeguards which have hitherto been stipulated for in all previous negotiations, and which we are all more or less firmly of opinion our representatives ought strenuously to insist upon. Well, gentlemen, this is the information, such as it is, which has been the main cause I may say of leading up to this meeting, and leading up to the resolutions which will be put forward at this meeting. And of course if there is truth in the information which has reached this place, then undoubtedly it would seem that the occasion had arisen for some action on our part—and it may be for some prompt action on our part. Of course, we are to a certain extent asked to take this information on trust, and we are bound to do it to that extent—but I say if there is truth in it, then an occasion may have arisen for somewhat prompt action, and I think the necessity for that might be a fitting excuse for our acting as we are doing—without, as some might suggest, in the first instance before taking any steps at all, going to our various representatives and asking them whether they can give us any information and whether there is any truth in the reports we hear.—(Applause.) Now, gentlemen, with these few preliminary remarks I shall proceed to state that three resolutions have been drawn up, which will be submitted to this meeting. They will not be put from the chair, but they will be read

by me one by one, and I will then call on the gentlemen who are here present to speak to them. The first resolution is "1.—That in the opinion of this meeting the time has not arrived when questions in regard to rights, whether of property or person, arising between Subjects and Citizens of foreign Powers in the dominions of His Majesty the Emperor of Japan, can be unconditionally and safely subjected to the jurisdiction of Japanese tribunals; or when an estimate can be formed of the period within which the unconditional relinquishment of extraterritorial jurisdiction in Japan can be safely promised." I call upon Mr. Lowder to be kind enough to speak to it.—(Applause.)

Mr. J. F. LOWDER—Gentlemen, this is the largest and most representative meeting that I have ever seen assembled together in Yokohama. The question naturally arises—two questions naturally arise—first, what are we here for? and, secondly, why are we here? The first I think admits of a very easy reply. We are here for the purpose of expressing our opinion upon two subjects of great and serious interest and moment to the community at large. That opinion has been passed into the form of a resolution which you have just heard read from the chair, and I will ask you whether it embodies your opinion as representing this community—whether it embodies your opinion upon that question. If it does, then there is no reason whatever to proceed to any arguments in support of this resolution.—(Applause.) That applause, gentlemen, shows me that it will not be necessary to depart from my original resolution, namely, to hold my peace entirely as to the reasons why we have this opinion. We have arrived at it from knowledge and from experience which is common to every individual in this room, and common to all of us as a community.—(Applause.) The second question, however, that arises is: why do we take this opportunity of expressing this opinion at the present moment? And the reason—our worthy chairman has already anticipated me in what I was about to say—the reason is that the British section of the community have lately had reason to believe that the policy hitherto pursued by the British Government in regard to treaty revision has been, or is about to be, reversed. You will recollect that in the year 1887 the first proposals came forward from the Japanese Government in regard to treaty revision, and it was then suggested that a large number of foreign experts should be added to the Japanese Bench in order to protect our interests.—(Applause.) I am sorry myself that those negotiations proved a failure. In 1889 the question was again taken up and the proposal then was to appoint only four foreign judges in the Court of Appeal. These propositions found favour with certain of the Treaty Powers, but it was always understood—I think it may be said to be a fact—that our representative at home, Lord Salisbury, Her Majesty's Principal Secretary of State for Foreign Affairs, was of opinion, which opinion he expressed to the Japanese Government through the proper channels, that he did not consider that to be a sufficient safeguard for the protection of our interests.—(Applause.) For that reason it is that the British portion of the community, at all events, has hitherto maintained a distinct silence, because up to the present moment we have always been of opinion—and I think with great reason—that our interests were being protected in the manner in which we wished them to be protected.—(Applause.) Lately, however, it has come to the knowledge of some of us that there is imminent danger of that policy being reversed—in other words that the proposals now put forward by the Japanese Government are to this effect: that outside what are known as treaty limits foreigners shall immediately become subject to the jurisdiction of the Japanese tribunals, and that after a period of five years all foreigners, whether within what are known as the Concessions or whether in the interior, shall become subject to Japanese jurisdiction, and that without any conditions at all. It is that information—the origin of which, as you have already heard, may not be divulged, but which comes, I may inform you, from a source which convinces my mind of the truth of the fact that there is danger, and imminent danger, of these proposals being agreed to—it is this that called the British section of the community together and gave rise to the advertisement you have seen in the newspapers. It was after that that requests were received from all nationalities of the community to be allowed to take part in this meeting, and it was thought by those who were taking an interest in promoting the meeting that it would be extremely ungracious on the part of the British community if we were to refuse our consent.—(Applause)—not only ungracious, but also there were these considerations which suggested themselves to our minds. If these resolutions are to be considered in the light of a protest—and we

don't know whether they will be so regarded or not—if they are to be so regarded, however, then that protest is very much stronger as coming from all sections of the community than coming from British residents alone.—(Applause.) If it is not a protest—if the information to which I have referred is incorrect—then, at all events, no harm can be done; in fact a great deal of good may be done, because then it would appear that we should be of one mind with those who represent us, and the hands of those who represent us will be materially strengthened by this expression of opinion from the community of Yokohama. I therefore propose, gentlemen, the first resolution.—(Applause.)

Mr. H. C. LITCHFIELD—I have much pleasure in seconding the proposal made by Mr. Lowder.

The CHAIRMAN—Now, gentlemen, this resolution which has been so ably spoken to by Mr. Lowder, and seconded by Mr. Litchfield, is before you; if you are ready to have it put I will now proceed to put it.

A show of hands was then called for in favour of and against the passing of the resolution, as the result of which the Chairman declared the resolution unanimously carried.

The CHAIRMAN—I now read, gentlemen, the second of the resolutions:—"2.—That in the opinion of this meeting it would be an act of grave injustice to foreigners who have purchased land in Japan under covenant with the Japanese Government, if the conditions or incidents of their tenure of such land should be altered without their consent." I shall call upon Mr. Gay, who has kindly consented to speak to this resolution.

Mr. A. O. GAY, who spoke in a very low tone, and was therefore imperfectly heard, said the matter forming the subject of this resolution had already been before the Chamber of Commerce a year and a half ago when the Chamber addressed the Foreign Ministers on this very subject. The replies received from those that did reply, all expressed determination and willingness to take up the matter and give it their full consideration at the proper time. That was the substance of all the replies that were made. He might point out that the elements of the covenants that had been entered into were that they were between individuals and the State, and that they were based on existing treaties. New treaties could not be retrospective, so far as property was concerned. The properties were all sold at auction by the Government, proving that the right of property was acquired, apart from the ground-rents, and those who bought them paid for the property and received certain guarantees, which guarantees, he maintained, could not be taken away without the consent of the holders.—(Applause.) Further, the ground-rent was fixed, representing the equivalent of the Japanese taxation at date. We have, continued Mr. Gay, been in the enjoyment of those properties now for nearly thirty-five years, and of course under the laws of the different Consulates at which the deeds were registered, without any reference to the laws of Japan, and I may mention that under English law enjoyment of immunity for twenty-five years makes the immunity perpetual. Further, the compulsory changing of the right of title is virtual confiscation. No reduction of ground-rent will compensate for the taxation to which we shall be subject under the new arrangement. The income tax alone is about 7½d. in the £, not to speak of stamps on documents. If Foreign Powers take the responsibility of so altering the treaties that they dispossess individuals of their right of recourse against the Japanese Government, they will create by their illegal action a right of recourse against themselves.—(Applause.)

Mr. W. J. S. SHAND seconded this resolution.

The CHAIRMAN—What Mr. Gay said in support of this resolution was so good that I wish all of you at the back of the hall could have heard him. You have heard the resolution in support of which he has spoken; I shall now put it to the meeting.

A show of hands was taken, and the resolution was declared carried unanimously.

The CHAIRMAN—The third and last resolution, gentlemen, is as follows:—"3.—That thirty persons or thereabouts be elected by ballot at this meeting, to be a standing Committee, with the following powers:—to transmit copies of the foregoing resolutions without delay to the Representatives of Treaty Powers; to Chambers of Commerce; and to any other bodies or persons, at the discretion of the Committee; to act as the representatives of the Community in any and all questions incidental to or arising out of the foregoing resolutions, now or at any time hereafter; to co-operate with any Committee that may be formed at any out port for objects similar to the foregoing; to call meetings of the Community whenever they consider it desirable; and to collect and send such monies as may be necessary for the efficient exercise of the said powers."

Mr. J. H. BROOKE, who was called upon by the Chairman to speak to this resolution, said—

Having undertaken at the request of the Committee the proposal of this resolution, it is now my duty to carry out my promise. I think it must be as obvious to you as to me that the want of some public organization in this community has been severely felt for a great number of years.—(Applause.) You have of course in the newspaper press a large amount of writing upon public affairs; but while the public press may be the eyes and ears of the community, it certainly is not its hands, and there is nobody to which appeals can be made to take in hand serious matters that require attention.—(Applause.) You have heard to-day from the various speakers that addressed you that we have arrived at something that looks like a crisis in our affairs. The amount of information now before us is not great, but it has been so difficult all through this treaty business to get any information at all, that at present we must be thankful for small mercies. We ought to have taken the alarm many years ago.—(Applause.) We ought to have formed a Citizens' Committee representing all the nationalities of the place to take cognizance of the various propositions that have been made, because, as no doubt you are aware, the propositions of the Japanese Government have been of a very shifty character. They never remained constant to any proposition they have asked Foreign Powers to agree to. No sooner was there a chance of a proposition being agreed to than that was used as a stepping stone and fresh demands made.—(Applause.)

The first speaker, Mr. Lowder, gave you a short history of what has taken place with regard to a most important matter, namely, the future judicial arrangements in this country. With regard to the tariff, I think a general agreement was arrived at some years ago as to the limit of duties to be charged, but it had been a bone of contention for a long period. We are all willing to submit to a certain amount of additional taxes, but what we object to is to surrender into Japanese hands those rights and privileges that as citizens we all enjoy. Under the arrangements that have prevailed in the treaty ports, we have been enabled to move along with the Japanese with very little friction indeed.—(Applause.) It has always appeared to me that the raising of the question of treaty revision as far as regarded the bringing together of foreigners and Japanese, has been altogether premature. When this question was last raised—I have the recollection that it was first raised as far back as 1872—there was a part of the judicial system of this country; the prisons were in a lamentable state, and there was no law as we understand law. At that time the Foreign Powers were asked to agree to the abolition of extra-territoriality. Of course they refused. As time wore on various proposals were made, until now we have arrived at the present condition of affairs, namely, that the Japanese propose to withdraw the diplomatic notes providing for a certain number of foreign judges being employed, and they ask us to submit to Japanese jurisdiction without any of those safeguards that we have a right to expect. Apart from serious question arises from this, that we are asked to surrender a great deal of that which we now possess. I need hardly point out to educated Englishmen the value of the writ of *habeas corpus*; that is not proposed to form any part of the future judicial system of this country. Then, again, there is to be no question of a system of juries, and we know certainly in political trials how valuable they have been. In point of fact a great deal of the liberty of the press has arisen from the firmness and independence of juries when prosecutions have been instituted by the Crown against liberal-minded men who wished to increase the liberties of England.—(Applause.) Also there is an amount of supervision and surveillance in this country which may be tolerated by the natives, but which is altogether foreign and alien to that degree of freedom which we have enjoyed in other countries. An Englishman's house is said to be his castle.—(Applause.) How far can he calculate on its being his castle here? I think that is a very doubtful business. There are a number of arrangements which, however well adapted to a race that has never breathed the air of freedom and has all apprehension they excite in such a people, excite because we should not be disposed to submit to those arrangements that are looming in the future—we cannot tell when, for we are always kept in the dark by our representatives—we may be quite sure that a large number of cases will arise not likely to exist, and it seems to me particularly requisite that we should agree to have a representative Committee of the Community to take cognizance of the various circumstances

as they arise, and to interfere in cases where the public interest is seriously threatened.—(Applause.) You will be willing, I am sure, to bear your share of any expenses that may be incurred—for you cannot carry on a war on paper or otherwise without money—and you will also, I feel certain, be willing to co-operate as mentioned in the resolution with the aggregations of foreigners that exist at the various treaty ports. Whatever we desire for ourselves—and I hope we desire nothing that is extravagant—will also no doubt be desired by foreign communities at the treaty ports, and if we hold out the right hand to them I have no doubt that it will be grasped, and that they will form similar organizations and put themselves in communication with us. I will not enlarge, but simply ask the meeting to adopt this resolution, and to take care in selecting men to sit on the Committee, to select those who will give the benefit of their experience and their intellect. I do not know whether it is practicable to carry on a ballot here; perhaps, a ballot might be afterwards taken and the Secretary could sit here and receive votes.—(Applause.)

Mr. N. P. KINGDON seconded.

The third resolution was then put and carried unanimously.

The CHAIRMAN—The next question is as to the election of the Committee. Mr. Brooke has suggested whether the election can be conveniently done at this meeting now. We have to make up our minds thoroughly as to the men we should wish to serve on the Committee, and if the meeting is of opinion that we can proceed to the election of Committee we can do so. Am I to understand that the desire of the meeting is that we should proceed to the election of a committee now?—(Applause.)

Mr. GAY proposed that a ballot-box be deposited at the Chamber of Commerce Rooms, and be left open for three or four days.

Mr. BRENT seconded.

Mr. LOWDER—With reference to that, I think I may be able to facilitate the election of a committee now without further delay by reading out to you the names of fourteen or fifteen Englishmen who have expressed their willingness to serve upon a committee if they are elected by the meeting, and it may then be very easy for the other sections of the members present at this meeting to add names so as to make up the thirty.—(Applause.) The names I have to propose are:—Chairman: J. A. Fraser; Committee: J. H. Brooke, A. H. Groom, J. D. Hutchinson, R. Johnstone, N. P. Kingdon, W. H. Taylor, James Walter, W. Gordon, F. Townley, D. Fraser, R. A. Wylie, W. J. S. Shand, A. Barnard, F. Lowder. I do not think any ballot would give you a better selection among the English portion of the community than that, and if the members of other nationalities are prepared to add their names to those, I think we may select the committee to-day.

The CHAIRMAN—I think it will be in order before proceeding further to put to the meeting the amendment of Mr. Gay. Mr. Gay's amendment is that a ballot-box be left at the Chamber of Commerce Rooms for three days, during which time this committee can be balloted for.

On being put, the amendment was lost by 66 to 52.

Mr. SCHULTZ proposed to represent the German community, Messrs. O. Reimers, Schultz, Grosser, and A. Meier.

A number of persons got up to leave the hall, on which

The CHAIRMAN said—I have been requested to ask you to sign the lists on which the resolutions to which you have agreed will be found outside.

Several lists of names were handed in on behalf of other nationalities.

The CHAIRMAN—Before reading out these names it would be as well, seeing the mode of election has been different from that proposed by Mr. Brooke, to ask that gentleman and his second if they agreed to the committee in this form.

Mr. BROOKE had no objections.

The CHAIRMAN asked the reporters to take note of the circumstance, and then read the names of the Committee as follows:—British—Messrs. J. A. Fraser, J. H. Brooke, A. H. Groom, J. D. Hutchinson, R. Johnstone, N. P. Kingdon, W. H. Taylor, James Walter, W. Gordon, F. Townley, D. Fraser, R. A. Wylie, W. J. S. Shand, A. Barnard, and F. Lowder. American—Messrs. Gay, Howard, Lindsey and Varnum. German—Messrs. O. Reimers, Schultz, Grosser, and A. Meier. French—Messrs. Sarda, Guillo, Halphen, and Douville. Swiss—Messrs. F. Abegg, L. Motin, J. R. Merian. Dutch—Messrs. Von Hemet, Scheuten, and Dr. Von der Heyden. Italian—Messrs. Biagioni, Giusani, and Andreis. Chinese—Mr. Wong Vick Tong. Portuguese—Mr. Fomeca. In all 37.

The Committee as thus formed was agreed to unanimously.

Mr. W. G. BAYNE proposed a vote of thanks to Mr. Fraser.

Mr. FRASER—I thank you, gentlemen. I am sure it is a very great pleasure to preside at such a very large and very enthusiastic meeting, and I think it is a matter of satisfaction to all of us that the resolutions put before you, and so ably spoken to by the various speakers, have been carried unanimously.—(Cheers.)

This brought the proceedings to a close.

Of those present at the meeting the following signed the lists bearing the resolutions.—British 87, German 20, American 15, other nationalities 16.

BRITISH CONSULAR TRADE REPORT FOR YOKOHAMA FOR 1889.

Consul ENSLIE to the Marquis of SALISBURY.

Yokohama, April 17th, 1890.

MY LORD,—I have the honour to furnish you with my Report on the Foreign Trade of this Port for the year ended December 31, 1889, accompanied by the ordinary returns based on the Statistics published by the Bureau of Customs, and by a return of the number of British and Foreign Residents and Firms.

The trade of this port during the past year compares with that of 1888 as follows:—

	1889.	1888.
Imports	5,399,015	6,891,708
Exports	6,519,154	6,276,743
Total	11,828,169	12,668,450

Decrease in imports for the year 1889... 1,082,692
Increase in exports for the year 1889 ... 242,411

Actual decrease of trade for the year 1889 840,281

It is only by comparing the amount of merchandise imported with the deliveries and stocks remaining that anything like a fairly correct estimate can be formed of the volume of import trade. I have, therefore, availing myself of statistics furnished by the Yokohama General Chamber of Commerce, compiled a return extending over a period of three years of the importation of some of the principal articles of merchandise, the deliveries, and stocks, showing at a glance the increase or decrease in each case in 1889 as compared with 1888.

Summarising this return, there was a large falling-off in the deliveries of English and Bombay yarns, grey shirtings, prints, blankets, pig-iron, and sugar of all kinds; whereas indigo shirtings, Turkey reds, victoria lawns, mousseline de laine, and kerosene oil were more extensively dealt in.

Stocks were on the whole heavier on December 31 last than at the end of 1888, cotton yarns showing an increase of 3,399,000 lbs., T-cloths 16,000 pieces, Turkey reds 36,600 pieces, and kerosene oil of 297,376 cases.

IMPORTS.

The business of the year under review has, as a whole, not been of a satisfactory nature, exceedingly few of the staple articles coming up to 1888 in quantity, and values being, as a rule, low.

It will be observed in the following remarks on the course of trade for 1889, that whenever reference is made to quantities or prices these are given both in local values and pounds sterling, and English weights. This is in compliance with instructions, but it may be well to observe that for obvious reasons, among which is the question of exchange, the local quotations are the more reliable.

YARNS.

The year commenced with stocks of English, 3,195,200 lbs. (23,964 piculs), and Bombay, 642,800 lbs. (4,821 piculs), both descriptions being, notwithstanding the new year's holidays, very firm, and with a tendency to rise. The demand remained good, English selling at better prices, and Bombays rather excited at an increase of 3s. 1½d. (1 dol. to 4s. 8d. (1 dol. 50 c.), per bale, but the Chinese new year soon caused complete stoppage in yarns and piece-goods generally.

Early in February business was resumed and continued for some days, sales being made in all numbers at advanced values. During March there was absence of life in the market, though with moderate transactions in English; there was at one period considerable activity in Bombays at lower prices.

After being very quiet, a fair demand set in for Bombays in April, good 16's being asked for, and moderately firm, though the continued rise in Manchester prevented holders from being free sellers of English. Importers were very firm during May, and apart from a few small sales at slightly better prices, English were quiet and Bombays neglected.

Dullness amounting almost to stagnation was the ruling feature of June, till towards the end of the month there was a sudden spurt of about 2,500 bales at better prices, small sales in Bombays being made at generally falling rates. The English movement did not hold on, and all kinds, including Bombays, were dull, with a weak market in July and August.

A favourable change occurred in September, though the demand was not very strong, and holders, in sympathy with a good rise in Manchester, were firm. Some considerable activity ensued for a short time, English selling at 4½d. to 5½d. (12 c. to 15 c.), and Bombays from 4s. 9d. to 6s. 4d. (1 dol. 50 c. to 2 dol.) per bale higher. Reports about the damage done to Japanese crops materially assisted in creating this temporary advance.

While English were quiet in October, buyers constantly demanding fresh concessions, Bombays, on the contrary, came in for considerable attention, and though a slight improvement took place in the former during a portion of November, the close of the year was unsatisfactory, Bombays having also given way in sympathy with general depression and a further decline in Japanese spinings. The estimated stocks at close of year were—English, 5,440,000 lbs. (40,800 piculs), and Bombays, 1,800,000 (13,500 piculs).

On the whole the trade has, owing to the constant tendency towards lower prices, been unfavourable both to importers and Japanese dealers. Nor can it be said to be satisfactory as regards volume, owing largely, it is alleged, to cost in dyeing, attributed to the great hydraulic pressure for packing, to which English yarns are subjected, one of the reasons why Japanese-made yarn is becoming a more or less formidable competitor.

GREY SHIRTINGS.

Prices opened steady, but 8½ lbs., not in stock, were wanted, and there was a brisk demand for 9 lbs. at slightly better rates before the end of January. After a quiet month a fair inquiry arose for both kinds, 9 lbs. being a little higher and at firmer rates.

They fell off early in May, but a little later 9 lbs. attracted considerable attention, the firmness of holders, however, preventing a large business, though there were fair sales at tugging advances.

The attitude of importers soon stopped the demand, only small lots of 8½ lbs. being sold, and 9 lbs. quite neglected from June to August.

Inquiry sprung up early in September, at an improvement of about 1d. (2½ c.) per piece, and a large business was done in 9 lbs. In October there was a very limited request for 9 lbs., and 8½ lbs. were going at lower prices. Later on 8½ lbs. were asked for, the other kind being fairly well maintained at former values notwithstanding a decrease in demand, there being also inquiry for superior 8½ lbs., which were not on the spot. Estimated stocks at the end of the year were 236,000 pieces, closing prices being for 8½ lbs. 5s. 11d. to 7s. 2d. (1 dol. 80 c. to 2 dol. 20 c.), and for 9 lbs. 7s. to 8s. 4d. (2 dol. 15 c. to 2 dol. 65 c.).

T-CLOTH.

The previous year's stocks were small, and early in January T-cloths were steady at last quotations, 7 lbs. ranging between 4s. 5d. to 4s. 7d. (1 dol. 40 c. to 1 dol. 55 c.). The demand soon dropped, and little or nothing was done till March, when there was a slight movement in lesser qualities with rather more inclination to buy in April.

Rates were rather higher in May, and with good sales continued to be wanted.

The few transactions in better kinds during June were followed by an inquiry for medium, though business during the next few months was on a small scale.

After great dullness some desire was shown for middle quality in November, and towards the end of the season there were signs of a demand all round.

Stocks on December 31 last were about 30,000 pieces, and prices from 4s. 8d. to 6s. 0½d. (1 dol. 42½ c. to 1 dol. 60 c.).

FANCY COTTONS AND WOOLLENS.

In these there at first seemed more inclination for business, but the demand was of short duration save for velvet, of which there were large sales at fair prices.

Indigo shirtings and Turkey reds next claimed attention, and a large business was also done in Italians and mousselines, but for blankets there was no demand.

Prints and other fancy cottons, as well as nearly all woollens, remained dull, though a few occasional sales were made, while indigo shirtings again met with fair inquiry towards the end of April. A little later Turkey reds, middle and heavy weights, came into good demand, Mousselines were firmer, and some Italians were sold.

Late in May there were fair sales in Turkey

reds, and woollens generally showed improvements, more particularly Italian cloth and mousselines.

June was dull and with very limited business, but in July there was a moderate demand for Turkey reds and victoria lawns, more attention being also paid to velvets, Italians, and mousselines.

August brought better prices, and holders soon became so firm as to stop business. In September a fair trade was done in coloured shirtings and Turkey reds, with small sales of mousselines, coloured goods generally being scarce and inquired after at increased prices.

A moderate general business marked October but at reduced values, the remaining part of the year being quiet, with small sales, principally coloured shirtings, Turkey reds, and velvets.

METALS.

The business for 1889 was as a rule satisfactory to importers, caused chiefly by the continued advances in home cost, as it may be safely said that at no one period could the equivalent of the prime cost be obtained; under the circumstances holders were, however, all the time current sellers of goods bought at lower prices than ruled when they arrived.

Nail Rods.—Deliveries 5,608½ cwt. (4,711 piculs) against 4,893 cwt. (4,110 piculs) in 1888, 6,665½ cwt. (5,599 piculs) in 1887, and 9,402½ cwt. (7,898 piculs) in 1886. As stated in report for the past year, the demand is continually decreasing whilst nails show each year a larger business; 1889 has been an exception to this rule, the transactions in nail rods having somewhat increased, whereas those in nails have fallen off, probably accounted for by the price of the former having, if anything, declined during the year, nails, on the other hand, steadily increasing in value.

Iron Bars, Plates, and Sheets.—Deliveries, 267,730 cwt. (225,643 piculs); in 1888, 260,641½ cwt. (218,939 piculs); and 1887, 232,351½ cwt. (196,675 piculs).

Bars.—The year opened with rather a small stock, and parcels as they arrived were freely taken for reasons mentioned above, and the year showed a gradual hardening of prices, which was the prevailing feature of most metals.

Plates and Sheets.—Prices for these did not increase in the same ratio as bars, and while the latter advanced during the year about 10 to 11 per cent., plates were throughout quoted much the same, though the cost laid down advanced considerably. Sheets advanced only about 5 per cent., while cost increased fully 15 per cent.

Pig-Iron.—Deliveries 60,352½ cwt. (50,696 piculs) against 108,659½ cwt. (91,274 piculs) in 1888, 44,991 cwt. (37,800 piculs) in 1887, and 32,963½ cwt. (27,689 piculs) in 1886.

There was a full stock left from last year, and prices of No. 3, north country, advanced but slowly in sympathy with the home market, value at end of year being only about 2½ per cent. more than at the commencement, whilst home cost advanced some 12½ per cent. during the same period, the general result of importations having been unsatisfactory.

Deliveries show a serious falling-off compared with 1888, when they were, however, very large as compared with previous years. This decline is probably accounted for by Japanese using up old stocks of scrap-iron, &c., instead of buying pig at a comparatively high price.

Galvanised Iron.—Deliveries in 1889, 11,657½ cwt. (9,792 piculs), against 1888, 10,277½ cwt. (8,633 piculs); 1887, 7,797½ cwt. (6,550 piculs); 1886, 4,259½ cwt. (3,578 piculs). This continued to increase in importance, being in more demand for roofing, &c. The year opened with next to no stocks, and prices, despite the advance in cost, about 2s. 7½d. (85 c.) per cwt., have been pretty steady, any advance being checked by heavy arrivals and holders meeting the market to effect pier clearances, rather than store their importations. At close of year there were comparatively heavy stocks, for which nothing like cost could be obtained, the result of trade in this article being generally disappointing.

Wire Nails.—Deliveries during the past year 81,533½ cwt. (68,488 piculs); in 1888, 88,228½ cwt. (74,112 piculs); in 1887, 86,607½ cwt. (72,750 piculs); and 75,612 cwt. (63,514 piculs) in 1886.

Stocks amounted to some 23,809 cwt. (20,000 piculs) when the year opened, and at the end of December last there were some 25,000 cwt. (21,000 piculs) on the spot, with heavy arrivals due very shortly. Prices advanced only some 5 to 12 per cent. with occasional fluctuations, though cost increased fully 25 to 30 per cent. Holders met the market freely, and deliveries having fallen off, as compared with 1888, there have always been ample stocks in the market.

Tin Plates.—Deliveries in 1889 were 7,050 boxes; in 1888, 5,160; in 1886, 6,560; and in 1886, 9,392. For the first time for some years there has been an increase in the deliveries of the article,

Original from

owing, probably, to a larger quantity being required for canning goods, and for which old kerosene tins are unsuited. Hitherto the rule has been that while the consumption of petroleum increased, business in tin plates fell off, as old kerosene linings proved an excellent substitute. During the past year prices declined, notwithstanding the increased importation of kerosene, and a considerable rise, particularly during the latter part of the year, of the home cost. The result of this business has been unsatisfactory, stocks being some 1,250 boxes, against 600 in December, 1888.

Taken all round, the year closed with a good stock of metals, but with small demand: the prospects for the present season, looking at the higher prices for nearly everything at home, are good, and, if holders continue to be firm, a period of remunerative sales is at hand.

PETROLEUM.

What with the firmness of holders, and dealers having sufficient stocks, there were no sales during the first two months of the year, quotations being entirely nominal. Business early in March was large in American brands, at a lower range of prices, and 150,000 cases were sold at from 6s. 2d. to 6s. 2½d. (1 dol. 97½ c. to 2 dol. 2½ c.), after which some further considerable transactions took place at slightly better rates. April and May were quiet, prices remaining firm, and a few small sales only being made.

The market was weaker in July owing to the arrival of 78,000 cases of Russian oil, several unimportant transactions at a decline in quotations being effected during that month, though a large business was done towards the end of August.

Dealers holding nearly all the stocks, and therefore disposed to wait, the market was steady but quiet at the beginning of September, after which there was an improved tendency, owing to rumour of rise in Russian oil, and better prices in China.

Heavy arrivals occurred in December, to a great extent sold "to arrive," and as the holdings were large, business was very dull, but quotations nominally unchanged, being 6s. 6d. (2 dol.) per case for American "Comet" brand and 6s. 4d. (1 dol. 95 c.) for Russian.

Highest and lowest prices during 1889 were, for American 7s. 2d. to 6s. 6d. (2 dol. 20 c. to 2 dol.), and for Russian 6s. 7½d. to 6s. 2d. (2 dol. 3 c. to 1 dol. 90 c.). Stocks on December 31 last being heavy, and estimated at 476,596 cases against only 179,220 in 1888.

Reviewed generally, the past year has seen a further considerable expansion of the trade in this article, deliveries having amounted to 1,844,820 cases against 1,466,407 in 1888. Russian oil shared largely in the increase; no less than 10 steamer cargoes were received here from Batoum, amounting in the aggregate to 756,253 cases, of which 301,378 were forwarded to Kobe, while in 1888 the total import was only 251,935 cases.

There has been a very marked improvement in the packing of Russian oil, and the Batoum factories are now turning out tins and cases little, if at all, inferior to those sent from the United States. This oil has consequently increased in favour among dealers, the area of consumption over which it is distributed widening very considerably. Though it has thus become a formidable competitor with American oil, it cannot be said that the latter has so far lost ground in Japan, as both imports and deliveries are larger than in previous years.

The respective values of the two products are, however, approximating more and more; thus where formerly there was for the most part a difference of 4d. to 6d. (10 c. to 15 c.) per case between the average selling prices of the various American brands and Russian oil, the difference during the past year has not averaged more than half that amount.

On the whole the trade for the past year has been a fairly remunerative one to importers.

SUGAR.

Quietness was the prevailing characteristic of the market in January, brown kinds continuing dull, with little doing in refined at easier prices, the general tendency being downwards. About the middle of February there was some activity, the bulk of some 28,000 bags "New Takao" being sold at 11s. 0½d. to 11s. 2½d. (3 dol. 85 c. to 3 dol. 91 c.), as also some stocks of Taiwan. This spirit did not last, as the demand was small, and business consequently limited, the balance of supplies of New Takao being, however, held at the former quotations.

In March there was fair demand for refined at an advanced price, and even sales of Takao were effected, but the terms of a large transaction in Formosa were found difficult of settlement.

The large sales of Takao which took place during the latter part of April were followed by quiet and an active demand at higher prices set in for refined. Next came another movement for brown

kinds, and large transactions at good prices took place in Takao, Taiwanfoo, &c., refined also advancing.

By the end of May there was a quieter feeling, and little demand, due in a measure to the wet weather impeding distribution in the country. The first few days of June were dull, when a revival took place, and 35,713 cwt. (30,000 piculs) of Takao changed hands; there were also large sales of refined at better prices.

The market was remarkably quiet in July and August, but holders were firm, and prices fairly well maintained.

Great activity and cargo settlements in Takao and other brown kinds marked September, but "refined" was dull and the market unsettled. Takao stood at 15s. 1d. (4 dol. 75 c.), and Taiwan at 14s. 3½d. (4 dol. 50 c.) early in October; but the market of browns weakened slightly on fresh arrivals, remaining remaining firm and steady. Later on the stock of Formosa kinds became exhausted, and small parcels of Manila and Penang were disposed of, a large trade being done at the end of December in refined, though sellers had to make some concessions in prices.

Business for the year in browns showed a falling off as compared with 1888 of about 10 per cent., and in refined of about 15 per cent.; but the value of the trade in the latter was fairly well maintained by the higher prices ruling throughout.

RAW COTTON.

The trade in this important staple is a growing one, and has already assumed large dimensions, the importation for last year having been upwards of 8,000,000 lbs., as against 3,793,000 lbs. in 1888.

It is largely used in the numerous cotton spinning mills erected in various parts of the empire and which are gradually affecting the import trade in cotton yarns. Large sums of money have been sunk in these undertakings, and as the Japanese cotton crop, always uncertain, is, even at the best of times, far short of the home demand, foreign cotton is now largely used with the native article to the extent of some 80 per cent.

According to Japanese statistics, the annual cotton crop is about 41,000,000 lbs.; whereas the demand for cotton piece-goods, yarn, and thread is estimated at more than double that amount, the deficiency being made up by foreign importations from China.

Last year inquiries were instituted on the spot as to the possibility of using Indian raw cotton in the mills of this country with better results than the China staple; a commission investigated the question very minutely, and have reported favourably.

This result is of great interest and value to all concerned in the cotton trade, and immediate effect was given to the recommendations of the commission, the raw produce having already arrived in Japan side by side with the manufactured Indian yarn.

Some surprise has been felt that Bombay raw cotton can be shipped to this country and spun with the expectation of successfully competing with the foreign yarn placed on this market, but inquiry has shown very clearly, that compared with India, available labour is cheaper here.

American cotton is also being imported; mixed with that from China it is expected to produce a quality of yarn better than that now turned out by the mills.

DRUGS AND CHEMICALS.

This is an increasing trade, large quantities of chemicals being imported for manufacturing purposes, such as paper and match making, glass works, and other industries. They come chiefly from the United Kingdom, but a considerable portion is of German origin.

The business is, judging by the "Daily Import List," compiled from customs returns, distributed among the majority of the importing firms of this port.

The Japanese Government are themselves manufacturers of caustic and other sodas, and sulphuric acid, which is shipped in considerable amounts to the China market, or sold to Japanese.

Medicines for pharmaceutical purposes are also made on a large scale at establishments generally reported to be furnished with Government loans.

Some importers complain of the difficulties, almost prohibitory, raised in regard to the sale of foreign drugs and medicines; these being constantly rejected by the Government analysts, as not being up to the standard of the Japanese Pharmacopœia, and it appears, from a recent Government notification to Japanese traders, that this condition will in future be strictly enforced.

The standard is, I am informed, higher than that of England, and necessitates the preparations submitted to the test being chemically or absolutely pure and free from inherent impurity, such as bluntness without a trace of arsenic, which nature places in it for medicinal purpose.

Chemically pure medicaments are, I am assured, not needful, absolutely pure chemicals being only used for scientific purposes.

Under the Japanese pharmacopœia, iodide of potash is required to be 97 per cent. pure; in the British it is 95 per cent.

This staple article, when pure, turns a yellow colour; it is rejected by the trader, and deliquesces, not containing what is called free salt.

The whole question, being of great importance to Japanese consumers and foreign importers, is entitled to earnest attention.

EXPORTS.

RAW SILK.

After the usual stagnation of business at the beginning of the year, the market re-opened, when holders proved very strong, prices being in some cases higher. Buyers had, moreover, apparently satisfied their most urgent requirements, but, notwithstanding a large number of rejections in hanks and filatures, a fair amount of buying was done for a short time. Transactions in Re-reels and Oshiu were, however, small, though there was a tolerable demand for Kakedas.

February commenced dull, but after the Chinese new year and the declaration of the New Constitution a good amount of buying at fair prices, equally divided between Europe and America, took place.

Little was done in hanks, but filatures had a fair amount of attention. There was also more demand for re-reels, as well as for kakedas, though they soon shared the fate of Oshiu, in which there was no business.

In March there was a fair amount of business almost exclusively for America, chiefly in Shinsiu filatures; re-reels and kakedas were also wanted, but unobtainable. The European demand was small, owing to the pending financial crisis, resulting from the Panama Canal, copper syndicate, and other affairs.

The market in April was dull, the improved demand for Europe not resulting in much business, prices being strong, though stocks had lessened, but there was a decided improvement for New York towards the 15th. The whole business was, however, insignificant, and principally in hanks, good Shinsiu and the class of Yoshin.

Small daily transactions in hanks and filatures, principally for Europe, marked May, suitable silks for America being scarce; and about the end of the month favourable reports were current regarding the new crop, notwithstanding the lateness of season.

The beginning of June was dull, but news about insufficient crops in Europe soon brought about a demand, with a decidedly firmer market for old silk, absorbing general attention. New silk arrived on the 12th, six days earlier than last year, the first batch of re-reels, No. 1 Joshi being bought at 97l. 0s. 1½d. (625 dol.), and Koshu filatures about 1 to 1½ at 98l. 11s. 1½d. (635 dol.). Prices, however, soon advanced, and 102l. 8s. 9d. (650 dol.) was refused for Shinsiu filature No. 1.

There was some buying of old silk in July, but the assortment was poor and stock exhausted, little being done in new silk, though arrivals considerably exceeded sales, as holders showed no readiness to sell, hoping for better prices later on. A great demand shortly arose, and on the 16th one solitary purchaser made a rush for filatures, and re-reels at full rates, which others were evidently unable to follow. Purchases for Europe were, however, soon in full swing for a short time, not so for the American market.

Till the middle of August business was dull again, when a brisk demand for Europe set in, high prices being obtained for really good quality. This was followed by a desire on the part of sellers to move, and prices weakened: full-sized filatures were pressed for sale, and a large business was done both for Europe and America.

September was marked by three rushes—the first from America which was soon over. Then came one from Europe, leading to a large business at hardening prices for fine kinds. When this had exhausted itself there was a lull, followed by another spurt at steadily increasing prices, which at last made buyers hesitate.

On October 2 a buyer for America began purchasing on a large scale, which disorganised the market, and the Japanese, becoming confident, at once raised their prices. On that day 80,000 lb. (600 piculs) of good filatures and re-reels changed hands. On the 13th a strong demand set in for Europe, and again for America, resulting in heavy purchases. At the end of the month the highest prices paid were (per picul of 133½ lbs.)—Best hanks, 107l. 0s. 5½d. (665 dol.); extra filatures, full sizes, 131l. 10s. 4½d. (820 dol.); No. 1 Shinsiu filatures, 133l. 11s. 6½d. (810 dol.); No. 1 re-reels, 126l. 16s. 3d. to 123l. 8s. 5½d. (760 dol. to 770

dol.), and No. 1 kakedas, 118/ 11s. 10 1/2 d. to 116/ 19s. 8 1/2 d. (740 dol. to 750 dol.).

November opened quiet, rise in exchange and absence of demand preventing operations. There was, however, great activity about the 15th, chiefly in filatures and hanks, kakedas continuing to be purchased to some extent, but hanks soon becoming neglected and firmly held. Towards the middle of this month it became clear that previous estimates of the year's crop were excessive, it having been generally supposed that 6,000,000 lbs. (45,000 piculs) would be available. This amount had now, however, to be reduced by about 1,333,333 lbs. (10,000 piculs), the falling-off evidently due to unfavourable weather during the rearing.

The month closed with a quieter market and very moderate business, owing to absence of superior silks, firmly held for higher prices.

Though there was some buying for Europe early in December the market was generally quiet; this was followed by fair daily business for Europe and America, without very marked features, and less than at the same time during 1888.

WASTE SILK.

As compared with 1888, wastes improved in January last, and a considerable business was done, principally in Noshi, filature, and Kibiso at advancing prices; no sales were, however, effected in Mawata.

In February the market was quiet and the selection poor, Noshi being conspicuous by its absence. Some business was done during the earlier part of the month in filature Kibiso, but the pierced cocoon season closed about this time.

There was considerable business for the time of the year in Noshi and Kibiso during March, though much hampered by scarcity of selection and poor quality of quality still on hand; and few sales of Mawata continued to be made.

Stocks were low in April, but moderate transactions in Kibiso were completed, the market showing no life, and business being insignificant in May.

A trifle more activity marked June, with inquiry for Noshi, of which, however, there were no good qualities, as the season was closing, what stocks remained having been thoroughly picked through.

For July business in old waste was very small, with nothing doing in new, though there were fairly large arrivals.

Inquiries for Noshi and Kibiso, made about that time, ended in nothing, as buyers and sellers held considerably different views regarding values.

Business in the new crop fairly opened in August, but was only on a moderate scale, prices being too high for the bulk of buyers. The market was active and business large in September, pierced cocoons and better classes of waste being heavily purchased; less was done in medium and lower grades of Noshi and Kibiso, these being held at too high prices to meet buyers' views.

October opened with a fairly active market in cocoons and Noshi, but buyers soon held back, as not only did sellers endeavour, though unsuccessfully, to create an advance, but the rise in exchange also impeded business. Later on there was a temporary increase in business, the chief transactions being in Noshi, the higher grades specially, and strongly sought for; large sales took place, the medium kinds, such as Joshi Noshi, being principally dealt. The superior grades, filatures Noshi, also found buyers, but, as stocks were comparatively small and prices high, no very large business was done. Though all through this month (November) Kibiso was in rather less demand than Noshi, a fair business was done in this class of waste.

During December a fair daily business was done for Europe, principally Switzerland, but though a fall in exchange was of some benefit to exporters, purchasers were not anxious, and sellers, relying on the future, did not press sales.

Briefly, the silk trade for 1889 may be summed up as follows:—

In raw silk there was less in quantity and more in value, the highest prices being reached on October 31, when Shinshu filature of extra grade, 17/15 den, which on September 13 stood at 103/ (660 dol.), was as high as 131/ 19s. 4 1/2 d. per picul of 133 1/2 lbs., all classes having advanced in proportion. On December 31 last the prices for fine quality filatures were fully 20 per cent. higher than on January 1, 1889, to which must be added the further disadvantage to the exporter of a considerably higher exchange.

With the exception of the farmers, who pretty generally, owing to a system of advances, dispose of their cocoons at low prices, other Japanese interested in silk, the filature and dealer, must have made large profits, in consequence of the rush caused by the moderate quantity produced in Europe, and the fact that the crop here also turned out smaller by some thousands of bales than at first anticipated.

In waste silk a large business was also done,

though nothing like the stir in raw. Prices increased irregularly, some classes of Noshi and filature Kibiso advancing from 10 per cent. to 20 per cent., while Joshi or Noshi, for instance, was no dearer than in 1888. The stocks at close of year were about 1,600,000 lbs. (12,000 piculs).

The general demand for "waste" has tended throughout towards the better qualities, the common kinds appearing to go gradually more and more out of favour.

MANUFACTURED SILKS.

These are a rapidly growing article of export, and numerous large factories, with the latest approved machinery, have started up in various directions. The foreign demand is steadily increasing, but reliable statistics of recent date on a question of such importance to Japanese and foreigners are sought for in vain.

The export under this head amounted last year to 426,000/ against 235,000/ in 1888, and 2,205/ in 1879.

TEAS.

A little activity was apparent shortly after the year opened, though business was unimportant, as holders were firm with the small stocks left; towards the end of January there was nothing doing, the season being virtually at an end.

On April 30 some 93,333 lbs. (700 piculs) arrived and were almost entirely bought at from 51/ 7s. 11d. to 61/ 3s. 4d. (35 dol. to 40 dol.) the leaf, and liquor being up to last year's first arrivals.

The May market was very active, more particularly during the latter part of the month, and everything was readily purchased at prices equal to those of last year, though the tea was now found not to be up to former quality.

Throughout June there was also much buying, principally medium and low grades, with prices very firm and rather higher than those of 1888. The first crop finished about the 21st, and the second commenced to arrive freely. Total settlements, up to the 28th amount to 16,106,667 lbs. (120,800 piculs), as against 15,040,000 lbs. (112,800 piculs) last year, quotations being:—

		STERLING.			CURRENCY.	
		£	s.	d.	¢	
Common	1	17	1 1/2	0	3
Good common	2	3	4 1/2	10	2
Medium	2	9	7 1/2	10	2
Good medium	2	19	0	10	2
Fine	3	5	3	11	6
Finest	3	14	7 1/2	4	13
Choice	4	7	1 1/2	10	4
Choicest	4	19	7 1/2	10	—

Stocks, 866,666 lbs. (6,500 piculs), principally medium and finest.

Owing to unsatisfactory news about the home market, July opened with small transactions, which, however, increased as the month grew older, though prices, particularly for lower grades, were high—too high, in fact, when compared with those ruling outside of Japan.

A fair amount of business was done during the first part of August, with easier prices, though the Japanese showed no disposition to urge sales.

Throughout September the market was active, with repeated business of considerable dimensions in low grades, which advanced 3s. 1 1/2 d. (1 dol.) per picul; the tea offering was, however, of the poorest quality.

October was quiet till the end, when there was rather more doing, though desirable teas continued scarce.

The business done in November was, on the whole, fair, though, notwithstanding a firm market, the tea on offer was very limited, low grades being apparently exhausted, and nothing above fine coming forward.

December was quiet, with firm prices and stocks on 31st, about 200,000 lbs. (1,500 piculs).

Quotations at close of year were:—

		STERLING.			CURRENCY.	
		£	s.	d.	¢	
Common	1	19	0	2	3
Good	2	5	6	2	8
Medium	2	12	0	2	15
Good medium	2	16	3	5	0
Fine	3	8	3	1	6

with no "finest," "choice," or "choicest."

A somewhat curious feature about the tea business of this place is that shipments to the markets of the United States have steadily decreased, and were about 6,000,000 lbs. less last year than in 1887, those to Canada and Europe have respectively increased 1,683,000 lbs. and 441,000 lbs.

COPPER.

After almost complete stagnation and the ineffectual offering of some small parcels, business began to look up again towards the end of February, and there being a demand for China a few small sales of refined at 31/ 14s. 9d. to 31/ 15s. 3 1/2 d. were effected.

Bad reports from India and Europe, however, soon again depressed the market, and buyers,

awaiting the result of the pending crisis, abstained from purchase.

The report of the failure of the French syndicate caused much uneasiness in this market, and as both sellers and buyers were watching the course of events, there were no transactions, prices being quite nominal.

This dulness was only relieved to a slight extent by small purchases of Arada at 21/ 11s. 8 1/2 d. (16 dol. 50 c.), and Segawa at 21/ 13s. 9d. (17 dol. 50 c.), for China, until July, when a fair and increasing demand set in, both for India and China, arrivals in outside shops finding ready buyers: Arakawa at 21/ 8s. 5 1/2 d. (15 dol. 50 c.), and Fumikawa at 21/ 10s. 9d. (16 dol. 26 c.).

After this prices went up, and buyers withdrew from the market, 21/ 15s. 4 1/2 d. (17 dol. 75 c.) being asked for Segawa. Holders remained firm for some time, but a trifling business was ultimately done at rather lower rates.

TOBACCO.

Prices in the interior were very high about the beginning of the year, but supplies on the spot were obtained at slightly lower rates than those ruling in December, and speedily bought up for shipment to Europe.

This nearly exhausted the stocks of desirable quality of Joshi and Hadano, the remainder being firmly held at prohibitive prices: Joshi quoted at 11/ 15s. 11d. (11 dol. 50 c.) per picul of 133 1/2 lbs. and Hadano at 21/ 0s. 7 1/2 d. (13 dol.).

Demand still continued, but country stocks had rapidly decreased, the little left early in March being of most inferior quality. A few further shipments, the balance of purchases for export made in April, practically closed the season.

Small quantities still came in during May and June, but the mixed and poor quality of goods, as well as heavy rains, and generally unsettled weather interfered with business. What little was left, being taken up late in June, the market became bare and the season was closed.

About the end of December the quality and quantity of the new crop was reported to be insufficient, and prices were firm, sales to the extent of about 213,333 lbs. (1,600 piculs) being made at prices ranging from 11/ 10s. 1d. (9 dol. 25 c.) for Joshi to 21/ 17s. 4 1/2 d. (11 dol. 50 c.), and even 21/ 15s. 6d. (14 dol.) for Hadano.

Since then the unsatisfactory rumours have been fully confirmed, the available crop for this season being not only very inferior in quality, but about one-half in quantity.

RICE.

Only a limited business was done during the earlier part of the year, and prices fluctuated with a downward tendency, being rather in favour of buyers about the middle of May, though so little was offering that transactions were necessarily small. In June, best quality stood at 6s. 10 1/2 d. (2 dol. 20 c.) per picul of 133 1/2 lbs., continuous bad weather and numerous inundations in July caused fears for the harvest, and stocks being reduced to a very low ebb, heavy speculation set in and soon made prices prohibitory for foreign trade. Severe storms in September caused further damage to the new crops, and manipulators forced the market up to 11s. 6 1/2 d. (3 dol. 60 c.) in October, the year closing at 10s. 4 1/2 d. (3 dol. 20 c.) per picul.

For the whole of Japan the past year has been a most important one, the trade in this article amounting to some 100,000 tons of which fully three-fourths was contributed by Kobe.

During the period under review several new mills for cleaning rice with foreign machinery were started by Japanese, and turned out some 26,000 tons.

The Government, finding so large an increase in exports, have decided to cease making shipments to Europe on their own account.

FISH OIL.

The year commenced with a weak market, and though dealers appeared willing to meet sellers, they were not over anxious to do anything at 11s. 8 1/2 d. to 11s. 10 1/2 d. (3 dol. 75 c. to 3 dol. 80 c.) per picul of 133 1/2 lbs. A few small purchases were made, but not continued, as holders raised their demands till they reached 12s. 5 1/2 d. (4 dol. 15 c.) early in March. Later on this article was sought after, but supplies were absent, though ultimately some 7,000 cases changed hands at 13s. 4 1/2 d. to 13s. 8 1/2 d. (4 dol. 35 c. to 4 dol. 45 c.). Some further business was also done at 13s. 6 1/2 d. to 13s. 8 1/2 d. (4 dol. 40 c. to 4 dol. 45 c.), but dull home markets affected trade, and purchasers held off.

During the balance of the year, sundry sales were effected at quotations ranging between 13s. 9 1/2 d. and 13s. 6 1/2 d. (4 dol. 35 c. to 4 dol. 25 c.), which latter was maintained in December.

HAPPE SEED.

The market opened nominally at 11s. (3 dol. 50 c.), but fell to 9s. 9d. (3 dol. 10 c.), with no buyers; a demand for home consumption soon put

it up to 12s. 5d. (3 dol. 95 c.), at which export was out of the question; a state of things which lasted till the season closed in May.

The new crop was up to average in quality and quantity, prices starting in July at 9s. 8d. (3 dol. 10 c.), steadily rising, till about the middle of October they reached 13s. and 13s. 2d. (4 dol. 5 c., and 4 dol. 10 c.) with small stocks and nothing doing.

At the close of the year values had slightly fallen, and quotations were nominally 11s. 8½d. (3 dol. 60 c.).

WHEAT.

The absence of desirable stocks and price were at first a bar to business, purchases for home consumption tending to strengthen the market, which for some time stood at 6s. 1½d. (1 dol. 95 c.) per picul. In April, however, holders weakened, and upwards of 3,572 cwt. (3,000 piculs) changed hands at 5s. 7½d. to 5s. 9d. (1 dol. 82½ c. to 1 dol. 85c.) per 133½ lbs. Some further sales being effected, stocks decreased, and the prospects of the new crop not being very favourable, dealers became firm, for a short time only, and early in June prices were down to 5s. 5½d. (1 dol. 75 c.).

With a good demand, first arrivals of the new crop were taken up at 5s. 6d. (1 dol. 80 c.) during the first part of August, though subsequent business was done at rather lower rates.

The ideas of Japanese soon changed, and after holding back for some time, purchasers took 300 tons for export at 6s. 6d. (2 dol. 5 c.), which at once caused a rise to 7s. 1½d. to 7s. 3½d. (2 dol. 25 c. to 2 dol. 30 c.) at which figure export is impossible.

In October and November prices fluctuated, some purchases being made at 5s. 11½d. (1 dol. 82½ c.). Quotations at close of the year were 6s. 2d. (1 dol. 90½ c.) to 6s. 4d. (1 dol. 95 c.).

Cotton manufactures do not show any perceptible increase since 1869, and a falling off as compared with last year of some 260,000.

Woollen and mixed cotton and woollen manufactures have increased since 1886, but are 100,000 less than in 1888.

Metals have quadrupled since 1869 as regards the amount represented in sterling, but show a decrease during 1889 of some 350,000.

The Sugar trade has grown largely in volume, but is also less than in 1888.

Kerosene Oil has made large strides, and the quantity imported during the year under review is nearly double that of 1885.

Miscellaneous western goods have been subject to considerable fluctuations, and call for no special remarks.

Of miscellaneous eastern the most important article is raw cotton, the volume of which is rapidly increasing.

As regards rice, this article has, fortunately for Japan itself, not been required since 1885 until last year, when, owing to partial failure of the crop and a heavy "corner" by Japanese speculators, a small quantity of the foreign article found a market.

Silk has doubled in volume during the last ten years.

Silkworm eggs are practically nil. In 1869 considerably over 1,000,000 cards were exported, and last year not 10,000; this is, however, more than in 1888, owing to the insufficiency of the silk crop in Europe.

Tea figures for 2,000,000 lbs. more than ten years ago, and upwards of 18,000,000 lbs. more than in 1869.

Coal exported is said to be for ship's use, but as a fact is not, steamers being, by the interpretation put on the treaties, allowed to export it duty free; all coal carried in sailing ships is chargeable with duty. This trade has increased 34,000 tons since 1879.

Copper shows a considerable increase as compared with 1879 and 1888, though the export has fallen off with reference to the intermediate years.

From the import table it will be seen that, apart from cotton yarns, Italians, shirtings, T-cloths, victoria lawns, sugar, molasses, and galvanised iron, almost exclusively in the hands of local British firms, a very large percentage of the business in other articles is also transacted by them.

As regards exports our firms here deal largely in tea, copper, tobacco leaf, straw braid and paper, also to a considerable extent in silk, rice, fish oil, and awabi shells.

CUSTOMS DUES.

The duties paid during the past year amounted to 435,845½, as against 462,446½ in 1888.

It is a matter of regret that I am unable to mention the custom-house at this port in terms of unqualified praise. Many signs have been apparent of a desire to meet the growing requirements of trade, but much still remains to be done. Complaints about delays and excessive routine are general, and not without foundation.

EXCHANGE.

Owing to the fall in silver, exchange declined

in January, though money was scarce, and in good demand. During the following two months rates remained fairly steady, but business was dull, and little doing either in bank or private paper.

In sympathy with the fall in silver, exchange declined in April, though closing steady.

Finnish, with an upward tendency, money being scarce and in strong demand, set in early in May, and continued with trifling fluctuations till end of year.

SHIPPING.

The foreign carrying trade of this port was distributed as follows:—

	Per cent.
British	66
American	14½
German	9
French	8
Norwegian	2½

The total of foreign shipping amounted to 442 vessels, with a capacity of 766,063 tons, as against 410 ships of 688,480 tons in 1888. Of these, 54 were sailing vessels, 23 being British, 19 American, 10 German, and 2 Norwegian, representing a total tonnage of 51,373 tons, an increase of 7 ships and 4,617 tons over 1888.

The total steam tonnage was 714,690 tons, represented by 388 steamers, being in excess of 1888 25 ships and 72,966 tons. Of all the steamers, 269 were British, aggregating 485,687 tons, an increase over 1888 of 35 ships and 81,372 tons.

In connection with these details, reference must be made to the line of Peninsular and Oriental steamers put on at the close of 1888 between this port and Bombay. The first vessel of this branch arrived here in January, 1889, and was followed by others at pretty regular intervals, until in December last 20 had arrived here via ports of call, their tonnage being 31,104 tons.

Another circumstance with regard to shipping may also be mentioned. In June last the first vessel, a British steamer, arrived here direct from Batoum with kerosene oil; she was followed during 1888 by two others, also British, their collective tonnage being 5,462 tons. During the year under review there arrived direct from Batoum, laden with kerosene oil, seven British steamers with an aggregate tonnage of 11,782 tons.

The regular mail lines are:—

	Tons.
Oriental and Occidental (British)	80,735
Peninsular and Oriental (British)	74,088
Canadian Pacific (British)	64,774
Pacific Mail (British)	2,401

Total.....221,298

	Tons.
Pacific Mail (American)	85,796
Messageries Maritimes (French)	62,580
Nord. Deutsche (German)	23,060

The above summary of mail lines includes an item of 2,401 tons, being the net tonnage of the Pacific Mail Steamship Company's steamer *China*, which was built on the Clyde and continues to run under the British flag, all the other ships of that company being American. The *China* is a fine vessel, of 4,939·83 gross tonnage, and makes remarkable passages.

Of shipping other than British, Japanese shows during the past year as compared with 1888 a decrease in ships of 130, but an increase of 104,022 tons; American the same number of ships, and an increase of 431 tons; German a decrease of 4 ships and 926 tons; French a decrease of 1 ship and 4,476 tons.

Both are satisfactory proofs that British mercantile shipping interests are well to the fore and gaining ground. Twenty years ago with a general foreign tonnage of less than 500,000 tons, the percentage of British tonnage was rather more than 37, whereas last year, when the foreign shipping represented 766,000 tons, the British percentage was nearly 66. On the other hand, the percentage of foreign trade for the whole of Japan carried in British ships in 1882 was 48, while last year it had risen to over 62.

GENERAL REMARKS.

POPULATION.

The number of foreigners, exclusive of Chinese residing here, on December 31 last was 1,549, of whom 720 were British, showing an increase of 38 in the general foreign population, and of 12 in the British portion. Of Chinese there were 2,993, as against 2,981 in 1888. On the above date there were 331 foreign firms established here, and of these 57 were British. The enclosed return shows the gradual and steady increase during the past ten years of the foreign population of this port.

The Japanese population of Yokohama was 121,985, and of the prefecture of Kanagawa 958,653. The latest census (December 31, 1888) makes the entire population of the empire 39,607,234, of which 23,008,445 were males and 19,598,789 females.

EDUCATION.

Yokohama has 59 schools, of which 1 is normal, 7 are rural elementary, 31 private elementary, 1 commercial, and 19 general private.

In the prefecture of Kanagawa there are 668 schools, of which 603 are rural elementary, 36 private elementary, 2 rural, and 27 general private.

According to the latest returns there are 27,500 educational establishments in the Empire, namely, 2 universities, 1 higher normal, 45 ordinary normal, 7 higher middle class, 50 ordinary middle class, 25,530 elementary, 18 female first class, and 1,847 general schools; of these 39 are supported by the Government, upwards of 25,000 by the municipalities of various places, the rest being private schools.

In the last edition of a well-known Japanese encyclopaedia, published in Tokyo, it is stated that the number of industrial and commercial companies in Japan is 2,038, with an aggregate capital of nearly 68,000,000 Mexican dol.; of these 144 are agricultural, 1,360 industrial, 374 commercial, and 159 transport companies.

In 1881 the Tokyo Meiji Life Insurance Company was started with a capital of 100,000 yen,* and a reserve fund of 7,783 yen, which latter had, in 1889, increased to 231,099 yen. During the year ended July last, 5,609 lives were insured for sums amounting to 2,849,200 yen, the claims paid being 31,600 yen.

The Tokyo Marine Insurance Company was started in 1879, and appears to be a flourishing institution. It has a capital of 1,000,000 with a reserve of 144,366 yen, and in 1888 had 41 branches or agencies; the amount of insurances effected is, by latest statistics, 19,736,356 yen.

ROADS.

On January 1, 1889, there were, exclusive of mere country paths, 22,020 miles of high road; of these 5,127 miles are maintained by the Imperial Government, and the rest out of prefectural funds.

RAILWAYS.

The construction in Japan of railways was first considered in 1870, and, on December 31 last, 1,040½ miles were open to traffic; 421 miles are under construction, and expected to be opened during the current year, and 437 miles, also under construction, are to be opened subsequently.

During the first period of railway communication (May to December, 1872), the length of the Imperial Government lines was 18 miles, the number of passengers being 495,078, and the amount of goods transported 457 tons.

In the year ending March 31, 1889, the length of the Government lines was 446 miles; 8,404,776 passengers, and 616,913 tons of goods were conveyed.

At the present moment there are numerous private railway companies, some of the principal being the Japan Railway Company, the Rōmō Railway Company, the Sanyōdo Railway Company, and the Kiushin Railway Company.

TRAMWAYS.

Three have been opened to the public; one is in this prefecture, one in Tokyo, and one up north, between Yokogawa and Shin Kanuzawa, which serves as a connecting link for railway communication from the south with the town of Naotsu.

WATER TRANSPORT.

The total capacity of ships of foreign build, owned by Japanese, was, in January, 1888, 133,207 tons, of which 72,322 tons were steamers, and of the latter about two-thirds were over 500 tons burden. The two principal steamship companies are the Nippon Yusen Kaisha (Japanese Mail Steamship Company), and the Osaka Shosen Kaisha (Osaka Merchant Shipping Company).

The number of trading junks (ships of Japanese build) on that date was 17,194.

PUBLIC WORKS.

A note on the proposed scheme of harbour works at Yokohama appeared in the report for 1888; all the preliminary steps are now settled, and work is to commence next month. The general opinion is that when completed the additional facilities to be afforded will give a great impetus to trade.

ELECTRIC LIGHTING.

This was introduced some five years ago; there are at present in different parts of Japan six companies with a total number of lights amounting to 22,300, of which 11,000 are actually in use. One of these companies is now perfecting a scheme for lighting Yokohama.

Having at the commencement of these remarks mentioned the population of Japan, it may not be inappropriate to state in conclusion, and on the authority of the *Kokumin Shinbun* one of the

* 1 yen equals 1 Mexican dol.

leading newspapers, that on the 20th December last there were in this Empire 302,628 officials, which is in the proportion of 82 per 1,000 persons. I have, &c.,

(Signed) J. J. ENSLIE.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, September 7th.

Serious floods have occurred in Bohemia. The famous old bridge over the Muldau at Prague has collapsed, and thirty persons have been drowned.

London, September 7th.

The United States Treasury has decided to purchase an average of 4,500,000 ounces of silver monthly, instead of 54,000,000 ounces annually.

London, September 8th.

A terribly destructive fire has occurred in Salonica, the whole of the European quarter having been destroyed and 12,000 of the inhabitants rendered homeless. Two hundred and fifty acres of the city are laid waste, and the destruction includes consulates, mosques, churches, hospitals, and other public buildings, in which were many valuable archives that have been totally destroyed and cannot be replaced.

London, September 10th.

The race for the St. Leger has resulted as follows:—

Memoir.....	1
Blue Green.....	2
Gonsalvo.....	3

Fifteen ran.

Canon Liddon is dead.

LONDON, The Rev. Henry Parry, D.D., D.C.L., Canon of St. Paul's Cathedral, and probably the foremost living preacher of the English Church, was born in 1829. He became a student of Christ Church, Oxford, where he graduated B.A. in 1850, taking a second-class in Classics. In 1851 he obtained the Johnson Theological Scholarship and in 1853 proceeded to the degree of M.A. Having taken orders he was, from 1854 to 1859, Vice-Principal of the Theological College of Cuddesdon. He was also Examining Chaplain to the late Bishop of Salisbury. In 1864 he was appointed Prebendary of Major Pars A. in Salisbury Cathedral. He has been Select Preacher at Oxford (1865-69, 1870-72, 1877-79), and in 1860 he was Bampton Lecturer. From 1866 to 1875 he was a member of the Hulsean Foundation at Oxford. In

The Japanese steamer *Sagami Maru*, Captain Kenderdine, reports:—Left Kobe the 6th September at noon; had fine weather with light south-westerly winds and high easterly swell to port. Arrived at Yokohama the 7th September at 9 15 p.m.

The British steamer *China*, Captain Seabury, reports:—Left Hongkong the 4th September at 2 45 p.m.; had all through Formosa Channel and well into eastern sea stiff N.E. winds, and rough seas; rest of voyage, easterly airs, and fine weather. Passage 4 days, 21 hours, 13 minutes.

The Japanese steamer *Satsuna Maru*, Captain Brown, reports:—Left Hakodate the 6th September at 8 a.m.; had moderate easterly winds and fine weather which continued until 4 p.m., after which breeze gradually freshened till 10 p.m., when it blew a heavy S.E. gale with blinding rain and high confused sea; have to till midnight, weather then moderating kept away again, and experienced thick, misty weather with heavy rain squalls and high easterly sea, which continued until arrival at Ogiuohama the 7th at 1 p.m. Whilst in port the weather became very threatening and at 8 p.m. the barometer began to fall rapidly, the wind gradually increasing in force until midnight when it was blowing from the east with typhoon force, accompanied by torrents of rain; this continued until 2 a.m., when the centre of the storm passed over the ship and for a few minutes it became perfectly calm, the barometer at this time being at its lowest reading, viz., 29.22; the wind then suddenly shifted to the N.W. and blew with great violence for about two hours, after which it veered to westward and gradually went down. Left Ogiuohama the 8th at 7 a.m.; had heavy rain squalls with strong southerly wind and high sea, decreasing until off Noshiro; thence to port light variable winds with passing showers. Arrived at Yokohama the 9th September at 11 a.m.

The American steamer *City of Peking*, Captain Cavarly, reports:—Left San Francisco the 23rd August at 1 13 p.m.; for first 36 hours had fresh N.W. gale, with rough sea; thence moderate to fresh winds from N.W. to S.W., with moderate sea, and swell, and fine weather. Arrived at Yokohama the 10th September at 7 05 a.m.

The Japanese steamer *Yamashiro Maru*, Captain Young, reports:—Left Hakodate the 8th September at 8 a.m.; had S.E. gale and thick rainy weather, when nearing Siyu saki encountered a tremendous S.E. sea and turned back to Hakodate; at 4 p.m. same day, weather having improved, left again with a gentle N.W. to W. breeze and fine. Big sea from Siyu saki to Yamada Head and light S.W. and southerly winds and cloudless sky which weather continued, sea going down all the time, to port. Arrived at Yokohama the 10th September.

The German steamer *General Werder*, Captain Eichel, reports:—Left Hongkong the 5th September at 5 45 p.m.; had through the Formosa Straits strong N.E. winds with high sea; thence to port fresh and moderate N. and N.E. winds with cross sea. Arrived at Yokohama the 11th September at 8 20 p.m.

The Japanese steamer *Sendai Maru*, Captain Spreigalhal, reports:—Left Hachinohe the 9th September at 8 27 p.m.; passed Kikkosan the 10th at noon; passed Iwobye the 11th at 3 30 a.m.; Noshiro at 11 45 a.m., and rounded the lightship at 3 45 p.m.; passed H.M.S. *Alacrity* going S.S.W. Weather fine and clear throughout, with light southerly winds.

The Japanese steamer *Wakanoura Maru*, Captain Hussey, reports:—Left Kobe the 10th September at noon; had light easterly winds and fine weather; passed Ooshiro at 9 34 p.m., a fresh breeze from the eastward and clear weather continued throughout the night; passed Rock Island the 11th at 1 48 p.m., with a fresh breeze from the eastward and fine weather. Arrived at Yokohama at 8 15 p.m.

LATEST COMMERCIAL.

IMPORTS.

During the week prices again dropped for English Yarns, and buyers were tempted with the unwarrantably low range of prices accepted by holders, which was caused no doubt by the uncertain movements of exchange, and a very large business was put through during the last four or five days. At the close sellers seem to have taken heart somewhat, and are trying to get prices up again, but owing to the weakness of one or two importers the move is very difficult. Shiftings have been without life, and only a small business in T. Cloths has taken place. Italians have had a considerable amount of attention, and some large lines have been put through, but the demand

has not been general. Sales for the week amount to 3,700 bales English, 120 bales Bombay Yarns, 4,500 pieces Shirtings and T. Cloths, and 14,000 pieces Italians.

Cake	3.70 to 4.10	
Brown Takao	4.35 to 4.45	

EXPORTS.

RAW SILK.

Our last report was dated the 5th inst. since then settlements in this market are 369 piculs divided thus:—Hanks 10, Filatures 281, Re-reels 64, Kakeda 14. There has been no direct export so the total business of the week is represented by the above figures.

All the buying during the first few days has been on European account. Holders have raised their pretensions so much that buyers for the States are quite shut out. Exchange is something lower than last week, but closes firm, and the prices which holders now ask seem to threaten a quiet time in the near future. Japanese are abnormally strong, and some of them refuse to sell even at present quotations.

Business for America seems quite crushed out by this rise in price. It might be possible to make

a few shipments at values current a fortnight ago, but as things are, with the gloomy market now arriving from New York, it appears impossible that anything should be done.

There is no doubt that present and late quotations threaten reellers with very severe losses, and the *Shinshu* Mill owners are said to have entered into an agreement that they will reel no more silk after their present stock of *Coccons* is exhausted. Supplies are coming in more freely as communication with the interior is restored by degrees. Our stock has gained nearly 1,000 piculs on the week, and with a few days quiet we should soon see a reaction in our market.

There has been only one shipping opportunity since we last wrote; the English Mail Steamer *Ancona* of the 6th inst. carried 250 bales for Lyons and London. This departure brings the present export up to 3,011 piculs, against 7,435 last year and 5,928 on the 12th September, 1888.

Hanks.—There has been some further business done in these at an advance in prices; *Chichibu* being done at \$560. Stock is very small; less than 200 piculs, and is in strong hands.

Filatures.—These exhibit a marked rise, and holders are careless about selling even at these figures. In full sizes *Hiranoshu*, grading No. 1 *Shinshu*, has been sold at \$655. *Hakutsuru* asks \$670, with no takers; other *Shinshu* silks are held at proportionate prices, while *Koshu* sorts are off the market altogether. In fine sizes considerable business has been done, including extras at \$685, with best No. 1 at \$670, and No. 2 at \$640, all these being destined for Europe. At closing, buyers are not quite so eager and we might see a slight decline next week.

Re-reels.—These also are wonderfully firm and all more or less nominal, buyers in general being quite unable to continue purchases at present figures.

Kakeda.—Here also prices have been forced up, although very little business has been done. Quotations are mostly nominal, only one settlement being entered, and this consists of about 15 piculs *Flower Girl* Chop at \$597 1/2.

Oshu.—No transactions since our last and prices are without change.

WASTE SILK.

Settlements in this branch have been 435 piculs, of which 385 are Pierced Coccons, the remaining 50 being Kibiso.

The Market is by no means brisk, and it would seem that we must have lower prices before we can see any considerable trade. The principal event of the week has been the opening of the market for Pierced Coccons, in which article business has been done at prices which seem to be unusually dear.

The only export during the week by the P. & O. steamer *Ancona* on the 6th inst. She carried 58

bales of *Noshi* for Trieste. Shipments to date are 1,080 piculs, against 1,217 last year and 1,294 in 1888.

Pierced Coccons.—As noted above, the market has opened; about 460 piculs, good to best quality, averaging say 75 per cent, have been taken at prices ranging from \$122 1/2 to \$127 1/2. These prices at current rates of Exchange would seem to be dearer than the same quality would realize to day in consuming markets.

Noshi.—No sales this week; but some parcels of *Joshu* are under consideration and will probably be settled at or about \$78 per picul.

Kibiso.—The purchases in this department are not large; they include *Filatures* at from \$100 to \$110; with ordinary *Joshu* at \$35 1/2.

TEA.

Buyers have operated to the extent of 2,530 piculs for the week ending yesterday, and at higher prices than is warranted, considering slow sales on the other side. Low grades continue to be most in request, though better qualities have received some attention. Quotations remain unchanged. Tea shipments to date are 10,397,965 lbs. for New York, 13,909,970 lbs. for Chicago, 8,799,631 lbs. for Canada, and 2,608,491 lbs. for California; total, 35,716,057 lbs., as compared with 30,336,461 lbs. last year for the same period. The combined settlement at both ports are 342,050 piculs, against 288,220 piculs at the same date last year.

CONTRACTORS TO THE ADMIRALTY, LEADING STEAMSHIP COMPANIES, AND YACHT OWNERS.

STEAM LAUNCHES & YACHTS,

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 10 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. Illustrated Catalogue in English, French or Spanish. Send for Copy to

SIMPSON, STRICKLAND & CO.

WORKS:
DARTMOUTH, SOUTH DEVON (ENGLAND).
LONDON OFFICE:
181, QUEEN VICTORIA STREET, E.O.

MACHINERY.—Mr. ARTHUR WADHAM, proprietor of *The Machinery Market and Exporter* (illustrated)—the greatest machinery business journal published—(subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery and Engineering Materials. Mr. Wadham is open to act as sole Buying Agent in England for one or two good firms in Japan desiring to deal with a reliable house. Mr. Wadham's intimate knowledge of the English Machinery and Engineering Trades enables him to save large sums to foreign customers placing their orders in his hands. Firms dealing with Mr. Wadham may rely upon being served in a prompt and straightforward manner. Address:—Mr. Arthur Wadham, Engineering Offices:—181, Queen Victoria St., London. Registered address for telegrams—"Wadham, London." June 28, 1890.

THE GREATEST WONDER OF MODERN TIMES. HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribulations in Abyssinia," says:—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best to medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN! HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COCHRAN, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fresh butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1889.

KEATING'S INSECT POWDER.

BUGS, BEES, MOTHS, BEETLES, and all other insects are destroyed by KEATING'S Insect Powder, which is quite harmless to Domestic Animals. In exterminating beetles the success of this Powder is extraordinary, and no one need be troubled by those pests. It is perfectly clean in application. Ask for and take no other than "KEATING'S POWDER," as imitations are numerous, and fall in giving satisfaction. Sold by all Chemists, in Tins and Bottles. May, 3, 1890.

NOW READY,

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, SEPT. 20, 1890.

SUMMARY OF NEWS.

THE opening ceremony of the Administrative Court will take place on the 1st October next.

VISCOUNT ENOMOTO, who went to Hokkaido some time ago, returned to Tokyo on the 17th instant.

It is commonly reported that Prince Sanjo has resigned his position of Lord Keeper of the Seals.

COUNT ITO, who had been staying at Kobe for some time, proceeded to Arima on the 14th instant.

H.I.H. PRINCE KITASHIRAKAWA left the capital on the 16th instant and proceeded to the Takasaki Barracks.

H.I.H. PRINCESS ARISUGAWA started from Tokyo on the 12th instant for Kyoto, Osaka, and Hyogo Prefecture.

VISCOUNT TORIO will publish a newspaper in the capital in October, which is to be the organ of the *Hoshu Chusei* party.

It is stated that Count Yanagihara will be nominated by the Emperor as President of the House of Peers shortly.

FIRE broke out on the afternoon of the 10th instant in a house at Mimamura, Imadate-gun, Fukui Prefecture, and twenty houses and four

godowns were entirely destroyed, five houses being partially burned, before the flames could be subdued.

MR. KATO MASANOSUKU, editor of the *Hochi Shimbun*, will leave Japan on the 24th instant for Europe and America.

HER MAJESTY THE EMPRESS will proceed to Kyoto in October next to visit the tomb of Prince Kujo, Her Imperial Majesty's father.

THE Joyetsu Railway Company has applied to the Cabinet for permission to construct a railway between Takasaki and Niigata.

MR. ARISHIMA is rapidly recovering from his recent attack of cholera and will soon be able to resume his duties at the Custom-house.

THE line of the Sanyo Railway Company between Kasaoka and Kanagasaki, which is now in course of construction, will be completed in July, 1891.

HER MAJESTY THE EMPRESS proceeded to the Aoyama Detached Palace on the afternoon of the 17th instant to pay a visit to the Empress-Dowager.

H.I.H. PRINCE KITASHIRAKAWA returned to the capital on the 12th instant from Gumma Prefecture, where His Highness had been staying for some time.

ACCORDING to investigations made by the Nishi District Office, Osaka, the total amount of damage caused by the recent conflagration was yen 634,173.75.

THE line of the Kyushu Railway Company between Onga and Hakata (twenty-seven miles) having been completed, will be opened for traffic in the present month.

AN ordinary meeting of the Cabinet was held on the 16th instant, at which all the Ministers of State were present, the proceedings lasting till a late hour.

MAJOR-GENERAL IMAI, Commander of the 7th Brigade of the Osaka Military Division, was seized by cholera on the afternoon of the 15th instant at Kobe, and died a few hours after.

MR. MATSUMURA NINZO, Assistant Professor of the College of Science in the Imperial University, was promoted to Professor on the 13th instant, being raised to fourth class of *souin* rank.

AN ordinary meeting of the Cabinet was held on the 12th instant in presence of the Emperor, at which all the Ministers of State with the exception of Count Oyama were present.

DYSENTERY is now prevailing in Kyushu extensively, and the number of persons attacked in Fukuoka Prefecture up to the 10th instant was 14,494, of whom 2,369 died.

MARQUIS SATONJI, Japanese Minister to Germany, and Marquis Tokugawa, Japanese Minister to Italy, have applied to the Foreign Department for permission to return home on six months' leave.

FIRE broke out on the night of the 12th instant in a house at Omonaicho, Iwanai, Shiribeshi, Hokkaido, and about six hundred houses, including the Law Court, the Post Office, and the branch office of the Mitsui Bank, were entirely destroyed. On the evening of the 13th

instant forty-one houses were burned to the ground at Yamagieho, Noshiro, Yamagata Prefecture.

THE Sobu Railway Company will be amalgamated with the Hokuso Railway Company shortly and Mr. Narahara Shigern, President of the Japan Railway Company, will become President of the amalgamated company.

A REPORT by the Sanitary Bureau of the Home Department shows that the number of persons attacked by cholera throughout the Empire from the commencement of the epidemic to the 15th instant, was 21,769, of whom 13,663 died.

ACCORDING to a report made by the Sanitary Bureau of the Home Department, the number of persons seized by cholera throughout the Empire from the commencement of the epidemic to the 12th instant, was 19,726, of whom 12,235 died.

AN outbreak of fire took place early in the morning of the 16th instant in a house at Bakurocho, Akita, Akita Prefecture, and thirty-five dwellings and two telegraph posts were entirely destroyed before the flames could be got under control.

It is rumoured that the rank of all Prefects will be raised to *chokunin*, and that instead of two Secretaries in each Prefectural Government one only will be appointed, in connection with the revision of the Law for the organization of Prefectural Governments.

IN consequence of the recent heavy rains the Ito and Ainogawa Rivers, in Tosa, overflowed on the 11th instant. Embankments were damaged in several places, the village of Nishimachi, Susaki, was flooded and thirty-six houses carried away, fifteen persons being drowned.

THE improvement in the Import trade last week continued for several days, and a large business was done at gradually hardening rates, though during the past day or two buyers have begun to slack off somewhat in their demands; the general position, however, is much improved. The brisk business in Yarus was shared by Shirts and Fancy Cottons at better prices, the sales being 3,400 bales English, 550 Bom-bays, and 35,000 pieces Shirts. There is more doing in Metals, and though no large sales of Kerosene have transpired, values are unchanged in spite of a stock-increased by the arrival of a cargo from Batoum—of 800,000 cases. There have only been two small parcels of White Sugar sold, and notwithstanding that holders of Formosa have further reduced their prices, no transaction in that kind has been reported. Utter stagnation in the Silk trade in the States and a meagre demand from Europe, added to the strongly entrenched position of holders here, have combined to almost paralyse the local market, the settlements, including some direct shipments, only totting up 130 piculs. Heavy arrivals come in and the stock is over 10,000 piculs; still holders say they can afford to wait, that buyers will be forced into the market later on, and that they can rely on a large quantity being taken by home manufacturers, whose business is largely and steadily increasing. Waste Silk has been taken—about 350 piculs—at late rates. The Tea trade is fairly steady; receipts of common diminishing, buying has extended to better grades, and sellers have obtained full rates for the leaf purchased. There is probably not a great deal more to come in, and stocks here are not heavy. Exchange again fluctuated during the week, but on the whole is much about the same, and closing rates are fairly firm.

EDITORIAL NOTES.

THE ANTI-REVISION MEETING.

Nothing can be clearer than that the promoters, or at least some of the promoters of the recent Anti-Revision Meeting were either misrepresented by their organ, or that they intended to give the proceedings a very different complexion from that which they actually assumed. On the evening of the day when the meeting was held, a local English newspaper, which reflects the sentiments of, and is well known to be in direct touch with, the most violent anti-revision agitators in the Settlement, made the following statement:—"If the editor of the *Japan Mail* were to have the courage to attend the meeting, he would hear some remarks both about the Japanese and himself, which would probably astonish him." This assertion, though its prophetic character indicates that it was penned before the meeting, did not appear in print until the meeting was over. In other words, the writer was so entirely confident as to the truth of his prediction, that he took no trouble to provide for its correction should the results of the meeting be opposed to his expectation. The statement also indicates that the intention of the promoters who inspired it was to hold the meeting with closed doors; otherwise there could have been no need to attend in order to learn what occurred. Such indeed was the plain purpose of the little band of promoters, and from it we acquire additional reason to suspect that they intended to adopt a tone and pursue a line of argument not conveniently reconcilable with the idea of publicity. But, as might have been expected the inbred love of open-handed dealing which prevails among all Western peoples, defeated this sinister project. When the reporter of the *Japan Mail* presented himself at the meeting, he was informed by the chief promoter that notes were not to be taken for journalistic purposes, but as to this he very properly replied that he should look to the meeting itself for instructions. He foresaw that an unauthorized attempt to muzzle the press, and shroud the proceedings in secrecy, would not be endorsed by the community. And he was right; for when the Chairman, after announcing his original intention—namely, to state that it was neither expected nor desired that reporters should take notes for insertion in the newspapers—proceeded to ask the sense of the meeting on this point, his project of privacy was defeated by an overwhelming majority, though all the leading promoters voted with the minority. The consequence was that with the exception of some remarks by Mr. J. H. Brooke, who whether in speaking or writing has never shown himself capable of moderation or accuracy, the meeting passed off without the utterance of a single word calculated to astonish anyone in the sense predicted. Either, then, the nature of the proceedings had to be modified because the more violent among the promoters found themselves forbidden to hold the meeting with closed doors, or else the announcement of their intentions, published by their organ, was unauthorized and untrue. Whichever hypothesis be correct the result was decidedly amusing. For when the proceedings of the meeting were published, the very journal which, in its issue of Thursday, had exultingly prophesied that things would be spoken calculated to astonish the Japanese and the editor of the *Japan Mail*, this very journal, in its issue of Friday, had the consummate coolness to announce its "pleasure at being able to remark that—with the exception of the actual object of the meeting—there was nothing against (*sic*) which the Japanese could object, the speeches having been calm and dignified." It was certainly well that the public took the management of one part of the affair, at any rate, out of the hands of men who contemplated secrecy in such a movement.

"TU AGUARD."

The *Tokyo Koron* has been betrayed into one of its not unusual ebullitions of extreme violence and unreason. Its wrath against the promoters of the anti-treaty-revision movement in Yoko-

hama has led it to call British merchants by a great many ugly names, such as unprincipled, ignorant, grasping, selfish and so forth. The *Tokyo Koron* merely renders itself ridiculous by such outbursts. It does not understand British merchants, and will perhaps be unprepared to learn that abuse so utterly inappropriate excites only their laughter. The incident has been rendered still more ludicrous by the irate rejoinder of an English local newspaper, which daily moves its readers' mirth by really marvellous displays of juvenile hyperbole. By this journal the *Tokyo Koron* has been spitted, gibbeted, and lung up to public scorn as an example of Japanese barbarity, and as a proof that the nature of the nation is savage after all. But let us go softly. Was it not only a few days before the *Tokyo Koron's* tirade that an English merchant addressed a letter to one of the Yokohama papers in which he charged Japanese traders with "bare-faced robbery, roguery, and rascality," called them "scoundrels," likened them to "burglars," and declared that foreigners "regarded them with loathing and contempt?" A candid comparison of this gentleman's language with the diatribes of the *Tokyo Koron* leaves us in some perplexity as to which side should carry off the palm of rudeness and vulgarity. On the whole we think that the Englishman has it. At any rate he began the mud-throwing.

SPIES.

It was indeed a gross outrage that attempts should have been made to spy upon the promoters of the anti-revision meeting and its proceedings, as related in the columns of a local contemporary. This, of all things, is least endurable in the eyes of the true pot-house politician, the genuine British agitator in moral shirt sleeves, who is perpetually on the watch to nail a piece of bunting to some pole or other. A great philosopher once corrected the suspicions of a fussy but not too cleanly scrivener who imagined that his converse and actions were the object of official scrutiny. "My friend," said the philosopher, "be re-assured. No outsider except a parasite or two of the insect genus takes any interest in your personal movements." But no such consolation can be offered to the honest folks who were spied upon last Thursday by the Japanese police. Why, the police actually had the audacity to station themselves at the entrance to the Public Hall and to watch who entered. Must foreigners submit to such insults! Let us not be idly reminded that the office of the police requires their presence at all large assemblages; that to be at hand on such occasions is part of their business as guardians of law and order, and that if they had not been at the entrance to the Public Hall they would have been guilty of a district dereliction of duty. Such pleas are mere subterfuges. They came there to spy, and to spy only. It is true that they could not recognise any of the foreigners passing in and out. It is true that they could not hear any of the speeches, or, hearing, could not have understood a word of them. It is true that the meeting was absolutely public; that the names of the principal persons present, the speeches delivered, and the resolutions passed would all appear in the newspapers; that anybody and everybody was allowed to be there—with one exception. None the less the police acted as spies. Governor Asada had better call off his myrmidons. We Britons who have been reared in the glorious atmosphere of freedom, begotten of trial by jury and the *habeas corpus*, will not submit to the indignity of having constables posted to keep order in the precincts of buildings where we hold mass meetings in defence of our liberties. Bring out the Union Jack, the hammer and the tacks.

What is more, the meeting was insulted by the "discourteous intrusion of a Japanese behind the platform." What business had the spy to come there? It is true that free admission was given to Chinamen; it is also true that every Japanese newspaper of enterprise should have had a reporter there; and it is also true that the meeting was held by foreigners on Ja-

panese territory. But to admit a Japanese spy! Monstrous notion! Most happily there was a fine straightforward Briton to meet the emergency. He directed the Japanese to abscond, and showed by his demeanour that no trifling would be suffered. The Japanese took the hint, but, before leaving had the gross audacity to enquire the name of the gentleman then addressing the meeting. Mark how the extender of spies rose to the occasion. He promptly gave a false and unpronounceable name. Still unabashed, this most intrusive Japanese enquired how the wonderful name was spelled, and then the Briton capped his ready heroism by ringing out the four letters of a filthy word which we are forbidden to print, though we would fain give all the details of so splendid a champion's conduct.

The worst of it is that after all this spying, after actually having had the insolence to enquire the name of one of the speakers who addressed the meeting, the Japanese contrived to obtain most misleading accounts of what went on. The details given furnished another example of that "weakest and most slovenly feature of Japanese journalism," the reporting. Can anything be more contemptible than newspapers which fail to give accurate accounts of meetings from which their representatives are extruded with an obscene word of four letters ringing in their ears?

THE ANTI-TREATY REVISION COMMITTEE.

The first meeting of the Committee of thirty gentlemen appointed at the general meeting of foreign residents on Thursday, took place at 2 p.m. on Saturday in the old Chamber of Commerce Rooms at No. 60. Mr. J. A. Fraser presided, and there was a large attendance of members. The chief business of the meeting was to consider and decide on means for carrying out the instructions of the general meeting, and it was resolved, the Committee being of somewhat unwieldy size, to appoint a sub-committee of seven to make the necessary arrangements for communicating the resolutions of the General Meeting to Chambers of Commerce and the representatives of Treaty Powers. An understanding was arrived at that distinctions of nationality should not be recognized in the action of the Committee, but that English should be the language employed in its communications, and that it should be held to represent simply the views of foreign residents, not of so many nationalities.

MEETING OF THE CONSTITUTIONAL RADICALS.

On the 11th instant at 2 o'clock in the afternoon the Constitutional Radicals held a meeting in the Yayoi Club, Shiba, Tokyo, to discuss the recently drafted principles and rules of the party. About 130 members were present, and various resolutions were passed. It was decided, in the first place, that the meeting should continue its sessions for three consecutive days for the purpose of fully discussing the platform and financial affairs of the party; that each city and Prefecture should be invited to elect its representatives to the Committee on the 14th instant; that steps should be taken to draft the rules, elect the directors, and so forth before the meeting broke up on the 13th instant, and that another grand meeting to celebrate the organization of the party should be held on the 15th instant. At half-past five in the afternoon of the 11th, when the assembly was on the point of breaking up, about ten *soshi*, who seem to have been loitering about for fully an hour, set upon Mr. Kawashima Jun as he was leaving the Yayoi Club, and attacked him with stones, knives, and sticks. Mr. Kawashima is physically powerful. He made a stout resistance, and being succoured by his brother as well as by other members of the party who ran on on hearing the noise, he escaped with trifling injury. The *soshi*, seeing that they could not accomplish anything, took to their heels, and running rapidly round the building evidently by pre-concerted plan, got into *jinrikisha* which were waiting to receive them, and succeeded in effecting their escape. The same evening, how-

ever, two men, called Goto Ichitaro and Yoneta Kichitaro, were arrested on suspicion by the police of the Kyobashi district. Mr. Kawashima Jun has made himself very conspicuous in respect of the organization of the new amalgamated party (Constitutional Radicals) and it was doubtless for this reason that the *soshi* attacked him. His injuries were so trifling that he was able to attend the meeting on the following day. It is, we think, very much to be regretted that he did not disable or even kill two or three of his assailants. The *soshi* are an intolerable blot upon Japanese civilization, and no measure, however severe, would be condemned if it put a stop to their lawless proceedings.

A NEW BOOK.

A LITTLE book lately published in London is entitled "A Social Departure," the "departure" being that two ladies travel together round the world without an escort, and are apparently very proud of their defiance of Mrs. Grundy. We have an idea, however, that the departure is not "new" by any means. In one year Miss Bird and Miss Gordon-Cumming visited Japan on their way round the world without an escort. We refer to the book now because of its account of an interview between a Japanese newspaper reporter and the fair travellers. We suppose that it is all right: the ladies say so, and therefore it must be so. But we cannot understand why a Japanese reporter interviewing two foreign ladies for the purposes of a Japanese journal, should write in English, or if he did, how the ladies contrived to see what he had written before it passed under the editorial pen. However, here is the interview:—"Yesterday by Canada steamer radies arrived. The correspondent, who is me, went to Grand Hotel, which the radies is. Radies is of Canada, and in the time before of Engand. They have a beautiful countenance. Object of radies recomotion is to make beautiful their minds. Miss Elder Rady answered: Our object is to observe habits makings, and beings of the Japanese civilization, and to examine how civilization of Engand and America prevails among the nation. And other objects is to examine the art and drawing and education from the exterior of the confectionery. In order to observe customs of Japan we intend to earn a private house. Miss Younger Rady, measuring ten stone and wearing six shoes and a half. Radies has the liability of many news. "That last item," remarked "Orthodocia, the younger of the two, is frightfully correct." The book is very amusing, although this little reporter's incident leads one to think that the amusement is due rather to a lively fancy and a capacity for finding materials for a laugh everywhere than to a strict adhesion to literal fact. Mr. B. H. Chamberlain, however, has taken this interview, or rather the two ladies' description of the manner in which it was conducted, and has enshrined it in his "Things Japanese," at the same time pledging his own word for its absolute truth, a proceeding which indicates that Mr. Chamberlain's judgment is less mature than his scholarship.

DEPARTURE OF PRINCE KACHO AND MR. WATANABE.

THE Shimabashi terminus presented a remarkable appearance on Sunday morning at the time of the departure of the 6.40 train for Yokohama. At that early hour H.I.H. Prince Kacho and suite, who are proceeding to Germany, and Mr. Watanabe, who goes to Vienna with Madame Watanabe, to assume the post of Japanese Representative, left Tokyo to embark in the Messageries Maritimes mail steamer *Saghalien*. The combined parties numbered thirteen in all, there being included three students of the Imperial Japanese University who visit Germany to carry on their studies. Despite a drizzling rain and the very early hour, one of the largest crowds we have ever seen under similar circumstances assembled to bid good-bye to the departing Minister, whose life during the past three months has been a succession of farewell scenes. The spacious platform, the ticket office, and the waiting rooms held such a multitude of persons that ingress or egress was

a matter of no small difficulty. Numerous carriages and hundreds of *jinnikisha* formed a sea of vehicles in front of the station, and the business of finding and entering one's conveyance after the departure of the train was such a task as would have to be undertaken at a large garden party where no attempt at organization had been made. In the case of a crowd so immense it is obviously impossible to give a nominal list of the principal units, but among them were Ministers of State, officials of high rank, University Professors, officers of learned societies, the whole staff of the Korean Legation, and many foreigners. Mr. Watanabe may justly feel proud of the demonstration evoked by his great popularity, and of the universal good wishes which he carries with him on his way Westwards.

"BUSINESS CHANCE."

WE are not sure whether a correspondent writing to one of our local contemporaries over the signature of "Business Chance," is in earnest. Two things make us doubt. First, that he considers it expedient to question us through the columns of another journal instead of adopting the straightforward and courteous course of addressing us direct; secondly, that, although representing, as he says, a firm having large command of capital, and despite of being engaged, as a matter of business, in arranging certain commercial affairs in Japan, he is singularly ignorant of the fundamental conditions with which he has to deal. Here are his own words:—

"The commercial public would be greatly indebted to you if you could induce the Editor of the *Mail* to publish in his paper the names and addresses of Japanese merchants 'of honour and integrity'—'who will be found ready to gladly combine with foreigners for purposes of commercial and industrial enterprises,' with the understanding, of course, that the editor of the *Mail* is to be financially responsible for their honour and integrity. That would be bringing things to a practical issue, whilst vague general assertions have no more value than the papers representing money that the Chinese throw after their dead. I have been on the lookout for such Japanese merchants for the last three years, and made quite a number of drafts of agreements in negotiations with those whom I have approached on the subject of combination, but any clause fixing a hard and fast responsibility on them, or requiring any immediately convertible security for credit to be given, invariably ended all negotiations.

Incredible as it sounds, this gentleman appears to be ignorant of the fact that combinations between foreigners and Japanese for business purposes are at present illegal. He says that, during the past three years, he has "made quite a number of drafts of agreements in negotiations with those whom he has approached on the subject of combination," but that the negotiations always ended when there was question of "fixing a hard and fast responsibility." Of course it ended there. Not because Japanese merchants fit to combine with and willing to combine are non-existent, but because the law would not recognise any deed of combination, or sanction the making over of any tangible security in the shape of property outside the Settlements. It seems to us that "Business Chance" would have done well to seek fuller information before setting about an impossible task.

We are sorry to find that what we wrote has given umbrage to "Business Chance," and led him to descend to angry remarks which are at once unjust and unconnected with his subject. His second letter does not, however, throw much light on the position. The simple fact is that partnerships for business purposes between Japanese and foreigners are illegal at present in Japan. "Business Chance," in his first letter spoke of "Japanese combining with foreigners for purposes of commercial and industrial enterprise," and went on to say that, within the past three years, he had "made quite a number of drafts of agreements with those whom he had approached on the subject of combination." If these statements did not mean that he had contemplated actual partnerships with Japanese, we really do not see that we were to blame for reading them in that sense. He now explains, however, that he intended to refer to other forms

of combination "strictly within the letter and spirit of laws and treaties." What those forms are he does not tell us, but we trust he will pardon us for saying that while giving full credit to his knowledge and accuracy, he perplexes us not a little by his reference to "foreign firms which have entered into combinations with Japanese and are to-day doing business under Japanese names with the Japanese Government with full knowledge of the Government of the fact that these establishments are carried on under foreign direction, with foreign capital, and outside of Settlement limits." What bearing have such firms—if indeed they really exist—on the question under discussion? "Business Chance" evidently knows that they are illegal, for he asserts—quite erroneously we think—that their precedent warrants other foreigners in claiming the same privilege. We understand, however, that the combinations to which he originally referred, and now refers, are of an entirely different character, being "strictly within the letter of laws and treaties." Why then mix the two things up—illegal combinations surreptitiously carried on, and combinations perfectly legal and proper?

The interesting point now made clear by "Business Chance" is that the difficulty in the way of effecting the combination desired by him has been that the Japanese could not put up sufficient tangible security. In some cases they offered bonds "but not in amounts sufficient for the credit asked for," he writes. From his previous letter we were led to suppose that the chief obstacle was absence of "integrity and honour" on the part of the Japanese. Insufficiency of funds is surely a horse of another colour; a misfortune rather than a fault.

A second point worthy of note is his very frank admission that any secret evasion of the law successfully accomplished by one or two foreigners, and overlooked or winked at by the Japanese Government, constitutes a precedent for an open evasion of the same law by all foreigners. This is precisely what the Japanese Authorities have always apprehended with respect to passports and any other privileges which foreigners are permitted to enjoy over and above those conferred by the treaties. We have been scouted for admitting that grounds exist for such an apprehension. "Business Chance," however, furnishes a conclusive proof that neither we nor the Japanese are mistaken.

THE NEW COTTON CROP.

THE *Fiji Shimpō* publishes the following report from its Osaka correspondent on the cotton crop of this year:—"The breadth of cotton planted this year in different parts of the country is about five per cent. less than that of last year. But, as the weather has proved very favourable, the crop is expected to be twice as large as that of the past year. In the vicinity of Kashiwabara in Kawachi, picking was begun on the 23rd ult., about ten days earlier than usual. The new cotton is said to be of the finest quality that has been obtained for many years. Some has already been sent to the Osaka market, where it is expected to bring about one yen per 750 *momme*. The cotton of this district is usually ranked as a third class article. The first class cotton, coming from Sakauye in Settsu, will be picked from about the 20th Sept., and will probably be sold at the rate of one yen per 700 *momme*. As a rule, twelve *kwamme* of cotton command the same price as one *koku* of rice, but more recently this ratio has varied against cotton, in consequence of the importation of Chinese cotton. Thus, last year, while one *koku* of rice was quoted at nine yen, the highest market price attained per 12 *kwamme* of cotton was seven yen. Hence, on the supposition that the average price of new rice will be seven yen per *koku* this year, the probable price of cotton is about six yen per twelve *kwamme*. But, in consequence of the abundant yield of all kinds of farm produce this year, the farmers can well afford to wait patiently, and are apparently unwilling to sell their cotton at a disadvantage. This circumstance, added to the fact that the

cotton districts in China have suffered from inundations and drought, may produce a much higher price for the new cotton than in preceding years.

CASUALTIES AT SEA.

THE loss of the Turkish frigate *Ertugroul* with her captain and 586 officers and men, is an appalling catastrophe. The ship seems to have been pursued by an evil fate from the time she left Europe. Her progress to Japan was so slow, and her stoppages *en route* were so numerous and protracted, that all sorts of strange stories were circulated about her, and people began to doubt whether she would ever reach her destination. Ultimately, however, it was discovered that this leisurely method of procedure had been prescribed for her, and that her voyage was intended to be a liberal course of instruction for her officers and crew in the geography and customs of foreign countries. In good time she reached Japan, and Admiral Osman Pasha, with several of his officers, became the guests of the Japanese Government, and spent some weeks at the Rokumei-kan in Tokyo. Highly educated and genial men, they won golden opinions in the capital, and were universally liked. But after a time cholera broke out in the ship, and her commander decided to proceed to the disinfecting station at Nagaura, where she lay for several weeks, fresh cases of the epidemic occurring on board almost every day. Much surprise was expressed at this proceeding. It was thought that the better course would have been to proceed to sea at once, and the strong probability is that had this plan been adopted, the terrible catastrophe which we have now to record would have been avoided. On the 16th instant a typhoon swept across Japan, its full force apparently striking the sea between Kishiu and Shikoku. The *Ertugroul* was an old and by no means strong vessel. Her machinery broke down when she encountered the fury of the gale, and she was cast on the rocks. More than this we do not know, except that of her crew of 653, all told, only sixty-six escaped, and many of the survivors have received severe injuries. The Admiral, Osman Pasha, is among those who have perished, and with him have probably died a number of youths of high Turkish families who had joined the ill-fated frigate for a trip round the world. No disaster so terrible has happened on the coast of Japan in modern times. Neither in the case of the U.S.S. *Onida* nor in that of the *Unbe Kan* were nearly so many lives lost. Viscount Matsudaira has been despatched by the Emperor to the aid of the survivors.

Two other terrible casualties occurred on the same day and in the same waters. The first was the loss of the Japan Mail Company's steamship *Nusashi Maru*; the second, the loss of the same company's sailing ship *Forinobu Maru*. The *Nusashi Maru* was a large cargo steamer which came out from England in March last. She left Shimonoseki for Yokohama at 7 a.m. on the 15th instant with a cargo of coal on the company's account. The next news heard of her was a telegram received yesterday from Wakayama Prefecture, saying that one of her quartermasters had landed at Tanabe in that Prefecture with a report that the vessel had foundered off the coast of Tosa on the 15th instant. This date is probably incorrect, however, as the ship would have taken about 20 hours, under ordinary circumstances to reach the place where she is said to have been wrecked. It may fairly be assumed that she too succumbed to the terrible gale of the 16th instant. One of her life-boats was picked up near Oshima, Kishiu, by a vessel called the *Bocho Maru*. In it were found the chief engineer's clothes, a sailor's knife, and a pair of boots. Hopes are still entertained that some of the crew may have escaped, but as yet the only known survivor is the quartermaster. She carried no passengers, and her crew, all told, numbered 62 men, among whom were six foreigners, namely, the Captain, P. Frahm, a Dane; the Chief Officer, A. Jappe, a Dane;

the Second Officer, J. S. Peoples, an Englishman; the Chief Engineer, W. Miller, an Englishman; the Second Engineer, F. E. Forder, an Englishman, and the Third Engineer, A. McInnes, an Englishman.

The *Forinobu Maru* was also bound from Shimonoseki to Yokohama with a cargo of coal. She was lost on the 16th instant near Cape Oishi, Oshima, on the west side of the entrance to the Kii Channel. Only her chief officer and four men were saved out of a total crew of thirty-one, all told. The wreck of these two vessels in one day is a sad break in the record of comparative immunity from accident enjoyed by the fleet of the Japan Mail Steamship Company during the past three years. We learn that the President and Directors of the Company are greatly grieved at the loss of so many valued employés.

A report was freely circulated last evening that the German steamer *Bellona* had either been lost or that some accident had happened to her. There can be very little ground for the rumour, for the agents here have no information, and a Kobe paper received this morning shows the vessel to have been safe in that port on the evening of the 18th, and she was not supposed to take her departure till yesterday.

"JINSAN TEMPO."

WRITERS about Japan have differed about some things, but unanimity has always marked their verdict when the treatment of foreigners by the middle and lower classes of Japanese is in question. Politeness, gentility, and courtesy, they have invariably declared, mark the demeanour of the bulk of the nation towards strangers. But there has now appeared a sharp person who sees deeper into all things than any one else. By ragged children on the sea-beach and in suburban alleys this deliver after truth has been greeted with cries of "*Jinsan tempo sinjo*," which he interprets "Mr. Barbarian respectfully offer me a penny." "What an outrage!" the expert in ethics cries. "Fancy being called Mr. Barbarian! And fancy being asked by an ignorant vulgar child to 'respectfully offer' it a penny! Old cocks crow and young ones learn. It is evident that the Japanese consider us inferior creatures since they do not beg us of charity to bestow, but bid us 'respectfully offer' to those who though poorer are yet admittedly superior beings." Aye, in truth, it is very dreadful. The more so when we remember that foreigners themselves have taught this word *sinjo* to the Japanese. In the olden days when a foreigner purchased something, valuable or trifling, in a Japanese shop, the shopkeeper occasionally presented to his customer some little memento of the transaction. Whence the habit arose we cannot tell. It was never, so far as we know, practised quite in the same manner among Japanese. Perhaps the tradesman desired to conciliate his unwonted customers by some mark of generosity; perhaps he intended to assert his own superiority by bestowing alms in kind even while he trafficked! At all events he made these little offerings with a pretty air of polite deference, employing the usual formula of respectful presentation, *sinjo itashimasu*. Soon the foreigner came to regard it as his right to receive a gift when he made a purchase. Over and over again have we ourselves seen a foreigner take up some object in a Japanese shop and unblushingly say "*sinjo*." He did not even get the Japanese word right, but what matter for that. There could be no doubt about his meaning. He was deliberately begging some petty tradesman to "respectfully offer" him a gift, and he generally got what he asked for. Probably some foreigners imagined that in doing this they were merely proposing to have another article thrown into the purchase. For their own sakes we hope so, but under any circumstances the position they placed themselves in was ridiculous and humiliating in the extreme. The Japanese were too courteous to betray astonishment at these strange antics.

They regarded them as foreign fashion, and politely complied. But by and by, when it became quite evident that "*sinjo*" had been adopted into the foreigner's pidgin Japanese as the only intelligible equivalent for give, the Japanese began to employ it to him in that simple sense, dropping, as he had in the first place dropped, the distinction between the polite phraseology of giver and receiver. It is thus that urchins, looking up from their mud pies as a foreigner passes, call out "*tempo sinjo*." Their little vocabulary never included such a word as "*sinjo*." Still less do they know about "*sinjo*," its origin or its shades of meaning. But they have been taught by tradition that in the pidgin employed by foreigners "*sinjo*," and "*sinjo*," alone signifies "give," and so they formulate their "*tempo sinjo*" in innocent expectancy. Unconscious urchins! If they could only have understood that their prattle was destined to enter the long ears of a learned student of ethics and to be written down as evidence that they are inspired by "the condescension of superior creatures," and that their whole nation is rude and uncivilized!

HARD WEATHER IN THE NORTH.

DR. BENJAMIN HOWARD, of London, is lying in Hakodate with two ribs broken and other injuries received during a terrible voyage on the Japanese schooner *Toyama Maru*, from the Okhotsk Sea to that port. Dr. Howard has been examining into the management of the hospitals and prisons in Siberia and Saghalien. After spending some weeks as guest of the Governor at Korsakofski, he left there on the Japanese brig *Koûn Maru* for Hakodate. At midnight of the 23rd ult., in one of the most furious storms ever known in that region, the *Koûn Maru* was driven upon a sunken reef, and all hands had to lash themselves or take to the rigging. The vessel went to pieces and became a total loss, but by means of a rope secured on the shore end by some fishermen, all hands were eventually saved. The proprietor of the *Koûn Maru*, the Captain, and Dr. Howard, with some sailors, put to sea in a flat boat with matting for sails, and about 70 miles distant were taken on board the schooner *Toyama Maru*. This vessel, with another schooner the *Nanno Maru*, went to the relief of the survivors and thence sailed for Hakodate. The weather became so violent, however, that the *Toyama Maru*, after a severe struggle, reached here only by means of extemporized sails, her two masts being broken. The other schooner accompanying the *Nanno Maru* has for eight days not been heard of. Dr. Howard, although quite disabled, is likely in time to recover without difficulty, but apart from his actual injuries he is very much shaken. When sufficiently recovered to travel he expects to return to Tokyo, and via America to London.

AN ALLEGED SPY IN THE "DAIDO" CAMP.

A CONSIDERABLE sensation has been caused in political circles by the report that Mr. Imakado Choga, a well known member of the *Daido Club*, has been discovered to be a political detective of the Government. The secret, if we may believe rumour, was divulged by his *jiriki-sha* man, who told some one that his master was wont to pay secret visits to Count Matsukata, and that on every such occasion he (the man) was enjoined to keep the matter a strict secret. The late Mr. Kokatsu Shunkichi of the former *Yifu-to* was also suspected, a little previous to his untimely death, of being a spy. In his case the suspicion seems to have been based on some substantial ground. As to the present instance, we cannot yet pronounce an opinion either way. But considering that the *Kokumin Shimbun* only recently had to apologize to Mr. Kumagae, a young politician whose name first became known in the anti-treaty revision agitation of last year, for publishing in its columns a telegram charging him with the same contemptible offence, the present rumour about Mr. Imakado ought to be received with doubt.

A VAGABOND.

A SHIP carpenter named Kruger, who was convicted and sentenced in the Yokohama Sabau-

sho the other day—the German and American Consulates declining to recognise him—to eleven days imprisonment for trespassing on the compound of Mr. F. Vivanti, has recommenced the worthless career which was interrupted by incarceration. On Saturday, having just emerged from prison, he presented himself, wearing irreproachably white pants and a black coat, at the house of Mr. E. J. Moss. On being introduced to Mr. Moss he whined a request for food. Having on a previous occasion acceded to a similar prayer, and offered the applicant a plateful of substantial food and a draught of Yokohama beer; and having also witnessed with compassion the visitor's heroic attempts to simulate an appetite and eat what he plainly did not require; and having further the knowledge that Kruger had refused to accept a berth in a large sailing ship, the master of which even offered to buy tools for his use, Mr. Moss, finding no policeman close by into whose hands the fellow could be entrusted, ordered him off the premises. Of course the authorities cannot act unless a charge is preferred against such vagabonds as Kruger.

THE FUTURE OF THE SUMITSU-IN.

UNDER this heading, the editor of the *Choya Shimbun* says, "When Count Ito insisted that the draft Commercial Code should be submitted to the deliberation of the *Sumitsu-In*, one of the opinions advanced in opposition to the Count's view was that the powers at present vested in the Privy Council were too great to be consistent with those of the Imperial Diet. As the opening of the Diet approaches, this opinion appears to gather strength. It is reported that, simultaneously with the convocation of the first Diet, the powers of the *Sumitsu-In* will be so much circumscribed that it will no longer be empowered to discuss draft laws and ordinances, its official functions being limited only to participation in discussions regarding important matters concerning the Imperial House. In this case, the present fixed maximum membership of the Council will be abolished, and many persons distinguished by past service will be appointed, thus making the institution virtually a second *Genro-In*."

AN OLD HERREY.

How hard errors die; so hard in this Settlement that we sometimes think that people actually prefer to be in the wrong. "The lords of the soil in their jealousy of foreigners," says a correspondent, writing in the columns of a local contemporary, "deny us the creation of a municipality." Now this question is one that has been discussed *ad nauseam*, and any person desiring to write about it can easily ascertain the facts. The whole matter lies in a nut-shell. As Sir Harry Parkes lucidly explained a long while ago, to procure the authority necessary to set up an efficient foreign municipality in Yokohama would probably require twenty years' negotiation, for every Western Power concerned would have to legislate specially in order to invest its Consular representatives with authority to enforce the regulations of the municipality. If this was Sir Harry Parkes' estimate in the days when diplomatic co-operation was in full swing, what shall be said now that the solidarity of Powers is broken up, and each works on its own account? We do not pretend to think that the Japanese Government could be persuaded to confer the necessary charter, but to attribute the present strange state of affairs in Yokohama to "the jealousy of the lords of the soil" is quite misleading.

MOVEMENTS ABOUT THE REVISION MEETING.

The *Choya Shimbun* has the following:—"Great indignation has been caused among thoughtful persons in Tokyo by the meeting held by British subjects opposed to treaty revision. Messrs. Nagao Kageshige and Kobayashi Sentaro, holding that the action of the foreign merchants of Yokohama in opposing treaty revision is an outrage to Japan's national dignity, have sent to the Japanese traders of

Yokohama a very strong letter urging them, if they desire to show their patriotism, to adopt the same plan as that pursued on the occasion of the silk dispute, namely, to form a combination among themselves and put a stop to all transactions with men who engage in attempts to injure Japan. If this plan be adopted, the writers think that the association of foreigners will soon be dissolved. Other persons in Tokyo have organized an association called the *Kinkisha*—brocade club, in allusion to the flag of Japan—three members of which, Messrs. Soji Tokusaburo, Inui Rokuro, and Kaneko Ryoichi, are to proceed to Yokohama and interview the leaders of the movement on the British side, at the same time organizing a large lecture meeting with the object of commercially ostracizing Englishmen."

The *Shogyo Shimpō* says:—"In consequence of the decision to put an end to treaty revision, of which movement English residents of Yokohama were the promoters, two gentlemen of Yokohama, Messrs. Sakai and Yenomoto, organized a movement to open communications with foreigners on the subject. Fortunately at the Kodo Club in the same place a meeting of committee-men was opened on the 13th instant, and these, being of the same way of thinking as Messrs. Sakai and Yenomoto, decided to choose representatives and approach the foreign committee. Steps are now being actively taken to arrange preliminaries."

A JAPANESE STATESMAN'S OPINION.

THE *Hochi Shimbun* publishes an opinion which it says has been expressed by a certain Count, well versed in foreign affairs. "The duty of Ministers," said the Count, "is to promote good relations between their nationals and the people of the country to which they are accredited. Unless grave questions of right and wrong are at stake, they will do nothing to disturb those relations. In the present case, recognising the shallowness of a movement the chief promoters of which are one or two gentlemen, discontented because they have lost their positions in the service of the Japanese Government, the Foreign Ministers will pay little attention to it. Moreover, many of those who took part in the demonstration merely obeyed the dictates of fellowship or attended the meeting out of curiosity. If the Japanese merchants of Yokohama show a little strength of back and resolve to have no more dealings with men who, while residing in Japan, behave as the promoters of this recent movement have behaved, the break up of the foreign combination will soon be witnessed."

We make no comments on these various items of intelligence from the vernacular press, but merely publish them for the information of our readers.

THE REVISION MEETING AND THE FOREIGN MINISTERS.

WHATEVER attempts may be made to evade or conceal the truth, it is beyond all question that every person signing the resolutions adopted by the Anti-Revision Meeting of the 11th instant publicly records a vote of want of confidence in the Foreign Representatives. If there could have been any doubt upon this point, it is dispelled by correspondence addressed to one of our local contemporaries. The latter had stated, in a leading article, that the Anti-Revision Meeting "was practically based upon a very justifiable distrust of Ministers, and was a unanimous vote of want of confidence." To this assertion an American correspondent took strong exception, declaring that no such construction could be placed on the intention of the meeting, and that American residents feel every confidence in their Minister. But this correspondent himself shows the error of his disavowal, for he admits that American residents of Yokohama who did not attend the meeting "were kept away by a fear that their action might be construed" in the sense of a vote of want of confidence. The meeting was held on the 11th

instant, and the first journalistic intimation that it amounted to "a unanimous vote of want of confidence" in Ministers appeared two days later. Evidently, therefore, the fact that the affair would be open to such a construction was appreciated long before a local newspaper drew attention to it. Observe, too, what followed. The journal in question, being hastily taxed with using such language calculated to deter intending signatories, replies that its words cannot possibly be construed as applying to the present American Representative, because he did not negotiate the Treaty concluded last year between the United States and Japan. It follows, therefore, that the "unanimous vote of want of confidence" does apply to all Ministers engaged in the negotiation of last year's Treaty. Apart from the United States, the Powers which actually signed that Treaty or consented to accept its principal stipulations, were Russia, Germany, and France. Subjects or citizens of the last three Powers understand, therefore, the construction put upon their action in signing the resolutions.

But without any referency to the utterances of our local contemporary, or the disclaimer of its American correspondent, can any intelligent person be in doubt about the significance of the meeting and its resolutions? The meeting was originally convened on the explicitly stated grounds that Her Britannic Majesty's Secretary of State for Foreign Affairs was believed to be about to take a step inimical to the interests of the British residents of Yokohama. The Representative of Great Britain in Japan is invested with plenipotentiary powers to negotiate the revision of the Treaty, and the action of Her Majesty's Government is directed chiefly by his advice. When a public meeting of British subjects passes resolutions declaring that the course contemplated by Her Majesty's Government, acting through its Plenipotentiary in Japan, is to be condemned, do not the resolutions distinctly signify that the meeting lacks confidence in that Plenipotentiary? If such a meeting were held in England with reference to negotiations conducted in Washington by Sir Julian Pauncefote as British Plenipotentiary, for the purpose of settling the Behring Sea dispute, would not every English newspaper regard the meeting as a vote of want of confidence in Sir Julian Pauncefote? If the promoters of the agitation had not intended to organise a demonstration of that kind, they should have proceeded in a very different manner. They should have prepared a memorial for the information of Her Majesty's Minister, setting forth their objections to being placed under Japanese jurisdiction without adequate guarantees, defining what they regarded as adequate guarantees, and explaining that while they had every confidence in the ability and intention of their Representative to protect their interests, they desired to assist him by placing him in possession of their full views. They might have adopted another course, too; they might have placed themselves in communication with their Representative, and obtained such information as would have obviated the necessity of appealing to the public in the vague and mysterious manner resorted to. But they resolved upon holding a demonstration condemnatory of the supposed action of the British Plenipotentiary and of the British Secretary of State for Foreign Affairs, and it is futile now to attempt any palliation of their proceeding.

It is a great pity that the promoters of the demonstration did not adhere to their original intention—the intention which guided the phraseology of the advertisement summoning the meeting. We do not think that the dignity of the British nation is consulted or the loyalty of British subjects evinced when men of all nationalities—Germans, French, Dutch, Italians, Portuguese, Chinese and others—are associated in a public declaration that Her Majesty's Secretary of State for Foreign Affairs is about to commit an error. If Englishmen want to make demonstrations of that kind, they should surely limit the performance to their own household.

What makes the matter worse is that the information upon which the promoters acted is generally believed to have been obtained from a non-British source. Certainly times have changed greatly for the worse when Englishmen go about secretly gleaning scraps of intelligence from foreign sources, and then employing them to organise a demonstration of mixed nationalities against the action of British officials.

AN INTERESTING DISAVOWAL.

THE *Shogyo Shimpō*, the principal commercial journal published in Japan, contains a significant paragraph in its issue of the 11th instant. We translate it as follows:—"Mr. R. Masujima, acting on behalf of Messrs. J. P. Mollison and W. B. Walter, has addressed to us the following correction:—"Among the miscellaneous items in your issue of the 10th instant, there appears a statement that British subjects resident in Yokohama are to hold a meeting with reference to treaty revision on the 11th instant, and that Mr. J. P. Mollison of No. 48, Yokohama, and Mr. W. B. Walter, of Messrs. Jardine Matheson & Company, No. 1, Yokohama, are among the promoters of the meeting. This statement is groundless. The above two gentlemen have no connection whatever with the affair, and I have to request that you will lose no time in making a correction to that effect." It will be discovered, by and by, that the much vaunted unanimity of the Yokohama community on this subject is not so complete as some people assert.

THE TWO NEW ENGLISH DICTIONARIES.

It is well known that within the lifetime of most of us the world will be enriched with two new English Dictionaries, which judging from the parts that have already appeared will in point of arrangement, fulness, accuracy, and convenience of reference surpass anything that has as yet been published. The two Dictionaries referred to by us are "A New English Dictionary," edited by James A. H. Murray; which is being published by the Oxford Clarendon Press; and "The Century Dictionary," under the superintendence of William Dwight Whitney, LL.D., published by the Century Company, New York. The two works do not interfere with each other. The aim of the English work is thoroughness at all costs. Neither time or expense is spared. Part I. was published in 1884. It is calculated that it will not be completed till about 1910, thus occupying nearly thirty years to compile. In "A New English Dictionary" the reader may rely on finding a complete account of the past and present usage of any word that he may come across. It is constructed on historical principles and is acknowledged by common consent to be perfect of its kind. "The Century" is compiled on a different plan. It describes itself as an encyclopaedic lexicon. The historical element is made subordinate in it. Its aim is to be a book of reference on technical, and to a certain extent, scientific subjects. Literature is in it of secondary importance. It does not pretend to be exhaustive nor perhaps to be original in the sense that "A New English Dictionary" is so. But it promises rapidity of publication. Vol. I. has already appeared. There are to be six volumes altogether, and it is calculated that they will all be out in two years. The typography is clear and the illustrations first class. For the specialist of the future the Clarendon Press Dictionary will be indispensable, but for ordinary students of literature the Century will prove more than adequate.

A LETTER TO THE PRESIDENT OF THE MEETING.

THE vernacular press publishes a letter said to have been addressed by Messrs. Yenomoto, Sakai, Hamano, and thirty-three others, on behalf of public-spirited persons in Yokohama, to Mr. J. A. Fraser, President of the Anti-Revision Meeting and, also of the Citizens Committee. The letter translated runs thus:—Sir,—We learn from the newspapers that on the 11th instant in the Public Hall on the Yokohama Bluff, your countrymen and other foreigners, to the number of some hundreds, held a meeting,

at which three resolutions opposed to the claims of our Government in respect of Treaty Revision were adopted. Deeming it inconsistent with our duty to our country to remain silent, we desire to have an interview with you, and we have the honour to request that you will give us an answer one way or the other by noon on the 16th instant.—(Signed) Yenomoto Keizaburo, Sakai Keiji, Hamano Kuisuke, and thirty-three others." The vernacular newspapers add that the writers of the letter, being anxious to learn the views of the Japanese merchants of Yokohama, have placed themselves in communication with them. The letter is polite enough, with the exception of the peremptory tone of the request for an answer by a fixed time. Behind a hard and fast demand of that kind, there seems to lurk a suggestion that if the recipient of the letter fails to furnish a reply by the appointed hour, the writers will take other measures. Messrs. Yenomoto, Sakai, and Hamano must know perfectly well that the question of meeting them and discussing treaty revision with them, rests entirely with Mr. Fraser for decision, and that he is even under no sort of obligation to answer their letter. We greatly doubt, for our own part, whether any good can come of such meetings. Mr. Fraser's interviewers can tell him nothing about Treaty Revision which he does not know already, and if they think to shake the resolution of a particularly courageous and upright Scotchman, who believes that his convictions are founded on a just estimate of his fellow-residents' interests, they are the victims of an amusing delusion. We do not share Mr. Fraser's faith, but we know that it is conscientiously held, that he has never wavered in it, and that he is a Scotchman. The Japanese had better let him alone, for although he will give them a kindly and courteous greeting, the result must be absolutely *nil* so far as bridging over the gulf between the two sides is concerned. There is only one legitimate and influential way for the Japanese to act under present circumstances, and that is to follow the example of the foreign residents—hold public meetings and let their Government and the world know how far they are in earnest. To go about interviewing this foreign merchant or that is an idle occupation, sure to be misunderstood, if not actively resented, by some muscular members of the Yokohama community.

BRITISH SUBJECTS AND TREATY REVISION.

THE *Nichi Nichi Shimbun*, writing under the heading "Who injures the credit of Britons?" says:—"Defamatory statements usually find belief when frequently uttered, and so we once believed that foreigners were all proud and insolent, treating the Japanese as so many savages. In our youth we frequently heard such statements, and by their repetition we came to believe them. When, however, we were able to read books and to have intercourse with foreign scholars and gentlemen, we began to think that the ideas of our younger days with regard to aliens were false and unfounded. When we were able to travel in foreign countries, and specially in England, we gradually familiarized ourselves with the conviction that Englishmen were righteous and just in their dealings, and that among them were many persons such as John Bright. In short, we supposed that the English were not a turbulent and ferocious people, but that they were a nation with whom we ought to have intercourse, and whom we should trust. Unfortunately an opinion of quite an opposite nature was generally held in Japan. We did not repose confidence in England. This was no doubt a regrettable circumstance from England's point of view, for it caused considerable injury to her interests. Among the causes of this feeling we may no doubt include the attitude adopted by Englishmen in regard to concessions to Japan, but the chief cause was beyond all question England's rejection of our proposals for treaty revision. The English Government is probably incapable of international injustice, but it is always deceived by a few selfish persons who arrogate to themselves superior knowledge of Japanese affairs.

Those are the persons who influenced Sir Harry Parkes against Japan; we refer to a section of the English community at Yokohama. When Count Inouye proposed his scheme of treaty revision it seemed as if England was about to recover her lost credit, for at that time she was apparently influenced by friendly feelings towards this empire. When Count Okuma brought up his proposals she held a neutral position, but the scheme now put forward appears to appeal favourably to her judgment. Among the Japanese people this fact was noted with great gratification, and it seemed as if Englishmen were about to recover their lost credit, and to raise the name and repute of their country among Eastern nations. How curious in these circumstances, then, must appear the recent conduct of English residents in Yokohama. Quite ignoring the fact that for thirty years they have been tarnishing our national honour by persisting in the maintenance of extra-territoriality, and that they have by their practical exemption from taxes been gaining large and unreasonable profits, they now show themselves desirous of retarding and obstructing by their selfishness the acceptance by the English Premier of our treaty revision programme. Surely such conduct as this must work for the injury of the credit of Britons in Japan, and of England's national honour. And yet English residents have held a meeting openly; they have attacked our laws and condemned them as full of defects; they slander our system of administration as imperfect, and they vilify the Japanese people by describing them as having the spirit of slaves, who have never breathed the air of liberty. And they call themselves civilized men! If such conduct be true civilization, we had much rather be barbarians. What would Mr. Bright call such actions if he were still alive? And Mr. Bright, too, was an Englishman!

TOO PRECIPITATE.

MR. J. L. HALPHEN writes to the *Japan Herald* in reference to a letter which he sent to this journal, and which appears in this issue, and says:—"I am inclined to believe that the editor of the *Japan Mail* did not care to insert any contradiction," &c. Mr. Halphen must be labouring under a curious mental condition, for he gives no reason whatever for his belief. Indeed, Mr. Halphen is perfectly well aware why his letter did not appear on the morning after it was received. Mr. Halphen sent the letter here written over a *nom de plume*, but omitting his name. His messenger took back a reply to the effect that his communication could only appear on his furnishing his name, though of course not for publication. He did not answer that day, consequently his letter did not appear next morning. The following day, however, Mr. Halphen wrote to say that he thought we could have known that the letter was his "by the club-book." Mr. Halphen's methods are evidently rather loose, and his ideas somewhat crude as to the conduct of newspaper correspondence. Pressure upon space often necessitates the holding over of letters for a day or two, but Mr. Halphen's failing to obtain an immediate hearing was entirely due to his own carelessness, hence it is that he has been "too precipitate."

INSUFFICIENT SAUCE.

THE Press Laws of Japan are most abominable things. Nothing can exceed their arbitrariness. Over and over again they have been denounced in unmeasured terms by free-born foreign editors, who rightly rail against the tyranny of punishing a newspaper because its articles are calculated to be prejudicial to the cause of law and order, or to bring officials into contempt. There ought to be no such restraints upon free speech. It is a hateful state of affairs. And what makes these laws particularly odious is that their stringency cannot be stretched so as to protect foreigners against vernacular abuse. If the Japanese Authorities would only supplement the law a little, so that its provisions might furnish a pretext for coming down with a hard hand on every native journal which indulges in

"the virulent, insolent, and false course" of calling foreigners by bad names, foreign newspapers, on their side, being meanwhile free to go on saying as many disagreeable things as they please—if only this could be accomplished, if only, in short, the laws could be made more arbitrary than they are, they would be quite pretty examples of legislation. But really the situation at present is very uncomfortable. Here are foreign newspapers, as is quite just and proper, going on month after month and year after year, reminding the Japanese what semi-barbarous, untrustworthy, depraved, and corrupt people they are, yet when the Japanese have the ungrateful insolence to retort in kind, the wretched defective law won't step in to aid the foreign editor, and he has consequently no resource but to call the Japanese "unparalleled liars," "sewer-mouthed spouters of the smutty and the reeky," "coiners of bestial expressions," and to apply to them other cognate epithets which, owing to the refined and moderate character of the vocabulary necessarily employed by scholastic and courteous Occidental writers, cannot produce any effect upon callous Oriental traducers.

NIKKO TO TOKYO.

THERE appears to be very little chance of the railway from Tokyo to Nikko being opened right through for several days still. At the Ueno terminus the officials do not attempt to fix any date for the resumption of service, and from their uncertainty we may fairly infer that the prospect of complete repairs is remote. Travellers to and from Nikko are not, however, subjected to any serious inconvenience. The portion of the line still closed to traffic is very small—a distance of a little over five miles, from Kurihashi to Kuki, and there is an excellent *jinrikisha* service by which passengers can transport themselves and their baggage without difficulty. By road the distance between the two places is called three *ri* ($7\frac{1}{2}$ miles), but a *jinrikisha* drawn by one man traverses it easily in two hours, and as the interval between consecutive trains passing down or up the line is three hours, there is ample time to accomplish the *jinrikisha* ride without pressing. A delay of one train is practically the whole inconvenience: in other words, the journey is lengthened by three hours—instead of accomplishing it in 5 hours 40 minutes, one has to spend 8 hours 40 minutes. The railway people have evidently taken much pains to organise the service of *jinrikisha*. A number of these vehicles are always in readiness, and they invariably demand the same fare—35 *sen*, which is certainly a very moderate charge. One point, however, should be noted, for it is very likely to cause trouble to passengers unable to make themselves fully understood in the vernacular. It is this—foreigners riding by *jinrikisha* generally desire to have two coolies, but no provision is made for this at either Kurihashi or Kuki. The reason is very simple: the second coolie, going without a *jinrikisha* of his own, is deprived of the chance of obtaining a fare for the return journey. This embarrassment can be immediately overcome by offering to disburse the price of the return journey—35 *sen*—and thus paying one *yen* five *sen* for *jinrikisha*. But if the traveller has no previous knowledge of the point, his position will prove perplexing. For the *jinrikisha* folks do not attempt to explain such an intricate question to the pidgin-speaking foreigner. They are content to meet his request for a second coolie with a simple *non possumus*, and an assurance that one man is amply sufficient.

The trouble with the railway is that a considerable part of the section between Kurihashi and Kuki is still under water. What happened was that the Tonegawa burst its southerly bank at a point about three miles below the railway bridge near Kurihashi. The big river, pouring through the breach, inundated all the country lying below the level of the flood, and reaching back to the railway, laid a portion of it under water. From Kurihashi onward the traveller towards Kuki keeps along the top of the river

embankment, and finds that all the space on his right is a huge lake, as far as he can see. On his left the Tonegawa flows along, now peaceful and self-contained enough, and it is not until the breach in the bank is reached that the source of the disastrous inundation is comprehended. The breach has now been completely stopped, but the building of the bank has not been carried to a stage permitting passage by vehicles. At this point, therefore, travellers must descend from their *jinrikisha* and allow the latter to circumvent the breach by boats, of which a number are assembled under the energetic control of a railway official. Passengers themselves, however, will do well to walk along the bank and meet their *jinrikisha*, for the boats are cranky affairs, dirty, wet, and without any arrangements for sitting. The place is worth visiting if only to obtain a conception of the ravages caused by the inundation. Scores of houses have been rendered totally uninhabitable for the time being; in many the surface of the flood is barely below the floor, and in the case of others unfortunate people find themselves knee-deep in a muddy stagnant lake the moment they descend from their verandahs. We have not seen any accurate statistics as to the area of the submerged district, but from rough observation we judge it to be fully thirty square miles. Needless to say that within this space the crops are wholly destroyed, and the unhappy farmers brought to the verge of ruin. Strong measures of relief have been taken by the Local Authorities, and the people themselves seem to support the catastrophe with all the bright helpfulness that characterises the Japanese in times of difficulty. But their sufferings must be very great and their losses cruel.

IMPERIAL NOMINATIONS TO THE HOUSE OF PEERS.

ACCORDING to a statement in the *Nippon*, it appears that the Cabinet had originally the intention of limiting the number of Members of the House of Peers by Imperial nomination to thirty, of whom twenty were to be selected from among the Senators, and ten from officials in the service of the various departments of State as well as distinguished persons outside the Government. But, in consequence of the adverse result of the election lately held for Members of the Upper House, this original intention is said to have undergone some change, the number being increased to fifty. Our contemporary further states that the Cabinet has recommended for His Imperial Majesty's consideration the nomination of Count Ito for the Presidency of the House of Peers. The Vice-President will probably be Count Yamagata.

THE TAXING OF FOREIGNERS OUTSIDE THE SETTLEMENTS.

A QUESTION which at one time attracted some attention though its importance was, we think, greatly exaggerated, has been re-opened by the *Nichi Nichi Shimbun*. Last year, says our contemporary, enquiries were addressed from various localities to the Foreign Office with regard to the taxation of foreigners residing beyond the limits of the settlements, and the then Minister for Foreign Affairs issued instructions to the effect that such foreigners should pay exactly the same taxes as Japanese, and in the event of default should be treated precisely as Japanese subjects are treated. The present Minister of Foreign Affairs, however, is reported to have so far modified his predecessor's instructions as to direct that the Foreign Office must be consulted before any action is taken in the case of foreigners failing to pay these taxes. The *Nichi Nichi Shimbun* conjectures that this change may be connected with the general policy of the Foreign Office. But without making any comment on the probability or improbability of the *Nichi Nichi*'s information, it may be worth while to point out that if instructions of the above character were really issued by Count Okuma, no steps appear to have been taken towards carrying them out. Foreigners residing outside the settlements have never been required to pay any taxes other than those which they have always paid. Our Tokyo

contemporary may be surprised to hear us speak of taxes which foreigners have always paid, but a little consideration will show that we are correct. Every foreigner living outside the settlements pays rent for his house, whether he hires it direct or has its cost deducted from or included in his salary. The principal taxes for which a householder in Tokyo is liable are land tax, local tax, house tax, and lighting rates. The first of these is nearly always paid by the owner of the land who naturally takes care to include it in the rent. The remaining three are a question of arrangement between the owner of the house and the lessee: if the former pays them they are of course added to the rent. The better classes of Japanese in Tokyo generally own their houses, but a foreigner residing outside the settlements can only be a tenant, unless indeed he contrives to purchase in the name of a Japanese, a contingency which need not be considered here because the nominal Japanese owner then becomes liable for all taxes leviable on the tenement. Now every foreign tenant of a house outside the settlements pays a far higher rent than would be charged to a Japanese for the same premises. It is not easy to state the difference arithmetically, but we shall scarcely be exaggerating if we put it at twenty-five per cent. What does this twenty-five per cent. represent? It represents, in the first place, an allowance on account of the greater wear and tear supposed to result from foreign methods of living as compared with Japanese; and in the second place, an allowance for the taxes which the lessor himself has to pay in case of a foreign lessee. It will thus be seen that foreigners residing outside the settlements have always been paying and do now pay, though in an indirect form, a considerably larger sum on account of taxes than they would have to pay were they placed in every respect on the same footing as Japanese subjects. To require them to pay over again taxes already simply levied upon them in the shape of extra rent would be a harsh and unjust proceeding. Considering all this, and considering also the excitement which would be caused by such a measure as compared with the trifling amount at stake, we are strongly inclined to doubt whether Count Okuma issued the instructions attributed to him. So far as concerns the principle involved, we presume that no question can be raised. Foreigners have no manner of claim to live outside the settlements under conditions more favourable than those enjoyable by Japanese subjects. Any measure which goes no farther than placing the two on a precisely similar footing, would never, we imagine, be objected to by the foreigners concerned, or opposed by their Governments. It can only be for the principle that the Japanese contend, and that is beyond cavil.

GENERAL MEETING OF THE SHAREHOLDERS OF THE SPECIE BANK.

ACCORDING to the *Keizai Zasshi*, the Yokohama *Shōkin Ginkō* (Specie Bank) convened the general meeting of its shareholders on the 10th instant, at 2.30 p.m. The meeting was held at the Bank itself. One hundred and twenty-six shareholders attended in person, while about 200 others were represented by proxy. The chair was occupied by Mr. Sonoda, President of the Bank, who in a short address explained the embarrassing situation in which the Bank now finds itself in connection with the silver question. The extraordinary appreciation of silver has caused considerable loss in the transactions of the Bank. This was frankly admitted. With regard to future fluctuations of exchange, Mr. Sonoda could only promise the shareholders that he should not spare any effort to so arrange the affairs of the bank as to meet every emergency. He then caused one of his clerks to read a report on the general business of the bank, after which the profit and loss accounts were laid before those present. The total amount of profit during the first half of the present year from January to June inclusive was *yen* 672,417.134. Deducting from it *yen* 316,471.685, the amount of loss sustained as explained by the chairman,

and adding the balance from the preceding half year, yen 19,666,969, the aggregate net profit amounted to yen 375,612,418. From this amount, the following items were deducted:—special reserve fund, yen 100,000; rewards to officers, yen 25,590; and ordinary reserve fund, yen 25,600; amounting in all to yen 151,190. The item called "special reserve fund" is to meet losses caused by the appreciation of silver. Thus the amount available for distribution as dividend on the shares was reduced to yen 224,422,418, and in order to bring the dividend to par with the general rate of interest at present ruling in the market, Mr. Sonoda explained that it was found necessary to appropriate yen 140,000 from the fund specially reserved for that purpose. The total sum available for distribution among the shareholders thus reached yen 364,422,418. Of this amount, yen 360,000 was actually appropriated as dividend, the balance being carried over to the account of the coming half year. Thus the rate of dividend was 5 yen per old share and 4 yen per new share, that is 16 per cent. per annum on the face value of the shares. These arrangements were unanimously approved by the shareholders. The meeting closed at half-past three o'clock.

THE CONSTITUTIONAL LIBERAL PARTY.

The principles and rules of the Constitutional Liberal Party have been drawn up by the Committee appointed for that purpose. They have yet, it is said, to be revised by leading members of the party:—

AIMS.

The following is a statement of the tenets of the party:—It is not long since political parties first made their appearance in Japan, and yet we have already had instances of dissension and disputes among bodies professing similar ideas and objects. Perfection of the system of limited monarchy is impossible of attainment so long as such conditions prevail. Lamenting this state of affairs, we desire to form a new party, dissolving our previous organizations, clearing the political atmosphere of ill feeling and conflicting sentiments, and by reliance on Liberal principles and progressive measures,—thus increasing the power of public opinion,—to promote the happiness alike of sovereign and people. If others, whether connected with parties or not, should be induced to come among us and join in our discussions, we shall extend to them a hearty welcome.

PRINCIPLES.

After conference we have decided on the following general and detailed principles:—

Liberalism shall be our first and great principle.

Our general principles shall be as follow:—

We shall maintain the dignity and promote the prosperity of the crown, and extend the popular rights. We shall endeavour to discourage interference with internal government, and shall labour to secure treaties on equal terms and equality of intercourse with foreign countries.

We shall strive to realise the true representative system and to arrive at the end of government by political party.

To carry out these general tenets not a few points require attention, and we have therefore decided on the following ten detailed propositions. Of course we do not intend to bring all these matters before the Diet this year, nor do we pledge ourselves to limit our labours to those enumerated. We content ourselves now with settling the general direction of our policy, reserving the right of varying the same as circumstances may require.

Political affairs should be simplified and political expense reduced.

Military and naval arrangements should be systematized.

The educational system should be amended.

The Law of Finance should be amended, and the supervision of the expenditures and receipts of the Treasury be made more strict.

The system of dealing with national debts and with Government property should be amended.

The laws as to taxation should be amended, and attempts made to reduce the land tax.

Methods for the protection of the occupations of the people should be amended.

Local institutions should be reformed and the best arrangements relating to local economy aimed at.

The several laws relating to speech, meeting, and political association should be amended, and the Peace Preservation Regulations abolished.

The Laws of the Houses and of Elections should be amended.

DRAFT RULES.

Article 1.—The office of the party shall be established in Tokyo.

Article 2.—There shall be five directors, who shall be chosen at a meeting of delegates and shall deal with all the affairs of the party. Their term of office shall be 6 months.

Article 3.—There shall be three officials to conduct the affairs of the party, to be chosen by the directors, and act under their orders. Their term of office shall be 6 months.

ORDINARY MEETINGS.

Article 4.—Ordinary meetings of members shall be composed of ordinary delegates, not more than two for each city or prefecture, chosen by the members of the party in each city or prefecture.

Article 5.—Ordinary delegates shall discuss the affairs of the party, control the officials, and draft bills to be submitted to the general meetings. Their term of office shall be six months. (Any city or prefecture which cannot be represented by a member of delegation, may entrust its representation to the delegates of another city or prefecture by means of a power of attorney.)

GENERAL MEETINGS.

Article 6.—General meetings shall consist of representatives of the same number as the members of the House of Representatives, chosen by members of the party in each electoral district for members of the House of Representatives in cities or prefectures.

Article 7.—The mode of election and term of office of representatives shall be decided in accordance with the convenience of each locality.

Article 8.—A general meeting shall be held at Osaka each year on April 10th and in Tokyo each year on October 10th, to discuss the affairs of the party, and to receive the settled accounts of finance, and reports of the results of the work of the party during the preceding term.

EXTRAORDINARY GENERAL MEETINGS.

Article 9.—Should any important matter present itself an extraordinary general meeting may be held at any time on the decision of a meeting of delegates. Where the case is urgent and time will not permit of the holding of an extraordinary general meeting, the matter shall be decided at a meeting of delegates and reported to the members in each district.

ADMISSION, RESIGNATION, ETC.

Article 10.—Persons desirous of joining the party shall intimate the same to the office of the party, on the introduction of two members.

Article 11.—Persons desirous of resigning from the party shall intimate the same to the office.

Article 12.—Members who are guilty of improper conduct shall be expelled by decision of a meeting of delegates.

ORDINARY EXPENSES.

Article 13.—Ordinary expenses shall be borne by each member. The mode of defraying expenses shall, however, be regulated separately by means of supplementary rules.

ADDITIONAL RULES.

Article 14.—These rules cannot be amended or added to unless by decision of a general meeting.

THE SENATE.

"We are informed on trustworthy authority," says the *Nippon*, "that the 30th of this month will be the last day of the life of the Senate. In regard to the management of such affairs as have to be attended to after the dissolution of the institution, a rumour has been current for some time to the effect that they will be intrusted to fifteen Senators, who are to be selected for that special purpose. But the latest report is that the Cabinet has come to the resolution to place such business in the hands of the secretaries of the Senate. Twenty of the present Senators will be appointed Members of the House of Peers by Imperial nomination, of whom ten will be Court Councillors in addition. All the other Senators will be placed on the retired list, with one third of their present salaries. Of the Senators thus superannuated, those who have been in the Government service for fifteen years or more will be granted pensions under the Pension Regulations, while to those whose service has not extended over so long a period H.M. the Emperor will grant a special reward in recognition of their past labours."

TOURISTS.

YEAR by year the number of tourists visiting Japan increases. Already the British Legation has furnished passports for some eight hundred of its nationals this season, and if the present rate be maintained, it seems probable that instead of the two thousand British holiday-makers who "did" Japan last year, three thousand will have come and gone before next Christmas. On the average we may fairly assume that every

one of these visitors spends five hundred yen in the country, their total expenditure thus amounting to a million and a half. What this means for Japanese hotel-keepers, *jinrikishas*, guides, and curio-dealers we need not attempt to explain. It may be mentioned here that the stream of tourists this season does not seem to have been appreciably influenced by the Exhibition. The notices which appeared in *The Times* and the *Daily Telegraph* doubtless sufficed to bring the matter to the attention of the British public, but they were scarcely published in time to be of much service. Moreover, it was from the United States that the greatest number of sight-seers might have been expected to come, and in the United States people seem to have remained in complete ignorance as to the prospect of an industrial exhibition in Japan. Even now American tourists arrive who say that, previously to embarking at San Francisco, they had no notion that an Exhibition was being held in Tokyo. It is very much to be regretted that more thorough steps were not taken to advertise the affair. Had full notice been given, we conceive that many of the exhibits which remain unsold might have found a market.

THE "EDINBURGH REVIEW" ON JAPAN.

THE new number of the *Edinburgh Review* contains an article on "Progress in Japan" which is nominally a review of certain Japanese reports. There is nothing original in the article, which is on the whole favourable to Japan. The author suggests that the difficulty as to foreign judges might be got over by the appointment of foreign assessors to Japanese judges, as in the Mixed Court at Shanghai, in all cases in which foreigners are concerned. Here is the suggestion in his own words:—"If, in all cases where Europeans were concerned, a foreign assessor sat on the bench to watch the course of justice, an effectual check would be put to any irregularities, should there ever be a disposition towards any, and, in the absence of such, the Japanese would have a free hand in the administration of the law." Later on he says that "the *amour-propre* of the Japanese must be sensitive indeed, if so harmless a precaution can be offensive in their sight." We fear that this device would scarcely meet the situation. The writer is said to be Professor Douglas of the British Museum.

A LETTER ABOUT THE REVISION MEETING.

THE *Hochi Shimbun* publishes a letter from a member of the Tokyo Exchange, whose name is not given. The letter runs thus:—"It is very much to be regretted that the Englishmen in Yokohama have assumed an attitude of opposition to treaty revision, and are endeavouring to place impediments in the path. I am resolved to have no more dealings with such persons. I understand, however, that some Englishmen are in favour of treaty revision. May I beg of you, Mr. Editor, to clearly distinguish for our information in your columns what foreigners of Yokohama are opposed to treaty revision and what foreigners are in favour of it. It will then be possible to cease dealing with the former and limit our transactions to the latter. In this way a combination may be effected, the Chamber of Commerce of course joining and also the foreign merchants themselves who are in favour of revision. Pray take what steps you can to assist this consummation."

SLANDER.

MORAL decency has ceased to be an appreciable influence in the lives of journalists who do not hesitate to publish the contents of private letters maligning individuals. A Canadian newspaper inserts among its telegraphic items an extract from a "private letter" received in San Francisco from Tokyo. The subject of the epistle is Sir Edwin Arnold, about whom some diaphanous and grossly false statements are made—statements calculated to pain Sir Edwin and his friends. This extract is reproduced verbatim by the *Japan Gazette*, and thus introduced to the notice of people who are in daily contact

with the poet. Of course we fully appreciate the motive of such shameless and treacherous action. Sir Edwin has advocated a liberal attitude on Great Britain's part towards Japanese claims, and having thus become an object of hatred to the intolerant section of the community, is to be traduced, attacked, and hounded in every possible way. He can bear it, we dare say. But what an opinion he will carry away of the people who set themselves up as representatives of British fairness and British patriotism in Japan.

LIBERTY OF CONSCIENCE.

A CORRESPONDENT of a local contemporary, stating his reasons for signing the resolutions passed by the meeting of the 11th instant, says:—"Should the Japanese Government, unasked, nobly guarantee us liberty of conscience, right to public meetings, freedom of the press, and freehold tenure of all our lands, these liberties would never be abused by the class of foreigners residing or likely to reside in Japan, and by so doing the present Government of Japan would deservedly take rank as the most enlightened Government in Asia." The writer can only refer to the granting of these privileges after the abolition of extraterritoriality, for under the present system foreigners enjoy them all, with the exception of freehold tenure of their lands, which has not been yet recognised. Now we would ask this correspondent and his fellow-thinkers, in all seriousness, on what conceivable grounds of reason can strangers residing in a foreign country expect the Government of the country to grant them privileges in excess of those enjoyed by the people of the country? We cannot look for the full right of public meeting and freedom of the press in Japan so long as it is not considered safe to extend the enjoyment of the same rights to Japanese subjects. Surely this is only consistent with common fairness. Japan is not England. We have left England for the purpose of settling in this country to earn a livelihood, and we must not expect to enjoy all the advantages of residence in England plus the commercial opportunities which attracted us to Japan. Freedom of speech and public meeting will come all in good time. It is far nearer than it was ten years ago, and its advent will be immensely hastened when parliamentary institutions come into operation. We are not too sanguine when we assert that before consular jurisdiction is abolished, speech and pen will be as unfettered in Japan as they are in almost any European State. Meanwhile, it may be worth reminding our contemporary's correspondent that freedom of conscience is already guaranteed by the Constitution. "Japanese subjects," says the 28th Article of that charter, "shall, within limits not prejudicial to peace and order, and not antagonistic to their duties as subjects, enjoy freedom of religious belief." As for freehold tenure of our lands, that too will follow immediately on the abolition of extraterritoriality, for we shall then become the absolute owners of such lands, and receive title-deeds confirming us in the ownership for ever.

FISHING AT SAPPORO.

THE fishing at Sapporo has been very poor this year, and the reason assigned for this is that the refuse from the hemp-works is allowed to fall into the river, with the result that the fish cannot come up. There are few things more pungent than the decayed outer skin of hemp or flax; and we can easily understand the failure of several parties to find sport at Sapporo, as one of the most successful fishermen in Japan only got seven fish during the few days he was there this season, a carload being nearer the result of some of his visits to the river in previous years. There is a peculiarity about the fish in this river—they only take the fly when the water is of a certain temperature. That this temperature lasts from ten to fourteen days only has been proved year after year by Captain Blakiston and others who have paid many visits to the place and studied the water. At other times, however, spinning has often resulted in large takes. The fish are not particular as to the lure, and

seize greedily anything bright as readily as do mackerel a piece of red cloth or an inch of clay pipe-stem. Spoons of various designs have been found effective, so have other artificial baits—the "Devon," the "Phantom," the "Swivel-tail," and so on. We are led to these remarks by an article in the *Hongkong Telegraph*, reproduced from the *Regimental Gazette*, a little paper published by the Highland Regiment stationed in the Crown Colony. It appears that two officers visited Sapporo this year, and shared the fate of several others—that is, they got no fish. This is what they say about it:—

Hakodate, which we next visited, was chiefly remarkable for bear skins, a plentiful lack of accommodation and the smell of dried salmon; which last peculiarities so annoyed two other officers that they beat a hasty retreat, going back by the same boat which had brought them. We, however, persevered and reached Sapporo, having suffered severely from the weather. At least I did; Z declared that he felt quite well, but if greenness of complexion and want of appetite go for anything, I should say he told a tarradiddle. Fishing was our object; we had heard that there was magnificent fishing at Sapporo, that the river was simply full of salmon trout. The morning after our arrival we sallied forth, armed with powerful rods, and books of seductive flies, and followed by trishaws carrying our tilfins, and to carry the fish. In our limited phrase-book Japanese, we had asked the people of the hotel about the fish; they had replied, their faces wreathed in agreeable smiles, that there were "Taksan," which is being interpreted "plenty." We had inquired about the size, and holding their hands about four feet apart they had made as though they were lifting exceedingly heavy weights. This was of happy augury and naturally as we walked along we were gay at heart. We soon came to the river; it looked splendid. We fished several pools carefully but with no result. A countryman came by; "Sakuna arimaska?" (are there any fish?) we asked. "Takyu," he replied, with a grin, and pointed up the river. "They seem to be further up," we said, and trudged on again. We put on new flies and did our level best, but we caught nothing. Every time we asked a passing countryman about the fish he said there were "Taksan," and pointed up the river; we must have walked about ten miles that day, but we were not rewarded by a single rise. Next day was the same, except that we each caught a sort of titlbat. Our feelings were too deep for words; we did not put the wretches back, but gave them to the trishaw coolies, a piece of generosity we thought would be appreciated. On opening my door next morning I found my titlbat, the coolie's titlbat, suspended by a piece of string to the handle. Z found his in the same position. It spoilt our appetite for breakfast; even the coolies laughed at us. We came to the conclusion that the fish must have gone to the upper waters, and determined to follow them. We went to the upper waters, a painful journey on pack horses. We fished with flies, we fished with spinners, we descended to bait, but we caught no salmon trout. On getting back, while our cuticle was slowly healing from the injuries it had received from the pack horse, we studied works on Chinese tortures, with a view to experimenting on the person of the villain who gave us the alluring details of the beautiful fishing at Sapporo.

MESSRS. FRASER AND YENOMOTO.

MR. YENOMOTO, one of thirty-five Japanese in Yokohama, who has taken up the question of Treaty Revision with special earnestness, having written to ask for an interview with Mr. J. A. Fraser, Chairman of the Anti-Revision Meeting, received a reply in the negative. Mr. Fraser assigned two reasons:—first, that pressure of other business did not permit him to accede to his correspondent's request; and secondly, he was not authorized to enter into discussion with either foreigners or Japanese. To this Mr. Yenomoto has addressed the following answer to Mr. Fraser—we extract it from the columns of the *Nichi Nichi Shinbun*:—"I beg to acknowledge the receipt of your letter of yesterday. You say that pressure of business makes it impossible for you to meet me. Such a reply is natural in the case of one engaged in active pursuits, but in view of the fact that the present question affects our mutual interests as well as international contentment, I cannot think it right that pressure of business should be allowed to prevent a meeting. You worked hard as one of the promoters of this demonstration. In the second place, you say that you have no authority to discuss this matter with either Japanese or foreigners. That sounds reasonable, but I fail to see why you should not discuss it on your own account. We are not inspired by any desire of controversy. We believe that by discussing the views of both sides with thought and

care, the truth may be arrived at. If you cannot meet me, may we at least discuss the subject by letter? If to this, too, you object, there is nothing more to be done. I respectfully await a second answer from you."

We admire the wish of Mr. Yenomoto and his fellow-thinkers to open relations with the foreign merchants, but we cannot think that any good is to be gained by interviews. There is now a Citizens' Committee, one of whose functions is "to act as the representatives of the Community in any and all questions incidental to or arising out of the resolutions" passed at the Anti-Revision Meeting. We recommend Mr. Yenomoto to address to the Committee a written statement of the views held by himself and his associates. The Committee is bound to reply, and the resulting interchange of ideas may help to clear the air.

The experience of Mr. Kobayashi bears out our recommendation. The *Nichi Nichi Shinbun* publishes an account of his proceedings. He waited upon Mr. Fraser, and being recommended by that gentleman to betake himself to a barrister or a newspaper editor, he proceeded to the chambers of Messrs. Lowder and Litchfield. Failing to find either of the latter, he next repaired to the residence of Mr. J. H. Brooke, and had a long interview with that gentleman, which is reported with apparent fidelity in the columns of the *Nichi Nichi*. Of course these old baubles of insular conservatism, *habeas corpus*, trial by jury, castles to live in, and freedom of speech, were once again ranged in the van of the controversy, and made to parade their decrepit respectability in a most striking manner. But in the end the disputants came down to "hard pan," and discovered that wealth and strength, not right and justice, were at the bottom of it all. Such must be the end of all interviews. Better dispense with them.

PERSONAL NEWS.

VISCOUNT TOKO seems to have obtained a considerable number of converts to his religious-political doctrines in the provinces of the Tokaido. It is also reported that he is about to establish a branch office of his party at Kyoto. The latest rumour about him says that he is contemplating the publication of a daily paper in Tokyo as his party organ. The funds will be supplied by himself and Generals Harada and Horie.

MR. TAKASHIMA Kaemon, of Kanagawa, in addition to commercial sagacity, is noted for dexterity in the art of divination. He has originated a new school of his own for interpreting the Book of Change (易经), and is the author of several elaborate volumes on the subject. Lately he is said to have prophesied, in compliance with Count Yamagata's request, about some of the more important questions of the day. He is reported to have assured the Minister President that the amalgamation of the progressive parties will not succeed, and that the Diet will be dissolved. The *Kokumin-no-Tomo*, noticing this rumour, observes that, if he attaches any value to the prophesies of Mr. Takashima, the best thing the Minister President could do would be to appoint this shrewd man of business to the position of Cabinet Adviser. Harmless pleasantries, enough.

HOUSES AND CASTLES.

WEARY as is the task of correcting errors which have been repeatedly corrected before, and conveying information which has already been conveyed time after time, we think it desirable at this juncture that every effort should be made to remove false impressions. We notice, therefore, a paragraph in a local contemporary, asking:—"If it is true that a Japanese house is inviolable and cannot be entered without a warrant, what becomes of the complaint so constantly put forward by and on behalf of the police, that they are handicapped in their efforts to detect theft and repress crime in the settlements by reason of their inability to enter the premises of

foreigners?" The writer of this is evidently a new comer. The complaint put forward by the police is that great difficulty and delay are involved in obtaining a warrant from a foreign Consul, and that before they can act upon the warrant, they invariably find that the person they seek to arrest has received warning of their intentions and taken refuge in the premises of another foreigner, probably of a different nationality. This necessitates an application for a new warrant and involves a delay perhaps of a day. A warrant from a Japanese police magistrate, on the contrary, can be swiftly and quietly obtained. The difference lies entirely in this. Were Consular Jurisdiction abolished, the police would have no more right to enter a foreigner's house without a warrant than they have at present. The Constitution says:—"Except in the cases provided for in the law, the house of no Japanese subject shall be entered or searched without his consent." Why should there be any misapprehension about these things? They are plain enough, surely.

GOLD AND SILVER RATIOS.

The *Official Gazette* gives the following table of comparative values of gold and silver coins and of the pound sterling for the week ended the 13th instant, as derived from the returns of the Bank of Japan and the Yokohama Specie Bank:—

Days	Gold Coin, (Per yen 100)	Pound Sterling (Per £1)
8th	106.000	A.M. 5.2459 P.M. 5.2459
9th	106.000	A.M. 5.2892 P.M. 5.2892
10th	106.800	A.M. 5.2892 P.M. 5.2892
11th	106.800	A.M. 5.2892 P.M. 5.2892
12th	106.800	A.M. 5.2892 P.M. 5.2892
13th	106.800	A.M. 5.3333 P.M. 5.3333
Averages	106.533	5.2893

The above averages show for gold coin an increase in value of *yen* 1.383, and for the pound sterling an increase in value of *yen* 0.0859, as compared with the previous week.

THE TELEGRAM TO LONDON.

The *Mainichi Shinbun* says that, with regard to telegraphing the resolutions of the Anti-Revision Meeting to London, as previously resolved upon, the gentlemen charged with the business, fearing that if they made use of the wires in Japan the message might be stopped by the Japanese Authorities, decided to send one of their number to Shanghai, in order that the message might be despatched from that place. We do not believe this for a moment. Such distrust of the Japanese Telegraph Authorities would be extravagant. The same journal adds that the expense of sending the telegram is estimated at 8150. The first two resolutions consisted of 116 words, to which very nearly as many would have to be added in order to make the message intelligible, and to include names and addresses. The telegram must have cost something more like four hundred dollars than one hundred and fifty.

THE EMPEROR'S BIRTHDAY.

The *Fomuri Shinbun* says that the celebration of the Emperor's birthday this year, on the 3rd of November, will be marked by an unprecedented feature. His Majesty proposes to entertain all the members of both Houses of the Diet in the Homeiden at the Imperial Palace. The Household Department, our contemporary adds, is already making preparations for the banquet, and has given an order to several workers in metal in Morikawacho, Tokyo, for the manufacture of a number of candelabra to be used for the first time on this historical occasion. From what the *Fomuri* says we gather that the candelabra are to be silver, and that the well known cranes and tortoises are to figure prominently in the decoration, chrysanthemums being of course added to distinguish them as articles of Imperial furniture. The sockets for the candles will be a cluster of chrysanthemum blossoms, and each candelabrum is to weigh about eighty pounds avoirdupois. If

this statement be correct, it is evident that the Imperial waiters will not find it a very simple business to move the candelabra about.

CHOLERA RETURNS.

The latest cholera returns derived from official sources are as follow:—

Prefecture or City.	Date.	New Cases.	Deaths.
Osaka	11th	240	249
	12th	180	143
	13th	280	158
	14th	261	265

	19th	34	14
	20th	34	14

The numbers of cases and deaths since the commencement of the epidemic, inclusive of the above figures, appear in the following table:—

Prefecture or City.	Cases.	Deaths.
Osaka	5,210	3,711
Hyogo	1,210	784
Nagasaki	3,490	2,119
Yamaguchi	1,580	940
Fukuoka	2,571	1,632
Oita	741	418
Saga	392	406
Kumamoto	860	503

The total number of cases and deaths in the following Cities and Prefectures not included in the above, from the commencement of the epidemic to the 17th instant, are:—

City or Prefecture	Cases.	Deaths.
Tokyo	1,360	1,101
Tsukuba	103	53
Kanagawa	1,612	1,115
Chiba	603	352
Ibaraki	15	4
Utsunomiya	933	434
Ehime	39	51
Okayama	23	22
Mie	6	3
Shizuoka	87	32
Yamanashi	20	11
Shiga	30	19

INSTANTANEOUS SPECIFIC FOR CHOLERA.

The *Colonies and India* mentions another specific for cholera. It is styled "Dr. Harkin" or "Vagus treatment of cholera," and consists in the simple application with a camel hair pencil of the *Liquor epispasticus* (a blistering fluid) of the British Pharmacopoeia to the skin of that part of the neck lying immediately behind and round about the lobe of the ear. The blistering fluid is said to excite a nerve that controls the heart and digestive functions. The effect is described to be instantaneous; the purging, vomiting and cramps cease; and the patient generally falls asleep, and awakes cured.

THE TAITO JOYAKU-KAI.

The Association for the Revision of the Treaties on Terms of Equality held a meeting, on the 16th instant, in the Kaika-tei Shinsakana-cho,

Kyobashi, Tokyo, and came to the decision that, in consequence of the Anti-Revision meeting held by foreigners in Yokohama on the 11th instant, steps should be taken to put an end to commercial dealings with foreigners opposed to Japanese jurisdiction. With this object it was resolved to send deputies to the Chambers of Commerce in Tokyo and Yokohama, the deputation to consist of three members of the Association and two outsiders. The persons chosen for the purpose were Mayeda Kagashi, Ishizaka Masataka, Yamaguchi Shichiji, Morimoto Tokichi, and Futsabayashi Katsu.

THE BANK OF JAPAN.

The amounts of convertible notes and reserves in the Bank of Japan for the week ended the 13th instant were as follows:—

Convertible Notes.	Reserves and Securities.
YEN.	YEN.
Notes issued	Gold coin and bullion
74,565,860	24,645,247
	Silver coin and bullion
	21,011,279
	Public Loan Bonds
	13,476,459
	Treasury Bills
	—
	Government Bills
	—
	Other securities
	4,732,182
	Commercial Bills
	10,100,721
74,565,860	74,565,860

Of the above total issue of notes, the sum of *yen* 5,743,554 is in the treasury of the Bank, and *yen* 68,822,315 in actual circulation, the latter showing a decrease of *yen* 985,039 as compared with *yen* 69,807,354 at the end of the previous week.

ARREST OF MR. KRIPS.

MR. KRIPS, who absconded from Chefoo some time ago in a Chinese junk, having embezzled or dishonestly made away with a large sum of money, has been arrested at Chemulpho. It was expected that he would have come on to Japan, in which case another Power, Austria—for Krips is an Austrian subject, though he acted as Consul for Sweden in Chefoo—would have had to tackle the extradition problem. In Korea, however, the Authorities give themselves no concern about such matters, and we have no doubt that Krips by this time is safely returned for trial at the place of his misdeeds.

"KIRIN" BEER.

The "Kirin" beer has just won a great victory. Owing to the strong dissatisfaction engendered in many quarters by the decisions of the Judges at the Exhibition, the *Fiji Shimpo* undertook to consult public opinion as to the best article in each class, promising to mark the verdict by presenting a handsome silver medal plated with gold to the exhibitor of the articles which obtained most votes. One hundred of these medals were given, and the "Kirin" beer was fortunate enough to obtain one. This settles the question of its superiority over the "Yebisu" beer, at least according to Japanese taste.

POLICE CONSTABLES AT THE ANTI-REVISION MEETING.

We are informed on the best authority that the police constables, whose presence outside the Public Hall while the anti-revision meeting was in progress has been commented on in several quarters, were sent by the authorities to preserve order, and chiefly to secure that no lawless conduct should be committed by any boisterous Japanese youths who might be drawn to the locality.

ILLNESS OF MR. ARISHIMA.

The *Nichi Nichi Shinbun* says that Mr. Arishima, Superintendent of Customs, was seized by cholera on the morning of the 12th inst. and is now under medical treatment.

We are glad to be able to report that Mr. Arishima is daily improving, and it is hoped that he will be about again in a few days.

YOKOHAMA CRICKET AND ATHLETIC CLUB.

The committee of the above Club find it impossible to hold the autumn athletic meeting in the month of October, as was suggested last year, in the face of the numerous events taking place then, viz., the two interport cricket matches, the regatta, and the races. The meeting will therefore be held as early in November as possible.

JAPANESE COMMERCIAL MORALITY.

THE commercial morality of Japanese brought into contact with foreigners been discussed pretty fully of late, but many of the comments evoked have been so obviously inspired by a feeling of hot anger that the net result of the discussion will probably be more injurious than profitable. Many Japanese, instead of seeing that the conduct of their countrymen at the open ports deserves severe reprobation and is calculated to impair the nation's good name, will be apt to conclude that the average foreign resident dislikes and despises the native too heartily to form anything like an impartial estimate of his character, and that the much abused *Boyeiki-shōnin* is the victim of prejudice rather than of his own misdeeds. Moderate men, indeed, must have been astonished and pained by the display of rancour which this controversy has called forth. It is plain that some of the writers were smarting under the keen sense of recent losses, and that their language came from outraged pockets rather than from calm conviction. We do not wish to say a word calculated to embitter feelings already only too bitter, but it would be misleading were we to leave unanswered certain difficulties and objections that have been raised.

It has been frankly recognised in these columns that the morality of the native merchants in Yokohama, and indeed at the treaty ports generally, is below Western standards. Six years ago the foreign residents of Yokohama, in a memorial addressed to their Representatives, spoke of these merchants as "remnants of an evil past;" three years ago, in an official remonstrance presented to the then British Minister, they described the same merchants as sound traders with whom they were content to deal and upon whose competence and general integrity they were indignant that any reflections should be cast; now, they remain silent while the most injurious epithets are hurled at the same merchants by writers in the local English press. It is obvious that great differences of opinion exist, and the fact is emphasized by the letter of our correspondent, "Twenty-one years in Japan," who avers that he has "come across many Japanese merchants who are particularly honest," and gives it is his experience that "if you can get a Japanese to have faith in you, he will deal pretty honestly with you." We ourselves have, nevertheless, accepted the unfavourable statements addressed to us by more than one British merchant of standing and experience, not because we consider our informants to be beyond the reach of prejudice, or proof against the danger of making a mistake, but because the conditions under which trade is conducted in Yokohama seem to us so eminently calculated to encourage dishonesty that we

are altogether unable to reconcile them with any hypothesis of strictly straightforward dealing. We analysed these conditions at length in previous articles, and need not recapitulate them here, especially since no attempt has been made to deny their existence. But surely it is extravagant to claim, as has been confidently claimed, that, because the practice of Japanese merchants in Yokohama, under these peculiar conditions, invites condemnation, therefore Japanese merchants must be equally bad everywhere. There are men of low morality in every body of traders, of whatever nationality, but their existence does not establish the unsoundness of the whole body. It is a fact, strange at first sight but easily explicable, that the worst types of Japanese of all classes congregate at the treaty ports. Just as the better grade of Japanese merchants despise and distrust the *Boyeiki-shōnin*, so do all Japanese hesitate to employ a servant, clerk, or labourer who has lived in Yokohama. Considering the stigma that attached to money-getting in feudal times, and remembering the social status then occupied by the merchant, we are constrained to admit that the profession of commerce does not yet attract men as upright on the whole, or encourage methods as honourable, in Japan as in Europe or America. But to measure the morality of the whole by the stature of the most deformed section is grossly unjust. Still more preposterous is it to argue that, because Japanese traders in Yokohama are, in the main, unworthy of confidence, therefore the entire nation is unfit to be trusted. With equal justice might one assert that, since certain fathers and mothers in England treat their offspring with revolting brutality, therefore all English parents are inhuman, and therefore the whole English race is degraded. Such arguments cannot be reconciled with any sentiment of justice or kindness. They emanate from persons who glory in traducing the Japanese, and who pretend that, whereas to claim the highest virtues for one's own countrymen is manly and patriotic, to say a good word for people of foreign origin is mean, cowardly, and mercenary.

This brings us at once to a strange misconception on the part of our critics. In answer to our contention that the only hope of inaugurating a better state of things is to abolish the settlements and enable foreigners to combine with Japanese, we are told that respectable foreigners would not dream of combining with men who rob and cheat. We confess that we have sometimes been puzzled to understand how respectable foreigners can induce themselves to go on, year after year, dealing with Japanese, if the latter are really as black as they are painted. Be that as it may, however, the change contemplated by us had expressly declared reference to partnerships with Japanese

merchants of a type different from those who now monopolise the trade at the open ports. That there are many merchants of high probity outside Yokohama and Kobe cannot for a moment be denied. There are, indeed, many such within those settlements. Legally recognised partnerships between these men and foreigners would not only secure the latter against much of the dishonesty said to be now practised, but would also remove them from their present alien and isolated position, which makes them the prey of sharpers and low traders of every description. To have legally recognised partnerships, however, Treaty Revision must be accomplished, and to that consummation we have almost ceased to look forward. It seems to us that a body of aliens confined within the limits of a settlement; forbidden to trade in the interior or to combine with the people of the country for purposes of business; maintaining their isolated position for the avowed reason that they consider themselves a superior race to the nation whose territory they inhabit; conducting one half of their commerce in a high-handed and exceptional manner because they declare their inability to trust a native dealer, and denouncing, in uncompromising terms, the chicanery and immorality of the Japanese who come to trade with them—it seems to us that the history of these men's commercial existence must, in the very nature of things, be unsatisfactory, and that they cannot possibly expect to find themselves in contact with the best classes of Japanese, or to be treated with anything like the consideration and integrity which mark the dealings of civilized men with their own nationals.

THE TREATY REVISION MEETING.

IT seems to us that when the community of Yokohama comes to consider the action to which it pledged itself at the Treaty Revision Meeting on the 11th instant, there will be some surprise and even disgust. From beginning to end the affair has been of a strange and startling character. The meeting came together in response to an advertisement bearing no signature, emanating from a totally unknown source, and professing to be "by order." Under such circumstances, it might have been anticipated that one of the first steps taken would have been to tender or seek an explanation of this extraordinary formula. But nobody seems to have thought of doing either the one thing or the other. It was enough for those present to know that they had been brought together. They cared nothing about the means, nothing about the form of summons; and this indifference as to preliminaries, supplemented by the fact that so large a number of residents put in an appearance, must be taken as denoting unusual interest and earnestness.

But if such was the mood of those present, how are we to reconcile it with the fact that outside the little band of gentlemen by whom the demonstration had evidently been projected and organised, not one person brought with him an idea which seemed worthy of ventilation; not one person had a question to ask or a word to say? The whole affair suggests the idea of a theatrical performance at which half a dozen persons played the principal rôles and all the rest behaved as audience. Possibly this was because everybody's mind was made up beforehand to vote for whatever anti-revision propositions were submitted to the meeting, putting no queries and raising no issues of any kind. Such very practical determination is, in one sense, impressive, but its consequence was to impart to the proceedings a meagre and stereotyped character which must necessarily detract greatly from their value as an intelligent expression of public opinion. The little band of leaders were active enough. They all came with duly prepared speeches, moderate and for the most part effective, and they had the pleasure of finding an appreciative and not inquisitive audience. But the difficulty of performing all the items on their programme with such a limited corps must have been keenly brought home to them when they found that, in two instances, the task of proposing names to serve on a committee had to be discharged by the aspiring committee-men themselves. These, however, are small matters compared with the singular discovery made after the meeting had assembled, namely, that no one could give any distinct explanation of the causes of the agitation. The Chairman was perfectly frank about this. He confessed his complete ignorance, and avowed himself a searcher after the very information on the strength of which the meeting had been convened. He alluded mysteriously, however, to a gentleman possessed of information, trustworthy but obtained from a source which could not be divulged. This gentleman turned out to be Mr. J. F. LOWDER. Mr. LOWDER for a long series of years occupied a position of honour and trust in the Japanese Government's Service, and is now a life pensioner of the same Government. During that protracted period his sympathies were openly and strongly given to the cause of Treaty Revision, and to the efforts made by Japan to obtain international recognition of her rights. Whether with such a record immediately behind him, the part now played by Mr. LOWDER is consistent with the dictates of either decorum or friendliness we shall not attempt to decide. It is certain, however, that the official confidence which he formerly enjoyed, and the sources of knowledge to which he now has access, render his statements credible. For that reason, perhaps, the meeting was content with his very vague assertion that he had

obtained, "from a source which convinced his mind of the truth of the fact," information that there is imminent danger of the English Government's accepting Japan's proposals, and placing British subjects under Japanese Jurisdiction without any of the safeguards hitherto considered necessary. On the strength of this hazy piece of news, resting entirely on Mr. LOWDER's responsibility, the meeting had been convened, and showed itself prepared to act. In such a remarkably complacent mood it proceeded to consider resolutions which would never, we are persuaded, have been accepted on calm reflection. The first resolution consisted of two parts, to one of which the meeting's unanimous consent was natural and proper—namely, that "the time has not arrived when questions in regard to rights, whether of property or person, arising between subjects and citizens of Foreign Powers in the dominions of His Majesty the EMPEROR of Japan, can be unconditionally and safely subjected to the jurisdiction of Japanese tribunals." This decision, we say, is precisely what any body of Englishmen might have been expected to formulate. It is, to be sure, a strangely worded decision. For it speaks only of "rights of property or person arising between subjects and citizens of Foreign Powers in Japan," and says nothing whatever about the very much larger and more important question of such rights as between Japanese and foreigners. We can conceive what the drafters of the clause intended to say, but in a case so important their phraseology ought surely to make no demands on our imagination. It is the second part of the resolution, however, which may fairly be described as astounding. Anybody, even Mr. LOWDER, the proposer of the resolution, can claim that Treaty Revision without guarantees may not inconsistently be opposed by advocates of Treaty Revision with guarantees. But every form of revised treaty, whether proposed in the past or to be proposed in the future, must contemplate the complete abolition of Consular Jurisdiction after a fixed term of years. No guarantees offered by Japan can be claimed in permanency. Their operation, as part of an international agreement, must be of a temporary and limited character. When, therefore, the meeting passed a resolution declaring that "the time has not arrived when an estimate can be formed of the period within which the unconditional relinquishment of extraterritorial jurisdiction in Japan can be safely promised," it declared, in the most unequivocal manner, that the time for Treaty Revision on any terms whatever has not yet come. There is no gainsaying the import of this clause. The meeting of Thursday last distinctly pledged itself to the assertion that any attempt whatsoever to revise the Treaties is at present premature. Did the gentlemen who voted this extraordinary and sweeping resolution

understand what they were about? We greatly doubt it. Mr. LOWDER himself, in his speech proposing the resolution, declared his regret that the negotiations of 1887 had proved a failure. But the principal condition of the draft treaty of 1887, as Mr. LOWDER well knows, was that Consular Jurisdiction should be completely abolished after a fixed term of years. Are we to understand then, that what was not premature in 1887 is premature in 1890? Mr. LOWDER evidently relied implicitly on the disposition of his audience when he permitted himself to drift into such flagrant contradictions. And he was right. Consistency is evidently an idle fancy now-a-days. Last year a deputation from the Yokohama Chamber of Commerce assured Count OKUMA of their sympathy with his efforts to secure Treaty Revision. This year the Vice-Chairman of the Chamber, who was himself a member of that deputation, votes for a resolution declaring that Treaty Revision is out of the question.

Passing to the second resolution, we find that it was laid before the meeting in terms which betray singular misconception of facts. The resolution ran thus:—"That in the opinion of this meeting it would be an act of grave injustice to foreigners who have purchased land in Japan under covenant with the Japanese Government, if the conditions or incidents of their tenure of such land should be altered without their consent." Now as to the general question whether land leased in perpetuity on certain terms may be placed upon a different footing without the consent of the lessee, we can understand that many persons will be disposed to hold strong opinions. On the other hand, we cannot understand or believe that any fair-minded foreigner, enjoying in Japan all the rights and privileges of a Japanese subject, would object to being placed on the same fiscal footing as a Japanese subject. An alien cannot properly claim, in any part of the world, that he should be allowed to conduct trade or industry on terms more advantageous than those enjoyed by a native. When, therefore, the foreign land-renters receive title-deeds of ownership in lieu of their present leases, and are placed in all other respects on the same footing with respect to land tenure as Japanese subjects, it will be an act of simple justice that they shall be liable for whatever land taxes are leviable upon land similarly held by Japanese subjects. The resolution submitted to last Thursday's meeting by Mr. A. O. GAY, and unanimously carried, speaks of "foreigners having purchased land in Japan under covenant with the Japanese Government." Where is any evidence of such purchase to be found? Not in the Treaty. The third article of the Treaty between Japan and Great Britain, after enumerating the ports to be opened to British subjects on July 1st, 1859, says:—"In all the foregoing ports

and towns, British subjects may permanently reside. They shall have the right to lease land and purchase the buildings thereon." The land, it will be observed, is to be "leased;" the buildings "purchased." Mr. GAY, in his speech proposing the resolution, said:—"The properties were all sold at auction by the Government, proving that the right of property was acquired, apart from the ground-rents, and those who bought them paid for the property." These statements betray singular carelessness and want of research. If Mr. GAY had taken the trouble to think he would have remembered that all the properties held by foreigners were not purchased at auction, many of them having been handed over by the Japanese Government without any charge whatever. And if Mr. GAY had taken the trouble to examine the Treaties and Conventions, he would have learned that the money paid by foreigners at auction cannot be regarded as the price of the properties they occupy. Yokohama happens to be the Settlement concerning which least information is obtainable from the letter of the Conventions. But even with regard to Yokohama Mr. GAY can inform himself. If he turns to the memorandum of 1864 and the Convention of 1865, he will learn something about the destination of the money paid by foreigners for lands acquired at auction. Referring to the Swamp Lots, the former document says that "the proceeds arising from their disposal shall be added to a municipal fund, which shall be employed for the making of drainage and roads, &c., and keeping them in a state of repair," and with regard to the Bluff Lots the latter document provides that "the premia obtained by their sale at public auction shall be used for the improvement of the locality." Certainly these articles and others which can easily be found, do not indicate that the foreigners acquiring Swamp or Bluff lands, paid the Government for the right of property in them. Further, Mr. GAY went on to say that "the ground-rent was fixed, representing the equivalent of the Japanese taxation at date," and he then wandered off to speak of income tax, evidently under the impression, which his words conveyed to his hearers, that the ground-rents include all kinds of taxation. Here again he might easily have avoided flagrant misconception by referring to the Hyogo and Osaka Convention of 1867, where the nature of ground-rent is very clearly defined—namely, "an annual rent calculated at a rate that will be considered sufficient to meet the expenses of keeping in repair the roads and drains, the cleansing and lighting of and maintaining order in the settlements, and the ordinary land tax payable at the present date to the Japanese Government." The only tax included in the ground-rent is the land tax, and we must confess unbounded astonishment that an old resident like Mr. GAY, having

undertaken to address a public meeting of Yokohama residents on a subject so often discussed and so easily studied, should have betrayed such remarkable ignorance.

As to the silly speech of another member of the little corps, one of the firebrands of this Settlement, who intimated that Japanese jurisdiction could never be trustworthy until those fine old English institutions, *habeas corpus* and trial by jury, were introduced, we need not waste space on such empty clap-trap. Nearly all the most highly civilized nations in the West are without both *habeas corpus* and trial by jury, and Japan also can very well afford to dispense with them. Altogether it must be confessed that the anti-treaty-revision movement, with whatever enthusiasm and earnestness its little posse of promoters may be animated, has been inaugurated amid a good deal of blundering and confusion. Absolute ridicule it might have escaped had fate been a little kinder. But the last straw was added when the name of a Chinaman was included on the roll of the Committee of Thirty Citizens—a Chinaman to work hand in hand with the champions of Western progress in protecting the privileges of the "superior races" and opposing Japan's claims to be recognised as a civilized country! Could the irony of an evil genius be more cruelly displayed than in this wonderful association of a Celestial with the guardians of Yokohama's haughty isolation!

THE EFFECT OF THE TREATY REVISION MEETING.

WE find it impossible to believe that the resolutions passed at the Treaty Revision Meeting will have any serious effect on the course of the negotiations. It goes without saying that in such a matter HER MAJESTY'S Government will be disposed to consult the wishes of British subjects residing in Japan, but it is equally obvious that the Secretary of State must be guided by the dictates of reason, by the obligations of national dignity, and by the principles of sound statesmanship. All these he will have to ignore, we think, if he resolves to follow the route now indicated for him.

If the first resolution—which, after all, is the only one that has any bearing on the general question—had been confined to a declaration that, in the opinion of the meeting, the time had not arrived when the persons and properties of British subjects residing in Japan could with safety be placed unconditionally under the jurisdiction of Japanese tribunals, HER MAJESTY'S Secretary of State might have accepted it as a reasonable and proper protest, and could have promised to give it favourable consideration. It is true that the resolution would have been superfluous, Lord SALISBURY'S opinion and indeed the opinion of everyone engaged in the negotiations, being al-

ready emphatic as to the prematurity of unconditionally abolishing consular jurisdiction. Still the resolution in that form would have been a moderate plea for due caution, and would have strengthened the hands of the Secretary of State for Foreign Affairs without embarrassing him. But the resolution did not stop there. It went incomparably farther. Instead of pleading for the exaction of satisfactory guarantees, which was all that the meeting was summoned to do, it declared that "the time had not yet come when an estimate could be formed of the period within which the unconditional relinquishment of extraterritorial jurisdiction could be safely promised." Now a promise to abolish consular jurisdiction completely and unconditionally after a fixed term of years, has constituted the basis of every scheme of treaty revision hitherto advanced, and must constitute the basis of every scheme hereafter advanced. By that object and by that object alone the Japanese Government is actuated in seeking to revise the treaties. That object and that object alone has been openly recognised as the ultimate aim of the negotiations in which all the great Powers have been engaged for the past ten years. Thus the announcement made to Lord SALISBURY by the meeting of the 11th instant is simply this:—"Western States have for ten years been carrying on negotiations with Japan for a purpose which we, HER MAJESTY'S subjects in Yokohama, now declare to be untenable and dangerous. Western States, in each of the three series of negotiations hitherto conducted, have announced their readiness to promise that after a fixed term of years Japan's judicial autonomy shall be unconditionally restored: their only difficulty has been to agree about the nature of the guarantees which Japan shall pledge herself to put into operation during a part or the whole of that term of years. But we now declare that no such promise can yet be safely made, and consequently that all negotiations on the subject of Treaty Revision must be postponed *sine die*." Is it in the smallest degree probable that Occidental Governments will accept this dictum? Are they at all likely to turn round at this eleventh hour and say to Japan:—"The engagement which through so many years has formed the basis of all our negotiations with you; the engagement, namely, that we are willing to set a fixed limit of time to the further existence of Consular Jurisdiction within your territories—from that engagement we now withdraw, being informed by some three hundred of our subjects and citizens in Yokohama as well as by certain Chinese folks also resident there, that we have been acting prematurely and rashly, and that the time has not come when any engagement of the kind can be safely entered into." The Cabinets in London, in Washington, in Berlin, in Paris, in Rome,

in St. Petersburg, and in Vienna, will not dream of performing this undignified pirouette at the suggestion of a meeting of Yokohama residents. On the contrary, they will want to know why the Yokohama residents did not make this radical discovery long ago. Nobody is deceived by the shallow pretext with which the proposer of the resolution tried to reconcile the inconsistencies of his own conduct, and to hide from his audience the extravagance of the resolution itself. Both the Treaty of 1887 and the Treaty of 1889 distinctly fixed a term of years at the end of which Consular Jurisdiction should be unconditionally abolished, yet the foreign residents made no attempt to object or protest. What, it will be naturally asked, what has led to the sudden and complete change of opinion in Yokohama? If any importance is to be attached to the resolution adopted by the meeting, Western Governments will at once ask what reasons now persuade the people of Yokohama that the basis upon which negotiations for treaty revision have been conducted with their tacit acquiescence for the past ten years, is to-day unsafe and premature. Reasons, however, are precisely what the people of Yokohama do not give. They appear to think that a simple announcement of their opinion is sufficient. Only one of the speakers at the meeting on the 11th ventured into the dangerous realm of argument, and what arguments his were to be sure! There was no *habeas corpus* in Japan! There was no trial by jury in Japan! It was not certain whether a man's house is his castle in Japan! Truly when one reads such silliness one is disposed to conclude that the meeting of the 11th barely escaped being converted into one of those farces for the performance of which its place of session is usually reserved. If this reasoning is to be laid before the Marquis of SALISBURY, his Lordship will form a very flattering estimate of the motives of Yokohama's action.

If we have said also that the principles of sound statesmanship are opposed to Great Britain's endorsement of the position taken by the meeting of the 11th instant, it is because we believe it to be now too late for Foreign Powers to recede. They cannot, with any show of reason, impose upon the Japanese Government the impossible task of restraining the sentiments of its nationals within amicable limits, in the face of such a declaration of Western unfriendliness. The history of the past is open and legible to all. Just as in mediæval times the overbearing and arbitrary conduct of foreigners themselves brought about the substitution of dread and dislike for the confidence and hospitality with which they were originally received in Japan, so in these modern days the position of superiority openly assumed by the foreign residents, their rough and rude criticisms

of the country and people, above all the haughty isolation which they persist in maintaining, and their refusal to recognise the empire's claims to civilized treatment, are gradually and surely sapping Japanese regard, and, if suffered to remain unchanged, must inevitably bring about a state of affairs fraught with the gravest international danger. To step back now, in obedience to an unexplained and suddenly adopted resolution of certain residents of Yokohama; to step back and inform Japan that she must be content to revert to the position which she occupied a dozen years ago; to tell her that the time has not come when even an estimate can be formed of the period after which her international ostracism may be brought to an end—to do this would certainly create such a feeling of bitter indignation throughout the whole country that no Administration could be answerable for the consequences. Lord SALISBURY is far too shrewd a statesman to invite such a crisis. He will see quite clearly that if Yokohama's lead is to be followed, Great Britain must fall back upon the *régime* of force, which happily she has been enabled to abandon for ever in her dealings with Japan.

THE ANTI-REVISION MEETING AND THE VERNACULAR PRESS.

OF course the meeting of the 11th instant has attracted considerable attention in Japanese circles, and been very largely commented on in the vernacular press. To the violent utterances of such a newspaper as the *Tokyo Koron* we need not pay much attention, inasmuch as they represent the extreme view of the case, and are no more to be considered representative than the equally violent and far more persistently bitter writing which appears from time to time in the English local press of the foreign settlements. But we are sorry to see that a sensible, solid, and generally moderate journal like the *Shogyo Shimpō*, in language carefully chosen indeed, but none the less emphatic, attributes the movement entirely to the selfishness of British merchants who do not want to expose their established business to any risk of change or competition, and who care nothing about the general progress of trade and industry provided that their own selfish interests are safeguarded. Now it would be idle to deny that there are such merchants in the Yokohama community—men who having built up a business on certain lines, are opposed to everything savouring of innovation; men who do not want the country opened, and do not wish to see any strong encouragement offered to the inflow of Western capital or Western enterprise. It is natural that there should be such men among foreigners, just as on the Japanese side there are not a few merchants who find their account in keeping

things in the old groove, and who pretend that the opening of the country is fraught with danger to national interests, whereas in truth its only danger is to their own monopoly. The *Shogyo Shimpō* must be well aware of the existence of these objectors among its own nationals, and must see that their motives are even less defensible than the selfish conservatism of their foreign counterparts, for whereas the latter only block the path of general progress, the former oppose a consummation in which the honour of their country is involved. While admitting frankly, however, that the foreign opposition is by no means free from the taint of illiberal selfishness, we cannot admit, and the *Shogyo Shimpō* ought not to suspect, that all the opponents of Revision are actuated by such motives. The higher the value set by a man on good laws and their efficient administration, the more reluctant is he to transfer the guardianship of his person and property to codes with which he is not familiar, and to tribunals concerning the competence and purity of which he entertains doubts. It is a very serious step for Englishmen to submit to any alien jurisdiction whatsoever, above all to the jurisdiction of an Oriental country for the first time in their history. Were it proved that educated Japanese do not and cannot appreciate this reluctance on the part of British subjects, we should regard the fact as a strong evidence that Japan is not yet fit to discharge the functions with which she seeks to be entrusted. Instead of suggesting that British merchants, as the originators of and most prominent figures in the present agitation, should be boycotted by the Japanese traders at the treaty ports, the *Shogyo Shimpō* ought to recognise that, in this as in all other Oriental questions, Englishmen take the lead which properly belongs to the preponderance of their interests and to their preëminent sense of the sacredness of personal rights and personal freedom. We do not ourselves agree for one moment with the methods of the promoters of the agitation. On the contrary, we believe that they have reawakened a most mischievous spirit; that they are blind to the true interests of their country in the first place, and of their commerce in the second; that they have placed fresh obstacles in the path of a problem the solution of which is absolutely essential to the smooth relations of Japanese and foreigners; and that their act will one day be prominently classed among a train of incidents contributing to a catastrophe which will be regretted when too late. None the less we give many of them full credit for honest and conscientious motives, and are not at all offended by the blind zeal which induces them to regard all their opponents as renegades and men of corrupt morals. Equally of course must thoughtful persons appreciate and sympathise with the intense chagrin and exas-

peration felt by the Japanese. The *Nichi Nichi Shimbun* says truly that it seems quite hopeless to look for any liberal recognition of Japanese efforts on the part of foreign residents. Reviewing the legislative reforms accomplished during the past twenty years, our contemporary points out that foreigners seem just as dissatisfied and just as distrustful as when they first advanced the valid objection that Japanese laws, being based on Oriental principles, could not be applied with propriety to Occidental peoples. What can be answered to this? Stronger than anything we could write is the flagrant fact that at the meeting of the 11th instant not one single word was uttered showing a sense of the progress Japan has made. Not one of the speakers thought of admitting that she had done much, however far her accomplishments might still, in his opinion, fall short of sufficiency. It was a monotone of condemnation. "Not yet has the time come when even an estimate can be formed of the interval that must elapse before Japan will be fit to assume jurisdiction over the persons and properties of foreigners residing within her territories,"—such was the harsh and sweeping verdict which the meeting was betrayed into passing. Not one of the little group of uncompromising promoters seemed to care a jot how much anger and indignation their reckless proceedings must create in the breasts of every Japanese having any concern for the reputation of his country. Not one paused to think what kind of character such a concert of bigoted contempt and distrust must impart to the international dealings of Western peoples. And to crown all, they did not hesitate to make the Chinese residents their associates in this declaration of Japanese semi-civilization and national incompetence. What wonder that the Japanese are deeply insulted and bitterly angered. If the band of agitators are in any doubt as to the mood which their proceedings must rouse in Japan, let them recall the treatment they themselves, or their newspaper representatives, extend to every one venturing to plead Japan's cause; how they abuse him, hound him, bully him, ascribe to him the meanest motives, and even deny his possession of that sentiment which the most abandoned Englishman never loses—patriotism. In truth the Japanese have ample reason for indignation, but it were well if they can remember that every angry expression uttered by them will surely be construed as an evidence of anti-foreign feeling. They cannot afford to be impatient, unless indeed they are already resigned to the end towards which the acts of men like the promoters of the anti-revision meeting would inevitably drive them.

MR. LOWDER AND TREATY REVISION.

A QUESTION propounded in a few lines often requires an answer filling more than one column. We will try to be as brief as possible in replying to Mr. LOWDER, with whom we share the desire to discuss all matters relating to Treaty Revision in a calm and friendly spirit.

But first we must call attention to the fact that the principal resolution voted at the meeting of the 11th instant, has assumed, by the light of Mr. LOWDER's subsequent explanation, a complexion very different from that indicated by its language. The words of the resolution say that no period can safely be fixed for the unconditional abolition of Consular Jurisdiction. Mr. LOWDER, who proposed and, we believe, framed the resolution, says that a period for the unconditional abolition of Consular Jurisdiction *can* be safely fixed, provided that Japan engages to adopt a measure for strengthening and educating her judiciary. The former hypothesis would preclude Treaty Revision altogether. The latter constitutes the basis upon which all negotiations for Treaty Revision have hitherto been founded. We are now told that the drafter of the resolution intended it to convey the second meaning. But by ordinary readers, and especially by readers acquainted with the history of Treaty Revision, the resolution must inevitably be read in the first sense. To illustrate this, let us refer to the Treaty of 1887, since that seems to have been taken by the malcontents as a point of departure. The Treaty of 1887 provided that the foreign settlements and consular jurisdiction should remain *in statu quo* for five years. At the expiration of that period the settlements were to become as other parts of the Empire, and consular jurisdiction was to be completely and unconditionally abolished. During a period of seven years from the time of its abolition, foreigners coming into Japanese Courts were to find legal experts of Western origin occupying the Bench in a majority. Thus this Treaty fixed five years as the term of life remaining to Consular Jurisdiction, and decreed that it should then die finally and unconditionally. Foreign States reserved to themselves no title to revive the system under any circumstances, and its demise was therefore absolutely unconditional. Mr. LOWDER now explains, if we understand him aright, that the framers of the resolution did not intend it to preclude negotiations on a basis similar to that of the Treaty of 1887. But it will certainly be construed in that prohibitive sense by HER MAJESTY'S Secretary of State for Foreign Affairs, and it must have been voted in that sense by the Meeting, for its proposer did not then attempt to explain, as he has since done, that it was intended to convey a meaning not deducible from its language. We shall not, however,

pursue this part of the subject. It is at all events satisfactory to learn that the proposer of the resolution did not intend to pledge the meeting to any illiberal and retrogressive policy, and that, assuming the resolution to have been voted in the sense contemplated by him, a large number of Yokohama residents were in accord with the proposals of the Japanese Government in 1887.

Passing now to Mr. LOWDER's query, we might remind him that our charge of inconsistency was based on the radical difference between the strict terms of his resolution and the terms of the Treaty of 1887, which he approved and promoted. So soon as he asserts that he adheres to his attitude of 1887, and that his resolution was not framed in opposition to that attitude, we freely admit—as we did in our foot-note to his first letter—that his intentions at least are consistent. But we presume that this point is altogether secondary to his desire to discuss the problem indicated by his query. Has, then, "anything occurred between 1887 and 1890 that would justify any modification to-day of the admission of three years ago as to the necessity for the judicial safeguards that were agreed to by the Japanese Government and the Foreign Representatives?" Yes, we reply; something very important has occurred: the promulgation of the Constitution. It is for the Japanese to interpret their own Constitution, and the majority have interpreted it as vesting in Japanese subjects an exclusive right of property in civil appointments, and therefore as declaring that to confer such appointments on aliens would be to dispose unlawfully of a portion of the nation's property. Against this interpretation we ourselves fought with what strength we possessed. But the other side won the day, and it is hard now to find a single Japanese willing to admit that the Constitution would not be violated were alienage made a condition of appointment to places on the Japanese Bench. Things must be dealt with in their actuality. The Constitution stands irremovably in the way of giving Japanese judgeships to foreign legal experts.

A second thing has occurred: years have passed. There is no longer any possibility of negotiating revised treaties, and putting them into operation before the meeting of Parliament. The Diet possesses no treaty-making power, but the Diet must give its consent to any law required for putting a treaty into operation. The enactment of a law would be necessary in order to the constitution of courts having a majority of foreign experts on the Bench. Such a law the Diet would undoubtedly refuse to pass. Therefore the Japanese Government can no longer agree to embody the Judge Guarantee in the revised treaties.

A third thing has occurred: the Japanese nation has grown up to a much fuller

sense of its rights and dignity. In 1885, when the Judge Guarantee found a place in the basis of negotiations, the Japanese were undoubtedly ready to make the concession, hurtful though it must necessarily have been to their patriotic feeling. The occasion was unique. Had it been wisely utilized, the treaty-revision problem might have been satisfactorily solved long ago. But it was not wisely utilized. In 1887 when the guarantee emerged from the manipulation of the negotiators, it had assumed startling dimensions. The body of Judges of foreign origin, destined to discharge judicial functions in respect of three or four thousand foreigners, had swelled to a number in excess of the total *personnel* of the English Bench, and appeared capable of very much larger expansion according to the terms of the Treaty. Nominally Japanese Judges, these foreigners were completely removed beyond Japanese authority, and were made answerable to themselves alone for their conduct and competence. Avowedly appointed by the Japanese Government and to discharge legal functions only, it had become plain that each Foreign Power would claim a voice in their selection, and that, being nominated in proportion to the preponderance of their countries' respective interests in Japan, they would tend to become judicial representatives of their nationals, not impartial arbiters of right and wrong. Presented in such a form, the Judge Guarantee shocked the Japanese nation. Mr. LOWDER speaks of it as "acquiesced in by all Japanese and foreigners alike." He means the guarantee of 1885, certainly not the guarantee of 1887, which, by short-sighted and imprudent handling, had been converted from a reasonable and statesmanlike proposal into a veritable scarecrow, calculated to warn Japan away from the field of every similar concession in the future.

We need not pursue this retrospect. Enough has been said to show that between 1887 and 1890—or, to speak more accurately, between 1885 and 1890—the course of events has carried Japan beyond all possibility of accepting the judicial guarantee, whether in its practical and valuable form of 1885, or in its attenuated and comparatively worthless form of 1889.

But, it will be justly objected, all this has reference solely to Japan's point of view. For foreigners the crucial consideration is whether they have better grounds for confidence now than they had in 1887. We think that they have. In the first place, the progress of Japanese reform is maturer by three years. No one will deny that time has much to do with this question. Every year sees an improvement in the education and experience of the Japanese judiciary. If it were possible to conceive the treaties left unrevoked for the next decade, it will be conceded that Japan, at the expiration of that period, supposing her present rate of progress to

remain unbroken, will be in a position to claim a much larger measure of international consideration than she can expect now. What is true of ten years, is proportionately true of three. Further, the promulgation of the Constitution has greatly raised the status of Japanese Judges by securing them in their tenure of office for life, and by making them independent of the Executive. The organization of the courts has also been materially improved, at large cost to the nation—a reform which constituted one of the secondary guarantees contemplated by the foreign negotiators in 1887. Different estimates may be formed of the value of all this. We limit ourselves to noting that such facts must by no means be ignored in comparing the situation in 1887 with the situation in 1890.

It comes to this then—that the day has irrevocably past when the appointment of foreign legal experts to the Japanese Bench can be made a condition of Treaty Revision, and that foreigners have more reason to trust the Japanese judiciary now than they had when such a condition was first proposed.

This seems to us a strictly fair and accurate statement of the situation which has to be dealt with by the negotiators. That there is neither possibility of finding, nor necessity to seek, an exit which, though differing from the paths hitherto chosen, shall be at once acceptable to the Japanese and satisfactory to foreigners, we do not for a moment assert.

POSTAL SAVINGS BANKS REGULATIONS.

LAW No. 63.

We hereby give our sanction to the present Regulations relating to Postal Savings Banks, and order the same to be duly promulgated. This law shall come into force on and after the 1st day of the 1st month of the 24th year of Meiji.

[His Imperial Majesty's Sign-manual.]

[Great Seal.]

Dated August 12th, 1890.

(Countersigned)

COUNT YAMAGATA ARITOMO,
Minister President of State.
COUNT GOTO SHOJIRO,
Minister of State for Communications.

Article 1.—Matters relating to Postal Savings Banks shall be under the control of the Minister of State for Communications.

Article 2.—The deposit and repayment of funds entrusted to Postal Savings Banks shall be dealt with by Postal and Telegraph Offices and by such Post Offices as shall be fixed by the Minister of State for Communications.

Postal Savings Banks shall be opened at places where the Minister of State for Communications deems it necessary to establish the same, and such banks shall receive deposits.

Article 3.—Evidence of the deposit of money shall consist of a pass-book in which shall be entered all money deposited, and evidence of repayment of money shall be the document of repayment.

Article 4.—The amount to be deposited by one person at one time shall be to *sen* or above; fractions of one *sen* shall not be received, and the maximum that may be deposited in one day by one depositor shall not exceed *yen* 50.

The total sum of money deposited by one person shall not exceed *yen* 500, counting principal and interest together.

Article 5.—The rate of interest on money deposited shall be decided by Imperial Ordinance.

The interest on money deposited shall be computed on March 31st in each year, and be added to the capital, and interest shall begin to run from April.

No interest shall be allowed on money deposited in a Post Office for the month when such deposit took place, nor shall interest be allowed on sums under 10 *sen*.

Should repayment of money deposited in a Post Office be applied for, interest shall not be allowed for the month in which the document of repayment is issued.

If the interest on a sum deposited involves fractions of *rin*, such fractional sums shall not be included in computing the interest.

Article 6.—Depositors of money in a Post Office may at any time require repayment of all or part of the money deposited. In the case of part repayment, however, interest which has not yet been added to capital may not be included in the repayment.

Article 7.—Depositors of money in a Post Office may apply for the purchase and custody of Public Loan Bonds with part of the money deposited. Any Public Loan Bond so acquired shall, however, be one whose nominal amount is *yen* 50 or a multiple of *yen* 50.

Depositors may at any time require delivery of the above mentioned Public Loan Bonds into their custody.

When depositors require repayment of all the money deposited by them, they shall also demand the delivery of public loan bonds acquired on their account.

Article 8.—Should a deposit in the Postal Savings Bank exceed the limit of Article 4, the fact shall be intimated to the depositor, who shall be required to reduce the amount to the limit fixed.

Should such reduction not be made within 60 days after the notice provided in the last article is given, Public Loan Bonds shall be bought with the excess of deposited money, for the account of the depositor. In this case, however, the bond to be purchased may not exceed the nominal value of *yen* 50.

Article 9.—One pass-book shall be given to each depositor; should any person in depositing money receive two pass-books, repayment shall be made, without interest, of all money except that mentioned in the pass-book received first; and repayment shall be made with interest only on the larger sum when two pass-books so received bear the same date.

Article 10.—Depositors in Postal Savings Banks shall present their pass-books to the Department of Communications at the end of each full year after the month in which the first deposit was made, and shall then obtain entry of the interest calculated for the term. Should the last full year be begun in April or May, the book shall in future be presented in June.

Article 11.—Should a depositor in the Postal Savings Banks fail to make any fresh deposits, or to demand repayment, or to present his pass-book to the Department of Communications during 10 years after the last deposit, or after the pass-book was presented and written up, or interest was entered in it for the last time, or after the last repayment was applied for, no interest shall be added to the principal from the month next to that in which the term elapsed. Interest on Public Loan Bonds in the custody of the banks shall not be so treated however.

Should no deposit be made, or repayment required, or pass-book presented to the Department of Communications during 20 years in addition to the above term, the deposited funds shall become the property of the Government.

Should there be in the last case Public Loan Bonds in the custody of the Banks, then such bonds shall also become the property of the Government.

When a deposit is made or repayment required or a pass-book presented to the Department of Communications, interest shall accrue from the next month.

Article 12.—Money the repayment of which has been applied for, or Public Loan Bonds delivery of which has been required, must be received within one year from the date of the document of repayment or the document of delivery.

If they be not so accepted within such period, they shall be sent to the deposit office.

Article 13.—No application can be made for transfer to another name of money deposited in the Postal Savings Banks, except when a change has taken place in ownership by succession.

Article 14.—In cases where the Government is responsible for the indemnification of loss by depositors, the latter must apply for such indemnifica-

tion within one year after the date on which the loss was sustained, or after the date on which entry of interest for the next term would be made in the absence of knowledge of such loss. Otherwise the Government shall be freed from responsibility.

Article 15.—Mail matter relating to the affairs of Postal Savings Banks shall be carried free through the post.

Article 16.—Documents relating to the receipt and payments of money deposited in Postal Savings Banks shall be released from stamp duty.

Article 17.—Bye-laws for the carrying out of this law shall be fixed by the Minister of State for Communications.

SUPPLEMENTARY RULE.

Articles 157 202 and paragraph 2, Article 242, of the Regulations as to Posts, Notification No. 59, December, the 15th year of Meiji, shall be abolished on and after the day on which this law shall come into force.

GOVERNMENT CONTRACTS.

IMPERIAL ORDINANCE No. 193.

We hereby give our sanction to the present Regulations relating to Voluntary Contracts as to works, as well as sales and purchases, leasing or hiring property of the Government, and order the same to be duly promulgated.

(His Imperial Majesty's Sign Manual.)
(Great Seal.)

Dated September 1st, 1890.

(Countersigned)

COUNT MATSUKATA MASAYOSHI,
Minister of State for Finance.

When no bidder comes forward for public works, or for the sale or purchase, or for the leasing or hiring, of property of the Government by competition, or where the prescribed price has not been reached, even on a second invitation of tenders according to Article 77 of the Regulations of Finance, voluntary contracts may be made. Prices and other conditions settled previously in competition must, however, be adhered to.

**COMMERCIAL AND MARINE
REGISTRY.**

IMPERIAL ORDINANCE No. 207.

We hereby give our sanction to the present Regulations providing for an addition to the Regulations as to the registry of Commerce and Vessels, and order the same to be duly promulgated.

(His Imperial Majesty's Sign-manual.)

(Great Seal.)

Dated September 12th, 1890.

(Countersigned)

COUNT MATSUKATA MASAYOSHI,
Minister of State for Finance.
COUNT YAMADA AKIYOSHI,
Minister of State for Justice.

The following article shall be added to Imperial Ordinance No. 133, promulgated in July of the present year:—

Article 3.—Fees shall be paid in registry stamps.

THE RAILWAY BOARD.

IMPERIAL ORDINANCE No. 198.

We hereby give our sanction to the present Regulations relating to the changing of the name and the control of the Railway Bureau, and order the same to be duly promulgated.

(His Imperial Majesty's Sign-manual.)

(Great Seal.)

Dated September 5th, 1890.

(Countersigned)

COUNT YAMAGATA ARITOMO,
Minister President of State.
COUNT SAITO TSUKUMICHI,
Minister of State for Home Affairs.

The Railway Bureau shall become the Railway Board and be under the control of the Minister of State for Home Affairs.

CUSTOM-HOUSES.

LAW No. 80.

We hereby give our sanction to the present Law relating to Custom-Houses and order the same to be duly promulgated. We also order that the same shall come into force on and after the 1st day of the 11th month of the 23rd year of Meiji.

[His Imperial Majesty's Sign-manual.]

[Great Seal.]

Dated September 6th, 1890.

(Countersigned)

COUNT YAMAGATA ARITOMO,
Minister President of State.
COUNT MATSUKATA MASAYOSHI,
Minister of State for Finance.

Article 1.—Matters relating to the entrance and clearance of vessels of foreign build and vessels of Japanese build which navigate between this and foreign countries, as well as to the export and import of goods at open ports shall be under the jurisdiction of a custom-house.

Article 2.—Matters relating to the control of foreign trade at any open port shall be dealt with by the custom-house which has jurisdiction over such port.

Article 3.—No vessels shall be permitted, except in special cases mentioned in laws or ordinances, to proceed to a foreign country from any port which is not an open one, or enter to any port which is not an open one from a foreign country. The master of any vessel contravening this law shall be punished with a fine of yen 1,000.

No navigable vessel trading between this and a foreign State is permitted to enter, from an open port, except in special cases mentioned in laws or ordinances, any port which is not opened. The punishment for breaches of this provision shall be the same as provided in the last paragraph.

Article 4.—Vessels proposing to proceed to foreign countries shall obtain beforehand the permission of the chief of a custom-house. The owner of any vessel which proceeds to a foreign country without obtaining such permission shall be punished with a fine of yen 1,000, and the cargo of such vessel shall be forfeited.

Article 5.—Persons producing false documents to a custom-house for the purpose of evading the whole or part of the customs duty shall be punished with a fine of yen 125.

Article 6.—Should the freight in an invoice produced to the custom-house of the port to which it is directed, be less as compared with the invoice produced to the custom-house of the port whence the freight was sent, then, in accordance with the Rules of Custom-houses as to coastwise trading vessels which have freight on board in regard to which the usual procedure for import has not been complied with, and if such conduct be found to be wrongful, the master of such vessel shall be punished with a fine of yen 1,000.

Article 7.—In the case of persons who transport goods the export of which is prohibited, between open ports, in accordance with the Rules of Custom-houses, such persons shall produce a certificate as to landing the goods, given by the Custom-house to which the goods were directed, to the Custom-house whence they were sent, within the period mentioned in the regulations. For each breach of this regulation the offender shall be punished with fines or penalties equal in amount to the original value of the goods.

Article 8.—Persons who have transported goods between open ports in accordance with the Rules of Custom-houses, who have lost or mislaid the certificate of transport, and who do not take the prescribed action within the period mentioned in the Rules, shall be punished with fines or penalties equal to five hundredths ($\frac{1}{200}$) of the original value of the goods so transported.

Article 9.—Persons who land imported goods not mentioned in invoices shall be punished with fines or penalties equal to the import duty on such goods, in addition to forfeiting the latter.

Article 10.—Where goods the export of which is prohibited, are exported, or the loading or landing of export or import goods takes place at a port not opened, against laws and orders, such goods shall be forfeited.

Where goods are landed without obtaining a licence for landing in accordance with the Rules of Custom-houses, or goods are loaded without obtaining a licence for loading or for transport, or goods are imported without obtaining a licence for import, such goods shall be forfeited.

Article 11.—Where prohibited goods, or goods which should bear duty but are not mentioned in the letter of notice of export and import, or in the document which enumerates the goods brought, are concealed in an export or import package they with the package shall be forfeited.

Where goods which should bear duty are concealed in travellers' luggage such goods shall be forfeited.

The application of the Penal Code shall not be interfered with by this article.

Article 12.—If goods which should be forfeited are already sold or consumed, their price shall be imposed.

Article 13.—If the Chief of a Custom-house considers it to be necessary for carrying into practice this law or the Rules of Custom-houses, he may suspend the departure of vessels, or order an inspector of the Custom-house by writ to seize goods designed for transport or for export or import.

Article 14.—Inspectors of Custom-houses may go on board vessels entering ports to inquire into necessary matters and examine the interior of such vessels, or conduct inspection on board such vessels.

The master of such a vessel shall provide a cabin for such inspector and shall treat him properly.

Article 15.—Should the inspector of a Custom house know of the existence of, or believe that there are in existence smuggled goods, he may take measures for finding proofs of a breach of the Rules by entering houses or other places.

Inspectors of Custom-houses shall carry a badge to show their office, in the cases mentioned in the last and in this article.

Article 16.—The Chief of a Custom-house may pronounce a decree against persons who contravene this law or the Rules of Custom-houses, ordering them to bring to such Custom-house money equal to the fines or penalties imposed or the goods to be forfeited, or the cost of conducting an examination into a breach of the law or Rules.

Article 17.—Persons thus ordered shall produce a letter of receipt whether they obey such decree or not, within two days, Custom-house holidays being excluded.

Should they obey such decree the goods shall be brought the same day, and the money shall be paid within ten days.

Should they refuse to obey, or produce the letter of receipt within the period mentioned in paragraph 1, or to bring in the money or the goods, the Chief of such Custom-house shall appeal to the Authorities.

Article 18.—When the Chief of a Custom-house conducts an examination into an alleged offence he may summon the offender, witnesses, and other persons concerned.

The Chief of a Custom House shall appeal to the Authorities in regard to any offence if the decree mentioned in Article 16 cannot be carried out owing to the non-attendance of the offender, witness, or other person concerned, or if objections are raised.

Article 19.—The costs of examination into an offence by the Chief of a Custom House shall be reckoned and decided in accordance with the process adopted in criminal judgments.

Article 20.—In the case of offences against this law and the Rules of Custom-Houses, the provisions as to mitigations, aggravation by second offence, and simultaneous offences, mentioned in the Penal Code, shall not be applied.

Article 21.—Matters relating to vessels navigating between this and foreign countries, vessels navigating coastwise; goods for export and import, the remission of duty, release from duty, and tentative duty, except those mentioned in this law, shall be regulated by the Rules of Custom-houses.

Fines or penalties under yen 100 may be provided in the Rules of Custom-houses.

Article 22.—The Rules of Custom-houses shall be decided by Imperial Ordinance.

SUPPLEMENTARY RULES.

The paragraph in the Rules of Merchant Shipping, Notification dated January 27th, the 3rd year of Meiji, which deals with the prohibition of navigation to foreign countries without licence, Notification No. 123, the 7th year of Meiji, Notification No. 20, the 8th year of Meiji, Notification No. 163, the 8th year of Meiji, and Notification No. 149, the 9th year of Meiji, shall be abolished on and after the day on which this law shall come into force.

"IN DARKEST AFRICA."—EFFECT OF THE LIEBIG COMPANY'S EXTRACT OF MEAT ON A MADZ CARVER.—"On the 22nd, soon after the advance had reached camp, a cold and heavy shower of rain fell, which demoralised many in the column; their failing energies and their impoverished systems were not proof against cold. Madzis and Zanzibaris dropped their loads in the road, and rushed helter-skelter for the camp. One Madi managed to crawl near my tent, wherein a candle was lit, for in a rainstorm the forest, even in daylight, is as dark as on an ordinary night in the grassland. Hearing him groan, I issued out with the candle, and found the naked body rigid in the mud, unable to move. As he saw the candle-flame, his eyes dilated widely, and he attempted to grasp it with his hands. He was at once borne to a fire, and laid within a few inches of it, and with the addition of a pint of hot broth made from the Liebig Company's Extract of Meat, we restored him to his senses. On the road in front of the rear guard two Madzis died, and also one Zanzibari of the rear column, stricken instantaneously to death by the intensely cold rain."—Stanley's "In Darkest Africa."

CORRESPONDENCE.

THE JAPANESE "BANTO."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have waited before addressing you, hoping that some abler pen than mine would be wielded in defence of the Japanese Merchant. Though what your Japanese correspondent, in a recent issue, says is in the main true, yet I have come across many of the class he cries down who are particularly honest. Just lately I had this experience. I had some orders on commission; these were placed at home at the very top of the Metal market, immediately afterwards home prices fell greatly, and the goods were paid for before silver had appreciated much, yet they were taken without a murmur, all that was said was "that it is unfortunate." For the last twelve years I have never had anything to do with a banto, and to the banto class I ascribe all of the foreigner's woes. I have no doubt in my mind but that the demand to participate in the profits of the rise in exchange, mentioned the other day in one of the Yokohama papers, was suggested by a banto. The banto has a peculiar position; he must pretend to serve both buyer and seller; he receives wages from the foreigner and a commission from the Japanese. The banto originally came from Nagasaki, where many years of diamond cut-diamond business between Japanese and Dutch evolved him. My experience is that if you can get a Japanese to have faith in you he will deal pretty honestly with you. There are many rogues in Japan; so there are elsewhere. Their modes of looking at certain subjects are sometimes different from ours, but then from their standpoint of view we are not quite what we ought to be.

I remain, dear Sir, yours truly,

TWENTY-ONE YEARS IN JAPAN.

September 9th, 1890.

MR. LOWDER AND TREATY REVISION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It seems to afford you satisfaction to misrepresent me. My opinion on the subject of treaty revision, whatever it may be worth, has been public property for at least eighteen years. During that time I always have been, and still am distinctly in favour of concession, to the reasonable demands of this country. I may cite the proposals put forward or agreed to in 1887 by Japan's greatest and wisest Foreign Minister as illustrative of the meaning I here attach to the word reasonable. At that time all Japanese and foreigners alike, you yourself included, recognized and admitted that the judicial safeguards contemplated in those proposals were necessary. I know of nothing that has occurred during the three years that have elapsed since then to justify any modification of that admission. Do you?

Yours faithfully,

J. F. LOWDER.

September 14th, 1890.

[If Mr. Lowder had confined himself to the point noted in this letter, we should have had no cause to question his consistency, whatever we might have thought of the good taste of his action. But he seems to forget that he proposed, and spoke in support of, a resolution declaring that "the time has not arrived when an estimate can be formed of the period within which the unconditional relinquishment of extraterritorial jurisdiction in Japan can be safely promised." A distinct promise of that nature was included in the terms of the Treaty of 1857. A finite term of years was fixed, at the expiration of which Japan should recover full and unconditional jurisdiction over foreigners within her territories. Such a promise and such a fixed term must be included in the draft of any negotiable treaty. Mr. Lowder must know this perfectly well. He must know that the object of all treaty revision, from Japan's point of view, is the total abolition of consular jurisdiction after a definite period. Therefore he must also know that his proposition is distinctly and unequivocally intended to announce the complete removal of treaty revision from the field of practical politics, for the present at all events. It is here that the contradiction between his past attitude and his present proceedings is so flagrant. He is very greatly mistaken in his idea that it gives us satisfaction to misrepresent him.—Ed. J.M.]

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I am pleased to learn from your editorial note to my letter of the 14th instant that I am mistaken in thinking it gives you satisfaction to misrepresent me. Then for whose satisfaction do you do so?

You say that in 1887 a finite term of years was fixed, at the expiration of which Japan should recover full and unconditional jurisdiction over foreigners within her territories; and that therefore I am inconsistent in now supporting a resolution declaring that "the time has not arrived when an estimate can be formed of the period within which the unconditional relinquishment of extraterritorial jurisdiction in Japan can be safely promised," seeing that "a distinct promise of that nature was included in the terms of the Treaty of 1887."

This is no answer to the very simple question I propounded, but a mere evasion of it. It seems necessary to remind you that the promise given in 1887 that extra-territorial jurisdiction should be unconditionally abolished at the end of fifteen years, was itself conditional upon the undertaking that during the whole of that period the efficiency of the Japanese Bench should be guaranteed by the addition thereto of a large number of foreign judges, whose educational influence was of course a main object of the proviso. It is the absence of this condition which constitutes the difference between the proposals of 1887 and 1890, and which justifies the terms of the resolution you affect to misunderstand.

Yours faithfully,

J. F. LOWDER.

Yokohama, September 15th, 1890.

[Nothing that Mr. Lowder writes now can change the language of the resolution proposed by him at the meeting on the 11th instant. The resolution said:—"In the opinion of this meeting the time has not arrived when an estimate can be formed of the period within which the unconditional relinquishment of extraterritorial jurisdiction in Japan can be safely promised." This statement is perfectly explicit. What Mr. Lowder may have desired it to mean we do not pretend to know. What it does actually mean neither we nor any one else can doubt. If the resolution was intended to convey the signification now attached to it by Mr. Lowder, it should have been worded thus:—"In the opinion of this meeting the time has not arrived when an estimate can be formed of the period within which the relinquishment of extraterritorial jurisdiction in Japan can be unconditionally promised with safety." We observe with some surprise that Mr. Lowder is ignorant of, or at any rate that he greatly mis-states, the terms of the Treaty of 1887. But that is a question apart. Should he have occasion to address another communication to this journal, it will be rejected unless he observes the ordinary forms of courtesy more strictly than he has done hitherto in this correspondence.—Ed. J.M.]

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Will you be good enough to pardon all previous faults in taste, courtesy, consistency, and grammar on my part; to read the resolution of the foreign residents of Yokohama, to which you attach a hard and fast meaning, in the light of the interpretation placed upon it by me in my communication of yesterday; and then to answer the question I took the liberty of putting to you in my first letter, namely, whether you know of anything that has occurred between 1887 and 1890 that would justify any modification to-day of the admission of three years ago as to the necessity for the judicial safeguards that were then agreed to by the Japanese Government and the Foreign Representatives, and acquiesced in by all Japanese and foreigners alike, yourself included?

You will, of course, see the bearing of this question upon the present discussion. You have challenged me to give my reasons for my present attitude. I point to those which were universally admitted to exist in 1887, and I say that they exist still.

Yours faithfully,

J. F. LOWDER.

September 16th, 1890.

[The issue raised in this letter is entirely unconnected with the charge which Mr. Lowder originally undertook to rebut. Our accusation was that the resolution proposed by him conflicted flagrantly with his attitude in 1887. He now asks us whether we can assign any reason to justify him in changing that attitude. We have nevertheless endeavoured to answer his questions in our leading columns.—Ed. J.M.]

THE TREATY REVISION MEETING.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your report of the Treaty Revision Meeting held yesterday in Yokohama, one of the speakers said: "Under the arrangements that have prevailed in the treaty ports we have been enabled to move along with the Japanese with very little friction indeed."—(Applause.) Does not this statement conflict somewhat with certain other statements recently made by Yokohama merchants in the newspapers about the general dishonesty and unscrupulousness of the Japanese? One would suppose from the way the Yokohama merchants are said to suffer at the hand of the Japanese merchants that their lives would be far from frictionless. The same speaker points out the enormous importance of the well-known safeguards of English liberty: *habeas corpus*, trial by jury, and the fact that an Englishman's house is his castle. If the absence of these safeguards constitute a true ground for the continuance of the present condition of extraterritoriality, ought not the same claim for extraterritoriality to be made in France, Germany, Russia, and in fact nearly every country of the civilized world except England and America. I am no lawyer, but I am of the opinion that *habeas corpus* is unknown in Europe outside of England; trial by jury is likewise unknown in Continental Europe except in certain criminal cases in France. Surely the German and French gentlemen must, like the Roman augurs, have smiled at each other when they listened to this argument in favour of extraterritoriality. As I understand it, no treaty is to be made by any foreign country with Japan until her system of law is perfected, a system of law compiled by

foreign experts from Germany and France. It may be true that the Japanese will not impartially carry out this law, but that was not the point raised. If the speaker in yesterday's meeting wishes to have his English safeguards about him at all times, he had better begin his reforms in France and Germany (not to mention Russia). Was the gentleman quite fair, after making his remarks, in calling for a representative Committee of the Community, instead of a representative Committee of his own countrymen or Americans?

Yours truly,

X.

Tokio, September 12th, 1890.

THE ANTI-TREATY REVISION MEETING.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It is easy for a savior or a petty clerk, or for people from Macao or the Celestial Empire, to raise the common cry that foreigners cannot come under the jurisdiction of Japan. But to impart to that cry the sound of reason, persuasion, and conviction is another thing, even when the attempt is made by such men as Messrs. Lowder and Brooke.

I for one should be very glad to hear fair discussions on a question which necessarily affects foreign interests, but I am at a loss to understand why the meeting swallowed the resolutions like a pill or a draught without any discussion. Unlike what one might have expected from a lawyer, Mr. Lowder did not deduce any specific objection why foreigners can't submit to Japanese jurisdiction. The objections raised as the gravest by Mr. Brooke were that in 1872 torture was part of the judicial system; prisons were in a lamentable state, and there was no law that foreigners could understand; there is no right of *habeas corpus*; the system of juries does not exist; the supervision and surveillance in this country though tolerated by natives, is altogether foreign to an alien; and that the castle-like inviolability of an Englishman's house may not be recognized by the Japanese.

These objections seem to me very weak. On the same principle, a British Minister accredited to the Court of Rome might raise objections in a treaty negotiation of to-day that in Italy torture was part of the judicial system, that prisons were in a lamentable state, and that there was no law which Englishmen could understand, 25 years ago. A British Minister accredited to the French Republic might insist that British subjects living in France must have the right of *habeas corpus*. Is it only Japan that has not that much questioned system of juries? Is it the duty of a country to teach and educate all comers in its institutions and laws? Is it not the fault of foreigners themselves that they can't understand Japanese laws? I presume that supervision and surveillance will not be so altogether foreign to those who come from a country where Criminal Codes are based on the Code Napoleon. A man's house here in Japan cannot be entered nor can a man be arrested without proper warrant. Formerly the house of a Japanese was even more sacred than an Englishman's house. The criminal law which was partly in force until 1882 said that a man's house could not be entered without the permission of the owner, and that anyone venturing to enter against the will of the owner could be put to death with impunity by the owner. That spirit was jealously guarded by the framers of the present Code. Be it as it may, a man's house here is safer than a man's house in Ireland. I am sorry that Mr. Brooke did not state his objections to the Japanese Courts of Law. If he has any, I wish to warn him not to forget to compare what he finds here with what exists elsewhere; what exists even in English Courts of Law. I saw the other day in the *Japan Gazette* some English gentleman's complaint about his case being delayed in one of the Japanese Courts. If I rightly remember, in one instance three months and in another six were spent between the filing of a petition and the rendering of judgment. As a matter of fact a case to be conducted in more than one language takes a longer time than a case conducted in one language all through. You cannot expect a court of law to be perfect in any country. Delay and expense are common to law-suits everywhere. I am in a position to state that a similar case requires a very much longer time in England, and involves a far larger expenditure.

Mr. Brooke's view seems to be that an Englishman has the right to expect the same English institutions wherever he goes. It seems to me that he must wait a pretty long time to fulfill his expectation; he must wait until England conquers the whole world and turns it into one country.

I am quite in accord with those who assembled on the 11th that the resolutions be forwarded in due course to Her Majesty's Government, accompanied by a request for favourable consideration. But I see some doubt whether Lord Salisbury as a guar-

dian of British interests in the large sense of the term will swallow the resolutions as they were swallowed here. He has to look a little ahead; has to consider the general interests of the British Empire. He knows very well that a great question like this does not depend on the number of sales or purchases made by a few foreigners in a little settlement. He knows very well that British statesmen cannot afford to consider the views of the share-holders of the East India Company where the control of India has to be taken over. He will not ask, are such and such Japanese laws different from corresponding statutes in England? He will ask, is Japan a fairly well governed country? Is she not a better governed country than Hayti, Cuba, and some of the South and Central American States? Is she not a better governed country than even some European States?

Your obedient servant,

A JAPANESE WHO HAS TRAVELLED.

Tokyo, September 14th, 1890.

TREATY REVISION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—On March 20th, 1886, I had such interest in Treaty Revision as prompted me to raise a warning voice through the medium of your columns. Mr. J. A. Fraser had written his opinions, promulgated by the *Japan Herald* of the 17th of March. Mr. Fraser said:—"I feel sure that a feeling of uneasiness, amounting it may almost be said to anxiety, pervades the members of this community—a feeling intensified by the thought that some changes in the status of foreigners in this country are in contemplation, possibly impending, but of the nature of which they have no exact information, and in regard to which the respective Governments may afford them no opportunity of expressing an opinion." Mr. Fraser was afraid that extraterritoriality would be abolished at a more or less early date with the consent of the Treaty Powers. Mr. Fraser said that he must "decline to endorse the statement that there is ability in Japan to administer her laws, and that such an expedient as the so-called mixed tribunals would fail to remedy the evil." Mr. Fraser conceded that "it might be a desirable step, and might be productive in time of some benefit to the commerce of the country, but that the balance of advantage would be undoubtedly to Japan." Mr. Fraser was a good representative of the opinions and desires of the then residents of Yokohama. Mr. Fraser then thought that foreign trade would be best carried on within the confines of the open ports. The warning voice, added to the spirited letter of Mr. Fraser, had no immediate effect; the foreign residents remained supine and unconcerned. Now there is energy and purpose manifested in the matter of Treaty Revision, but in a modified form. The refuge of extraterritoriality may be swept away by common consent after a fixed and full period of five years provided an admixture of foreigners on the Bench is guaranteed. Such an admixture in 1886 was not in favour. Now it is desirable, and is deemed to be just the thing. It is only the fool who never changes his opinions, so let us look upon the men who in 1886 held with Mr. Fraser did as wise men, inasmuch as they have changed their opinions regarding the so-called mixed tribunals. Give us mixed tribunals and Treaty Revision is not so bad after all, but to submit to Japanese jurisdiction without that guarantee is protested against. There is a Committee of 37 good men and true, who are to see to it that no new treaty is made that does not provide for foreigners on the Japanese Bench, though just what interests these foreigners would benefit during the period that Consular jurisdiction is in force in the treaty ports is not shown. There are at present no vested interests held by foreigners in the country outside of treaty limits; there can be none while the present treaties exist and are in force.

Supposing that the active remonstrance formulated by the fearing, tender-footed projectors and participants in the late meeting held in the Public Hall should fail of its purpose, what interest would suffer. At present no one is allowed to place himself under Japanese jurisdiction as a foreigner. Should a treaty be signed by Great Britain giving to the Japanese Government complete and full jurisdiction over British subjects who should elect to try their fortune in the interior, why should anyone fear for his well-being? The treaty ports will afford them a refuge for a term of five years. No man can take them by the throat and force them to become subject to Japanese jurisdiction, with mixed or unmixed Courts. If they have that dread of Japanese Courts, and Japanese justice, it would seem that a full period of five years after the promulgation of a new treaty would prove sufficient time for one or

all to put their house in order and enable them to close all accounts with the merchants they are so fearful of trusting, giving them ample time to shake the dust of Japan from their feet, and bid themselves to other lands without detriment to their material interests. There is no treaty to be made that will divest any Government of its duty and privilege of caring for its citizens or subjects wherever it has a diplomatic representative. England would not suffer Japan or any other country, through its tribunals, to jeopardise the lives or vested interests of its subjects. America protects its citizens throughout the wide world, no matter what Government attempts a wrong upon them; so do all Governments that are worthy of respect in the world. Does an Englishman fear that his Government will not protect him against outrage in Japan? If there is one such I fear he has lost faith in the British Lion. It has been for so long the correct thing to hold everything Japanese in contempt, whenever the present condition of things is attempted to be altered, that to be consistent the average foreigner, yes, even the Chinaman, must throw his castor into the ring and declare that nothing must be done without guarantees being given that the so-called Mixed Courts shall be established. Of course he will demand that he have at least one Judge on whom he could depend, and who but another Chinaman would suit him, and all protestants must be suited or they will not submit—viva la humbug. We must name the men we desire for Judge; we have them in Yokohama. Brooke of the *Herald* is our first choice. He is nearly a square man.

Yours, &c.,

ANXIOUS WARNER OF 1886.

September 15th, 1890.

THE TOKYO HOTEL.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Allow me to correct one or two misconceptions contained in your leader of the 3rd instant upon the subject of the New Imperial Hotel in Tokyo. I am therein mentioned as having devised new foundations for this building, and therefore, it would seem, by implication, as having pronounced defective the foundations first executed by the "original European architect." The facts of my slight connection with the structure in question are as follows:—

The promoters of the Hotel having, for reasons with which I am not acquainted, made a final settlement with the architects who had prepared the original designs and planned the foundations of the building, placed the subsequent control in the hands of Mr. Watanabe, Japanese architect of the modern school, who had just returned from Berlin. Mr. Watanabe, working on the lines already determined by the executed foundations, prepared new plans and elevations suited to a somewhat altered programme, and it was after this that I was professionally consulted, in conjunction with Mr. Watanabe, as to the best methods of construction to be adopted in the superstructure.

Considering the very unreliable nature of the soil with which I was familiar, and also the demand for a speedy completion of the building which was intended as a commercial enterprise, I did not hesitate to recommend the employment of the lightest possible structure consistent with stability and durability, and suggested the adoption of a strong timber and iron framework filled in with brick, and cemented, in order to render it fire-proof. I also expressed the opinion that a building thus tied and braced continuously in every direction, besides distributing weights with greater equality, presented certain seismicological advantages which could not exist in any equally light structure executed entirely in brickwork or masonry.

These very simple suggestions of mine, were, I believe, put into practice.

With regard to the general arrangement of the hotel, it goes without saying that, finding foundations almost completed when he assumed charge of the work, the architect, Mr. Watanabe, followed to a great extent the original ground plans; but for modifications in these plans, for the whole exterior design, construction, details, and architectural decoration, and for the very satisfactory execution of the building within a reasonable time, all responsibility and full credit belongs to Mr. Watanabe.

I am, Sir, yours obediently,

J. CONDER.

Tokyo, Sept. 10th, 1890.

A DOG WARNING.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The Foreign residents of Tsukiji, Tokyo, have been disturbed beyond further endurance

during the past few weeks by the howling and barking of vagrant curs, that go about the streets of the Foreign Concession in droves sometimes of fifteen or twenty, apparently all barking at once. During the excessively warm weather it is absolutely necessary for the residents of Tsukiji to keep their windows open all night; but whether the windows were kept open or not, it would be impossible to sleep during these dog concerts, consequently a few of the outraged residents of Tsukiji take this means of informing those of their neighbours who may have dogs that they value, to keep the same shut up at nights for an indefinite period in the future. It would pain the authors of this notice exceedingly to cause the destruction of any innocent canines, but from present indications the present hot weather is almost certain to breed an aggravated form of "dog cholera" on or about Monday the 15th instant. A word to the wise is sufficient.

Yours respectfully,

RESIDENTS OF TSUKIJI, TOKYO.

Tokyo, September 12th, 1890.

BLACKGUARDLY JOURNALISM.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Whatever may be published in America, there is no excuse for reproducing here, where the truth is known, the lying, scandalous paragraph in reference to Sir Edwin Arnold which appears in last night's *Gazette*. It is, perhaps, too much to expect anything approaching decency from the persons who control the columns of the local gutter sheet, but as a friend of the victims of this outrage I beg that you will permit me to enter my protest.

Yours, &c.,

AN ENGLISHMAN.

September 16th, 1890.

NO DOCKYARD AT SOUTHAMPTON?

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It would be well if the Editor of the *Japan Herald* tried to learn something about England instead of pretending to know everything about Japan. He states in an Editorial Note that there is no dockyard at Southampton. What next?

Your obedient servant,

A JAPANESE WHO HAS TRAVELLED.

Tokyo, September 17th, 1890.

JURIES AND HABEAS CORPUS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I should feel most obliged by your inserting in your next number the few following lines. In reply to Mr. X—who, in a letter published in the *Japan Mail* states that although he is no lawyer, he is of the opinion that *habeas corpus* is unknown in Europe outside of England; and that trial by jury is likewise unknown in Continental Europe except in certain cases in France. I beg to state that Mr. X—is perfectly right when he says that he is no lawyer, as all his other statements are absolutely wrong.

There are juries for almost all criminal cases in France, Italy, Switzerland, Belgium, Netherlands, Germany, Austria, Servia, Roumania, Denmark, Sweden and Norway, Greece, and even Monaco and San Marino; and I think also in Spain and Portugal.

As for the *habeas corpus*, there is, of course, no law in Continental Europe bearing that old Latin name, but there are in many countries laws very much similar to that celebrated writ, and severe penalties inflicted upon those officials who might commit arbitrary arrests.

If the German and French gentlemen were to smile at each other, it would therefore be surely while listening to Mr. X's—extraordinary knowledge of Continental jurisdiction.

Thanking you in advance, I remain, Sir, yours faithfully,

CONTINENTAL DOCTOR JURIS.

Yokohama, September 15th, 1890.

THE LATE MEETING AT THE TOWN HALL.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As a stranger in this country, I would take it as a favor if you could inform me of any book or pamphlet to be obtained in Japan on the subject of Treaty Revision. The few acquaintances that I have made here appear to know nothing whatever about the subject, and seem to care less, and a gentleman—certainly an American—next to whom

I sat at a late meeting in the Town Hall, let me in for a big blunder, which is now on its way to my native city. When I left home I promised a relative who runs a daily paper that I should write an occasional letter from Japan when I met with any subject which I considered of sufficient interest or importance, and my first attempt at newspaper correspondence—it ought to be my last—contains the statement, made to me at the meeting by my neighbor, that the entire community was present. According to your issue of this date (*vide* English Consul's report) I find that there are 1,549 foreigners in Yokohama, and a fair estimate I think of the number at the meeting would be from 260 to 280. There were several seats near me vacant, but I noticed a few persons standing in the doorway; and, setting down the number at 300, which leaves a balance of 1,249, am I to suppose that these are all women and children? On asking this question to-day, I was told that the major portion of the foreign residents of this city is composed of single men. I do not find that the English Consul gives any returns for the other towns in Japan, and I am told that our Consul does not publish any trade or population statistics. I now find that several inaccuracies are contained in my letter sent by the *China*, and will feel much indebted if you will kindly refer me to some work of reference on this country by which I may be enabled to steer clear of error in the future letters which during my visit here I may find it worth while to write. Enclosing my card—and address in case I may be favored with a reply by letter.

Respectfully,

AMERICAN CITIZEN.

September 16th, 1890.

[There is, unfortunately, no book on Treaty Revision. The back files of newspapers are the only aid to which we can refer our correspondent.—*Ed. J.M.*]

JAPANESE SAILORS IN SOUL.

TO THE EDITOR OF THE "JAPAN MAIL"

SIR,—The points of your editorial note, in the issue of July 26th, denying the presence in Soul of Japanese troops, are well taken. Nevertheless, you are slightly in error. While there was at no time a body of troops in or near the capital, there was a small detachment of blue-jackets quartered at the Japanese Hotel in Chingo-Kai. I saw them with my own eyes on the a.m. of June 8th, and a few hours later was advised of the despatch from Chemulpo of a steam launch containing a large party.

Naturally many persons here asked the diplomatic officials of Far Eastern Consistory for information. They at first denied the presence of the sailors, and then attempted to explain it by saying they were simply an excursion party up to see the sights of the capital. Finally, upon its being remarked that officers and sailors visiting a friendly city did not usually wear their side-arms and ammunition pouches, it was quasi-admitted they might have been hastily sent up by mistake; and at any rate, they were to go down immediately.

All attempts to obtain information as to the movements of the detachment said to be on the river failed before the diplomatic reticence of the Japanese representative.

This is, I believe, the second time an armed force of Japanese sailors has been present in Soul, since 1888.

Enclosing my card, I remain, Sir, yours very respectfully.

Soul, Korea, August 9th, 1890.

TSSO.

SUICIDE.

TO THE EDITOR OF THE "JAPAN MAIL"

SIR,—Perhaps care and doubt never wrote their signatures so deeply on the face of any generation as on the countenance of this. The pressure to the square inch is greater now than ever. Life is shortened thereby, and the light of day obscured. And probably never did men love life less. When one, then, more reckless than the rest, breaks through the fences by which this life is bounded and rushes unsummoned into the presence of his Creator, it is not strange if there are some who venture to follow in his steps. The contagion of evil example is almost sure to spread, till a number of persons who feel that life is a burden too heavy to be borne, plunge into the abyss of eternity.

The love of life is instinctive in man, and so is the dread of death. But what passion has not been at some time or other, in some bosom or other, sufficiently strong to annihilate or at least to overpower both the one and the other? Disappointed ambition, insulted pride, implacable wrath, burning resentment, fierce hunger or pain, tortured affection—any of these may become so powerful as to overcome the dread of death. The first King of Israel, exulting in his pride, went forth to battle.

Victory was with his enemy: "And the battle set sore against Saul, and the archers hit him, and he was sore wounded by the archers. Then said Saul, unto his armour bearer, 'draw thy sword and thrust me through therewith;' but his armour bearer would not, therefore Saul took a sword and fell upon it." As if in death he should find healing for him, and discharge from the dishonour of defeat.

It is true that suicide is often committed under the disease of melancholy or that of mental derangement, where no responsibility is incurred for the act itself, except as the disease is the effect of a series of acts, each of which involved guilt, because they were all committed despite the warning voice of conscience. But it is no less true that the stupendous crime is often committed by those who are in the full possession of all their faculties. Yet it probably never takes place except under the influence of passion, when reason has been imposed upon so far as to "call evil good, and good evil, to put darkness for light, and light for darkness." Addison makes even Cato distrust his judgment when it was too late to rectify it:

"Alas! I fear

I've been too hasty. O ye powers that search
The heart of man, and weigh his inmost thoughts,
If I have done amiss, impute it not."

It may be well to consider briefly some of the reasons with which suicide is defended. Mr. Hume argues for the right of suicide from the paltriness of human life, and declares that the life of a man is of no greater importance to the universe than that of an oyster. But is it so? Can anybody be persuaded that Kossuth, Cavour, Bismarck, Gladstone, Lincoln were or are of no more importance to the race than so many oysters? The great Master said to His disciples: "You are of more value than many sparrows." Mr. Hume further insists that suicide is absolutely the work of God. He says: "When I fall upon my sword, I receive my death equally from the hands of the Deity as if it had proceeded from a lion, a precipice, or a fever." How can one reason with a man who denies the very principles which underlie public opinion, domestic education, and human legislation? Fortunately for Mr. Hume and his fame, he is here inconsistent with himself, and argues elsewhere for right against wrong. But it had been better had he seen the radical character of his contention, which involves the absurdity that all crimes are the acts of God.

Again, it is argued, why should we not obey the impulse to avoid evil? Is it not written, "The prudent man foreseeth the evil and hideth himself"? But is death a refuge from calamity?

"To die,—to sleep:—

To sleep I perchance to dream; ay, there's the rub,
For in that sleep of death what dreams may come,
When we have shuffled off this mortal coil,
Must give us pause

The dread of something after death,
The undiscovered country, from whose bourne
No traveller returns, puzzles the will;
And makes us rather bear the ills we have
Than fly to others that we know not of.

But, granting for the sake of argument that death by suicide is a refuge from the ills we suffer, is it right to avoid evil in this way if we involve others in suffering? The claims of family are to be considered, and the influence of an act in furnishing an example which others may be induced to follow, ought not to be ignored.

Finally, self murder has received the high-sounding name of magnanimity. Let us oppose to this the verdict of Aristotle: "To die in order to avoid the pains of poverty, love, or anything that is disagreeable, is not the part of a brave man, but of a coward; for it is cowardice to shun the trials and crosses of life, not undergoing death because it is honourable, but to avoid evil." The picture of steadfast courage under calamity which the old Latin poet draws presents to us a character that cannot fail to command our profoundest respect. Here is magnanimity; never do we see it in the self murderer.

"Not the rage of the people commanding
harsh measures, nor the look of the threatening
tyrant, nor the southern blast, the stormy ruler of
the restless Adriatic, nor the mighty hand of
thundering Jove, can shake from his settled
purpose the man who is just and firm in his resolve.
If the shattered heavens fall upon him the ruins
will strike him undismayed." To endure evil
patiently and unflinchingly though long and weary
years, to remain resolute of purpose and unbroken
in spirit though evil report and good report, amid
strain of sore temptation and frequent assaults of
one's enemies—here is a spectacle of magnanimity,
for the wonder and admiration of angels and devils
and men.

"When all the blandishments of life are gone,
The coward sneaks to death—the brave lives on."

It is perhaps more to the purpose to say that suicide is destructive of human happiness. To the

self-murderer himself, it is the *coup de grace* which completes and perfects his misery. To his family it brings disgrace and possibly ruin. To the world about him the loss of one who might have been a useful citizen.

This enormous crime is forbidden by our religion. Our life is given us by our Creator. Our times are in His hand. "Thou shalt not kill" is His command. "Do thyself no harm" is the spirit as well as the language of the New Testament, while the example of our Lord teaches us that evil is to be endured and how it may be alleviated. Poor Imogene in "Cymbeline" cries:—

"Against self-slaughter
There is a prohibition so divine
That craves my weak hand."

Moreover, the unhappy suicide closes his probation by a crime of which he has no space to repent. In view of what lies before him it is "an awful thing to die; more horrid still to die by his own hand," and to appear in presence of his Judge with all his guilt upon his head. There need be no enlargement of this awful thought. Let the reader only ponder its full import.

The practical question with which I conclude is: what can be done to arrest the spread of this evil contagion? My answer is: Load the crime with all the opprobrium which it deserves. Let it be felt to be as mean and disgraceful as it really is, and men may be deterred from its commission. We are told that the spirit of suicide became epidemic among the girls of Milestia. Neither prayers nor tears of friends availed anything, and they died daily by their own hands. At last a council set forth an edict that every girl that laid violent hands on herself should, dead as she was, be carried naked along the market place. The edict had its desired effect. Those that trembled not at death would not endure such an indignity. Let the law of our pious ancestors be re-enacted, that suicides shall be buried where four roads meet and a cartload of stones be thrown upon each body. And the suicide himself, who presumably is not without regard to his posthumous reputation, brand as a poisoner.

It may be that not one who reads this communication dreams he can ever be guilty of this crime. So a while ago thought those self-murderers who have lately passed away from us in this ignoble fashion. No man can be sure, who has begun the downward course by gambling, drinking, or animal pleasures, that he will stop short of the final plunge. Breakers ahead, young man, breakers ahead.

Let the man before whose mind the spectre of suicide has been raised take his guilty woes to the Lord Jesus, confess and obtain absolution, and then cease brooding over them. Else, remorse may prey upon him till, withering in his pain "like the scorpion girl by fire" which darts "the sting she nourished for her foes into her desperate brain," he comes to that crisis in his destiny where he bids farewell to the world and plunges into the abyss. How infinitely better it is to keep the fort committed to our trust, and remain at the post of duty till released by the Great Arbitrer of our destinies. The obligations we are under to God, to our families, to society—all

"Duty requires we calmly wait the summons,
Nor dare to stir till heaven shall give permission."

Yokohama, Sept. 13th, 1890.

SCIENCE AND CHRISTIANITY.—GENESIS AND GEOLOGY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—During the latter part of last month there appeared in the columns of the *Mail*, under the head of "unclaimed letters," one addressed to "Saten, Tokyo." That letter seems to have been delivered to Saten about the first of this month, for it does not appear in the list of advertised letters of the 2nd inst. We are correspondingly solicitous! For while it is not impossible that a being of flesh and blood bearing that euphonious name may be living here, it is quite certain that the Prince of Sheol has many emissaries among us, and, for aught we can prove to the contrary, may be making his own headquarters in the Japanese Imperial City, and have ordered his letters to be forwarded. Conceding this to be true,—as the hypothetical scientist says when arguing from a fancy,—Saten may have come here to strengthen the antagonisms supposed to exist between Science and Christianity (antagonisms whose plausibility has been somewhat shaken in the past few months), and we feel that it was only by giving the "devil his due" if we briefly set forth the Herculean task he has before him ere he digs a hole in the geological strata deep enough to bury Genesis.

Dissolving pleasantry into seriousness, it should

be understood that the Mosaic records of Creation are defended by the guns of at least two impregnable fortresses, in such a manner, that from whatever direction enemies approach, their ranks may be raked with a fire that all the "powers of Hell" and "false science" combined, cannot resist. It gives us pleasure therefore to present in a nutshell *one phase* of the invincible character of the Mosaic cosmogony, by virtue of which it is enabled to "smile at Satan's rage and face a frowning world" in that calm serenity which only Truth imparts to any cause.

The Summer Solstice has gone by; but it has left some ugly marks upon this fair land. The dog-days, aided and abetted by the germs of epidemic cholera, have not only caused the "heart to stop" among the living, but the hearts of other thousands have stopped in death. Our pestilential environment has had its "due influence upon us, by leading us to consider how frail and uncertain our life is," also to consider whether, after leaving this country on other than commercial lines, the "pale horse and his rider" is likely to escort us into another, "a heavenly." Hence any consideration of the integrity of that Book upon which our hopes of immortality are wholly centred cannot be inopportune.

It is useless for Christians to fancy they can mutilate the *Clart* by which they are sailing,—that they can reject Genesis, or the Old Testament, for instance, and retain the promises of the New Testament. The Bible is one complete whole. As such its essential parts must be kept together, or rejected together. Certain conclusions are drawn from Genesis by its enemies, which Christians are bound to concede. One of the most pertinent of these is the fact that Jesus Christ and his immediate followers all undoubtedly received the Mosaic writings as of Divine origin. Jesus not only quotes the name of Moses, but he quotes from the first eleven chapters of Genesis, no less than six times, twice directly, while those Scriptural writers who are regarded as inspired, quote from these eleven Chapters sixty times more, making *sixty-six* in all again. The whole plan of Redemption is based upon the account of man in Genesis. Genesis must therefore stand, if the philosophy of Christianity is to endure. Any form of the latter which can exist without the former, is a mere empty husk without consistency or excuse for existence, no matter how plausibly advanced, or by what University fostered. It is greatly to be regretted that the whole Christian world do not properly appreciate the dilemma, into which infidels and agnostics would like to plunge them, by persuading them that Genesis ought to be revised (by such astute theologians as Rob Ingersoll) when as a matter of fact, Genesis, including its account of Creation, is as impregnable as the rock of Gibraltar. All these notions that the Mosaic account of Creation is getting "out of date," will be found, upon candid examination, to be nothing more than will-o'-the-wisps which fit hither and hither over the dark swamps of ignorance or moral turpitude. This is not a "whistling to keep our courage up," for we believe in meeting all difficulties fairly and squarely. If demonstrated science,—not hypothetical, you understand,—destroys all possibility of the honourable acceptance of the Biblical account of Creation, let us be men and frankly concede that it is only a beautiful legend, and do without any religion which cannot stand the test of truth, even though we go down to our graves without God. Anything is better than *deception*. It is the height of absurdity to try to make ourselves believe we have a true religion if we have not.

But, on the other hand, if upon careful investigation we find the Mosaic Cosmogony admits of one or more interpretations which a candid man can accept, then in that case let us say so, and stand by the grand old record, even though the very dogs in the street bark their hatred at our heels, and the *bon ton* of Eastern society curls the aristocratic lip of superciliousness and scorn at our approach. One of the very first things an intelligent stranger to the Bible wishes to know when invited to accept it, is, whether it is really true or not. That point settled, and the more effectually the better, he is then prepared to appreciate all its wonderful beauties, its records of a matchless love and sacrifice, and its promises of future happiness and eternal life.

We have no need to evade any fair question which may be put to us regarding the Biblical account of Creation. That being the case, we propose to show an interpretation of it, which is in perfect accord with the teachings of the Bible as a whole, and one which at the same time discloses the most perfect harmony with Geology and Biology.

There are two ways of harmonizing the geologic and Biblical records of Creation. The first, is by interpreting the word "create" to mean the *actual material* production upon the earth of the forms of

life mentioned. The second, is to give the word "create" a higher meaning, by which the *designs, plans, and types* of life were made in heaven, and *afterwards* actually produced more leisurely upon the earth.

Either of these views may be consistently held in face of all the difficulties supposed to exist. The first view requires that the word "day" should be interpreted to mean a long period of time. The second is satisfied with an ordinary day, or one revolution of the earth upon its axis. It is the latter one, that of the production of types and designs in heaven, and the use of the word *day* in its ordinary sense, which will now be elaborated.

There is a large and very respectable class of men who, from time immemorial, have regarded the maker of the Universe as an *Architect*. For the time being at least, please adopt this idea of *God as an Architect*, and try to hold it firmly in your minds, while we proceed to sketch the processes of an earthly architect as he goes about the construction of new buildings.

Let us suppose that a modern architect has received an order for the production of six buildings, all of different designs and for different uses.

These six buildings may correspond to the products of the six days of Creation. The first thought that comes to the architect's mind, is that it is really desirable to construct this group of buildings, and in one act of volition he decides that it shall be done.

Then he takes up the first, say a Japanese house, and in his "mind's eye" he sees the structure, and proceeds to put the design of it on the drawing paper, with the arrangement and size of rooms, the number and location of doors and windows; the materials of construction are decided upon, with the amount of lumber, tiles, plaster, and stone required. The *creation* of the first building is then practically complete,—and at the close of the first day, allowing the whole could be architecturally finished in one day,—not an impossible thing,—the plans are handed over to the forces to be employed, and orders given to proceed at once to the careful construction of the Japanese house. It only remains for the mechanics to work out the design handed them by the architect, who, in the days and weeks to come, along with other duties will exercise a careful supervision of the work in order that it may be executed according to his wishes. *Time only* is now required to finish the *material* structure, every detail having been first created and finished by the architect. "And there was evening and there was morning, one day."

The next day the architect proceeds in a similar way to elaborate the mental picture of a foreign residence upon the drawing board, finishing all the details as before, with size of rooms and their coming uses, material, general style of structure and ornament, until the plans of the second house are at the close of the second day completed and ready to hand to the workmen. The creation of the second day is ended, and nothing but the necessary time is required to bring that which the architect has created into actual existence. And "It was so." From the standpoint of monetary obligation, as well as that of coming material reality, the structure is finished.

Again on the third day, comes from the architect's mind the plans for a great eleemosynary institution, in the same systematic manner. It is converted into detailed designs, handed to the workmen, finished. The creation of the third day is complete.

Next on the fourth day,—corresponding to the one in which the sun and moon and stars were appointed,—is undertaken the construction of an electric light tower. It is to rise to a giddy height in light and airy framework, with electric lamps at specified points on the structure where they may be most effective and useful to those who require the illumination. The architect is not called upon, we will say, to create or design the lamps for this tower on this fourth day, the lamps, and their proper working having already been attended to some days previously. He now only deals with finished lamps and arranges them on the lofty tower in the manner that will best subserve the interests of the people who have objects to be illuminated on the surface of the earth below. He plans the times and seasons in which the lights shall shine, being governed in the matter largely by the wants of those who are to be benefited by the light, and also by those periods when other sources of light are not available. At the end of the fourth day his creation of a lighting tower is complete, and the designs are handed to the proper builders, who in this case are a different class of workmen. The structure will not have a complete material existence for many days yet, but as an object of creation it is all complete on the fourth day.

On the fifth day, our architect begins the drawings of a prince's palace, and rapidly puts another

new creation on paper. It is in the most elaborate detail. Its observatories, towers, balconies, and conservatories are of the most ornate and beautiful proportions. It excels all the work of the previous days of this hard week's work, and at evening when the master workman receives the drawings, the whole is practically done, for the pledges are made, the contracts given, and time alone is required, to bring the beautiful picture into a tangible reality.

On the sixth day, corresponding to the one in which man was created, the architect whose ability and fertility of resource we cannot but admire almost to veneration by this time, is seized again with the creative afflatus, and lo! from his mind to the drawing board is transferred the grand cathedral. Its arched roof and stately dome, its pinnacles and imposing proportions, its worship-inspiring chancel and choir, its antique colourings of windows and ornamentation, and its massive stone-work, all appear on the enchanted paper as the architect and his draughtsmen toil on in harmony, inspired by the master mind.

At last the cathedral is finished. Its minutest detail is worked out. Experts in art are called to criticize it. They are lost in intensest admiration of that which they behold, and pronounce it the *crowning work* of the Great Architect. As they depart, they bow to him more reverently than when they came. And as the wearied architect sits in his studio at the end of this sixth day,—the whole work of the week completed,—the last design handed to the workmen who are to execute the wonderful creations of the master mind, he looks once more over the duplicate copies of the six days work, beginning with the modest Japanese house and ending with the grand cathedral, and he realizes that it has all been well done. He "saw everything that he had made, and, behold, it was very good."

The next day he rests from all his work, the studio is closed, the busy draughtsmen are gone, silence reigns about the architect's home, and he "blesses the seventh day, and hallows it; because that in it he rests from all his work which he has created and made."

At this juncture we hardly require to ask you to transfer your thoughts from an *earthly* architect, whose powers at best are but limited, to an *heavenly* One, the Omnipotent God; and in place of perishable earthly buildings, to think of the work of the separate days of Creation as recorded in the first chapter of Genesis.

Looking down the vista of the departed ages, away back into the eternity of the past—on—on—back of the time when the nebulae of La Place are supposed to have come into existence, the over-taxed and fainting imagination dimly discerns a time when at the call of Jehovah, a heavenly conclave assembled around the throne of God, to attend upon the King of Heaven while He created a new universe. There during six days, which were natural days, the designs and plans,—the architectural work of the Universe, and of this present world, were created and finished, and the working agencies which were none other than the forces of nature, began at once as each day's work was completed, to carry it out in the slow course of time, according to the words, "and it was so." The architectural work performed in one day by Almighty God, might easily have required untold eons of time for its material accomplishment by the slow processes of nature, even as the earthly architect may finish work in one day which will require a number of workmen many weeks to bring into tangible existence.

All real creative work is performed in the mind of the architect, not by the rough hand of the less cultured journeyman, who only executes the designs previously created.

Doubtless God might have completed his whole creation in one instantaneous fiat, instead of in the six days named. Why He did not we cannot know. The idea of time, as we understand it, probably does not exist in the Divine mind. Or, the relation of work days to the Sabbath, as it was afterwards to be impressed upon the minds of the Israelites, may even then have been a consummation which controlled God's work.

The whole Bible will support this idea of an original creative conclave, in which the designs, the types, and the architectural work were completed, before much, if any part, of them had been practically inaugurated upon the earth.

Let us refer to some of the Scripture which will support this view of Genesis. "These are the generations of the heaven and of the earth when they were created, in the day that the Lord God made earth and heaven. And no plant of the field was yet in the earth, and no herb of the field had yet sprung up; for the Lord God had not caused it to rain upon the earth, and there was not a man to till the ground." Gen. II; 4 and 5.

If, as assumed by many, the first chapter of

Genesis meant to convey the idea that all the plants, likewise Man himself, had been *materially* created, if those verses refer to the *actual production upon the earth* of the things and creatures named, then these verses taken from the second chapter would seem to be a direct contradiction of the first chapter. For it is plainly stated that plants had not yet grown, and that Man had not yet appeared.

But if we interpret all of the first chapter of Genesis to be an account of the creation of designs in heaven, then the passage quoted has a meaning as lucid and beautiful, as it was before obscure. Then, too, this second account of creation drops into its proper place, for it undoubtedly alludes to the work actually in progress on the earth as distinguished from the architectural work of the first account. It does not go over all the productions of each separate day as the first one did, for the main object of Revelation is to show the dealings of God with man.

The account of the building of the Tabernacle throws some light on the methods which God was pleased to use on another occasion. That narrative expressly states that the divine power originated the designs of the Tabernacles, and caused Moses to understand them. The tabernacle was truly God's creation, because it was all commanded in design and pattern by the Almighty, before Moses put the material together that realized the pattern in the camp of Israel.

In the 16th verse of the 136th Psalm, is also found this very suggestive statement:—"In thy book were all my members written which day by day were fashioned, when as yet there were none of them."

In the 38th chapter of the very ancient book of Job, we find a distinct allusion to a time when God "laid the foundations" of the earth, "prescribed its measures," made a "decreed place" for the sea, and framed "the ordinances of heaven," and all this in the presence of the heavenly host assembled,—"when the morning stars sang together, and all the sons of God shouted for joy."

Also in the 3rd. verse of the 11th chapter of the Epistle to the Hebrews, we read that "Through faith we understand that the worlds were framed by the word of God, so that things which are seen were not made of things which do appear."

Here we rest our case. Certainly the columns of a popular journal cannot be expected to go into a detailed account of the subject here presented in general outlines, but those desiring it can find this view in its fullest detail in H. H. Baden-Powell's "Creation and its Records."

It will now be in order for some great repository of human knowledge to come forward and "smile" benignly upon the "ignorance" of the writer, but it is greatly to be hoped that he will confine himself to the subject matter of the *writing*, and let the *writer* alone. We have no doubt that opponents of the Bible would prefer to have the other view of Genesis taken up, in which "days" are interpreted to mean indefinite periods of time. For it was upon this interpretation that the older infidels threw the geologic rocks of their wrath with peculiar vigour, in which also they are imitated by those who are still "voting for Jackson." It will, therefore, afford us much pleasure to present to them the other aspect of the Mosaic Cosmogony at another time. For, as Spencer has proven to their minds that the whole universe *was* and *is* in a state of evolution, so Biblical opposition appears to be evolving and the old species of antagonism to Genesis have given way to entirely different breeds of critical inquiry. Indeed, the wheel has at last made a complete revolution, and like the old-fashioned bonnet which has come again into vogue, the objections to Genesis, having been all around the camp, at length find themselves looking once more into the serene face of Moses with these reflections on their lips: "Moses was no scientist." True! "He had no geological means of knowing what the rocks contained." Right again! How, then, did Moses happen to hit upon the exact order of Creation, when, as Dr. Samuel Kins has shown in his "Moses and Geology," if he had no special knowledge, the chances against his hitting upon the correct order of the fifteen scientific events he names, were more than a billion to one? How, indeed! Except by inspiration of the Great First Cause?

Yours sincerely, V. MARSHALL LAW.
September 16th, 1890.

A NERVE TONIC.

HORSFORD'S ACID PHOSPHATE.

Dr. F. G. SADD, M.R.C.S., and L.S.A., 50, Church-street, Rugby, Warwickshire, says:—"I have a favourable opinion of it, and consider it an excellent nerve tonic."

VACATION RAMBLES IN IBARAKI.

II.

After an interval of only one day, we were off on another jaunt—this time to Tsukuba. We were three again—two Americans and one Japanese, Mr. A. as guide and interpreter. We had the opportunity of making part of this trip by rail; accordingly we left Mito by the first train at 6.25 o'clock, and went by rail as far as Shimodate. Travellers from Tokyo by the train leaving Utsunomiya at 6.40 a.m. would reach Shimodate about 10 o'clock, and get to the town of Tsukuba early in the afternoon; while those leaving Utsunomiya even as late as 11.40 a.m., reaching Shimodate about 3 o'clock, could make Tsukuba before dark by hurrying a little. The road from Shimodate has been recently repaired, and is in a pretty good condition as far as a place called Oshima, but beyond that is bad. If there are ladies in the party, it would be better for them to ride in *kuruma* a little farther to Numata, or, if possible to Usui, from which it is a short, but hard climb to Tsukuba. (It is foolish, as some one has suggested, to go to Hojo; for the ascent from there is almost twice as long as from Numata.) We went by *jinrikisha* only as far as Oshima, whence we rode on pack-horses, through Numata and Usui, clear up to the hotel, named Yedoya, in the town of Tsukuba. The ascent was very steep and rough; most of the road in Tsukuba consisted of stone steps.

Satow and Hawes, in their "Hand-Book," give an itinerary direct across the country from Tokyo to Mount Tsukuba; but they wrote when there was no railroad. That trip, being more than 23 *ri* long, would be an exceedingly hard day's journey; but the railroad brings the mountain within an easy and pleasant day's ride from the capital. However, as some travellers might have occasion to pass through Hojo, it may not be out of place to quote a little from page 470 of the "Hand-Book" (now out of print):—

"Hojo, 1,500 inhab., stands at the foot of a hill which was formerly crowned by a castle belonging to the family of that name. From this place it is a walk of 1 *ri* to Tsukuba through the villages of Kangori and Usui. Usui lies in a valley which is said to have been once an arm of the sea, on a spot which was then the port of Toyo-ura. At the foot of a hill to the right of the road among some fir trees is a temple dedicated to Waka-nusubi no Mikoto, who is said to have come ashore here, under the name of Ko-gai Mio-jin, the illustrious deity of silk-worm rearing." The legend says that long before the historical age a god was borne hither by a tidal wave across the lagoon, and, after spending several days on the mountain, disappeared, leaving a precious stone behind, which diffused a brilliant light around. Mulberry-trees and silk-worms developed spontaneously over the whole region affected by its rays. This is only one of the numerous legends of the introduction of sericulture into Japan.

The hill to the right of Kan-gori is called Kai-gosan. At the Shinto temple here the priest exhibits one side of the coffin in which, according to another form of the legend, the goddess was conveyed to Toyo-ura. Here is also a block of stone, which has been scooped into holes by the worshippers at her shrine, who believe that the powder, scattered over their farms, will ensure plentiful crops. The village of Tsukuba lies about half way up the mountain, and contains numerous inns. * * Most of the inns command a fine view from their upper stories of the plain of Yedo, stretching away towards Fuji-san. The ascent of the mountain begins immediately after leaving the village."

Mount Tsukuba is 2,897 feet ["2,880 feet"—Satow and Hawes] above the sea level. It is sometimes called "*Shintō*," or "purple peak," because in the fall it has a purple appearance when the evening comes. Concerning the name "Tsukuba," one report says, that in very ancient times a "governor," named Tsukuba-kō lived in those parts, and, wishing to perpetuate his name, applied it to the mountain. The prevailing opinion, however, is essentially that given in the "Hand-Book," from which we again quote as follows:—

"Tsukuba is said to be composed of two Chinese words meaning 'built bank,' and the legend is that Izanagi and Izanami constructed the mountain as a bulwark against the waves of the Pacific Ocean, which they had forced to retire to the other side of Kashima, formerly an island in the sea. This tradition is in accordance with the fact recently verified by geologists, that the eastern shores of Japan have been gradually rising during many centuries past. One legend says that Tsukuba is a fragment of the sacred mountain in China called Gō-dai-san, which broke off and flew over to Japan. This is supposed to account for

the peculiar species of plants found on it. But the fact is that no botanical species occur here which are not found on other mountains, although the inhabitants of the vicinity, noticing the difference between the flora of the mountain and the plain, might naturally be led to suppose that there was something special about the former." (It is necessary to make one correction, to the effect that the word "Tsukuba," as now written, means, not "built bank," but "built wave," with the possible idea, in accordance with the tradition, of "built against the wave," although the explanation is a little difficult.)

It would be very interesting, for one with the requisite ability, to study the geology of Mount Tsukuba. Its granite formation indicates a volcanic origin, probably in the older Palaeozoic; but, though it may once have been a volcano, there have been no eruptions within the true historical period. How far the above mentioned tradition concerning the origin of Mount Tsukuba embodies geological facts, I cannot state with precision. If the mountains of the Tsukuba range were suddenly elevated by volcanic action, it is very apparent that a considerable extent of country round about, which might have been under the ocean, would have become land. So much for rapid elevation; but that is not all; there are other facts indicating the more gradual elevation, which, as Professor Milne, of the Imperial University, writes, "may yet be in progress."

For instance, as stated in No. 1 of these "Vacation Rambles" (*Japan Daily Mail*, 3rd Sept.) the present Kashima country of this province was, as its name signifies, originally an "island," but in time became connected with the main land. This connection, however, was probably in comparatively recent times; for the surface soil of Kashima is "diluvial," while the deposits surrounding it on the land side are "alluvial."

Again, in the north-eastern corner of this province, is a sea-shore town, called Hirakata, near which is the location of a former "barrier" (*seki*), named Nagaso no seki, or "come-not-barrier." At present the ocean is a few *chō* distant; but, in ancient times, that barrier was rendered the more difficult of access, and easier of defence, because it overhung the sea. The proof of this is found in a poem, written by Saigyō Hoshi, a famous pilgrim of Yoritomo's time (700 years ago):—

Kokotsura ya,
Shio-michi kureba,
Michi mo nashi
Koko zo Nagaso no
Seki to yuran;

Which may be freely translated, "Kokotsura [name of a place]! If the tide comes in, there is no road; hence, probably, this place may have been named the Nagaso barrier." This same place is mentioned also in a poem, written by the famous warrior, Yoshitane, or Hachiman Taro, who passed through it on his way to Oshio to subjugate some rebels:—

Fuku kaze wo
Nagaso no seki to
Omoodomo,
Michi mo se ni chiru
Yama-zakura kana;

which, also freely translated, means "Though I wished that the blowing wind would not come, yet the mountain-cherry blossoms are scattered so as to fill up the way."

Once more taking up the geological topic, the other day, while taking a sail on the Nakagawa, I was shown large numbers, in one place, almost a "bed," of oyster shells in the banks of the river at a place called Kogawa, about one mile up from the mouth. On the down-trip I did not pay much attention to them, as I supposed that they had been cast away by various persons. But on the up-trip I examined them more closely, and noticed that, however the scattering shells may have come there, the "bed" showed no signs of artificiality. Of course, the shells only remained, as the meat had all decayed; but the shells were imbedded in the bank in a kind of "oyster-village." The boatman, an old *samurai*, knew, when a boy, of their being there, and had heard from old men stories of their having been there for a long time back. A young farmer, a fellow-passenger for a short distance, bore similar testimony; and added, that sea-shells are sometimes found in the fields, and huge rocks, like the present sea coast rocks, may be seen on the small hills, even so far up as opposite the city of Mito. All through the lowlands of Hitachi may be seen indications that these parts were once under water. I have instituted inquiries, but have not yet received answers, concerning the age of Mito, the harbour at the mouth of the Arakawa, and of Kogawa, the place where the oyster-

* Since writing the above, I have come across an article dealing with the elevation of the Kōriyama range, and mentioning especially this barrier. The article is not long, and may be found in No. 24 of Vol. II. of the *Geographical Magazine of Japan*; its author is Mr. Gunji Atsutori, of Mito (Ibaraki).

shells were found. I was sorry to learn the other day that in the recent floods many of those shells were washed away; but I hope that all have not been destroyed. These facts are all interesting, as they show that the name *Mito* (water-door) was the appropriate name of a place, which was a port at the (then) mouth of the Nakagawa. As I am not a specialist in geological science I dare not pursue the subject further, but content myself with merely presenting these superficial points, in the hope that some geologist will investigate the matter carefully. These facts have interested me also as showing, that traditions are oftentimes but the chronicles of geology. Now let us return to Tsukuba.

This mount, like all the "immoveable and unchangeable" mountains and "everlasting hills," often appears in poetry as a good example of the inflexible and immutable. Inasmuch as it is the highest mount in these parts, and is visible from almost all parts of the Kwantō, it is very famous, and ranks in poetical favour almost with Fuji-san. The following poetical allusion is quite famous:—

Tsukuba-ne ni
Kumo uie some,te,
Toki no ma ni
Sumida-gawa ra wo
Suguru yudachi.—

"A speck of cloud on Tsukuba peak in a short time becomes a shower passing over the Sumida River basin." One is forcibly reminded of the incident in *I Kings*, 18, when Ahab saw rising "a little cloud out of the sea, like a man's hand." One of the Tsukuba rivulets, named the Minagawa, is also used often in *uta*, as in the following instance:—

Tsukuba-ne no
Mine yori otsuru
Minan gawa
Koi zo tsumorite
Fuchi to nari naru.

"Like the Minan river falling from the peak of Tsukuba, love increasing has become a deep pool."

Likewise, from ancient times even till now, the mount has been considered holy and sacred; and is frequented, not only "for purposes of amusement," but also for purposes of worship. When the weather is pleasant, on an average 100 persons daily climb the mount, most of them to pay their homage at the shrines of Izanagi and Izanami. By superstitious people, however, it has always been considered dangerous to make the ascent after eating the flesh of birds or beasts; for the *Kami* (gods) hate and punish the unclean, and sometimes *tengu* (sky-dogs) appear and kick down those who have eaten or done any unclean thing. The faithful worshipper, therefore, keeps a seven days' fast, in order to make his body pure and clean. We, however, were sacrilegious enough to indulge in "unclean" chicken, to strengthen us the more for the arduous climb, but we failed to meet any *tengu*!

The Buddhist temple in Tsukuba is called *Omido*, and is sacred to Kwannon, the Goddess of Mercy. It was built by Iyemitsu, the grandson of Iyeyasu, for the same reason that temples were built on Hiyei-zan, of Kyoto, and Uyeno, of Tokyo—because all those localities are situated to the north east, unlucky quarter. In the Japanese Zodiac that quarter of the heavens is *unhi-tora* (ox-tiger), and in mythology is called *himori* (devil's gate); so that it was deemed necessary to build holy temples in those quarters to keep out the devils. It is for a similar reason, that carpenters, at the close of the day upon which they set up the frame work of a house, shoot arrows to the north-eastward. Such a custom still prevails here, but it is sometimes omitted; if, for instance, the house is to be rented, for there the tenant can himself look after the devils; or, when a house was constructed for the foreign teacher, who could likewise be left to fight the devils in his own way.

This Buddhist temple at Tsukuba suffered much through Rekkō's zeal for Shintoism and Confucianism, and his despoilment of Buddhist temples. During the Mito Civil War, Fujita Koshiro made Tsukuba the head quarters of the Seito forces, and established his main camp in "the high fenced place" in front of Yedoya. Here he was assaulted by the army of the *Bakufu*, and several battles were fought, during which that temple was almost destroyed by fire. When the *Bakufu* lost its power, the temple became a possession of the Emperor; for though the *han* still remained, this place had belonged to no *han*, but personally to the Shōgun. The Emperor then established in that place *Wakamori ken*, which was afterwards incorporated into Ibaraki *ken*.

The Shintō temple, called Tsukuba-jinja, with its two shrines, one at the summit of each peak, is more popular. One report says, that these shrines are dedicated respectively to a son and a daughter of Izanagi and Izanami; but the commonly received opinion is, that they are sacred to Izanagi and Izanami themselves. There is a legend that,

when Izanagi came to these parts, he climbed the mount, and was so kindly entertained by the gods then resident there, that he sang them a song. Inasmuch as the "official records" state, that the Emperor Kaikwa, in the 28th year of his reign (130 B.C.), ordered the priest of Tsukuba to fix the winter and summer celebration days, it is inferred by the "faithful," that the temple was built anterior to that time. In the 14th year of Konin (823 A.D.), this temple became a Government temple; and at different times, according to native customs, ranks were conferred upon these divinities by Imperial edict. In Yoritomo's time the last son of Hata Tomoye, of a famous family related to Yoritomo, became high priest of the temple; and his descendants have since served in that position. In the 10th year of Keicho (1605) Tokugawa gave the temple a domain of 1,500 *koku*, and undertook the repairs of the temple as necessity demanded. At present the great festival days are the *setsuhun*, in the first month, and the first day of the fourth month (O.C.). When the *setsuhun* arrives, "great multitudes" climb the mountain, and buying parched peas, scatter them about to welcome the New Year.

If the traveller intends to climb the two peaks, and return to the hotel in Tsukuba, it is just as well, as advised by Satow and Hawes in their "Hand-Book," to make the ascent on Nantai-zan, and the descent on Nyotai-zan, as the path on the former is "less steep" than that on the latter. We, however, having planned to descend on the opposite side of the mountain, took the ascent on Nyotai-zan, because it contains most of the queerly shaped rocks and romantic passages.

We left the hotel at about six o'clock in a "drizzle," which, though it made the climb cooler than the sunshine would have made it, was, nevertheless, "dampening" to our prospects of getting a good view from the summit. The ascent was, indeed, steep and difficult, and occupied more than two hours. Twice we stopped to rest at tea-houses, where is sold *Benkei no chikara mochi* (Benkei's strength bread), which is supposed to give the eater the strength of Benkei, who is well-known as the strong and brave companion of Yoshitsune. This Japanese Samson again figures on Mount Tsukuba in connection with some rocks which, according to their appellation, form "the door of the gate of Heaven." Here the path passes between two huge rocks, over which rests another immense rock, which looks as if it would easily fall. This place is also called *Benkei (no) nana-modori*, or "Benkei's seven-retours;" and the tradition that even Benkei, brave as he was, seven times drew back in fear of passing under, proves that it is an exceedingly dangerous spot.

A very low passage through which we must pass stooping is also called "Heaven's gate," and reminds one that "strait is the gate, and narrow is the way which leadeth unto life." Other stones of peculiar shape bear such name as *Kuni-wari-ishi* (country-dividing stone), because Nature has drawn lines thrown as if tracing the boundaries of countries; *defune-irifune ishi* (departing-ship [and] entering-ship-stones), because they are thought to resemble such vessels; *Daikoku-ishi*, whose shape reminds the imaginative pilgrim of the fat, jolly old god of wealth; *hokutō seki* (north star stone), a rugged stone, rising in bold relief, like a pole-star; *hōshi-seki* (precious jewel stone), which looks like a jewel in a rock setting; *kodane ishi* (child-seed stone), which has efficacy in giving children to childless women; *Daigin seki*, a stone sacred to Daijin, or Tsuchi daijin, or Amaterasu O Mikami, the sun goddess; *meoto-ishi* (husband and wife stone), because it is composed of two parts resting on one base; *Raijin iwaya* (the thunder-god's rock-den), where lives the Jupiter Tonans of the Japanese. Frequently the ascent must be made up the flat surface of a rock by catching hold of an iron chain; and in one instance we had to climb a rope ladder with similar assistance.

To reach the very summit we must first cross the *Ama no uki hashi*, or floating bridge of heaven, so famous in Japanese mythology. Izanagi no mikoto and Izanami no mikoto, who represent respectively the male and the female elements, met on this bridge, "which spanned the waste of waters." Then Izanagi dipped into the sea his sword, named *Ama no nuhoko* (Heaven's jewelled sword), from which the drops of brine falling congealed into an island, called Onogoro-jima, one of the poetical names for Japan.

On the very summit of Nyotai-zan (female-body mount) is the shrine sacred to Izanami, who was the first manifestation of the female principle in life; correspondingly on the summit of Nantai-zan (male-body-mount) is the shrine dedicated to Izanagi, who was the first manifestation of the male principle in life. Thus are the two peaks of Tsukuba always coupled off.

The descent from Nyotai-zan and the ascent of

Nantai-zan, are comparatively easy; the distance is only about half a mile. Between the two peaks there is nothing special, except in one of the tea houses. In this tea house is a *gaku* (inscription) written by Fujita Koshiro, who named it "a booth standing on the clouds."

When we reached the summit of the first peak, we had been much disappointed, because the clouds shut out the view on all sides. But we pushed on hopefully to the next peak, only to be similarly disappointed. It was merely with the opera-glass of the "Hand-Book" that we could realize that "the view is very extensive, and commands the eight provinces of the Kwantō." We had anticipated the sight that is vouchsafed in fair weather;—not only of the plain lying just beneath, with Lake Kasumi in its bosom, and stretching away on one side to the ocean, and on another side to Mito; but also of Nikkō, the city of Tokyo, and Fuji-san; but, though we waited a little, it was in vain.

The traveller who makes the descent (or ascent) of Nantai-zan on the Tsukuba side will find a few difficult and romantic spots. One water-fall bears the name *Nuubiki-no-daki*, because it resembles hanging linen cloth (*nuno*). There are other falls here and there around Tsukuba, such as *Shira-ito-daki* (white thread falls), *Shiva kuno-daki* (white cloud falls), &c.; but they are nothing extraordinary.

Our plan stated above, to descend on the opposite side, had been suggested by our landlord, when he ascertained that we must get home that Saturday night; because, by so doing, we could save time and distance. He was also kind enough to give us cards of introduction to several other hotels, which with his evidently formed a guild. The list included Kashima, Nikkō, Mito, and other places; but we had occasion to use only two out of the number.

It was about half-past 9 o'clock, when we began the descent with enthusiastic ideas of being able to make connections, so as to reach home about 5 o'clock that afternoon; but, as is usual in Japan, "the land of disappointments," the reality much exceeded the anticipation. There were no huge rocks to climb over, or between, or under; but the path was steep and slippery. To render matters worse, a rain storm came up and blew on us from all sides. One foreigner, who was wearing *waraji*, found them less safe than shoes; and had occasion two or three times to sit down and reflect on the *facile descensus* sung by Virgil! Perhaps, it was a *tengu* that made the meat eating barbarians slip down! By 11 o'clock we had descended to a small hill, called *Shii-no-o-zan* (Live oak tail hill), where is located a large and elegant Buddhist temple, sacred to Kwannon, and where we found an inn at which to rest and eat our dinner.

A large and flourishing Buddhist temple within the limits of the old Mito *han* is a great rarity; for it was the fixed purpose of the Mito princes, at least of Gikō and Rekkō, to weaken as much as possible the influence of Buddhism, and to strengthen the power of Shintoism and Confucianism. It is true that Gikō left intact some of the Buddhist temples, notably that in Mito called Gionji, of which a Chinese refugee, Shinyetsu, became priest; but Rekkō was less sparing. I wanted to collect some statistics concerning that temple at the foot of Mount Tsukuba; but, being in a great hurry, I learned only that it is very old, perhaps, 1,000 years or so.

Having hired pack-horses, we left that place, a little after noon, for a ride of perhaps, 5 *ri* to Iwase, the nearest station on the Mito Railway. We found the road pretty bad, and were glad that we had changed our original plan to walk to Makobe, the chief town of a county of the same name. In Makobe *kuruma* may be hired; but on that day they could not possibly have been used, even with two men to pull. The road beyond Makobe was in a dreadfully muddy condition; and, as the rain poured down almost all the afternoon, the riders could not, with umbrellas only, protect themselves sufficiently, and were wet through to the bones!

Part of the way the road was used also for a "baby" narrow-gauge railway to convey big rocks from the quarries of Mount Kaba to the Iwase station. This railway consisted of a single track, on which small flat cars were drawn by horses. The fact that there is only one track makes it rather inconvenient, when trains going in opposite directions happens to meet. It seems to be the just law that the rock-laden trains should have the right of way over the returning cars, on which the drivers were enjoying a ride. On that day, however, it must have been more than ordinarily difficult to run the cars off into the deep mud, and get them back on the track again.

On the way we passed along the foot of a mountain, called *Anabikiyama*, where also is a

temple dedicated to Kwannon, the Goddess of Mercy. This temple is likewise 1,000 or so years old from its foundation, and 300 or 400 years old from the time when last rebuilt. It is much frequented by worshippers, especially by pregnant women, who go to pray for safe delivery.

About 5 o'clock that Saturday three weary, soaked, and bedraggled travellers rode up to an inn at Iwase; and, having more than an hour to wait for the last train to Mito proceeded to get out of their wet clothes, to rub themselves thoroughly, and then, as there was no resource, to get into the same clothes again. One pair of stockings, however, had been cut to get them off, and one pair of shoes were too hard to get on again; so that one individual had to wear *tabi* (blue) and *waraï* and carry his shoes. One had also needs to be charged up against the Tsukuba trip, which came to an end, when, about 11 o'clock that evening, we reached "home, sweet home." For a day or so after, we experienced fatigue from our rough jaunt; but finally we came to feel as if we had revived our youth at the Ponce de Leon spring.

Mito, September 15th, 1890. CLEM.

LETTER FROM SAN FRANCISCO.

(FROM OUR SPECIAL CORRESPONDENT).

San Francisco, August 23rd.

Mr. Blaine's unexpected bolt has been followed by a very similar movement on the part of Senator Quay of Pennsylvania, the discoverer of Wanamaker the tailor. Quay is one of the shrewdest politicians of the day, and has risen to be boss of the party in the banner Republican state. He had a misfortune a few years ago; being treasurer of the State, he managed to mix up his own private account with his account as treasurer, and the latter suffered to the tune of \$150,000 or thereabouts. The deficiency was made up by Cameron and others, who feared that the party could not stand the scandal of a disclosure of the facts, and Quay retained his position in the party. He is now Senator, and is very close to the President. To him, whose shrewdness is not to be questioned, it occurred that the Republicans were rather crowding things, and he introduced a resolution the object of which was to postpone indefinitely consideration of the Force Bill. This has brought down upon him the wrath of Hoar of Massachusetts and others, and the Democrats are not grateful to him for saving the administration from falling into the pit they had dugged for themselves. Between the two they may defeat Quay's benevolent intentions. But he announces his purpose to fight the thing to the bitter end.

The Tariff Bill is slowly forging its way through the Senate; friends of the administration say that a vote may be taken in the last week of September. Meanwhile, all amendments—whether offered by friend or foe—are voted down by a strictly party vote. The impression gains ground that the long controversy will end in an irreconcilable conflict between the two houses; but political predictions are unsafe guides.

There are many who believe that Congress will remain in session till the opening of the next session. No such thing ever took place in our history, but there is no reason why an interval should elapse between two sessions of the same Congress, if members choose to sit *en permanence*.

There is no news from the departments. The papers are full of dark forebodings of a collision between the British and the American fleets in Behring Sea, but Mr. Blaine and Sir Julian Pauncefote are bearing themselves with such serene composure that they, at all events, can hardly share the prevailing apprehensions. The administration is mute as an oyster on the subject. Our latest authentic information is taken from the passage in the Queen's Speech which states that England has offered to submit the dispute to arbitration. Meanwhile, the new lessees of the fur-seal islands wish it to be understood that the seal is being so rapidly exterminated that persons who propose to buy seal-skin garments had better hasten to purchase before the supply is exhausted.

Mr. Wanamaker has again got himself before the public by excluding Tolstoi's "Krentzer Sonata" from the mails, and thus seeming for that rather nasty book an unexpectedly large sale. There are two laws which protect the public from improper publications; one is a State law, which prevails in almost every State, and under which the publisher or vendor of indecent literature may be prosecuted and jailed; the other is a United States regulation, under which rule publications may be excluded from the mails and stopped at the Custom House. No State has interfered with the sale of Tolstoi's book, and its circulation

will not be reduced by its exclusion from the mails. This is the less to be deplored, as, while the impression it produces on the reader's mind is unpleasant, it is hardly calculated to promote immorality among the young. Mr. Wanamaker's object has been to make some capital with the giddy-giddy class. No order—that the public have heard of—has ever been issued excluding from the mails a much more objectionable book—Zola's "La Terre." But its admission has been stopped at the Custom House, and it is practically impossible to buy a copy in this country. To the keen eye of the moralist, it is questionable whether much is gained by its exclusion, so long as the book-stores are flooded with the productions of the modern erotic school of novelists. Book for book, one of the late works of Mr. Phillips is calculated to do more mischief than the entire Rougon-Macquard series.

In commenting on the moulders' strike in this city in a recent letter, I drew the attention of your readers to the indications that it and other similar demonstrations did not spring out of disputes over wages and hours of labour, but were the initial steps in a rebellion by employers against the tyranny of labour unions. That view has received confirmation from a recent strike on the New York Central Railroad system, the largest railroad system in this country, and possibly in the world. Its steps thus far have been as follows:—A number of railroad hands, who were Knights of Labour, were discharged by the company. The Order of the Knights charged that they were discharged, not because they were insufficient, but because they were Knights of Labour, and invited the Board of Directors to join the Order in an investigation of their cases. The Directors replied that the men were discharged for reasons which to the company were good and sufficient, but which they declined to discuss with outsiders. Thereupon, a certain proportion of the hands struck, and at the hour I write a general strike on the whole Vanderbilt system is threatened.

There is no doubt but Powderly was right when he said that the men were discharged because they were Knights of Labour, and that the step was notice to the New York Central employees that the Company would not keep in its service men whose allegiance was divided between the employer who paid them and an organization of their own. Employers have at last made up their minds that the usurpations of the labour organizations have become too intolerable to be borne, and they propose to inaugurate the inevitable war.

Outsiders sometimes fail to comprehend the growth of the hostile feeling toward foreigners in this country. A case which has just been tried in one of our city courts sheds light on its cause. A woman named Silverwise, a Pole, sued her husband, also a Pole, for a divorce, on the ground of cruelty and failure to provide. It was shown on the trial that the pair had six children, a girl of 19, a boy of 18—who was a hoodlum—and four younger children. They all, with the mother, and the father when he was in, slept in two beds, in one small room. They were supported by the earnings of the mother, who kept a small bread and candy store adjoining the joint bedroom, and by the wages of the daughter, who worked in a shop. The father was habitually drunk, and contributed nothing to the support of the family. He visited them at intervals, however, when he beat his wife, and lavished brutal epithets in his own tongue on her and her daughter. He could not speak English, and could not be made to understand the nature of the proceedings which were brought against him. Such is the material out of which the new generation of American citizens is expected to be evolved.

The new cruiser *San Francisco* tested her capacity once more yesterday in the bay, before going down to Santa Barbara for her trial trip. She astonished the spectators. Her speed appeared to be something marvellous; it was said to exceed twenty miles an hour. The spray dashed up from her bow over the bowse pipes, and the swell in her wake nearly swamped some small craft which happened to be passing. If it should turn out that *San Francisco*, with no non except what comes from the Atlantic coast, and no experience in ship-building, should beat the shipyards of the East in the construction of men-of-war, it will be another illustration of the truth that the best energies of man are developed by obstacles.

Everybody has heard stories of runaway trains. One of the most thrilling of these is the history of the experience of freight train No. 19 at Cascade Station yesterday morning. When the train reached Summit at 4 a.m., the two engines which had been hauling it were detached to bring up two other cars. The conductor remained in charge; the rest of the crew went off with the locomotives. All the air brakes were set, but not the hand

brakes; and it seems that the air leaked into the air brakes. At any rate, without a moment's warning, the freight train, consisting of eleven loaded and six empty cars and a caboose, began to move down the grade, which at this point is very steep. Conductor Kingley must naturally have rushed to the nearest brake, but by that time the train had acquired such a momentum that it could not be checked. The last seen of him was his figure standing on the top of a freight car, setting the hand brake with might and main.

On the train rushed, thundering down the grade, through cuts and round curves, gaining speed as it went. At Cascade Station it got off the track, struck the station building, and shattered it. If the telegraph operator had been at his post, he would have been killed so quickly that he would never have known what hurt him; happily for him, he was off duty and was in bed. The first thing he knew, he was several feet away from his lodging, in the open air, with a lot of bruises, and fragments of the wreck around him. A short distance beyond Cascade, the runaway train struck the rear end of a freight train which was making its way to a siding. The caboose was still in the line of the runaway. In an instant it was smashed to fragments, and the wreck of half a dozen cars was piled on top of it. Three men who were in it were killed at once. They had heard the thunder of the approaching train, but, not understanding it, had neglected to place themselves in a position of safety.

There have been some changes in the steamship service between this city and Japan. A truce has been patched up between the Pacific Mail and the Canadian line, and each will for the present restrict itself to its old territory. There is no reason why the *San Francisco* lines should touch at Vancouver; but eventually the Canadian line, it would seem, will have to make this port its eastern terminus if it wants to get business. It is understood that the Pacific Mail ships and the O. & O. ships will hereafter make better time, which they can easily do by increasing their consumption of coal. Another trifling change has been instituted. Henceforth steamers for Yokohama will sail from this port at noon instead of 3 p.m. My ignorance of this change caused me to miss the last mail.

CRICKET.

The opening match of the Autumn Season came off on Saturday, when the First Eleven met the Next Nineteen. The latter went first to the wickets, but developed no brilliant play, nor did any one make much of a stand; only three managing double figures, several were non-contributors, and the innings closed for 83. Although the batting was not strong, it must be said that, with Edwards, Sutter, and Walford bowling, heavy scoring could hardly be looked for. This, of course, cut both ways, for, when the Eleven went in, Walkinshaw and Crawford punished the bowling, what there was of it, severely, and the pair rapidly compiled 110 between them before being sent home. Shortly after this Edwards made 55 and retired, and the game concluded with Tilden and Walford not out, and with Kenny, Chope, and Chalmers not batting the total made was 193. In view of the pending matches this season, this kind of practice is not calculated to improve either batting or bowling so much as games would do where two elevens were chosen as nearly equal as possible, in which case the batsmen would be called upon for a far better defence, and the bowlers would find it necessary to make a much more vigorous assault upon the enemy than in matches of the description of that of Saturday. Following are the scores:—

THE NINETEEN.

Mr. Adams, b. Walford..... 3	Mr. Nash, b. Walford..... 3
Mr. Stewart, run out..... 3	Mr. Hood, c. Chope, b. Grant 1
Mr. Wickett, c. & b. Sutter..... 13	Mr. C. W. Arnold, b. Sutter 9
Mr. E. Edwards, c. and b. Edwards..... 1	Mr. Vivanti, c. Dickenson..... 1
Mr. Wood, b. Edwards..... 0	Mr. Grant..... 1
Mr. Watson, st. Walkinshaw, b. Walford..... 1	Mr. F. Gullett, c. Dickenson..... 10
Mr. Philip, b. Dickenson..... 5	Mr. Edwards, b. Edwards..... 10
Mr. C. D. Moss, b. Edwards 7	Mr. Tordell, b. Edwards..... 5
Mr. Clarke, c. Edwards, b. Sutter..... 16	Mr. Abbley, not out..... 5
Mr. Hinton, b. Walford..... 3	Mr. Mott, b. Edwards..... 2
	Mr. Alcock, c. Edwards..... 2
	b. 2, l. b. 3..... 5
	83

THE ELEVEN.

Mr. Walkinshaw, c. Nash, b. Stewart..... 77	Mr. Sutter, c. Adams, b. Water..... 3
Mr. Crawford, c. Nash, b. Stewart..... 33	Mr. Walford, not out..... 0
Mr. Grant, c. Nash, b. Adams..... 11	Mr. Tilden, not out..... 0
Mr. Dickenson, c. Wickett, b. Adams..... 11	Mr. Kenny..... did not bat
Mr. Edwards, retired..... 55	Mr. Chope..... 6
	b. 0..... 6
	193

SAILING RACES.

Two sailing races took place on Saturday, one for boats over 17 rating—twice round the Club Course—and the other for 17 raters, postponed from 30th August. There was a fresh easterly breeze, the weather being thus most favourable.

The large boats started at 2 p.m., *Molly Bawn* being first across the line, followed by *Lady Louise* and *Princess Maud*, and later by *Maid Marion* and *Traveller*. *Princess* laid a straight course for the North Mark; the others, especially the blue cutter, the *Maid*, and *Molly*, headed up so far to windward—probably making allowance for the flood—that at the end it was practically up helm and squaring away for the mark. *Lady Louise*, however, was first round, *Molly*, *Traveller*, and *Princess Maud* coming all, at a few seconds interval between each, astern of her, *Maid Marion* a minute later. After rounding, all stood for a few minutes out on the starboard tack before coming about, as they did pretty much together, for a long leg in towards the Bluff. *Molly* and *Princess Maud* stood in farthest, *Lady Louise* and the *Maid* working up to the Lightship in shorter tacks, but *Molly* most unaccountably fell astern of her blue antagonist, while *Princess Maud* also failed to get near the leader. Mr. Martin's cutter was first round the Lightship, *Lady Louise* only 15 secs. astern of her, *Molly* being now all of 6 min. to the back. At the Home Mark *Maid Marion*, even with jib topsail, had lost her grip of Captain Owston's craft, and, jibing, passed round half a minute astern of her, *Molly* having effected a barely perceptible improvement in her position. The reach to the North Mark brought *Maid Marion* to the front again—half a minute—*Molly* being just in the same position relative to the blue boat as before, and evidently unable to get away from *Princess Maud*. The wind had calmed a little to the northward, so that the Lightship was reached this time with less beating, the *Maid* being now a full minute ahead, and *Molly*, though practically sailing over the same ground as *Lady Louise*, 10 minutes astern of the latter. On the run in to the finish Captain Owston crept up on the *Maid*, getting his gun some thirty seconds later than her, *Molly* coming in 10 minutes astern and only half a minute ahead of the *Princess*. The victory was therefore an easy one for *Lady Louise*, *Princess Maud* taking second place on her time allowance.

The 17 raters started at 2.15. *Sayonara* got the best of it at the outset, rounding the Green Lightship first and gaining on *Jessie* during the run down to Kanagawa. Close to the *Hiroshima Maru*, however, Capt. Campbell undertook to shorten the course by steering through a narrow channel which seemed to be open amid the dismantled ribs of the *Glendon*, with the result that *Sayonara* was caught on a spike which ripped a considerable hole in her bottom, and necessitated henching. This gave *Jessie* a lead which she maintained to the finish.

Mr. Beart acted as officer of the day for both races.

The following are non-official times:—

	Rating.	N. mark.	Lightship.	Home.	N. mark.
30 Rater.					
<i>Maid Marion</i>	39	2.22.00	5.03.00	3.21.00	3.38.30

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, September 12th.

Serious disturbances have occurred at Southampton among the strikers. The troops were called out, and the situation became so serious that they were ordered to charge with the bayonet. Gunboats are patrolling the harbour, and military guards have been posted to protect all the approaches to the Dockyard.

London, September 16th.

As the Washington Mint is now ready and willing to buy largely of silver, Mr. Windom,

in order to relieve the stringency of the money market and prevent a panic, conferred yesterday with a number of the leading bankers.

["SPECIAL" TELEGRAM TO "JAPAN MAIL."]

Hyogo, September 19th.

While the Turkish frigate *Ertongroul* was passing the coast of Kishu on her way to Kobe, an accident happened to her boiler, and the ship, becoming unmanageable, drifted on the rocks, and sank off the Kashinosaki Light House at about four o'clock in the afternoon of the 16th instant. Admiral Osman Pasha, and 587 officers and men went down with her. Sixty-six only were rescued and brought ashore, most of them in a wounded condition. They are being tended by the inhabitants of Oshima. Four dead bodies are said to have been cast up. Two officers of the ill-fated vessel have just arrived at this port under the escort of policemen and local officials of Oshima, for the purpose of conveying information of the catastrophe. They report that every assistance was given by the people as well as by the Local Authorities of Oshima.

[FROM THE "SINGAPORE FREE PRESS."]

London, August 25th.

The Marquis of Salisbury, in reply to the circular of the Porte, intimates that the British forces cannot evacuate Egypt until the work of improvement is properly consolidated.

Affairs in Armenia are becoming very serious.

London, August 26th.

During the Italian manoeuvres at Brescia the smokeless powder was used with remarkable success, the batteries having cannonaded for half an hour without in the least betraying their position.

London, August 27th.

Tokay, the famous wine centre, has been totally destroyed by fire, rendering seven thousand persons homeless and foodless.

London, August 28th.

There is intense excitement at Newcastle, New South Wales, in consequence of the strike of the miners. The military have been sent to the scene of the disturbance, and the police both at Sydney and Melbourne have been reinforced. It has also been considered necessary to swear in a considerable number of special constables.

The strike has now extended to the gas stokers, they having refused duty at Melbourne.

The fleet representing the enemy under the command of Rear-Admiral Seymour at the late naval manoeuvres completely eluded the defending force, and he was able to coal his ships in mid-Atlantic from the colliers brought from Bantry Bay.

London, August 29th.

The report that the Sikkim difficulty had been settled is confirmed, and the ratification of the Treaty has now taken place.

REPORTS.

The British steamer *Abyssinia*, Captain Lee, reports:—Left Vancouver Railway Terminus the 29th August at 7.30 p.m.; calling at Victoria and finally leaving Victoria the 30th at 1.55 a.m.; passed Cape Imbuoye-saki the 14th September at 8.40 a.m. and arrived at Yokohama at 6.30 p.m. From Victoria to 180° meridian had moderate to fresh westerly winds, overcast, and foggy weather with confused seas; thence to Yokohama moderate variable winds and fine clear weather with smooth sea; actual time on voyage 14 days, 23 hours. September 8th at 3.30 a.m. in Lat. 48.56 N., Long. 179.50 E. passed a steamer showing Canadian Pacific S.S. Co. night signals and supposed to be steamer *Mongkut*.

The Japanese steamer *Kobe Maru*, Captain Haswell, reports:—Left Kobe the 11th September at noon; had moderate breeze and cloudy weather; at 4 p.m., wind increased to moderate gale with occasional heavy squalls from E.S.E. to S.E. and high S.E. sea accompanied with heavy rain; passed Oshima at 9 p.m. this weather continuing to Rock Island which passed at 12.22 p.m. on the 12th; thence to port moderate winds and cloudy weather.

LATEST COMMERCIAL.

IMPORTS.

The improvement in the Yarn Market for English Spinnings report last week continued for several days at gradually enhanced rates, and a very large general business was done, but at the close buyers are showing signs of satisfaction for the present, and an interval of dulness is naturally to be expected. The position appears to be somewhat improved, as stocks in first hands must be very much reduced and imports are moderate. Bombay Yarns have been left out, owing to the cheapness of English Spinnings, but at the close there is more inclination to business. Shillings have improved, and fair sales are reported at better prices. Fancies have also received continued attention. Sales for the week amount to 3,400 bales English Yarns, 550 bales Bombays, 35,000 pieces Shirtings, and 4,500 pieces Italians.

COTTON PIECE GOODS.

Grey Shirts—84 in, 34 yds, 39 inches	\$1.35 to 1.90
Grey Shirts—94 in, 34 yds, 39 inches	1.50 to 2.52

Tin Plates, per box	4.70 to 4.90
Pig Iron, No. 3	1.20 to 1.25

KEROSENE.

The chief event of the week has been another arrival of a cargo per steamer from Batoum. No sales of any moment. Deliveries are fair, but the stock on hand is over 800,000 cases.

QUOTATIONS.

Chester	Nom. \$1.75 to 1.77 1/2
Cornel	Nom. 1.70 to 1.72 1/2
Devoe	Nom. 1.67 1/2 to 1.70
Russian	Nom. 1.65 to 1.67 1/2

SUGAR.

Prices for Formosa Brown have been further reduced without eliciting any bids. Consequently the business done has been confined to two parcels of White Refined amounting to 1,114 piculs, viz., 614 piculs at \$7.25 per picul, and 500 piculs at \$6.40 per picul.

White Refined	\$5.75 to 8.30
Manila	3.80 to 4.60
Taiwanfoo	— to —
Pentaina	3.00 to 3.40
Namiida	2.90 to 3.20
Cake	3.70 to 4.10
Brown Takao	4.30 to 4.40

EXPORTS.

RAW SILK.

Our last issue was dated 12th inst., since then settlements are only 79 piculs, divided thus:—*Filatures* 64 piculs; *Re-reels* 15 piculs. The Japanese direct shipments which went by the *China* bring the figures up to about 130 piculs in all as the total of the week's business.

We may again say that all the buying has been for European account, purchases for the States being practically nil. Exchange has been lower in the interim, but closes at about last week's rates, and Japanese who were very strong when exchange declined are now somewhat more easy although they refuse to alter their prices.

Business for America seems quite dead, and the Market there shows a state of paralysis such as has not been known for years. It would seem that the "Silver Bill" which was to have been a panacea for all commercial ills, has acted like a "boomerang," for the stringency in financial

matters at New York has apparently been increasing ever since the passage of the Bill. It remains to be seen whether the proposed Government action there will evolve any relief in the present situation.

Holders here are very strong; in spite of the heavy arrivals, they seem to be able to wait a bit longer and will undoubtedly do so. They recognise the present abnormal state of affairs in the New York Market, and are apparently wise in looking on until the state of suspense is ended one way or another. The small business done for Europe has been at full rates, but the demand is very limited and trade generally is by no means lively.

There have been three shipping opportunities since we last wrote; the French Mail, American Mail and Canadian Mail. The first named of these, *Saghalien* on the 14th inst., took 294 bales; the *China* on the 13th inst. had 118 bales for New York, and the *Batavia* on the 16th took 20 bales for the same destination. Present export is therefore 3,451 piculs, against 8,680 last year and 7,071 on the 19th September, 1888.

Hanks.—No business at all during the week; holders are strong and the Stock is but small. They profess themselves quite easy, because they say that if Foreigners do not want the *Hanks* Native Manufacturers can use them at remunerative prices.

Filatures.—The business for Europe goes on; \$685 being paid for extra, and a small parcel of best No. 1 Uzen, fine size, has been shipped to New York at \$675. The same price has also been paid in *Hikone* *Filatures* for Europe, but the bulk of the trade has been in Mino, Bushu, and similar grades at \$640.

Re-reels.—Business done has been very small and consists of a few bales *Bushu* and *Koga*, grading No. 2 and No. 3 at \$608 and \$585 respectively and the goods were shipped to New York by the *Batavia*.

Kakeda.—No business at all in these; holders are strong and sympathise with the rest of the market, but there has been absolutely nothing doing; quotations for these and in fact for every other kind of silk are more or less nominal until the market revives.

QUOTATIONS.—(NEW SILK.)

WASTE SILK.

Settlements in this branch have been 350 piculs divided thus:—*Cocoons* 110; *Noshi* 173; *Kibiso* 67.

While there has been more doing here than on the Raw Silk side, the Market cannot be called lively or trade good; buying is in the hands of two or three firms, some of the regular large shippers holding quite aloof.

The French Mail Steamer *Saghalien* on the 14th inst. took 51 *Waste* and 84 *Pierced Cocoons* for Europe. These have been the only shipments this week, and the present export stands at 1,506 piculs,

against 2,879 last year and 1,681 to the same date in 1888.

Quotations generally are unchanged; perhaps they are a little stronger for the better kinds of *Joshu Noshi*, but in all else there is absolutely no difference.

Pierced Cocoons.—The solitary buyer continues his purchases on the last basis, taking in another 200 bales. So far, no other shippers seem to have the courage to operate on the basis of quotations.

Noshi.—Some few parcels of *Joshu Noshi* have been done for Switzerland and Italy at prices ranging from \$77 1/2 to \$82 1/2. Some ordinary *Oshu* was bought at \$110.

Kibiso.—All the business of the week has been in *Filature* at prices ranging from \$100 to \$110, according to quality and grade.

All other sorts are quite neglected.

Total piculs 10,700 Total piculs 11,400

FEA.

A firm market combined with small receipts have enabled holders to obtain top prices for their leaf. Buying has been well distributed over all grades, and settlements for the week amount to 3,020 piculs, making 200,020 piculs to date, as compared with 167,020 piculs at the same period in 1889. The fifth picking has now been nearly all gathered, and it is said that there is not much more to come in, remaining stocks up country being small. The market is actually a shade higher than our quotations represent.

CONTRACTORS TO THE ADMIRALTY, LEADING STEAMSHIP COMPANIES, AND YACHT OWNERS.

STEAM LAUNCHES & YACHTS,

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Milder and Purer.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 10 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c. We supply sets of Machinery separately. Illustrated Catalogue in English, French or Spanish. Send for Copy to

SIMPSON, STRICKLAND & CO.

Firms dealing with Mr. Wadham may rely upon being served in a prompt and straightforward manner. Address:—Mr. Arthur Wadham, Engineering Offices:—181, Queen Victoria St., London. Registered address for telegrams—"Wadham, London." June 28, 1890.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. It was sent to the people, and nothing could exceed their gratitude, and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tremendous quantity of Ointment was worth a fowl and any quantity of pork, and the duns I became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World. May 1st, 1889

NOW READY,

WITH COLOURED PLAN,

A FULL REPORT on the ERUPTION of BANDAI-SAN, being a reprint from the "JAPAN MAIL" of copious translations from Tokyo Journals, a Description by "Our Reporter," and an "Editorial," written after a visit to the locality. Price 50 Cents.

YOKOHAMA: SATURDAY, SEPT. 27, 1890.

BIRTH.

On 25th September, 1890, at 28, Minami Kajiva-cho, Nagoya, the wife of W. H. SMITH, Esq., of a Daughter.

SUMMARY OF NEWS.

THEIR IMPERIAL HIGHNESSES PRINCE AND PRINCESS Komatsu left the capital on the 19th instant for Numazu.

H.R. MAJESTY THE EMPRESS-DOWAGER will proceed to Kyoto in October next to visit the tomb of Prince Kujo.

MARQUIS NADESHIMA will, it is said, be nominated by the Emperor Vice-President of the House of Peers.

H.I.H. PRINCE HARU paid a visit to the Emperor and Empress on the 19th instant, returning to his Palace at 4 p.m.

H.I.H. PRINCE KITASHIRAWA returned to the capital on the 19th instant from Takasaki, where His Highness had been staying for some time.

It is stated that an Imperial Proclamation for the convocation of the Diet will be issued in a day or two in accordance with Art. 1 of the Law of the Houses.

THE line of the Kansai Railway Company between Seki and Tsuge, which is now in course of construction, will be completed about the middle of November.

THE line of the Japan Railway Company between Ichinoseki and Aomori, which is now in course of construction, will be opened for traffic on the 1st October next.

A PROJECT has been started by residents of Fukushima Prefecture to construct a railway

between Shibata, Niigata Prefecture, and Wakamatsu, Fukushima Prefecture.

A MEETING of the Central Sanitary Association was to be held on the 24th instant at the Home Department to discuss methods of preventing the spread of infectious diseases.

RAILWAY communication between Shizuoka and Yaidzu on the Tokaido Railway, which had been suspended in consequence of damage to the line, was re-opened on the 22nd instant.

THE values of articles imported into and exported from Jinsen during the month of July last were yen 240,602.50 and yen 202,636.61 respectively, making a total of yen 443,239.11.

ALL the Ministers with the exception of Viscount Katsuyama met at the official residence of Count Yamagata on the 22nd instant to discuss matters in connection with Treaty Revision.

DURING the month of August last the number of visitors to the Library of the Japan Educational Association was 1,220, showing an increase of 310 as compared with the previous month.

A MEETING of chiefs of various police stations in Tokyo was held on the 20th instant at the Metropolitan Police Office for the purpose of discussing matters in reference to the regulation of *sushi*.

HER MAJESTY THE EMPRESS was pleased to grant a sum of yen 200 on the 19th instant, towards the funds of the Osaka Sanitary Association, which gives medical assistance gratuitously to persons attacked by cholera.

At a meeting of the Osaka City Assembly held recently, it was decided that a waterworks system should be provided for the city, and that a municipal loan of yen 1,800,000 should be raised for defraying the cost of the work.

THE Sanitary Bureau of the Home Department reports that the total number of persons attacked by cholera throughout the Empire from the commencement of the epidemic to the 21st instant, was 25,723, of whom 16,464 died.

A TELEGRAM from Takamatsu dated the 18th instant, states that in consequence of the recent heavy rains various rivers in the province of Sanuki overflowed; about forty houses were destroyed, and thirty-four boats sunk, twelve persons being drowned.

AN outbreak of fire took place on the night of the 13th instant in a house at Yanaginachi, Yamamoto-gun, Akita Prefecture, and thirty-nine houses, one temple, and one godown were entirely destroyed before the flames could be got under control.

OWING to the heavy rains on the 16th instant various rivers in Kagawa Prefecture overflowed; 1,238 houses were entirely destroyed, three bridges carried away, and embankments damaged in 19 places, five persons being drowned and eight injured.

FIRE broke out early in the morning of the 16th instant, in a house at Bakurocho, Akita, Akita Prefecture, and twenty-two dwellings and two telegraph posts were entirely burned, one house being partially destroyed before the flames could be got under control.

THE Japanese Consul at Fusan reports that the number of Japanese attacked by cholera there between the 6th and the 11th instant was 35, the number of deaths being 30. The Japanese Commercial Agent at Vladivostok also reports

that 22 Japanese were seized by cholera there between the 17th ultimo and the 8th instant, 11 of whom died, 5 recovered, and the remainder were still under treatment.

A MEETING of members of the Equal Treaty Association was held on the 21st instant, at the Kaika-tei. Among these present were Messrs. Inouye Kakugoro, Mayeda Kagashi, Kumagaye Naosaki, Ayai Takeo, Yagihara Shigeshi, Uda Taro, and Morimoto Tokichi.

IN consequence of the recent heavy rains various rivers in Tokushima Prefecture overflowed on the 12th instant, causing much damage to crops and embankments. Over 870 houses were carried away or destroyed, and 38 boats were lost, 12 persons being drowned.

THE opening ceremony of the Nippon Horitsu Gakko (Japan Law School) took place on the 21st instant. About a hundred gentlemen were present. Addresses were delivered by Count Yamada, Mr. Tsuji, Vice-Minister for Education, Mr. Kaneko, chief secretary of the House of Peers, and Mr. Kato, President of the Imperial University.

ACCORDING to returns compiled by the Finance Department, the amount of Government paper currency and bank notes in circulation on the 31st August last was yen 65,141,303.40, of which yen 39,098,966.90 represented Government paper, and yen 26,042,336.50 bank notes. As compared with the previous month the above shows a decrease of yen 966,289 in Government paper, and yen 117,549 in bank notes.

THREE men named Hirayama Suyematsu, Matsumami Shonosuke, and Mori Kamezo were convicted in the Nagasaki Correctional Court on the 13th instant of having kidnapped girls for conveyance to Hongkong, several of whom were smothered on board the *Fushiki Maru*. They were sentenced to imprisonment for two years with hard labour, and to pay fine of yen 20 each. A woman named Awoki Yumi was also sentenced in the same court to imprisonment for three months with hard labour, and to pay a fine of 5 yen on a charge of having aided the prisoners in the commission of the crime.

THERE is not much to be said about the Import trade, the heavy sales of Yarns last week having, as expected, induced a quietness in both English and Bombays; and Shertings, Fancy Cottons, and Woollens have followed suit. Prices, however, are unchanged, and the outlook is not unpromising. Something approaching a revival has taken place in the Metal market, though the only improvement in prices is in Wire Nails. Dealers in Kerosene appear to be fairly supplied, and very little reduction has been made on the large stock recently reported. Only a few retail transactions have been effected in Sugar; prices have declined, and holders are weak. The Silk trade remains in an unsatisfactory condition, and stocks continue to accumulate, there being now about 12,000 piculs on this market. Less than 400 piculs have been settled during the week, about one-fourth of the total being by direct shipment. There has been a fair quantity of Waste Silk taken, and rates incline to stiffness. The Tea trade has not been large, but news from consuming quarters indicate an improvement, and holders of leaf are firm, this attitude being strengthened by the belief that there is comparatively but a small quantity to come in. Exchange has again fluctuated, the direction during the last day or two being decidedly downward; in fact present rates are lower than for several weeks past.

EDITORIAL NOTES.

SPIES.

TWENTY-EIGHT lines devoted by one of our local contemporaries last Saturday to an attempt to prove that the Japanese Authorities employed spies to report upon the doings of the Anti-Revision Meeting, are now effaced by a tiny paragraph, announcing the discovery, "on the highest authority," that the police stationed at the door of the Public Hall "attended solely with the object of preventing any disturbance by the class of Japanese it was thought might turn up," and were not spies at all. This is very interesting. In view of the infantine condition of the minds of certain critics in Yokohama, it might be advisable to attach labels to the police when their duty calls them to places where foreigners congregate. A collar round the neck of each constable, bearing the legend, "This is a guardian of the peace," might have prevented all this silly prattle about spies, and saved a highly respectable journal the humiliation of having to retract and apologise.

Ought not these discoveries to teach caution? They do not, however. A much more remarkable one, made some time ago, seems to have produced no good result whatever. It was about an unfortunate coolie at Yokosuka whose brains were supposed to have been bashed out by a policeman, with a log of wood. What flaming paragraphs this awful piece of savagery produced, to be sure! How the police were rated, raved at, and held up to public execration! Then the discovery came. The man who carried the story to the gullible newspaper had heard it from another man, who turned round and declared that he had never told it. So the brained coolie and the brutal policeman disappeared in the noise of two foreigners charging one another with lying. The journal which has now distinguished itself by discovering, "on the highest authority," that policemen have other duties than spying to perform, was also the means of making that other brilliant discovery that men sometimes depart from the truth. What a trustworthy newspaper it will be when its conduct begins to be directed by its discoveries.

Speaking of the police reminds us of a tale told by one of the two Kobe English journals some time ago. It was a detailed account of a very inhuman process of torture said to have been applied by the police to a boatman charged with stealing kerosene oil. We ventured to question the truth of the story, and asked our Kobe contemporary to publish particulars—which it professed to be able to obtain—showing exactly where the thing had occurred. In reply the original vague information was republished, and by and by we were taunted with inability to refute it. Now the fact is that we found it quite impossible to trace the origin of the story. We applied to officials of the Government, and they, being anxious not only to discover whether such a breach of the law had really been perpetrated, but also to refute the libel if untrue, made every effort to sift the matter. But the information furnished by the Kobe journal proved quite insufficient, and no intelligence of any kind could be obtained from Hyogo. In every country the police are abused. But in few countries will a newspaper be found so unjust as to prefer a charge of detailed brutality against them without adding such information as will either enable the accused persons to defend themselves or enable the authorities to convict and punish them.

TREATMENT OF FOREIGNERS.

"We, too" (says the *Nichi Nichi Shinbun*) find it an extraordinary proceeding on the part of the English residents of Yokohama to have raised difficulties about Treaty Revision and passed resolutions in an opposing sense at a meeting. We believe it to be an occasion when public-spirited Japanese should not keep silent. Messrs. Yenamoto, Sakai, and Humano, traders of Yokohama, sought an interview with

Mr. Fraser, the President of the meeting, but he declined to meet them, alleging, first, his business occupations, and secondly, his resolve not to discuss the matter with either foreigners or Japanese. Mr. Kobayashi, of Chiba Prefecture, also waited on Mr. Fraser and subsequently had a discussion with Mr. Brooke, editor of the *Japan Herald*. What steps will be taken after this we do not know. As for the attitude of opposition assumed by foreigners, they find fault with our laws and our administration, and say that they cannot consent to come under such unsatisfactory laws and such an unsatisfactory administration. This rudeness cannot be tamely brooked; it cannot be tamely suffered that the consummation of treaty revision should be prevented by the action of a few foreigners. Therefore we find no fault with the zeal of public-spirited men to thwart the action of foreigners. But if foreigners are to be attacked, let them be attacked in a proper way. Do not fall into the error of being betrayed into violence and rudeness by the strength of momentary anger. If indeed foreign Governments share the views of the section of hostile foreigners; if the Foreign Representatives are of the same way of thinking, then we may conclude that however we amend our laws, however we improve our judiciary, whatever may be our general progress, whatever preparations we may make for treaty revision, there is no hope of accomplishing our purpose. But although on this occasion some foreigners in Yokohama have held a meeting and passed resolutions, all are not of the same mind. British subjects are the chief promoters of the opposition. The French and Italians are in favour of revision and others maintain a neutral attitude. It must not be supposed, therefore, that all the Foreign Representatives and all the Foreign Governments share the views of the hostile section. If then, in our anger at the doings of the agitators, we behave with violence and rudeness, the effect will be to alienate the goodwill of the foreigners who are well disposed towards us, and possibly, by convincing them that Japan is not yet fit for equal intercourse, to drive them into the opposite camp. Nay, even more serious results may be entailed. The anti-foreign party of the Bakufu days, impelled by their hatred for foreigners, set fire to Legations and killed foreigners. Their motives were undoubtedly patriotic, but the loss they caused to their country, the injury they did to her prestige, the impediments they opposed to her progress, were very great. It was through their doing that British and French troops had to be stationed in Yokohama for the protection of the foreign residents. No one will be now guilty of similar violence, nor would equally bad results ensue. But any excesses might impede the progress of treaty revision and thus inure similarly to the country's loss. Public spirited men should keep these facts steadfastly before them, and remember that the time to be careful is before the trouble occurs."

THE PRESS.

In an article on the future of the foreign press in Japan, the *Japan Gazette* writes:—

What guarantees, we ask, have the Ministers required as to the liberty of the foreign journals at present published in Japan—that they shall not become so enslaved, so oppressed, and so controlled by petty, flogging Government officials that their news must degenerate into unreliability and their enunciations into untrustworthiness? In Chap. 2, Art. 29 of the Japanese Constitution these words appear: "Japanese subjects shall, within limits of law, enjoy the liberty of speech, writing, publication, public meeting and association." The words we have italicized must be particularly noted as they constitute a reservation which confers enormous power on the executive, and practically nullifies the Article. Count Ito's commentary on the Constitution of Japan omits to give any very satisfactory explanation of Art. 29. It is true some comment is offered, but the wording is very cautious, and fails to convince experienced foreign residents that the Japanese Government will not hereafter pass Ordinances even more severe than the present highly obnoxious and tyrannical Press laws. This is no chimerical danger—it is a real and serious menace to the liberty of the subject when the Press of a country is under the control of severe censorship. Since the writer of this article takes the trouble to quote the Constitution and Count Ito's Com-

mentary, he might also have taken the trouble to read the latter with some care. His fear is that the Japanese Government will "hereafter pass Ordinances even more severe than the present highly obnoxious and tyrannical press laws," and he avers that a portion of the Article which he quotes from the Constitution "confers enormous power on the Executive and practically nullifies the article." Will he be surprised to learn that the Constitution confers no power at all on the Executive in this matter, and that the Government cannot issue any Ordinances of the nature referred to by him? Will he also be surprised to learn that this fact is clearly explained in Count Ito's Commentary. A "Law," as the word is used in the Constitution, is entirely distinct from an "Ordinance." The most careless student of the Constitution should understand that. But if he needs enlightenment, he has only to refer to Count Ito's Commentary, where he will find that what the *Japan Gazette* describes as a "cautious and not very satisfactory explanation," is in fact the following most explicit and unequivocal declaration:—"The restrictions" (mentioned in the Article) "must, however, be determined by law, and lie beyond the sphere of Ordinances." Now, according to the same Constitution, every "law" must receive the consent of the Diet. It follows then that the Executive has no power at all in this matter; that Ordinances cannot be issued curtailing freedom of speech, and that every restriction hereafter imposed upon freedom of speech must have the consent of the people's representatives. Could not the *Japan Gazette* have ascertained these easily ascertainable facts before publishing statements so diametrically opposed to the truth?

MR. KAWASHIMA JUN ON THE REFORM OF THE LAND TAX.

As one of the leading spirits of the newly organized Constitutional Liberal Party and an official of high standing in the Department of Finance, Mr. Kawashima's opinions on financial questions deserve very careful consideration. In a recent issue of the *Kokumin-no-Tomo*, he publishes his matured views on the reform of land taxation. When the present Government, shortly after the Restoration, set about the task of rearranging the system of taxation, it was found that the people had been harassed by specially heavy burdens under the feudal régime. Count Matsugata and Mr. Watanabe, the present Minister and Vice-Minister of Finance, had, according to Mr. Kawashima, the principal charge of the business. It was decided to make the value of land the basis for taxation. But the sale of land having been under the old Government systematically discouraged, if not arbitrarily suppressed, it was impossible to ascertain its value. A Choshu statesman then came to the rescue of those charged with the responsibility of carrying out tax reform, and suggested a mode of assessing the value of land, illustrating it by the system followed in his own clan. Adopting his advice, the Government assessed the value of land throughout the country on the basis of the yield of the crop. The rate of tax was then fixed at 3 per cent. of the value thus assessed. But it is plain that the assessed value (*chika*) of land did not represent its market value; the two were entirely independent of each other; and the consequence was that the tax weighed on the farmers as heavily as ever. In 1875 and 1876, insurrections took place in various parts of the country, and the Government reduced the rate of the land tax to 2½ per cent. of the assessed value. But this measure of the Government did not prove a welcome one to the people, because simultaneously with it the public burden on land was actually increased by the imposition of newly devised local taxes and communal rates (*choshon-zei*), which were all based on the land tax. Thus the actual burden on land was increased to 3½ per cent. and, in some cases, even 4 per cent., of the assessed value. Since then several reforms have been effected, but the system pursued being altogether wrong, they have not proved satisfactory to the people, and the reform of land taxation, Mr. Kawa-

shima remarks, remains one of the standing questions of the day. The writer observes that there are two methods of land taxation followed in Europe, the French and German methods. According to the former, the total amount of land tax for the whole country is first determined, and then it is divided among the different local administrative divisions. Each of such divisions then divides the amount among its sub-divisions, and so on, until each rural commune divides its share among the landowners within its jurisdiction. The German method is just the reverse of this: the land is classified according to the average profit obtainable therefrom, and the tax is assessed at a certain rate on the basis of such a profit. Mr. Kawashima proposes to adopt the latter method, and maintains that it is the only equitable mode of taxation that can be carried out in practice. He further proposes to entrust the task of classifying land on the basis of the net profits realized from it to a series of Committees. The Central Committee would be formed of an equal number of men from the Executive and the Legislature, presided over by one of the Ministers of State. Each *Fu* and *Ken* would then appoint a similar committee; while each *Gun* and *Cho* and *Son* would in turn have a sub-committee. These committees would be subject to the authority of the Central Committee in Tokyo. Should a landowner object to the assessment of a *Cho* or *Son* Committee, he might appeal to the *Gun* Committee, then to the *Ken* or *Fu* Committee and so on until the final decision of the Central Committee was obtained. In this way Mr. Kawashima hopes that the reform of taxation on land may be effected in a tolerably equitable manner.

MESSRS. BAVIER AND COMPANY.

THE following letter appears in the columns of the *Shogyo Shimpō*:-

TO THE EDITOR "SHOGYO SHIMPO."
DEAR SIR—We have the honor to request you to be good enough to publish in your next issue that not only were we not represented at the late foreign Anti-revision meeting, but that we emphatically disapprove of the said proceedings. We remain, &c.,
Yokohama, 16th, September 1890. BAVIER & Co.

The *Japan Herald*, incorrectly translating this letter from the Japanese, makes Messrs. Bavier & Co. say that they did not "support" the meeting, and on the strength of its own mistranslation indulges, *more suo*, in some vulgar ridicule of Messrs. Bavier & Co. The incident is characteristic. If any foreign firm has the courage to openly avow opposition to the views of the implacables, it may confidently reckon on being treated with the brutal intolerance which disfigures all their organ's utterances. Every resident in Yokohama must either be a foe to Treaty Revision, or, if he be a friend, must conceal his friendship. Otherwise abuse, rude attacks, and charges of mercenary motives will certainly be his portion.

BUSINESS CHANCE.

It becomes more and more apparent that wrath possesses the gentleman who, over the signature of "Business Chance," addressed one of our local contemporaries some time ago, complaining of his inability to effect combinations for business purposes with Japanese. We are sorry that this angry mood should have been excited, for a man out of temper never does himself justice, and the discussion raised by "Business Chance" is sufficiently interesting to be worth pursuing calmly. However, as the case stands, "Business Chance," greatly ruffled, has retired into a literary citadel and declared that the Editor of the *Mail* cannot write English. "A thorough knowledge of the English language" is a rare accomplishment to the possession of which we by no means pretend. But our two offences in this instance are surely not so very heinous. We did not say that a business combination must necessarily be a partnership. But we did say that the combination described by "Business Chance" bore a very strong resemblance to a partnership. With every desire to make full allowance for the state of "Business Chance's" temper, we think that he ought to have been able to appreciate this distinction. Our second

literary offence is that we described as an "admission" the avowal made by "Business Chance" that, according to his views, "successful and unrestrained evasion of the law by one or two foreigners confers on all foreigners a right to evade it. We called this an 'admission,' because the possibility of anything of the kind had hitherto been persistently denied by foreign writers. Perhaps, if we had possessed 'a thorough knowledge of the English language,' we might have understood what 'Business Chance' now asserts, namely, that 'open avowal' should have been substituted for 'admission.' So be it. But the 'open avowal,' or 'admission,' call it which you please, remains. Let us not be told any longer that it is perfectly safe for the Japanese Government to wink at violations of the Treaties in the interests of commercial expansion and for the sake of a liberal reputation. They now have it on the authority of a foreign merchant that if any foreigners are tacitly suffered to enjoy privileges not conferred by the Treaties, other foreigners will regard it as their right to enjoy similar privileges. "Business Chance" shies a little when brought face to face with this confession. "Wherever did I say or make" such an avowal, he asks. Well, here are his own words:—

I would further point out to him that some foreign firms have entered into combinations with Japanese, and are to-day doing business under Japanese names with the Japanese Government, with full knowledge of the Government of the fact that these establishments are carried on under foreign direction, with foreign capital, and outside of settlement limits. The editor of the *Mail* himself, in fact, lives and carries on his business of writing outside of settlement limits. I contend, therefore, that any foreigner who is in possession of the facts can claim the same privileges as those granted to the foreign firms in question.

Is it or is it not lawful, under the present Treaties, that a business establishment should be "carried on under foreign direction, with foreign capital and outside of settlement limits?" If it is lawful, then why assert that "any foreigner who is in possession of the facts can claim the same privileges?" If it is not lawful, then "Business Chance" stands committed to the avowal which we attributed to him.

"Business Chance" is quite at liberty to charge us with ignorance of the English language. But he has no manner of right falsely to accuse us of wilful deception. In his last letter he says:—

It is quite a new departure in journalism, too, for an editor of a paper to put his own inferences and suppositions in quotation marks, but the editor of the *Mail* apparently is not above such little tricks of trade by which the public would naturally be led to believe that the quotation is from the letter or article of his opponent.

This is absolutely false. We defy "Business Chance" to point out a single instance of the "trick" which he charges us with having employed. He is bound to substantiate his accusation or to stand convicted of having uttered a wilful falsehood.

THE MAIL TRAIN TO KYOTO.

It may be well to warn our readers that the train leaving Tokyo at 4.45 p.m. is not the mail train for Kyoto, and, in fact, does not run through at all, but only goes as far as Numazu. The train leaving at 3.30 p.m. is the one which carries the mails and runs through. This change was made some time ago, but has not been notified, so far as we know. It is not to be expected, of course, that notifications in English should be published with reference to the service on Japanese lines. The foreign passenger traffic is comparatively insignificant, and though changes of trains might be advertised at very trifling cost, and would be greatly appreciated by the foreign community, we freely admit that if the Railway authorities do not choose to perform this act of courtesy, foreigners cannot reasonably complain. But are changes of service notified in the vernacular press? We do not think so. At all events we have not seen anything of the kind. The Japanese travelling public seems to be left, just as the foreign is, to find out for itself what alterations are made in the time-tables. Is not this somewhat cava-

lier-like treatment? Take the case of the recent interruptions of service on several of the principal lines. Had anything of the kind occurred in England, full details would have been furnished by advertisement, informing travellers how to proceed, and letting them know exactly what difficulties lay in their way. Here, however, the only notice given was by meagre paragraphs in the *Official Gazette*, stating that such and such a section of such and such a Company's lines had been closed to traffic, or that such and such a section had been re-opened. Rome was not built in a day. We cannot expect to have everything just as it ought to be in Japan, but improvement in this particular respect would not be difficult.

PRINCE ARISUGAWA TAKEHITO AND THE NAVY.

We read in the *Nichi Nichi Shimbun* that H.I.H. Prince Takehito (Arisugawa), who was lately raised to the rank of Post-Captain in the Imperial Japanese Navy, is an ardent advocate of the policy of increasing the maritime forces of his country. During his travels abroad two years ago, the Prince is said to have been much impressed with what he saw of naval equipment and naval progress, and to have forwarded to the Head Quarter Staff in Tokyo numerous reports of what he observed. It was then that he became impressed with the necessity of increasing his country's fighting power at sea, and since his return he has more than once compiled memorials on the subject with his own hand. Our contemporary says that he sometimes sits up all night for the purpose of pursuing his researches, and that he is always ready to argue vehemently with any one opposed to his views.

BONES.

SHYLOCK's pound of flesh has a modern parallel in an ounce of bones. A certain householder in Nakacho, Hatchobori, Tokyo, says the *Fomuri Shimbun*, gave lodging to a *jinrikisha* driver, a native of Shimosa in Chiba Prefecture, who recently died of cholera. The corpse, according to regulation, was cremated at Sunamura, and the bones, having been collected, were handed over to his relatives. Thereupon the man's landlord stepped in, and preferring a claim against the deceased for money lent, demanded that the bones should be transferred to him as security until the debt was repaid. The demand was complied with, and the relatives are now said to be considerably perturbed about the matter, but truly we think that they might do worse than leave the creditor in quiet possession of his osseous security.

A MEMORIAL TO THE CABINET.

A POLITICAL association at Nagoya has addressed an interesting and significant memorial to the Cabinet. It is reproduced in the columns of the *Hochi Shimbun*, from which we translate it:—"The present is a great epoch in the history of our country, and we, deeply appreciating the importance of the conjuncture, beg respectfully to address these remarks to your Excellencies the Ministers of the Cabinet. The time has come for your Excellencies to complete your achievements by retiring from office. To step off the stage when fame is attained is a natural principle. Looking back on the events of the past twenty years, we see the Bakufu overthrown, the Restoration accomplished, the foundations of constitutional government laid, and even a national assembly opened; all which achievements, though due primarily to the virtue of the Emperor, have been largely brought about by the assistance of your Excellencies. Ascending from the people, you have attained high rank, and won the respect of all men through your talents and your loyalty, but also through the grace of the Sovereign. You are men who have an illustrious record and have won fame. To retire from office should cause you no regret. The whole nation asks for a party Cabinet. Your Excellencies, although you may not retire at once from office, being, as you are, true patriots, cannot choose but hearken to the wishes of the people. If, relinquishing your posts, you re-organise the Cabinet on party

lines under the direction of His Majesty the Emperor, the high virtue of your compliance with public opinion will long be remembered to your credit by the people of the Empire. Our country has reached the limits of the old government and the threshold of the new. At the epoch of the Restoration, when the public-spirited men of the country decided that unless the Government were centralized the empire could not be administered, nor its foreign affairs conducted with credit, the Bakufu was induced to restore the executive power to the Sovereign. The Tokugawa Prince, in his memorial to the Emperor, said:—"In the two hundred years that have elapsed since we assumed the reins of Government, our mistakes have been many, and it shames us deeply to-day to find how superficial is our administration. Moreover, intercourse with foreign countries has largely developed. Unless the executive be centralized its conduct will be impossible. Henceforth, therefore, reforming old customs, we restore the executive power to the Emperor, that the Government may be carried on by the Imperial direction in accordance with the will of the nation and in general unity, for the better promotion of the nation's safety and the people's happiness." Had not the Tokugawa Prince restored the executive power to the Sovereign, there would have been none to praise him afterwards. It cannot be doubted that the organization of a party Cabinet by your Excellencies would be an act of magnanimity and beauty. The Emperor's love for his people is as that of a parent for its babe. He does everything they desire, and he knows that they look for a party Cabinet. His Majesty has constantly before his eyes the great deeds your Excellencies accomplished at the Restoration, and your zeal for the country. Your Excellencies will not be acting contrary to the Imperial will by retiring from office. Your retirement to-day would be like the noble act of Prince Tokugawa in surrendering the executive power. If it be desired on the one hand to keep the Cabinet aloof from parties, while, on the other, the Diet which reflects the national sentiment endeavours to bring about a party Cabinet, what course can be pursued in the face of these conflicting views? Recourse must be had to government of the most intolerant character, and it will then be too late for you to resign office. Sooner or later your Excellencies must retire. Now is the time. Later on, constrained by the strength of the Diet, resignation will be unavoidable. To know the occasion is godlike, says the old proverb. If you resign now, and, forming a new Cabinet on party lines under His Majesty's direction, complete the fact of constitutional government, the whole nation will applaud your virtue. We pray you to hearken to our words, that the fame of the country may be heightened by your act."

When Prince Iyeyasu resigned the executive power into the hands of the Emperor, the Southern Barons were ready to assume the charge. When the feudal chiefs surrendered their fiefs, the Central Government was prepared to take over their functions and responsibilities. Is there to-day any political party competent to form a Cabinet?

AMENDMENT OF THE REGISTRATION LAW.

THE *Tokyo Shimpō* welcomes the appearance of the Amended Registration Regulations. The many obstructions that previously hampered the disposal of property constituted real interferences with the smooth progress of economical affairs; the complicated processes required and the heavy costs of the frequent journeys necessary proving most burdensome. Often people have had to waste several days, not to speak of actual outlay, and all about a matter of ten yen! Our contemporary finds many points which call for approval, among others the provision that an individual may obtain registration through an agent; that processes as to detention, attachment, public sale, &c., must emanate from a court or office; that a principal need not appear in person when he desires a copy of a document, &c.; that copies of contracts as to the sale, transfer, mortgage,

or hypothecation of lands, buildings, or vessels must form a part of the Registry Book, and that erasures or changes in the same may form ground for objection to registry unless proof of the consent of parties thereto, or some satisfactory explanation, is forthcoming; that the fees for registration in affairs of succession have been reduced; and that the responsibilities and duties of the Land Record and Registry Offices are distinct, each having to communicate transfers and other changes to the other. The *Tokyo Shimpō*, however, regrets that some change was not introduced in the provision requiring the attendance of both parties at the registration of each sale, transfer, mortgage, or hypothecation. This must without fail cause a vast amount of inconvenience and expense, and therefore our contemporary suggests that it would be sufficient if an agent were to produce on such occasions a certificate to use his principal's seal. The Tokyo paper further thinks the number of registry offices should be increased, greater care taken to locate the existing offices in the most convenient localities, and that officials be selected for such offices who have intelligence enough to perceive that their first duty is to facilitate the transaction of the business of the public. The last consideration our contemporary thinks of far greater importance than the other two.

THE OLD STORY.

In language the studied moderation of which is evidently intended to disguise its injustice, a correspondent of a local English contemporary charges this journal with incendiary writing, and declares that we shall be responsible if some excitable Japanese is betrayed into committing an act of folly. The article upon which this accusation is based was chiefly devoted to showing that the foreign opposition to Treaty Revision is perfectly explicable and in some respects natural; that the prominent position of British merchants in the agitation simply demonstrates the leading place they occupy in the Orient and "their preëminent sense of the sacredness of personal rights and personal freedom," and that if educated Japanese do not and cannot appreciate the reluctance of Englishmen to submit to an alien jurisdiction, the fact must be regarded "as a strong evidence that Japan is not yet fit to discharge the functions with which she seeks to be entrusted." The article then went on to admit that there was much connected with the anti-revision meeting to insult and exasperate the Japanese, but reminded them that every angry expression uttered by them would be construed as an evidence of anti-foreign feeling. It is actually against this article that the correspondent of our contemporary prefers his charge of incendiarism; it is this article which he calls "an attempt on the part of the editor of the *Japan Mail* to fan into a flame the feeling which he has done so much to create and foster hitherto," and it is this article which he pretends to think likely to instigate Japanese to acts of violence. Of course we do not for one instant think of defending ourselves against charges so extremely silly and obviously baseless, but it does seem worth while to point to this person as another illustration of the absolute incapacity shown by so many of the anti-revision writers to be commonly just and fair. Is it extravagant to conclude that if they descend to such dishonest and glaringly partial attempts to discredit those with whom they do not agree, their opinions on the subject of Treaty Revision are likely to be tainted with the same faults? It never occurs to them to protest against the ceaseless chorus of harsh and abusive writing penned by a portion of the local foreign press against everything Japanese. That writing, they appear to think, has nothing in it to rouse the anger of the people of the country or to offend their national feelings. But if there can be found in the *Japan Mail* a sentence expressing sympathy with Japan or admitting that she is not without cause for umbrage and disappointment, they seize upon that sentence, separate it from its context defending and explaining the motives of foreigners, and pretend to think that they have discovered

incendiary utterances calculated and intended to excite the Japanese to deeds of violence against foreigners. Let these people be ever so blind, they cannot but see how palpably dishonest are their methods, and how glaringly gross their prejudices. Were it not for the humiliation and disrepute which their proceedings bring upon the name of Englishmen in Japan, we should welcome them as most efficacious allies, for men who show not a scintilla of respect for fair play and ingenuous dealing, inevitably drag down every cause they espouse.

SOSHI.

THE *Nichi Nichi Shimbun* says that a hundred and seventeen *soshi* arrived in Tokyo on the evening of the 19th. Eighteen were from Saga, twenty-two from Fukuoka, forty-six from Kumamoto, and thirty-one from Ishikawa. The whole number are said to be enemies of the new Constitutional Radicals, and it is conjectured that they purpose undertaking something grave. One rumour is that they intend to seek an interview, in the first place, with Messrs. Oi, Kono and Uyeke. For some time back the arrival of *soshi* in the capital from various parts of the empire has been noticed, and the Authorities are understood to be seriously discussing the advisability of adopting decisive measures for the control of these troublesome agitators. Their total number cannot be great—probably a few hundreds all told—but they are sufficiently numerous to cause much trouble, and to threaten to inflict heavy disgrace on the country unless they are checked with a strong hand. Possibly the Government may be obliged to enforce the Peace Preservation Regulations once again, and expel the whole batch from Tokyo whither their steps seem to be now tending. To deport them to Hokkaido and give them an opportunity of devoting their superfluous energy to the colonization of that district would not be a bad plan. The *soshi* are patriots in their way; very erring and pestilential patriots, it is true, but yet by no means to be treated as criminals until violent deeds bring them within the pale of the law. Their tendency appears to be conservative on the whole, and when we consider the past history of some of the men who figure prominently among the Constitutional Radicals, and who seem bent upon carrying their country at break-neck speed towards universal suffrage and other unreasonable doctrines, we can easily understand that the hot-headed and hastily judging *soshi* may conceive themselves entrusted with a mission to impede such hasty progress.

VERNACULAR JOURNALS AND CURRENT TOPICS.

ALL the Tokyo papers fill the greater part of their columns with news of, and discussion in reference to, the movements of political parties in the capital, the doings of the Constitutional Liberal Party being very fully reported. A large portion of the remaining space is occupied by matter relating to the sayings and actions of foreign and Japanese merchants in Yokohama relative to Treaty Revision. The *Hochi Shimbun* of the 19th inst. found it necessary to comment on this circumstance and to point out that while the almost exclusive attention given to the Constitutional Liberals might warrant the charge that other vital matters were being overlooked, still the topic is beyond doubt the most engrossing of the time and must be fully treated. Meanwhile numerous political meetings are being held in Tokyo, their proceedings being in not a few cases provocative of disagreeable incidents, as witness the attacks on Messrs. Kawashima and Koike. The great Constitutional Liberal Party was successfully organized on the 15th instant, but the discussions that have taken place since show that the process of amalgamation has been a difficult one. The Yokohama journals similarly devote a large proportion of their space to Treaty Revision matters.

THE MAJERONIS.

WE regret to learn that Signora Majeroni, whose arrival in Japan, with her husband, we mentioned some time ago, is suffering from a serious

affection of the throat, which has so impaired her voice that she is at present under medical treatment. We have heard so much about this celebrated artiste, and her no less talented husband, that it will be a matter for regret if the community of Yokohama is not afforded an opportunity of witnessing their appearance in some of the well-known dramas with which their names are so widely associated. It is not often that artists whose abilities have been recognized in all the great cities of Europe come to this part of the world, and we trust that Signora Majeroni will shortly recover and be enabled to make an appearance in Yokohama. Failing that, however, Signor Majeroni might appear in one or two of his renowned impersonations. The "Old Corporal," for example, in which he has gained so high a reputation would, if produced here, prove a treat long to be remembered by local playgoers. This was the drama in which Signor Majeroni first appeared in English at Sydney in 1876, and with which he made, alone, the tour of the Australian Colonies and North America. The general opinion of press and public stamped his assumption of the character as one of the most artistic performances, both in its fidelity to nature and perfection of art, that had been seen for many years.

SAILING RACES.

A SAILING RACE for 17-raters took place on Saturday under the auspices of the Yokohama Sailing Club. A heavy rain storm came on at two o'clock, the hour fixed for the start, and the gun was not fired till 2.38 when the weather had cleared somewhat, though very little wind, and that of the most shifty character, prevailed. *Sayonara* was first round the Green Lightship, having got there mostly by "rocking," and improved her lead on the run down to Kana-gawa, a light breeze meantime springing up. *La Belle* between the first and second marks lessened the gap between her and *Jessie*, but fell astern on the beat home. *Sayonara* finished first, nearly ten minutes to the good, irrespective of her time allowance of 3m. 52sec., and therefore took the first prize. Mr. A. Owston was officer of the day. The following are the official times:—

Rating.	Green h.m.s.	Kana- gawa. h.m.s.	Finish. h.m.s.	Time allow. h.m.s.	Corrected Time. h.m.s.
<i>Tortoise</i>	16	1.20.45	3.30.30	4.19.35	4.19.35
<i>Des</i>	16	did not start	—	—	—
<i>La Belle</i>	16	3.12.25	3.41.40	4.26.40	4.26.40
<i>Sayonara</i>	13	2.57.20	3.31.00	4.09.05	3.52 4.05.08

On Tuesday being a Japanese national holiday, a sailing race for boats of all classes took place under the auspices of the Yokohama Sailing Club. The course was from a line between the French Hatoba and the bathing barge, across the bay to Myokensan, round a mark placed off that bluff and back, finishing over the same line, the entire distance being 21 knots. As the mark bears about S.E. by E. from the Boat-house and the wind was about N., the boats had a broad reach going and a close reach coming back. There was a goodly array of entries, but *Scow* did not start for want of a sailing master, and the weather looked too heavy for *Jessie*. At two o'clock, the starting gun being fired by Mr. F. H. Hooper, who also took the time, the yachts were got off. *Molly* hurried the time too much, and had to recross the line, but lost little by this operation. *Tortoise* was first across, 12 secs. after the gun went; *Molly* 30 secs. after the signal, *Princess Maud* 58 secs., *Lady Louise* 1m. 15 secs., *Lesbielle* 1m. 32 secs., *Nautilus* 1m. 55 secs., *Trawler* 2m. 47 secs., and *Maid Marion*, last, 2m. 52 secs. after the gun was fired. *Lady Louise* set the example—which the *Maid* and one or two others followed—of reaching down along the hither shore of the bay, her idea no doubt being to avoid the flood tide in the fair-way, till having progressed well down the bay and gained the advantage of any ebb that might be running close in, she could cross the current and thus drop down on the mark. The flood was not flowing as strongly as was expected, but the expedient was not without its advantages, for a villainous sea ran in the middle of the bay, which seemed a little

easier for the craft that had run into the lee-ward berth. Anyhow *Tortoise*, holding a course about midway between the lee and weather divisions, kept the lead that she had obtained, *Molly* close to her, but failing in the short sea to get on equal terms with her. *Maid Marion* had sailed in company with the blue cutter *Yokosuka-wards*, but designing to change her topsail lost her topmast, for which the straining of her flying jib proved too much. This caused delay, and may be said to have pretty well put the *Maid* out of the race. Jib-topsails, it should be said, had been hazarded by most at the outset, but proved too much for *Princess Maud*, which prudently took hers in after carrying it a few minutes. *Tortoise* was first round the mark; *Maid Marion* cutting inside of *Trawler* got round next, *Lesbielle* followed *Trawler*, and then came *Molly*, *Lady Louise*, *Princess Maud*, and *Tomiooka*. During the reach home, *Maid Marion*, proving too powerful for *Tortoise*, overhauled her and finished 20 min. ahead, but not sufficient to keep the old cutter out of first place, which she gained easily on her handicap. *Molly* and the blue cutter came in respectively four and six minutes later than *Tortoise*; *Princess Maud* followed at a dismally long interval sufficiently accounted for by the difficulty of sailing such a tiny craft in so nasty a sea; *Trawler* crawled in half a minute after, and *Nautilus* at 2h. 36m. 30s. in time to take second place by reason of the thumping handicap that she had. *Molly*, therefore, had to be content with third place. General satisfaction was felt with *Tortoise's* victory, for though the heavy sea seemed to bother her less than most of the others, she was undoubtedly well sailed and deserved the "Lesbielle" Cup. And what of *Lesbielle* herself? Well, with a sailing master who had never been on board of her before, and a new crew, the odds were against her from the outset, the handicap and the nature of the course favouring greatly the medium craft. Her last chance went, however, when in luffing to reef, after rounding the mark, she carried away some of her head gear; and after anchoring to refit she limped in at 3h. 47m. under staysail and mainsail reefed down but did not cross the line. The following are the times:—

Rating.	Finish. h.m.s.	Handicap. m.s.	Corrected Time. h.m.s.
<i>Maid Marion</i>	39	1.41.00	1.43.00
<i>Lesbielle</i>	38	3.47.00	3.47.00
<i>Lady Louise</i>	26	2.09.00	2.09.00
<i>Molly</i>	25	2.07.00	2.07.00
<i>Princess Maud</i>	24	2.31.30	2.31.30
<i>Trawler</i>	31	3.32.00	3.32.00
<i>Nautilus</i>	25	3.03.00	3.03.00
<i>Tomiooka</i>	26	3.36.30	3.36.30

PASSPORTS.

We recently mentioned that the number of passports issued by the Foreign Office through Her Britannic Majesty's Legation in Tokyo, for the use of British subjects visiting Japan, was larger this year than last year, an evidence that the stream of tourists is steadily increasing. We have now been kindly furnished with exact figures, from which we learn that the number of passports issued this year to British subjects from January 1st to September 18th was 1,162, against 1,069, for the corresponding period last year. Comparing 1889 with 1888, it seems that the total number of passports issued to British subjects during the former year was 1,415, representing 1,913 persons, whereas the number in the latter year was 1,070, representing 1,366 persons. This year's final returns will evidently show a still further increase. The number of British subjects now visiting Japan each year is probably as large as the total number residing here.

BURGLARY IN THE SETTLEMENT.

A BOLD attempt at burglary, which proved abortive, however, took place last evening at No. 160, the premises of Messrs. Stiebold & Co., undertakers. It seems that during the temporary absence of Mr. Hendlall, four men, about half past nine o'clock succeeded in gaining entrance to one of the front rooms from the verandah by prizing up the bar fastening the venetian shutters, the glass doors being kept open by reason

of the heat. Once inside, the thieves abstracted from a cupboard in the room a considerable quantity of property including valuable window curtains and some bed clothing, having previously opened a door leading into the hall-way, with the object of allowing the light from the other rooms to enter and illuminate the scene of their operations. An attempt to open another cupboard containing a quantity of plated ware failed, and three of the men decamped with their spoil made up in two bundles. The fourth, seizing a large box of cube sugar, essayed to follow their example, but some noise that he made brought out a servant, who at once seized him and called for help. He escaped for the moment, but, being pursued by a number of coolies, ran into the arms of a policeman near the Engine Works. All the property, having been incontinently cast aside by other thieves on hearing the alarm given, was recovered by the police.

MR. GLADSTONE'S CONSTITUTIONAL POINT.

A POINT raised by Mr. Gladstone in the debate on the Bill for the cession of Heligoland to Germany, seems to have puzzled some students of Constitutional law and doubtless has interest for Japanese who have been recently discussing the powers relatively vested in the Crown and the Diet for treaty-making purposes. According to the theory of the British Constitution—which is, after all, the basis of every Constitution, whether German, American, Italian, or what not—the power of making treaties rests absolutely with the Sovereign, and includes, of course, the cession or acquisition of territory. In practice, however, the House of Commons exercises a very efficient control, since, if it disapproves of a treaty it can turn out the Ministry which arranged the terms of the covenant. The House cannot, indeed, prevent the treaty from going into operation. Under ordinary circumstances it would have no cognisance of the document until the ratification of the latter had become an accomplished fact, and the nation had thus been pledged to abide by it. Of course if the enactment of some new law, or a grant of special supplies, be necessary for putting a treaty into operation, the House of Commons can effectually block the way. But that is another matter. What we are considering here is the actual power of the Throne to pledge the country internationally, and that that power is constitutionally absolute admits of no question. The House of Commons, in short, exercises a punitive function: it can turn out a Ministry which has concluded an obnoxious treaty, and with such a Damoclean sword hanging over their heads, Ministers are of course careful to pledge the nation to nothing of which the Commons is not pretty sure to approve. In the case of Heligoland, Lord Salisbury resorted to an unusual course, for he introduced a Bill for the cession of the island, though the cession ought to have been purely a matter of treaty. Of course no one act of a particular ministry can alter the Constitution. It may, however, be an unconstitutional act, and such was the character attributed by Mr. Gladstone to the Conservative Ministry's Bill. He contended, in the first place, that since the cession of territory by treaty is essentially a Royal prerogative, the Bill was unnecessary—an argument of no great importance when we remember what shadowy things Royal prerogatives have practically become in England—and, in the second, that it furnished an inconvenient precedent, inasmuch as it gave the House of Lords co-ordinate authority with the House of Commons in regard to treaty questions. Mr. Gladstone's chief concern was doubtless for the second of these contentions. The House of Lords is always governed by a Conservative majority. Consequently, if its endorsement become an essential preliminary to the ratification of a treaty, no Liberal ministry could set about the business of treaty making with any confidence. The ministry in office has necessarily a majority in the Lower House, and can therefore undertake international negotiations in full reliance on the support of that majority, so long it has to reckon only with the Commons. But when

a third power, the Lords, is added, affairs assume a different complexion. To this subtle and far-seeing contention of Mr. Gladstone's only one serious answer has been made, namely, that extreme cases should not be taken by legislators as a guide. The House of Lords must be trusted to act with common sense in the exercise of any powers vested in it, and not to allow itself to be so far carried away by political prejudice as to wantonly reject a treaty desired by the country and approved by the Commons. We can easily imagine that such a view is calculated to be more comforting to Conservatives than to Liberals.

COUNT INOUE'S ADVICE TO MR. SUYEMATSU.

THE *Choya Shimbun* tells a story the truth of which our readers will easily estimate. When Mr. Yoshikawa, the tale says, became Minister of State for Education, he proposed to have the post of Vice-Minister given to Mr. Suyematsu, who was formerly chief of the Local Government Bureau in the Home Department, a position which he resigned for the purpose of being elected a member of the House of Representatives. Informed privately of Mr. Yoshikawa's intention, Mr. Suyematsu felt that he ought not to refuse without careful consideration. He therefore consulted some of his friends, and then repaired to Count Inouye's house to ask for advice. Count Inouye is represented as having declared that he could see no difference, so far as official position went, between the chiefship of the Bureau of Local Affairs and the Vice-Ministership of Education, and that, if Mr. Suyematsu resigned the former for the purpose of being elected to the Diet, he ought not to accept the latter after election. Mr. Suyematsu accepted this advice, which the *Choya* calls an exceptionally just view. But, although we have no doubt that Count Inouye's answer to such a question would, under any circumstances, be exactly what the *Choya* attributes to him, we have very many doubts as to the probability of Mr. Suyematsu finding it necessary to put the question. The former chief of the Bureau of Local Affairs is the last man in Japan to be puzzled about the way to be consistent.

KOBE.

WHEN Kobe received the news of the doings in Yokohama, some people in the model settlement set themselves to follow suit. An announcement speedily appeared in the local English newspapers, to the effect that the foreign residents were invited to meet at a certain place on a certain day to endorse the action taken by Yokohama. But fortunately Kobe had time to think, and its reflections led to the conclusion that Yokohama had not by any means set an example to be implicitly followed. If the principal resolution passed by the Yokohama meeting meant only what its proposer subsequently explained it to mean, then to place such a resolution on record was quite a work of supererogation. Moreover, the Yokohama meeting had adopted the singular and imprudent course of carefully refraining from any word indicative of its belief in the advisability of revising the Treaties, or its appreciation of the efforts Japan has made to win foreign confidence. From this point of view the meeting might just as well have been held twenty years ago. Had it been convened in 1870 instead of in 1890, it could not have betrayed more complete indifference to Japan's claims. Kobe was not prepared to follow so old-fashioned an example. If the residents came together, there were men among them who declared their intention of correcting Yokohama's singular and injurious omission. There were men, too, who avowed their intention of pointing out that Treaty Revision has become inevitable, and that the fact should be recognised by any meeting of practical, open-eyed persons. Such being the case, it was evident that the meeting would not be unanimous. So far from agreeing without a dissentient voice to endorse what Yokohama had done, Kobe was plainly in danger not only of showing that it could appreciate and profit by Yokohama's mistakes, but also of betraying a liberal and just mood towards

the whole question of Revision. The promoters of the meeting prudently took warning, and the demonstration was postponed *sine die*. It results, therefore, that the second among the foreign settlements cannot agree to support Yokohama's action.

This is very disappointing to the implacables. It has driven them to take refuge in the courteous and magnanimous inferences which they invariably deduce from the actions of their opponents. We cannot refrain from quoting at some length the verdict they have pronounced; it is so elegant as to phraseology, and polished as to conception:—

We have learnt, but without the least surprise, that at Kobe, just as here, there are persons whose action with regard to the anti-treaty revision movement, is controlled or affected by the wish to get Japanese contracts, no matter whether Government or otherwise, but more especially the former, and they have concluded, by not coming conspicuously to the front during the present agitation, and manfully and boldly sustaining their part alongside with their competitors, that they will curry favor with those who have favours to bestow, and so they thus hope to steal a march on their competitors in trade.

We take it to be our duty to expose this miserable and paltry exhibition of cowardice and cunning combined,—and most frankly assure the Japanese, if every foreigner felt himself free to act without regard to any other consideration than that of aiding a useful and necessary public movement, that with the exception of a few eccentrics, such as are to be found in every community, foreigners, if may with truth be said, are almost to a man at heart opposed to treaty revision as submitted by Viscount Aoki in his proposal to the British Government.

This is the old familiar tale. With the writers of such diatribes there is but one efficient motive in life—money. They are incapable of understanding or appreciating any other. If a man rises above their every-day standard, he must have been paid to make the effort. So they proclaim their own baseness and venality, forgetting that the measure which they invariably mete out to others is the only true gauge of their own character. And for the sake of such men a whole nation is to be excluded from the pale of civilization!

INTERVIEWING.

MR. J. H. BROOKE, formerly Editor of the *Japan Herald*, who unfortunately for the reputation of the anti-revision meeting was put up by the promoters to speak to the third resolution, and the memory of whose extremely intemperate and reckless utterances during his period of editorship cannot fail to impart an evil character to any agitation with which he is prominently connected, was subsequently interviewed by a Japanese, and an account of the interview appeared in the *Nichi Nichi Shimbun* and other vernacular journals. We were ourselves struck with the apparent impartiality of the reporter, for he did not hesitate to put into Mr. Brooke's mouth many of the stock arguments which that gentleman has often laid before the public, nor did he shrink from making Mr. Kobayashi play the secondary part which it now appears that he did actually take. Mr. Brooke, however, has thought it necessary to write a sneering letter in a local English journal, in which he charges Mr. Kobayashi with having drawn considerably more on his imagination than his memory for his account of the interview, and leads the public to suppose that a deliberate attempt has been made to suppress the "home truths" which he, Mr. Brooke, conveyed to his interviewer. What these "home truths" were Mr. Brooke tells us in a few lines, namely, "that the laws dealing with the liberty of the subject are obnoxious, and that in the absence of competent judges, their administration could not be expected to be otherwise than imperfect and objectionable." Now the Japanese version of the interview is before us, and from it we learn that Mr. Brooke told Mr. Kobayashi that to speak of the completeness of Japanese laws was the superficial view of a person having no real respect for the sanctity of life and property; that although the Constitution looks very pretty on paper, it is a doubtful affair from a foreign point of view; that in spite of it the Peace Preservation Regulations are still in force, as well as Press Regulations the operation of which is more

severe than anything of the kind even in Germany; that even the Constitution cannot be said to guarantee freedom of speech or public meeting; that the Japanese would never have been allowed to hold such a meeting as the foreigners in Yokohama held the other day; that all these restrictions are contrary to the spirit of the Constitution; that the Judiciary is not independent of the Executive; that Japanese Ministers of State can manipulate the Judiciary as they please; that political offenders, as a matter of course, and anyone opposed to the Government, cannot obtain a fair trial; that the absence of trial by jury is a source of great uneasiness; that the Code of Criminal Procedure is not carried out in practice at all; that its provisions are liable to be disturbed by Imperial Rescripts or Ordinances; that more than one-half of its spirit is sacrificed; that however good laws may be the possibility of their being changed at any moment by an Ordinance is most disquieting; that in England, if there is any delay about bringing a criminal to justice, his release can be obtained without difficulty; but that in Japan, if a prisoner is an object of dislike to the Government, he is kept in jail awaiting trial for years; that if foreigners fell under the suspicion of the Authorities and were kept in jail for years awaiting trial, their ultimate acquittal would serve them very little; that the reforms to which Japanese laws have been subjected are purely superficial; that according to the accounts of Missionaries, prisoners in Japanese jails are beaten and otherwise ill-treated in a manner unbecoming a civilized country; that Japanese Judges possessing ability and experience are officiating in the lower courts only and are not to be found in the upper courts; that consequently foreign Judges should be employed in the upper courts, as is the case in Turkey and Egypt; and that wealth and strength are, in effect, the real basis of a country's rights. We have doubts whether even Mr. Brooke uttered the whole of this curious tirade, though a great deal of it is familiar to us already from his writings. But he hints that the vernacular press has been afraid to publish the "home truths" which he told Mr. Kobayashi—"home truths," he assures us with the most exquisite conceit, "which, if disseminated among the 37 millions of Mr. Kobayashi's brethren, might serve the useful purpose of showing that there are two sides to the question of foreigners being brought under Japanese jurisdiction." What are these "home truths"? Is not the catalogue yet full enough? Mr. Kobayashi's memory may be defective and his imagination redundant, as Mr. Brooke says, but he has certainly managed to put into that ancient agitator's mouth precisely the sentiments which we should have expected him to ventilate.

THE RICK CROP.

REPORTS from the rice-producing districts concur in estimating the yield of rice this season at something quite out of the common. Thirty-five million *koku* is a good average crop, but this year as much as fifty million *koku* will probably be produced. If this estimate be realized, the quantity of rice available for export will not be far short of fifteen million *koku*, which is more than Europe and America can possibly take, and is about ten times as much as the largest export hitherto made in any one year from Japan. Instead of distress among the consuming class we shall probably hear bitter complaints from the farmers, who will find the returns upon their land reduced to a very low figure, for it is understood that a considerable part of the increase is due to the greater area of land brought under rice cultivation.

JUDGE KABUTO AND THE PROJECTED KYOTO UNIVERSITY.

JUDGE KABUTO, who has just returned from Europe after a sojourn of some years spent in investigating judicial matters, has been appointed judge of the Otsu Court of First Instance. In connection with his appointment, the vernacular papers state that the Government has long entertained the idea of establishing a second university in Kyoto by enlarging the

present Third Higher Middle School in that city. But as the condition of the Treasury does not admit of the immediate establishment of a fully equipped university, the Authorities propose, in the first place, to constitute the department of law as a preliminary step. Mr. Kabuto is said to have received the appointment at Otsu in order that his services may become available as a lecturer in the projected Law Department of the new University.

THE TREATY REVISION MEETING AND THE TOKYO PERIODICAL PRESS.

THE *Keisai Zasshi* of the 20th instant takes a moderate view of the Treaty Revision Meeting at Yokohama. After reproducing the resolutions passed at the Meeting, our contemporary expresses surprise at the ignorance displayed by the foreign residents of Yokohama as to the present condition of Japan. It observes that Japan now possesses Criminal, Civil, and Commercial Codes and Laws of Criminal and Civil Procedure, of approved excellence and of merit at least equal to those of European and American countries, and that the judges charged with the administration of these laws are appointed under a severe system of examination. Our contemporary is, therefore, at a loss to understand why foreigners should consider it unsafe to put their persons and property under the protection of Japanese laws. Japanese might similarly object to being brought under the jurisdiction of the courts of European or American States. Particularly in England, says our contemporary, might a Japanese deem himself insecure, as in that country the judges possess a large measure of discretion in adjudicating a case, being even held competent to exercise legislative power by altering the received interpretation of a statute—and it may, therefore, happen that cases of the same nature result in conflicting judgments. In Japan, on the other hand, the judges have express provisions of law to guide them in deciding any case. Our contemporary thus considers the aversion of foreigners to come under the jurisdiction of Japanese courts as a mere subterfuge to obstruct the revision of the treaties. The Tokyo journal, however, attaches some importance to the resolutions passed, because if they find a favourable reception from people at home, they may undoubtedly influence the policy of the respective Governments. In conclusion, our contemporary advises its nationals to take a sober view of the question, and not to be betrayed into rash actions. The resolutions cannot represent the opinion of the entire body of the foreign residents of Yokohama; there are no doubt many who are in favour of acceding to the Japanese demands. The *Keisai Zasshi* takes special pains to condemn the excited youths in Yokohama who have interviewed foreigners on this subject, and who are said to have in contemplation the holding of a lecture meeting for the denunciation of aliens. The actions of such men are not calculated to benefit the country, but may possibly give rise to accidents which can be turned into new grounds for the objection of foreigners to treaty revision.

The *Nippon-jin* takes a far different tone in its article on the same subject. Its language is, in our opinion, unnecessarily violent and impolitic. It is furiously angry at the audacity of the foreign residents of Yokohama in opposing the just and rightful claims of Japan. It observes that the movement in question seems to have been started by a number of short-sighted and greedy merchants, who are naturally opposed to the abolition of an arrangement by which they can gratify their selfish natures in unjust and improper ways. It thinks the meeting lately held by them was not attended by that section of the Yokohama residents who are in favour of the improvement of the commercial relations of Japan with foreign countries by a just and impartial course of policy. Our contemporary does not stop here, but goes on to describe those who joined the Meeting as sharpers and knaves who, in their greed and viciousness, do not hesitate to grossly misrepresent

Japan and the Japanese in private as well as public correspondence with their nationals and public bodies at home. It laughs at foreigners, apart from Englishmen, who joined the meeting of the 11th instant, and calls them passive victims of Englishmen's intrigues. The opportunity is taken to remind Japanese of their folly in devoting their whole attention to domestic politics, and to point out that the insults which the nation has received from the handful of foreigners in Yokohama are in some respects the natural results of the comparative indifference shown by the bulk of the people to the foreign affairs of the Empire. The Tokyo journal especially appeals to the rising generation to stand forward, and clear the country from the contempt and insults it has received at the hands of Western nations.

We are surprised at the adoption of this tone by the *Nippon-jin*, a journal supposed to represent the views of a portion of the rising generation, and to be edited by a gentleman of attainments and judgment. It is true that in all countries when disputes arise with a foreign nation, journalists are found who forget altogether their responsibilities, and abuse their power by seeking to inflame the minds of their readers. Possibly, therefore, we ought to be prepared for utterances like those of the *Tokyo Koron* and the *Nippon-jin*, especially when we remember that the latter newspaper is the one which made itself notorious two years ago by publishing a libel of quite exceptional virulence and wildness against the management of the Takashima coal mines. But, on the other hand, the Japanese press has generally shown itself remarkably patient and moderate in its treatment of the country's foreign affairs, and the diatribes of the *Koron* and *Nippon-jin* sound strikingly out of tune with the general harmony. Of course it is in the last degree absurd to talk of the foreigners who took part in the Meeting as "sharpers and knaves," the fact being that among them are men of the highest honour and well proved philanthropy. Our own sympathy with Japan's cause cannot be questioned by the *Nippon-jin*, yet we venture to assure that journal that if a body of Japanese were circumstanced in a foreign country as the foreigners in Yokohama are circumstanced, they too would hold meetings and protest against the unconditional surrender of their privileges. At all events what is absolutely certain is that violent language or violent acts on the part of Japanese will only place a weapon in the hands of foreigners who still distrust the country's competence to assume jurisdiction over Occidentals. Every real friend of his country will conduct himself at this juncture with moderation and sobriety, working, indeed, in all legitimate ways for the achievement of the national purpose, but abstaining carefully from everything calculated to discredit the law-abiding character of the Japanese.

MESSEURS. KOBAYASHI AND BROOKE.

MR. KOBAYASHI, having been openly accused by Mr. J. H. Brooke of misrepresenting statements made by the latter at an interview reported in the vernacular press, has written a letter of remonstrance, a copy of which appears in the *Tokyo Shimpō*. In this letter Mr. Kobayashi expresses astonishment that Mr. Brooke has confined himself to vague denials, and says that a more straightforward course might have been expected of a gentleman of Mr. Brooke's attainments. He adds, however, that to discuss what was said or what was not said would be quite idle, and he therefore asks Mr. Brooke to grant him another interview, when Mr. Kobayashi promises to come with a good interpreter and a stenographer, and trusts that his *vis-à-vis* on his side will have an interpreter and a secretary. He also solicits the presence of the editors of the *Japan Herald*, *Japan Gazette*, and *Japan Mail*, as well as that of Messrs. Lowder and Litchfield. We strongly recommend Mr. Kobayashi to abandon this futile performance. No good end can possibly be achieved. The views of the moderate section of the community are not to be learned

ed from Mr. J. H. Brooke. Interviews with that gentleman can only lead to recrimination and bitter feeling. Already at this early stage of the controversy the methods adopted by Mr. J. H. Brooke are exhibited in a paragraph of his last letter, where he writes:—

I can well understand his anger at my *exposé*, but I felt it due to myself to decline responsibility for all the statements he has chosen to attribute to me, though I have no desire, and can have none, to shirk responsibility for views I have expressed either orally to him, or in print, but I shall not condescend to bandy words with one who, having made assertions at variance with truth, now that he finds himself in an awkward dilemma, apparently feels no hesitation in adding to the number of his falsehoods.

Very different is such contemptuous, rude language from the tone of Mr. Kobayashi's letter to Mr. Brooke. We must warn Mr. Kobayashi, however, that if he pursues this business, he will inevitably expose himself to insult, and that, unless he is a man of exceptional patience, he will be ultimately drawn into a mere interchange of angry epithets, in which pastime Mr. Brooke will prove his master. The latter gentleman holds very extreme views about Japan and about Treaty Revision—views which are gradually becoming his own exclusive property, and which, if taken by the Japanese as representing the opinion of Yokohama, would seriously exacerbate the ill-feeling already engendered by the meeting of the 11th. As to the conclave which Mr. Kobayashi desires to assemble for the purpose of listening to a controversy between himself and Mr. J. H. Brooke, he will doubtless gather from what we have said that the proposal is more likely to invite ridicule than approval.

SILVER.

In an essay entitled "The American Silver Bubble," Mr. Robert Giffen speaks thus of the probable effects of the United States' action in raising the gold price of silver:—"How the price will be raised is a different question, which concerns the City and speculators mainly, and which need hardly be discussed here. It involves questions of detail as to future production and demand. Two points, however, seem clear. 1. The rise in silver which has taken place seems likely enough to be temporary only. The increase in the production of silver of late years has been enormous. Dr. Soetbeer's figures on this head are well known; but take only this fact, which I find in the Report of the Director of the United States Mint, already referred to, that in 1873 the annual production of silver was 63,000,000 fine ounces, and in 1889 the amount was 126,000,000 ounces. And this enormous increase of production seems likely to continue. At the same time there is no corresponding increase of what may be called the natural demand. The additional artificial demand for the United States, therefore, only takes up part of an increasing supply, and will not, it is probable, have any greater effect on the market than the purchases under the Bland Act, when they commenced, which were equally great in proportion to the supply of that time. After the present flatter, therefore, silver in all probability will fall back to its former level, unless some new event happens. 2. The present rise may be to some extent nominal, forming part of a general rise of prices in gold incidental to a period of good credit. Silver, in other words, may have risen rather more as measured by gold than as measured by the average of commodities. When credit is again succeeded by discredit and depression succeeds prosperity, silver may also fall back with the average of commodities. If silver were the standard of countries economically as powerful as the countries whose standard is gold, this might not be the case. The influence of credit might in that case affect the two standard substances equally. But at present it is the gold countries which have most credit, and whose standard substance is most affected by fluctuations of credit. Still, silver has risen to some extent as measured even by an average of other commodities, and not merely as measured by gold, and so far the owners of silver, who promoted the bill, have gained. Of course,

Original from

this rise in silver in all countries which have silver money is appreciation and not depreciation, contraction and not inflation—the very opposite, in fact, of what has been aimed at by the soft money party. What owners of silver and silver mines have gained the rest of the world loses. The natural market is also disturbed, which is a loss to everyone in the end. For the present, however, there is no question as to the gainers by the American silver bubble. They are even better off than if they had got unlimited coinage of silver, which was so very near being carried.

MR. MASUJIMA AND CHAMBERS OF COMMERCE.

In a recent issue of the *Keisai Zasshi*, Mr. Masujima continues his articles on the subject of the Commercial Code. This time he calls the attention of Chambers of Commerce throughout the country to the absurdity of the resolution of the Tokyo Chamber of Commerce in reference to the postponement of the date of enforcing the Commercial Code. As our readers may remember, the Tokyo Chamber of Commerce passed some time ago a resolution deciding to memorialize the Government for postponement to January 1st, 1893, when the Civil Code is to come in force. Mr. Masujima now declares this resolution to be inconsistent with the known opinions of the men who voted for it. The principal reason why they deem the postponement so absolutely necessary is that time is required for the effective carrying out of the Code, so that irreparable injury may not be done to the existing commercial institutions and customs of the country. Mr. Masujima is therefore at a loss to understand why they fixed the limit of postponement at a date so near at hand. Men of their sagacity cannot, he says, believe it possible to get every thing ready by that date for the operation of the new law. He takes the trouble, he says, to discuss this subject in the columns of a leading economical paper, because delegates of Chambers of Commerce throughout the country are reported to have agreed to assemble in Tokyo in November, in order to consider the question of the postponement of the date of the operation of the Code. If these delegates approve the resolution of the Tokyo Chamber of Commerce, they will have spent time and money to meet in Tokyo for nothing, as the opponents of the postponement movement will then be very much strengthened in their position. Now that the mercantile class, which had hitherto been held in contempt, is gradually asserting its importance and power, Mr. Masujima reminds the delegates above mentioned of the gravity of the responsibility they bear in connection with this matter. If they do not act thoughtfully in the present juncture, they will find too late that an opportunity has slipped from their hands for the assertion of their influence in society. From the past writings of Mr. Masujima and his fellow thinkers, it appears that their true object in advocating the postponement of the date of the operation of the Commercial Code is to gain time for a thorough amendment of that law. We shall return to the subject when Mr. Masujima has concluded his articles in the *Keisai Zasshi*.

FIRE AT YOKOSUKA.

An outbreak of fire took place about half-past two o'clock in the morning of the 18th instant, in a bath-house at Otakicho, Yokosuka. A southerly wind was blowing strongly at the time, and the flames spread quickly, threatening destruction at one time to the greater part of the town. The engines of the Yokosuka Naval Division were soon on the spot and aided greatly in keeping the fire under. About 3.40 a.m. the wind changed to the westward, and the flames extended to the Yoshiwara, Otaki, destroying seventeen of the casinos there. Before the fire was got under about 6.10 a.m. one theatre and about a hundred and forty houses were entirely destroyed.

PROJECTILES VERSUS ARMOUR PLATES.

It has been often said that no sooner is a projectile found capable of penetrating the best armour plate for the time being, than a plate is

made to resist the shot possessing the highest degree of penetrating power, and *vice versa*, and so the contest goes on. The latest trial is reported by telegram from the United States to the agents at this port of which the following is a copy:—

Anapolis Proving Ground (U.S.),
September 18th.

A comparative trial took place here to-day between one Cammell's compound (steel and iron) armour plate and two Schneider's all-steel plates. Four first class chromed steel armour piercing projectiles were fired at each plate. The Cammell's plate proved a failure, being run through at each shot, and steel layers being detached on a considerable surface. The fourth projectile went through plate and backing plate, falling some hundred yards behind the target. Schneider's plates withstood the trial most successfully. None of the projectiles could pierce the plates, three of them being broken to pieces and falling in front of the target. After the four rounds no crack was to be found on either plate.

SOCIETY FOR PROMOTING TREATIES ON AN EQUAL FOOTING.

THE Society for promoting treaties on a footing of equality with Western States held a meeting on the 21st instant in the Kaika-tei, Shinsakana-cho, Tokyo. Three delegates from the Yokohama *Domei-kai* attended the meeting. A report was read of an interview between members of the Society and Mr. Ono, President of the Yokohama Chamber of Commerce. As this interview has not previously been mentioned in our columns, we may explain here that Mr. Ono strongly opposed the idea of employing commercial pressure to influence the foreign merchants of Yokohama. Indeed, he told his visitors pretty plainly that their project could not possibly be carried out. It would be a veritable case of the Japanese having recourse to the proverbial folly of biting their own noses to hurt their faces, for without the aid of the foreign merchants of Yokohama the country's foreign trade cannot be carried on under existing circumstances. Mr. Ono's emphatic counsel doubtless put a stop to this impractical project, for nothing more seems to have been said about it at the meeting, neither did it make its appearance among the resolutions adopted by the meeting. These were tolerably numerous, and embraced a programme which will make large demands on the society's earnestness. It was resolved, generally, that every endeavour should be made to induce foreigners to consider more carefully the claims of Japan in respect of Treaty Revision, and that, for this purpose, first, the views of the society should be transmitted to the foreign journals at the treaty ports; secondly, the same views should be sent to the leading journals in England, America, Germany, France, and the other principal treaty States; thirdly, they should further be communicated to the Foreign Ministers and influential politicians of the treaty States; fourthly, the Citizens' Committee of the Yokohama residents should be approached and due discussion opened with it; and fifthly, seven members should be chosen to represent the society, namely, Messrs. Kobayashi, Ayai, Inoue, Nakanishi, Morimoto, Yagiwara, and Mayeda. It was further resolved that in order to rouse Japanese public opinion on this subject the following measures should be taken;—first, that the Government officials connected with Revision should be urged to adopt a strong policy; secondly, that the views of the society should be communicated to the principal Japanese newspapers in the two capitals and at the five treaty ports; thirdly, that meetings should be held in Yokohama for the purpose of delivering lectures in opposition to the resolutions passed by the foreign residents of that port; fourthly, that fellow-thinkers should be enlisted in the various prefectures and cities; and, fifthly, that every conceivable step should be taken to bring the whole empire to one way of thinking in this matter.

It is plain, as we have said, that to carry out this programme the Society must put its shoulder to the wheel in real earnest. As to the programme itself, it deserves general approval, since it includes only legitimate

methods of agitation. The columns of the press, the public platform and written appeals to influential persons are all proper devices to further the objects of the Society, and so long as the members confine themselves to these, they will have general sympathy. But the talk originally indulged in about boycotting the merchants who took a leading part in the agitation against Revision was ill-considered and silly. There are, it is true, some foreign merchants in this Settlement—leaders, too, of the movement that culminated in the meeting of the 11th inst.—who resort to every practical means in their power to boycott newspapers opposed to their views. But no rational man could approve of such extravagant and illiberal action, and had a similar course been strongly urged upon the Japanese traders of Yokohama by the *Domei-kai* and the *Taito-joyaku-kai*, the movement would only have excited ridicule.

CURRENT TOPICS.

THE *Ten-soku*, writing on the amalgamation of progressive parties, observes that, at the time of the rupture of the Cabinet on the question of Korean invasion, Count Itagaki attempted, in concert with Yeto and others, to undermine the preponderating influence of the Choshu statesmen by inducing Satsuma men to undertake the subjugation of the peninsular kingdom. Our contemporary thinks that there is some analogy between that Korean affair and the question of the amalgamation of the progressive parties, the evident inference being that Count Itagaki's co-operation with Mr. Kawashima and other gentlemen of Satsuma extraction is to oppose the Choshu statesmen. The Tokyo journal further remarks that Count Itagaki is often capable of framing large plans, but not equally successful in carrying them into practice.

The future prospects of the Central Conservatives (*Hoshu Chusei-ha*), led by Viscount Torio, are also discussed by our contemporary. At present everybody speaks of progress and nothing else, and the surest step to invite the ridicule and contempt of the public is to advocate conservatism. The *Ten-soku* rightly observes that sooner or later a violent reaction will surely follow the present over-progressive tendency of society. Rashly undertaking and as suddenly abandoning schemes is a propensity which Viscount Torio is not quite free from, but judging from the extraordinary ability displayed by him at the time of the Satsuma Rebellion and the Takebashi Mutiny, he is beyond doubt quick to understand the signs of the time. Our contemporary, therefore, is not sure that his party will not one day become powerful.

Alluding to the Treaty Revision meeting of the 11th instant, the *Ten-soku* remarks that as the present British Representative at this Court is reported to be a man of fairness and integrity, there will be little danger of his being influenced by the absurd movement of his nationals at Yokohama. The Tokyo journal then turns to the Japanese Minister for Foreign Affairs, and asks him what course of action he will take in respect of the meeting in question. It will be advisable to rouse the public opinion of the country against the action of the foreign residents in Yokohama. But Viscount Aoki, whatever may be his skill in diplomacy, is, in the opinion of the journal we are quoting, far from a good administrator. Our contemporary's meaning seems to be that Viscount Aoki is not likely to allow his nationals to know enough of his treaty programme to make them zealous supporters of his scheme against the opposition of foreign residents.

JAPANESE CHRISTIANS AND TREATY REVISION.

JAPANESE Christians are much perturbed about the ill-feeling which has been engendered among their countrymen by the recent proceedings of a portion of the Yokohama foreign residents in respect of Treaty Revision. They perceive that it is a deep and wide-spread feeling, inimical to the friendly conduct of their country's international relations, and even calcu-

Original from

lated, if left unchecked, to cause serious complications. They have resolved, therefore, to take any steps lying in their power with the object of bringing about a better mood. In pursuance of this purpose they have made arrangements to hold a prayer meeting on three consecutive days, commencing with the 26th instant, in the Union Church, Yokohama. The principal projectors of the affair are Messrs. Iwamoto, Tsuda, Hirai, Honda, Yokoi, Inagaki, and Hayashi—all names well known in Japanese literary circles. The prayers will be partly in English and partly in Japanese, as will also be the addresses. Half-past two in the afternoon is the hour fixed for commencing each day. The meeting will be open to all comers, and the promoters hope that foreigners, by attending the ceremony, will show their sympathy with a movement the purpose of which is to dispel the indignation now prevailing and to promote the growth of a sympathetic and just mood. Japanese Christians perceive very plainly that so long as this Treaty Revision problem remains unsettled, an unfriendly spirit must constantly grow up around it, and they fear that blind anger and an exaggerated sense of unjust treatment may impel some of their country's hottest patriots to the commission of acts which would disgrace the nation, and set up a new barrier to the consummation of its aspirations.

THE "MUSASHI MARU."

FULL particulars of the loss of the Japan Mail Steamship Company steamer *Musashi Maru* have not yet been received. Indeed it is doubtful whether they ever will be received. The quarter-master's account of the affair betrays something of the confusion that would naturally result from so terrible an experience. He says that the ship was in the neighbourhood of Oshima when the catastrophe occurred. The force of the wind was so tremendous that the boats were torn from their fastenings and blown over-board. Subsequently a succession of huge seas broke over the vessel. Under ordinary circumstances scarcely any body of water coming on board could have produced very serious effects, but the boats, which must have been dashed about the deck with great violence, probably worked some mischief which enabled the seas to find their way into the engine-room. The quarter-master does not remember anything very clearly till he found himself in the water. He was fortunate to reach one of the boats which had not been blown far from the ship. In her he found several of his shipmates who had also reached her by swimming. By and by, seeing the land not far off, the quarter-master and another man volunteered to swim ashore with the hope of obtaining assistance. In this enterprise the quarter-master alone succeeded; his companion appears to have been lost. Doubtless the men in the boat perished also. It will be remembered that one of the *Musashi's* boats was afterwards picked up by a steamer, and that the Chief Engineer's clothes and boots were found in her. Probably she was the boat referred to by the quarter-master. It would seem that the other men attempted in their turn to swim ashore, whereas had they remained in the boat they might have been saved.

SUBSCRIPTIONS FOR THE SURVIVORS OF THE "ERTOUROUL."

People in Tokyo are beginning to understand the objections lying in the way of subscribing money for the survivors of the *Ertougroul* disaster. If the ill-fated ship had not been a man-of-war, the occasion would certainly invite charitable effort, but the rules of every military or naval service make due provision to meet emergencies of this nature, and to offer money to the Turks rescued from the *Ertougroul* is likely to cause umbrage rather than to evoke gratitude. This has been explained very fully to the *Hochi Shimbun* by a certain Viscount, whose opinions that journal publishes without comment. Considering that the catastrophe happened on the coast of Japan; that the officers and men of the frigate were virtually the guests of this nation, and that the ship came on a special mission to carry a Turkish decora-

tion to the Emperor, philanthropic Japanese may perhaps find reasons for the kind-hearted course they are pursuing. Other nationalities, however, would not be justified in following their example, and we are strongly disposed to think that even in the case of the Japanese their money will be politely returned. After all, the test is this—would any one have dreamed of putting his hand in his pocket if the wrecked vessel had been a man-of-war flying the colours of any of the Great Western Powers.

CHOLERA RETURNS.

The latest cholera returns derived from official sources are as follow:—

Prefecture or City.	Date.	New Cases.	Deaths.
Osaka	19th	103	215

	28th	8	4

The numbers of cases and deaths since the commencement of the epidemic, inclusive of the above figures, appear in the following table:—

Prefecture or City.	Cases.	Deaths.
Osaka	6,380	4,806
Hyogo	1,739	1,103
Nagasaki	3,351	2,194
Okayama	307	131
Yamaguchi	1,216	1,039
Hiroshima	1,193	619
Kagawa	330	170
Fukuoka	2,744	1,739
Oita	890	474
Saga	890	538
Kumamoto	931	544

The total number of cases and deaths in the following Cities and Prefectures not included in the above, from the commencement of the epidemic to the 24th instant, are:—

City or Prefecture	Cases.	Deaths.
Tokyo	1,096	1,531
Kanagawa	1,843	1,301
Gumma	38	18
Ibaraki	21	4
Chiba	719	415
Teikoku	10	78

Shiga	45	30
Fukui	27	15
Tokushima	70	40
Fukushima	223	66
Kochi	265	105

CHEMICALS IN JAPAN.

Drugs and chemicals are gradually forming a more important feature in the Japanese import

trade. Large quantities of chemicals are being imported for manufacturing purposes, such as paper and match making, glass works, and other industries. They come chiefly from Great Britain, but a considerable portion is of German origin. The Japanese Government are themselves manufacturers of caustic and other sodas, and of sulphuric acid. Medicines for pharmaceutical purposes are also made in Japan on a large scale. Some importers complain of the great difficulties raised in regard to the sale of foreign drugs and medicines, these being constantly rejected by the Government analysts as not being up to the standard of the Japanese pharmacopoeia, which is higher than the British. —Industries.

THE YOKOHAMA JAPANESE AND THE ANTI-REVISION MEETING.

We read in the *Nichi Nichi Shimbun*—which journal is particularly well informed about everything relating to the steps taken by the Japanese in connection with the Anti-revision Meeting—that Mr. Fraser, chairman of the Citizens Committee, has consented to the proposal made by Mr. Yenomoto and others, acting on behalf of the Domei-kai of Yokohama, and that a written discussion is likely to take place between the Committee and the representatives of the Domei-Kai. Inasmuch, however, as Mr. Yenomoto and his fellow-delegates were only authorized to carry on a verbal discussion, another general meeting of the Domei-Kai is to be called in order to consider the situation.

KOREA AND CHINA.

ACCORDING to the *Hochi Shimbun*, a citizen of the United States has been doing his best for some time to procure for Korea a loan from America capitalists. His action has evoked from the Chinese Legation at Washington the declaration that Korea being tributary to China cannot raise a national loan, as her resources are very small and she has not yet been able to repay the money that she borrowed from China. The latter, therefore, cannot permit her to deal with her customs duties and other revenue for the purpose of incurring fresh obligations.

THE JAPANESE PLENIPOTENTIARIES.

THERE appears to be little doubt that His Majesty the Emperor has nominated Count Saigo and Count Goto to act in conjunction with Viscount Aoki as Plenipotentiaries for Japan in the Treaty Revision Conference. The metropolitan press unanimously approves the nomination and suggests various reasons for it, the most plausible being that in a matter of such great national importance, more than one prominent statesman should represent Japan.

THE "KASHI-YA FUDA."

A PERIODICAL publication of a novel character, but likely to prove of very great convenience to the public, has just been started in Tokyo. It is called the *Kashi-ya Fuda* (Notice of houses to let). It describes the situation, the style of building, the extent, the number of rooms, and other particulars, of all houses which are at the time ready to be let, so that henceforward the expenditure of a few *sen* will enable every one in search of houses to save much time and labour.

RAILWAYS.

We read in the *Official Gazette* that the section of the Japan Railway Company's line from Kuroiso to Shirakawa is now open for traffic. There appears to be still very little prospect of the speedy opening of the Kurihashi-Kuki section, which is now the only break between Nikko and Tokyo. So far as we can learn, steps are being taken to raise the road above the water under which it still continues submerged.

SAN FRANCISCO CONSULATE.

MR. S. CHINDA, hitherto Chief of the Bureau of Telegraphs in the Foreign Department, is to become Japanese Consul at San Francisco, *vice* Mr. Kawakita. Mr. Chinda will be succeeded in his post in the Foreign Office by Viscount Torii, hitherto Japanese Vice-Consul in Honolulu.

THE TREATY REVISION MEETING.

THE discussion provoked by the Treaty Revision Meeting of Foreign Residents has now cleared the air sufficiently to justify us in considering broadly what the demonstration signified, and how far it is to be regarded as opposing a barrier to the consummation of Treaty Revision. It ought apparently to have been possible to treat the question on a broad basis from the outset, without pausing to examine the exact wording of the resolutions passed or to inquire into other seemingly minor details. But the language of the first resolution, read literally, embodied a declaration of absolute hostility to Treaty Revision on any terms, inasmuch as the only basis on which Treaty Revision is negotiable was rejected by the resolution. We have already explained this point at length, but it may be well to repeat succinctly here that all negotiations for Treaty Revision have hitherto proceeded, and all negotiations must hereafter proceed, upon the assumption that a period for the unconditional relinquishment of Consular Jurisdiction can be definitely fixed, whereas the first resolution voted by the meeting declares that the time has not come when an estimate of such period can be safely formed. Evidently if the meeting intended to commit itself to an assertion so radical and conclusive, that intention became the most striking feature of the whole affair, for while it was easy to conceive that the great majority of the foreign residents would, at any moment, have responded favourably to an invitation to protest against the unconditional surrender of their extraterritorial privileges, it was correspondingly difficult to imagine that they would assert the necessity of postponing Treaty Revision indefinitely. Subsequent discussion has to a certain extent explained the situation, and removed the seemingly glaring contradiction between the actual terms of the resolution and the views which a large number, if not the whole, of those voting it must, as rational men, be supposed to entertain. We know that the proposer and framer of the resolution intended it to convey, not any radical protest against the revision of the Treaties, but merely a declaration that Consular Jurisdiction ought not to be abolished without safeguards. How far it is justifiable to assume that the meeting, instead of being guided by the actual wording of the resolution, divined its proposer's intentions and voted in their sense, we cannot positively determine. Two considerations may, however, be allowed to guide us. The first is that the great bulk of the foreigners residing in Japan must be quite convinced that Treaty Revision is inevitable. There are undoubtedly some whose aversion to Japanese jurisdiction is so bitter that they cannot persuade themselves to admit the necessity of submitting to it at any time.

But these are the implacable minority: they need not be seriously considered. The majority appreciate the situation better, and so appreciating it, would scarcely have voted that the only practicable basis of negotiation may not yet be entertained. The second consideration is that the meeting was not convened for the purpose of recording any such radical opinion. The advertised summons, which, to a certain extent, may be taken as preamble to the resolution, spoke of remonstrating against the transfer of British subjects to Japanese jurisdiction "without any of the safeguards hitherto considered necessary for their protection." People coming together for the purpose expressed in the summons would not have adopted without question a resolution of incomparably more radical scope. These two considerations are not, of course, sufficient to outweigh the actual language of the resolution. But since it is now explained that the resolution was only intended as a limited protest, we may conclude that the meeting, guided by the summons, and by the common sense of the situation, voted not in favour of the indefinite maintenance of Consular Jurisdiction, but only against its unconditional surrender.

Such being the case, we are in a position to estimate how much importance attaches to the meeting. It has been greeted with a paean of triumph by the implacables. They call it a bolt from the blue, and amuse themselves conjecturing the consternation caused by it in the camp of the advocates of Revision. But it is not in any sense a bolt from the blue, neither has it produced any consternation. A number of Occidentals called together in an Oriental country to decide whether or no they will surrender privileges which they have enjoyed for years, and whether or no they are prepared to submit to Oriental jurisdiction without safeguards, could only vote in the negative. The very notion of surrender or submission is always distasteful to the Anglo-Saxon mind, and when the act becomes unconditional, there are happily few Englishmen whose first impulse does not prompt rebellion against it. Thus the mood of the meeting might have been predicted beforehand on general grounds. But with respect to the particular question of the moment, there was the still more obvious consideration that however firmly convinced reasonable people may be of the necessity of revising the Treaties as speedily as possible, probably not one foreign resident could be found to vote for surrendering Consular Jurisdiction unconditionally. Now the principal resolution adopted, if we accept the interpretation given by its proposer, meant nothing more than that the meeting protested against unconditional surrender of extraterritorial privileges and unconditional submission to Japanese Jurisdiction. Such a protest was superfluous. There was no occasion to elicit it by the aid of a

public meeting. Everybody knew, the Japanese Government knew, the Foreign Representatives knew, that Yokohama, where its opinion sought at any time, would vote in the sense of the resolution. It could not vote otherwise without casting its traditions to the winds and suddenly substituting, for long-entertained and by no means unreasonable distrust, a mood of absolute confidence. All that the meeting did, then, was to place on record a fact perfectly well understood before, namely, that the foreign residents of Yokohama are opposed to the unconditional abolition of Consular Jurisdiction. Considerable significance naturally attaches to the mere assembling of a large body of foreign residents to publish a protest: the plain inference is that the course of Revision is keenly scrutinized by the inhabitants of the principal treaty port, and that they are not at all prepared to endorse terms which exclude reasonable provisions for safeguarding their rights and interests. In this sense the meeting itself and its resolution will doubtless be taken into due consideration, but that a protest reflecting the inevitable verdict of every prudent foreigner under the circumstances, reiterating the view which Yokohama was well known to hold and which, indeed, it could not choose but hold, and conveying nothing more than an intimation of unwillingness to surrender unconditionally privileges now enjoyed and not lightly valued—that such a protest is in any sense astonishing, or that it alters the situation as to Treaty Revision, we fail absolutely to perceive.

TARDY BUT NOT INEFFICACIOUS
REPENTANCE.

WE are sincerely glad to see that the most active promoter of the Meeting of the 11th instant and the proposer of the principal resolution has, even at this late period, come forward publicly and asked that his own proceedings and those of the Meeting should be construed in a sense very different from that attaching to the actual language of the resolutions voted and of the speeches delivered. Protesting against the term "anti-revision" as applied to the Meeting, Mr. J. F. LOWDER now says:—

So far from being opposed to revision, there is not an intelligent man in the community who does not admit that Japan is entitled to demand a relaxation of the terms of the present Treaties. We recognize, with sincerity and admiration, the progress she has made, and we sympathise with her aspirations; but we say that she has not yet proved her right to claim unconditionally the promise of unrestricted judicial control over us, and we believe that outside the *soshi* there are few Japanese who do not admit that we are right. The term "anti-revision" is, therefore, unwarranted, and discerning men will in future avoid its use.

We have here a statement which, however tardily made, deserves to be welcomed and applauded, since it conveys to the Japanese a just idea of the sense of the respectable portion of the British residents, and since, above all, it

rescues the Yokohama community from the deplorable situation into which it allowed itself to be betrayed by the rash and ungarded proceedings of its leaders on the unfortunate 11th instant. Our first comment on the minutes of the Treaty-revision Meeting was that "when the Yokohama community came to consider the action to which it had pledged itself, there would be some surprise and even disgust." The prediction is fulfilled to-day. Yokohama, with unreasoning docility seldom found in a body of shrewd business folks, blindly followed leaders who had not duly considered what they were doing, and who now discover that it is necessary to throw themselves on the mercy of the public and to ask that their language be construed in a sense not deducible from the words they actually employed.

Unfortunately the matter does not end here. To build a golden bridge for retreating opponents is a good old maxim which we would fain follow in the present instance. But charity has limits, and Mr. J. F. LOWDER places himself beyond their extreme reach. Did the question lie between him and us, his attacks would pass unnoticed, being, as they are, directly opposed to the views he formerly held of our action, and being also, as we believe, dictated by anger, that last refuge of the beaten controversialist. Since, however, a majority of the foreign community is concerned, we are reluctantly compelled to take up the gauntlet so violently thrown at our feet by Mr. LOWDER. Writing to the *Japan Gazette* of the 20th instant, that gentleman says:—

SIR,—I wish to protest against the use of the term "anti-revision" to express the object of the meeting held on the 11th inst., or the attitude of those who supported it. Of the 438 persons who were either present on that occasion or who have since signified their adhesion to the resolutions by signing them, there are few, if any, who are animated by the sentiments attributed to them by one who, isolating himself from his fellows, nevertheless undertakes to pose as the expositor of their views, and as the only true friend of Japan. Japanese and foreigners would understand each other better but for the writings of the *Japan Mail*. To advocate the cause of Japan is one thing; to do so by holding up the members of this community to obloquy, by misrepresenting them, and by extolling the Japanese at the expense of the foreign residents of Yokohama, both here and in the columns of *The Times*, may be a congenial occupation for the editor of the *Mail*, but it is a vicious and perilous proceeding. Take the case in point. British subjects, having reason to apprehend that their interests are about to be sacrificed, call a meeting to protest against the unconditional abandonment of extra-territoriality. What happens? Their avowed object is ignored; perverted motives are attributed to them; the vilest abuse is showered upon them; the Japanese are told they have ample reason for indignation; that they are justified in thinking they have been bitterly insulted; and, finally, they are warned that they cannot afford to be impatient "unless, indeed, they are already resigned to the end towards which the acts of men like the promoters of the anti-revision meeting would inevitably drive them." The intention of such inflammatory writing is obvious, and the suggestion, I am sorry to say, has already borne promise of fruit. The Japanese Government have indeed reason to regret their choice of an advocate, but they have nobody to blame but themselves if they are identified with his utterances.

We pass with very brief allusion the tortuous and undignified course adopted by Mr. LOWDER in attacking the editor of this

journal in the correspondence columns of a contemporary. To emphasise this incident of the part he has played during the past fortnight, would be to betray a very imperfect sense of comparison. We proceed, then, at once to his assertions that few if any of the persons attending the meeting of the 11th and subsequently signing the resolutions "are animated by the sentiments attributed to them" by the *Japan Mail*. The *Japan Mail* has attributed no objectionable sentiments of any kind to the 438 signatories of the resolutions. The *Japan Mail* has most carefully confined its comments to the promoters of the agitation, and even to them it has attributed no sentiments, but has merely noted the construction which must inevitably be placed by the Japanese on their words and conduct. Stripped of Mr. LOWDER's strange perversions of fact, what is the situation? A meeting was convened for the purpose of protesting against the unconditional surrender of Consular Jurisdiction. At the meeting Mr. LOWDER proposed a resolution, the first part of which was in strict accord with the advertised object of the meeting. Concerning the announcement contained in that first part we wrote that "it was precisely what any body of Englishmen might have been expected to formulate." But there was a second part pledging the Meeting to a plain declaration that the only possible basis of Treaty Revision could not yet be accepted. No attempt has since been made to defend the wording of that second part: so hopeless a task has been carefully avoided. The public is simply asked to believe now that the resolution was not intentionally framed in the sense distinctly conveyed by its terms. So be it. Everybody accepts the disclaimer with pleasure, and is glad to think that the promoters of the agitation were actuated by liberal sentiments though couched in illiberal and misleading language. None the less, previously to the explanation now given, Mr. LOWDER and his fellow-agitators could only claim to be judged by their acts, and those acts were that they had betrayed the Yokohama residents into an attitude of apparently absolute hostility to Treaty Revision; that from their set speeches they had omitted all admission of the advisability of revising the Treaties as well as all allusion to what Japan has done to deserve international consideration, and that by thus divesting the proceedings of every sympathetic aspect and investing them with a character of radical antagonism to Japan's claims, they had taken a course justly calculated to stir the anger and indignation of every patriotic Japanese. If Mr. LOWDER seeks now to lighten the blame attaching to such errors of judgment and blunders of phraseology by distributing it equally among the 438 signatories of the resolutions, he must accept the sole

responsibility of the evasion, for nothing written in these columns justifies it.

Passing from particular to general charges, Mr. LOWDER says that we "hold up the members of this community to obloquy, misrepresent them, and extol the Japanese at the expense of the foreign residents of Yokohama." It has not apparently cost Mr. LOWDER much effort to descend from the plane of honesty and fairness to the lowest level of the literary traducers whose perversions of truth disfigure all controversy in this settlement. He knows perfectly well that not one of the false accusations here preferred by him can be supported by evidence. He knows perfectly well that, a few months ago, no one would have denied their truth more emphatically than himself. He knows perfectly well that in the very article of ours from which he subsequently quotes, we justified the action of the majority of the foreign residents, and said that "if educated Japanese did not and could not appreciate British reluctance to submit to an alien jurisdiction, we should regard the fact as a strong evidence that Japan is not yet fit to discharge the functions with which she seeks to be entrusted." He knows very well that we claimed "full credit for the honest and conscientious motives" of the promoters of the agitation, and that, referring to the "lead taken by Englishmen," we said it "properly belonged to the preponderance of their interests and to their preëminent sense of the sacredness of personal rights and personal freedom." Yet he ventures to say that we "hold up the members of this community to obloquy, misrepresent them, and extol the Japanese at the expense of the foreign residents of Yokohama." Such are Mr. LOWDER's weapons; weapons, we are forced to confess, not unworthy of a man who has turned upon his old friends and employers and placed himself at the head of a movement designed to inflict injury on a cause in the interests of which he was once a conspicuous worker.

It is idle to pursue such a writer through his labyrinth of wild assertions, prompted, let us hope, by an access of blinding anger. His preposterous accusation that "the vilest abuse has been showered" by us on the British subjects who called a meeting to protest against the unconditional abandonment of extraterritoriality, does not even deserve to be ridiculed. If there is anything "vile" in this business, it is the conduct of a man who recklessly traduces those he once applauded and encouraged, and who converts the dictates of hot resentment into data for framing cruel and injurious charges. Here, then, we would leave Mr. LOWDER—not, indeed, without keen regret that the task of replying to him in such terms should have been forced upon us—did we not think it wise to refer to one more sentence which he quotes from our writing. After warning

the Japanese that "every angry expression uttered by them would surely be construed as an evidence of anti-foreign feeling," we went on to say that they "could not afford to be impatient unless, indeed, they were already resigned to the end towards which the acts of men like the promoters of the anti-revision meeting would inevitably drive them." Mr. LOWDER asserts that "the intention of such inflammatory writing is obvious." It is hard to treat seriously any utterances in the sequence of those noted above, and even with our present knowledge of Mr. LOWDER'S spirit we can scarcely suppose him capable of pretending that our writing is designed to push the Japanese to acts of violence. On the other hand, it is equally difficult to imagine that he can have been deceived by the sentence he quotes. No one understands better than he that if the Foreign Powers, accepting the simple *non possumus* conveyed in the second part of the resolution of the 11th—as literally interpreted—and conveyed also by the strangely unsympathetic attitude of the promoters of the agitation, were to postpone the discussion of Treaty Revision *sine die*; or if acts of violence and lawlessness perpetrated by Japanese towards foreigners were to bring about a similar postponement, the inevitable result would be renoucement of the Treaties by Japan. That is the "end" alluded to by us; an end which we hope to see deferred as long as possible. Mr. LOWDER affects to misunderstand us. But it is evident that he takes no trouble to understand. His attacks upon the *Japan Mail* and its editor are, however, of small moment compared with the avowal which our comments have elicited and which we recommend to the earnest perusal of all Japanese, namely:—"So far from being opposed to revision, there is not an intelligent man in the community who does not admit that Japan is entitled to demand a relaxation of the terms of the present Treaties. We recognise, with sincerity and admiration, the progress she has made, and we sympathise with her aspirations; but we say that she has not yet proved her right to claim unconditionally the promise of unrestricted judicial control over us." We believe that the true feeling of the Yokohama community is conveyed in this statement, every word of which we ourselves heartily endorse.

FOREIGN AND JAPANESE MERCHANTS.

ONE of the most remarkable of the utterances published on the subject of the commercial dealings between Japanese and foreigners seems to us to be the following:—

The greatest difficulty in the question is the keen and cut-throat competition of foreign importers amongst themselves. A Japanese may repudiate contracts, disown obligations, discard the most palpable promises,

even refuse to pay money owing to one of several foreign firms, and yet, on application to a competitor, he can do business easily, be supplied with goods, place new contracts, and be received with open arms, *even with affection*, and no questions asked. Even when his past misconduct and shuffling are known, a foreigner, fully cognisant of all his tripping, often takes him to his desk and to his heart, and what is still more useful to the Japanese client, supplies him freely with goods thus establishing him as triumphant master of the situation.

If this be true, and there is nothing to make us doubt its accuracy, the situation is about as hopeless as can be conceived, and additional force is given to what we have ourselves repeatedly asserted, namely, that the conditions existing in Yokohama are such as to put a premium upon dishonesty on the part of Japanese traders. What is a Japanese to think of the standard of commercial morality among men who receive with open arms a dealer known to have played the part of a knave? What can he think except that roguery and knavery are very lightly regarded, and that, provided business be transacted, the manner of transacting it, and the men who transact it, are quite secondary considerations? We have suggested that the best hope of inaugurating a wholesomer state of things lies in partnerships between foreigners and Japanese—a suggestion which drew forth the indignant rejoinder that foreigners would not dream of demeaning themselves by commercial association with rascals of the type familiar to them in Yokohama. Assuredly we never imagined that they would. Our suggestion referred expressly to the far better class of merchants who undoubtedly exist outside the Settlements, and our idea was that by combinations between these and foreigners, the import trade might be taken out of the groove where it is surrounded by such evil influences. But now a British merchant himself tells us that whatever knavery or double dealing the Japanese trader may have been guilty of, he can always be sure of a hearty welcome and of ready confidence at the hands of other foreigners, although they well know how he has sinned against their competitors. Is it not the veriest chimera to look for commercial probity under such circumstances in Japan? Would it not be the veriest chimera to look for it anywhere? The upshot of the interesting correspondence elicited in connection with this topic is to confirm our analysis, first made five years ago and repeated on the present occasion, namely, that the Japanese dealer in Yokohama is absolutely free from all restraint. He need not fear the law; he need not fear the loss of foreign custom or confidence; he is placed at no disadvantage as compared with a conscientious competitor; and he runs no risk of losing caste among his own countrymen, who know only so much as he chooses to tell them of his doings. It would be little short of a marvel were he honest under such circumstances. Indeed honesty and success would be incompatible; for where all difficulties may be avoided and

risks averted by recourse to improbity and chicanery, and where no advantage whatsoever attends honest dealing, roguery and evasion become weapons essential to victory. Must things remain thus? Is it really a fact that foreigners are incapable of combining to ostracise the men who prey on them so shamelessly? We cannot believe it. Twice within the past nine years foreign merchants of all nationalities combined to resist particular attempts on the part of Japanese traders, and on both occasions the combination succeeded. Surely combination to correct such flagrant abuses as those now exposed ought not to be impossible. There is no gainsaying the fact, we fear, that foreigners themselves are chiefly responsible for the ills from which they suffer, and that they are also responsible for permitting the existence of a state of affairs which must inevitably produce a demoralizing effect anywhere. We cannot conceive a high standard of commercial morality observed among any people where all the most effectual restraints upon dishonesty are absent. In the interests not of the foreign merchants alone, but also of Japan, it is most desirable that a stricter system should be introduced. Japan's good name is suffering all the time. People at large do not discriminate, they cannot be expected to discriminate, the special and exceptional causes which lie at the root of the trouble in Yokohama. They only know that the Japanese trader is a slippery, untrustworthy customer, and they view his nationals through the spectacles of his depravity. This evil, too, is responsible for the greater part of the distrust evinced by foreign residents towards Japanese institutions, and for nearly the whole of the contempt which they entertain for the people of the country. A man is bound to derive his conceptions from the events of his every-day life. The merchant virtually exists in his business: its prosperous conduct brings him content; its failure, chagrin and unhappiness. If he is perpetually thwarted by Japanese insincerity: if he can place no confidence in the fulfilment of engagements or the implementing of contracts, let him be ever so genial and forgiving, he must inevitably lapse into a mood of umbrage and exasperation. This is what happens in Yokohama. Thus in the cause of all interests nothing is more desirable than some drastic measure to correct the abuses so fully set forth in the recent correspondence. Are the foreign merchants really so helpless that they cannot take the matter seriously in hand, with the view of expelling finally from the trade the dishonest parasites which interfere so seriously with its health?

THE CONSTITUTIONAL LIBERAL PARTY.

THE *Kokumin no-Tomo*, in its last issue, reviews the train of events that finally resulted, some days ago, in the formation of the Constitutional Liberal Party, and considers the present position of that party. According to our contemporary, the question of the amalgamation of progressive parties was first brought forward as early as 1883. In that year a number of politicians of Kyushu made a tour throughout the north-eastern provinces and discussed with their friends the desirability of consolidating all the existing parties of progressive principles under one banner. The *Kaishin-to* and the old *Jiyu-to* were then waging bitter party warfare in Tokyo and its vicinity. But the provinces of the North-East and of the South-West being beyond the sphere of combat, politicians in those localities stood aloof from the strife and were in a position to mediate between the hostile camps. The question of amalgamation was, however, evidently premature at that time, and it seems that no practical steps were taken to carry out the proposition. During several subsequent years things were more and more unfavourable to combination, until the climax was reached last year, when the question of Treaty Revision made the gulf between the *Kaishin-to* and the other progressive parties almost impassable. The agitation produced by this question led to a temporary combination among a number of parties otherwise widely different in political tendency. But such a state of things could not last long without producing a reaction. It was Count ITAGAKI who first recognised the spirit of the time, and endeavoured to bring together the scattered elements of his former party. The result of the famous meeting at Osaka at the end of last year disclosed a singular state of affairs in a party which was formerly distinguished for its power of combination. Personal ill-feeling among the leaders, and conflicting ambition among the young and aspiring rank and file, led to the splitting of the party into three sections, the *Aikokukoto*, the resuscitated *Jiyu-to*, and the *Daido Club*. Count ITAGAKI alone was indefatigable in mustering his former followers into one political organization. About this time the amalgamation of all the progressive parties agitated the minds of a few far-sighted politicians in the south-west corner of the Empire. Men of progressive opinions in the island of Kyushu held a meeting on the 15th of April last, at which they gave full consideration to the question, and decided to despatch a number of delegates to Tokyo to induce the progressive parties to come to an agreement as to alliance on certain general questions. The delegates at once came up to the capital, and found that the subject of their mission had al-

ready been receiving the attention of leading men there. Among the papers, the *Hochi Shimbun*, the *Choya Shimbun*, the *Yomiuri Shimbun*, and the *Kokumin Shimbun* took up the question with particular zeal, and declared the importance of alliance. Count ITAGAKI and other distinguished statesmen in the capital, belonging to the different progressive parties, declared themselves in favour of combination on a broad basis, and at first the members of the *Kaishin-to* took a leading part in the movement. Such was the state of things in May last. The time for the general election then drew near, and, the delegates from Kyushu returning to their localities, public attention became engrossed with excitement about the approaching elections. Accordingly, the question of alliance remained for a time in abeyance. Towards the end of July, the delegates from Kyushu again appeared in Tokyo, and things were progressing smoothly, when a new turn was given to the movement by the promulgation of the Law of Political Associations, and the enforcement of its provision prohibiting any alliance or correspondence between different political parties. The effect of this official measure was simply to make the political parties concerned go a step further and unite themselves into one party instead of forming an alliance. With this object in view, the resuscitated *Jiyu-to* and the party represented by the Kyushu delegates (*Kyushu Doshi-kai*) were at once dissolved. As to the *Aikokukoto*, it was not necessary to dissolve it, its organization not having yet been formally completed. Men thought that, so far as these three parties and the *Kaishin-to* were concerned, there was little doubt of their amalgamation, but that the section of the *Daido-ha* under the direct control of Count GOTO might refuse to unite. In point of fact, however, things took an unexpected course. The *Daido-ha*, which had been from the outset rather lukewarm and suspicious, suddenly decided, on the 17th of August, to dissolve its organization; and taking up the question of amalgamation with more than ordinary zeal, at once assumed the leading position in the movement. The *Kaishin-to*, which had been specially enthusiastic at the outset, now lagged behind the rest, and deferred its general meeting to the end of September. Meanwhile, the opponents of amalgamation and bitter enemies of the *Kaishin-to* were indefatigable in throwing obstacles in the path of the latter party. A meeting in commemoration of the opposition against treaty revision was one of the contrivances to revive feelings of ill-will between the *Kaishin-to* and the *Daido-ha*. The politicians of the *Daido-ha*, now becoming masters of the situation, insisted on the organization of the new party previous to the general meeting of the *Kaishin-to*, and persisted also in demanding the use of the term *jiyu* instead of *kaishin* to denote

the principle of the party. Now these two words are both equivalent to the English term "liberal," but the history of the bitter struggle between the two parties designated by the different terms had given to the ideographs a significance quite apart from their original meaning. The *Kaishin-to* declined to be absorbed into the new party unless the obnoxious name was either entirely dispensed with or used side by side with the word *kaishin*. The final separation between the *Kaishin-to* and the other progressive parties took place on the 23rd of last month. Our contemporary regrets that the *Kaishin-to*, instead of anticipating the *Daido-ha's* move, displayed a singular want of foresight and energy by deferring its general meeting till September. Thus the proposal for the amalgamation of the progressive parties has had partial success. The *Rikken Jiyu-to* has since been joined by the *Kōmin-kwai* of Kyoto and the *Kōgi-kwai* of the Prefecture of Gumma, and it is asserted that the party is represented in the Diet by upwards of 130 members. In conclusion the *Kokumin-no-Tomo* observes on the one hand that there are some elements in the new party which must be eliminated, while, on the other, it hopes and believes that the *Kaishin-to* will yet reconsider its decision and join the amalgamated party.

THE TENDENCY OF JAPANESE CHRISTIANITY.

SOME time ago we reproduced and commented on a remarkable article in the *Rikugo Zasshi* (a Christian periodical) on the Future Christianity of Japan, by the editor of that journal, Mr. T. YOKOI. His views having elicited various comments from Japanese and foreign sources, he has further expounded them in a recent issue of his journal, under the heading "The Tendency of Japanese Christianity."

In the first place, he observes that the Christianity which is to be preached to the Japanese must be simple and unalloyed. He regrets to notice that even those who pretend to preach the so-called simple gospel, attach undue importance to abstruse and, in many instances, exploded doctrines of theology, which are little connected with the fundamental facts of Christianity. "Some persons," he says, "stick to the old theological tenet, which holds up the Bible not only as an unerring picture of the life of CHRIST, the ways of GOD, and the method of salvation, but also as an infallible authority on science, history, chronology, and so forth. Others there are who, not content with preaching that CHRIST has atoned for human sin by his life on earth and by his death on the cross, and that all believers in and followers of CHRIST shall not perish, but receive everlasting life, go on to assert that GOD is love, but justice likewise; that man, though returning to the path of righteousness,

must be punished for his previous sins to satisfy GOD's justice, and that, therefore, CHRIST, though himself innocent, underwent punishment for the sake of humanity. These people are not satisfied with preaching the facts of religion; they must also preach its theories. There is indeed no objection to their preaching such theories, but it is a grievous mistake to maintain that theories form an essential part of the simple gospel. What we mean by simple Christianity is this, that men must follow CHRIST as his original disciples followed him. We beseech the preachers of Christianity not to worry us with formidable articles of faith, with difficult dogmas of theology, and with complicated ceremonies of worship. . . . Do not initiate us into the secrets of sectarian strife. . . . The disciples when they followed CHRIST, did not know anything about the doctrine of the Trinity or that of Redemption; they did not observe the ceremony of the Lord's Supper, and some of them do not even seem to have received baptism. But they believed in CHRIST, they loved him, and they were with him, and their hearts were regenerated by the character and life of their Master." Mr. YOKOI thus considers that the first condition of Japanese Christianity should be freedom from all the dogmatic theology that has gradually grown up around religion during these nineteen centuries, and that it should be presented to the people in all the simplicity of the apostolic age.

In the second place, the writer remarks that the presence of so many merely nominal believers in the Japanese Church is to be accounted for by the circumstance that too much importance has hitherto been attached to the mere number of converts. "The improvement of life and character," he says, "ought to be the sole aim of evangelization. To remedy this evil in our Church [the evil of giving undue importance to the accidents of religion], we must not look to any system either of theology or Church Government. If we wish to see our believers filled with the spirit of CHRIST, and to make them walk the path trodden by CHRIST, we must replace belief founded on reason by belief centered in CHRIST."

In the third place, Mr. YOKOI explains more fully his attitude towards theology. He does not maintain that theology is in itself bad, or that religious ceremonies are useless. But he does maintain that it is pernicious to introduce into Japan, and to fetter the Japanese mind with, theology, customs, and sects that owe their origin and development to the particular histories and character of different foreign nations. Whenever he sees foreign missionaries telling their flocks to follow this form of belief, to observe that custom or rite, he is reminded of the Jewish Christians who, in the age of PAUL, went about in the footsteps of that great apostle and taught

the simple-minded gentiles to observe the Jewish customs and ceremonies. But, while protesting against the indiscriminate introduction of foreign theology, customs, and sects, our author at the same time admits that the introduction of Christianity cannot but lead to the growth of a theology, and customs of some kind, in Japan. "What we desire is," he writes, "that such theology and such customs should be in their growth free and natural, that, in short, they should be genuine products of the Japanese mind. We do not hesitate to foretell that Japanese theology, ceremonies, and customs, when brought to maturity, will be more or less different from those of the West." He thus considers that, with a view to the growth of such theology, it will be necessary in the first stage to study the facts of the faith—facts bearing on the teaching of CHRIST, on his personality, on his resurrection, on the nature of the Gospels, on the teaching of PAUL and JOHN, and so forth. In the next place, enquiry should be directed to the more recondite parts of the faith—the existence of GOD, the relation between CHRIST and GOD, the nature of sin, the atonement of CHRIST, and so forth. "The Japanese theology," he states, "will take a long time to develop, for we must await the rise of Japanese theologians competent to handle the profound problems of religion. But we do not regret the tardiness of the growth of doctrines; what we regret is the circumstance that the facts of religion are not clearly settled."

In the fourth place, Mr. YOKOI calls attention to the fact that Japan is at present struggling to strike out a new career for herself; that she is endeavouring to find her place among the nations of the world. The form of patriotism partaking of the nature of the *jōi* spirit cannot be countenanced by any one believing in the religion of JESUS. But our author maintains that successful preachers of Christianity in Japan must, before every thing else, sincerely love their country, sympathize with the aspirations of the new Japan, and entirely identify themselves with the honour and dignity of the nation. He approves the wisdom of foreign missionaries, when they systematically avoid all interference with political, educational, and literary questions. But at the present crisis of the country's history, he considers it especially important that teachers of the Christian religion should not only devote themselves to propagandism, but should also endeavour to fill every department of the national life with the spirit of their religion. "Among foreign missionaries," Mr. YOKOI observes, "there are men of wide information and genuine loyalty, who are capable of assuming any responsibility of whatever gravity. If they cannot take the leading position in the work of evangelization in Japan, if they cannot stand in the van of the struggle, it is because they are not Japanese, and are con-

sequently incapable of being genuine lovers of Japan. We thank them for their past assistance and sincerely look to their coöperation in future. But at the same time we now propose to take upon ourselves the leading position in the conversion of the nation, always hoping however, that foreign missionaries will consent to give us their assistance. We have taken this resolve, because we are forced to it by the tendency of the times. Our unique aim is to work out the salvation of the country and the spreading of Gospel truth."

Such are Mr. YOKOI's views. Deeming that Christianity has reached a most interesting epoch of its history in Japan, we lay before our readers his analysis of its position.

THE CORRECTION OF JUDGES.

LAW No. 68.

We hereby give our sanction to the present Law for the Correction of Judges, and order the same to be duly promulgated.

(His Imperial Majesty's Sign-manual.)
(Great Seal.)

Dated August 20th, 1890.

(Countersigned.)

COUNT YAMAGATA ARITOMO,
Minister President of State.

COUNT YAMADA AKIYOSHI,
Minister of State for Justice.

CHAPTER I.—GENERAL RULES.

Article 1.—The correction of judges shall be executed by the judgments of the Correctional Court in the following cases:—

- (1.) When judges commit any breach of or neglect their official duties.
- (2.) When judges conduct themselves in a way which shall lower their official dignity or damage their credit.

CHAPTER 2.—PUNISHMENTS.

Article 2.—Punishments shall be as follow:—

- (1.) Reprimand.
- (2.) Reduction of salary.
- (3.) Transfer to another Court.
- (4.) Suspension from office.
- (5.) Dismissal.

Article 3.—The punishments mentioned in the last article shall be applied according to the discretion of the Court of Correction, but in accordance with the degree of the offence.

The Court of Correction may consider the general conduct of the person before it, in cases where punishment shall follow an offence.

Article 4.—In punishment by reduction of salary, one third or a smaller fraction of the monthly proportion of the yearly salary shall be deducted during not less than one month and not more than one year.

Article 5.—In punishment by transfer to another Court, the judge shall be removed to a Court other than that to which he was appointed. Reduction of salary may, however, be inflicted in addition to transfer, according to the circumstances.

Article 6.—In punishment by suspension from office, the judge shall be suspended from the duties of his office for not less than three months and not more than one year.

No salary shall be paid during suspension.

Article 7.—Judges who are punished by dismissal shall, in addition to the loss of office, be deprived of the right to claim a pension.

CHAPTER 3.—COURT OF CORRECTION.

Article 8.—A Court of Correction shall be established in each Court of Appeal and in the Court of Cassation.

Article 9.—Courts of Correction at Courts of Appeal shall be constituted from the five judges of the Court, and shall include the Chief Judge, who shall also be the Chief Judge in the Court of Correction.

The Court of Correction in the Court of Cassation shall be constituted from the seven judges of that Court, and the President of the Court of Cassation shall act in that capacity in the Court of Correction.

Article 10.—The Chief Judges of Courts of Appeal and the President of the Court of Cassation shall decide annually beforehand upon the judges who shall constitute Courts of Correction, after consulting with the chiefs of sections of the Court or Courts; and shall decide upon the order of the cases where the business of the judges shall have been interrupted.

Article 11.—The Regulations of the Code of Civil Procedure shall be observed as to challenging judges constituting the Court of Correction.

Article 12.—The duties of public procurators of the Courts of Correction in Courts of Appeal shall be executed under the direction of the chief public procurators; the duties of public procurators of the Courts of Correction at the Court of Cassation shall be executed under the direction of the Public Procurator-General.

Article 13.—The Chief Judge of the Courts of Correction in Courts of Appeal shall appoint clerks of the Court of Correction from the Court Clerks of the Appeal Courts; the Chief Judge of the Court of Correction in the Court of Cassation shall appoint clerks of the Court of Correction from the Court Clerks of the Court of Cassation.

Article 14.—Courts of Correction in Courts of Appeal shall have jurisdiction in cases of correction against judges of those Courts, except in the cases of their chiefs and chiefs of sections and chief judges of all the lower Courts within the jurisdiction of the Court.

Article 15.—Courts of Correction in the Court of Cassation shall have jurisdiction in the following cases:—

- (1.) Cases of correction against judges of the Court of Cassation, Chiefs of Courts of Appeal, and chiefs of sections of the Courts of Appeal, as first and final examination.
- (2.) Complaints and appeals against the judgment of the Courts of Correction in Courts of Appeal.

Article 16.—The jurisdiction of the Court of Correction shall be decided according to the Court where the judge was in office when its proceedings were opened, without reference to the place where the offence was committed.

CHAPTER 4.—PROCEDURE.

Article 17.—The Court of Correction shall decide whether a trial for correction shall be opened by its initiative through the Public Procurator. The Public Procurator shall, however, be consulted in the cases where the trial is opened by the Court's initiative.

Article 18.—A Public Procurator may raise an objection (within seven days) against the decision of a Court of Correction, in cases where the procedure for correction has been objected to at the commencement.

Article 19.—A Court for Complaints shall adjudicate upon complaints, after having heard the opinion of the Public Procurator. Should the Court consider the complaint to be well founded, it shall order a rehearing, and such subsequent proceedings shall be heard by the Court of Correction which has jurisdiction in the case.

Article 20.—Charges against judges for punishable offences shall be made in open court, and evidence relating to the same taken in like manner.

Article 21.—Notice of trial shall be sent to the Public Procurator and also to the defendant.

Article 22.—Should the Court of Correction deem it necessary to hold a preliminary examination, the Chief Judge of the Court of Correction shall order the judge of the Court where the trial is to take place, or the judge of a local Court within the limit of his jurisdiction, to hold the preliminary examination.

Article 23.—The judge so ordered to hold the preliminary examination shall obtain the necessary evidence.

The judge holding the preliminary examination may summon the defendant and examine him upon the facts of the case. The defendant may be represented by counsel. Witnesses shall be examined in accordance with the regulations of the Code of Criminal Procedure.

Article 24.—The judge so ordered may entrust the examination of witnesses and gathering of further evidence to the judge of another court.

Article 25.—The judge shall transmit a written statement of the examination and evidence to the chief of the Court of Correction after the preliminary examination has been concluded, and shall serve the Public Procurator with a copy of the same within 24 hours.

Article 26.—The Public Procurator shall record his opinion upon the documents and return the same to the Chief Judge of the Court of Correction within three days.

Article 27.—Should the Court of Correction consider the preliminary examinations to be sufficient for the purpose, it may issue an order to proceed with the pleadings, or shall give judgment for the defendant.

Should it be found impossible to proceed with the pleadings at once, an order to suspend proceedings shall be issued.

Article 28.—Judgment when given as provided in the last article shall be communicated both to the Public Procurator and to the defendant.

Article 29.—The Chief Judge of the Court of Correction shall determine the date upon which the pleadings shall take place, and shall summon the defendant to appear.

Article 30.—The pleadings shall be heard *in camera*.

Article 31.—The hearing shall begin with the reading by the court clerk of the Judge's decision as to the date of opening the case. The Chief Judge shall first examine the defendant, next take evidence, then hear the Public Procurator, then order the defendant to plead, and lastly call upon the defendant for his defence.

Article 32.—Should the Court of Correction deem it necessary to hear fresh evidence offered by the defendant, or the Public Procurator, or *ex officio*, it may issue an order to postpone the pleading for another day.

Article 33.—The defendant may have the assistance of counsel, or be otherwise represented in Court.

Article 34.—Should the Court of Correction consider that the evidence and pleading in a case is sufficient for the purpose, it shall conclude the case, and, after consultation, proceed to deliver judgment.

Article 35.—Judgment shall, if possible, be given at once; if, however, judgment be reserved, the defendant and the Public Procurator shall within seven days receive a copy of the judgment.

Article 36.—Judgment may be delivered even though defendant or his counsel or representative may not be in attendance on the day of its delivery.

Article 37.—The Regulations of the Law for the Constitution of Law Courts shall be observed as to consultations and judgments, and the Regulations of the Code of Criminal Procedure as to the hearing of evidence.

Article 38.—Either the defendant or the Public Procurator may give notice of appeal within a period of 14 days, to be reckoned from the day on which judgment was pronounced, or from the day on which judgment was served on the defendant during his absence from court, as the case may be.

Article 39.—Notice of appeal shall be given to the Court of Correction which delivered judgment.

A statement of grounds of appeal shall be filed with a period of 14 days from the day on which notice of appeal is given.

Article 40.—The Court of Correction shall serve copies of the notice of appeal and of the statement of the grounds of appeal on the party concerned.

The respondent shall file his statement within 14 days from the day on which he was served with the notice of appeal.

Article 41.—The Court of Correction shall transmit its documents to the Court of Appeal at the expiration of the period mentioned in the last article. The Chief Judge of the Court of Appeal shall summon the defendant and inform him of the date of pleading.

Article 42.—The Court of Appeal may take evidence which was not produced at the first hearing, if it is forthcoming. The re-examination of witnesses examined at the first hearing shall only be permitted when there is a full presumption that a witness's statement may differ on some important point, or that some new or important fact is intended to be proved.

Examination *ex officio* may take place at any time.

Article 43.—The Regulation of Articles 30-37 shall apply to the proceedings at a second hearing.

Article 44.—Should an appeal be deemed to be frivolous or without good grounds it shall be dismissed, and the costs shall be borne by the appellant.

Should an appeal be deemed to be on good grounds, it shall be upheld, and the judgment of the Court below shall be quashed, and a new judgment shall be delivered by the Court of Appeal; costs to go with the judgment.

The documents shall be returned to the original Court, together with a certified copy of the judgment, after the appeal is concluded.

Article 45.—The Regulations of the Code of Criminal Procedure shall be observed as to the compilation of written notes, the reckoning of periods, and the service of documents.

The Regulations relating to Costs of Judgment in Criminal Cases shall be observed as to costs of proceedings for judgment in Courts of Correction.

Article 46.—No judgment of the Court of Correction may be executed unless it is conclusive.

Article 47.—When judgment in a case of correction has been delivered, the Chief Judge of the Court of Correction shall report the case to the

Minister of State for Justice, and forward a copy of the judgment.

Article 48.—Should a Court of Correction deliver a judgment which entails a reduction of salary, removal to another Court, or suspension from office, the Minister of State for Justice shall execute the same.

CHAPTER 5.—SUSPENSION FROM OFFICE.

Article 49.—Judges shall be suspended from office in the following cases:—

- (1.) When under detention (*koryu*) or criminal process.
- (2.) When sentenced to punishment involving loss of office under criminal judgment.
- (3.) When sentenced to dismissal from office by correctional judgment.

Article 50.—In cases where a judge has undergone fixed judgment of punishment by detention under criminal judgment, his office shall, as a matter of course, be suspended till the expiry of his term of punishment.

Article 51.—A Court of Correction may suspend a defendant from office until the conclusion of the procedure of a correctional judgment, *ex officio* or according to the statements of the Public Procurator at any time, if it appears that a case of correction before it involves correction, change of place, suspension of or dismissal from office. The opinion of the Public Procurator must be taken when the decision is given *ex officio*.

A Court of Correction may decide on suspending a defendant from office at any time during the procedure of a criminal judgment, up to conclusion of such criminal process.

Article 52.—Official acts of a judge after he has been suspended from office by the decision of a Correctional Court shall as a matter of course be void.

Article 53.—No defendant may appeal against a decision of suspension from office.

CHAPTER 6.—RELATION BETWEEN PROCESSES OF CORRECTIONAL AND CRIMINAL JUDGMENTS.

Article 54.—No process of correctional judgment can be opened against a defendant during the trial of a criminal judgment regarding the same matter.

In cases where a criminal process has been begun against a defendant regarding the same cases before judgment is given by a Correctional Court, the process of correctional judgment shall be suspended till the day on which the other judgment in the case is given.

Article 55.—The process of a correctional judgment may be begun or continued even if a suit in a Criminal Court regarding the same acts has been dismissed or sentence of not guilty passed.

Should a defendant undergo sentence of punishment which does not involve loss of office, by criminal judgment, he may be tried again by a Correctional Court.

CHAPTER 7.—SUPPLEMENTARY RULES.

Article 56.—Acts involving liability to correction shall be tried in accordance with this law, even if they have been committed before the carrying into practice of the same.

Article 57.—This law shall come into force on and after the 1st day of the 11th month of the 23rd year of Meiji.

PORT REGULATIONS.

LAW No. 83.

We hereby give our sanction to the present Regulations relating to the punishment of offenders against the Rules as to Naval and other Important Ports, and order the same to be duly promulgated.

[His Imperial Majesty's Sign-manual.]

[Great Seal.]

Dated September 12th, 1890.

(Countersigned.)

COUNT YAMAGATA ARITOMO,
Minister President of State,
VISCOUNT KABAYAMA SUKENORI,
Minister of State for the Navy.

Persons who contravene the Rules as to Naval and other Important Ports, decided by the Minister of State for the Navy in accordance with Law No. 2, promulgated in the 23rd year of Meiji, shall be punished with major imprisonment for not less than 11 days and not more than 1 year, or with fines of not less than *yen* 5 and not more than *yen* 50.

HORSFORD'S ACID PHOSPHATE.
III Effects of Tobacco relieved by its use.

VOLUNTEER ACCOUNTANTS AND VETERINARY CADETS.

IMPERIAL ORDINANCE No. 195.

We hereby give our sanction to the present Regulations relating to the appointment of Volunteer Accountant and Veterinary Cadets as commissioned officers in reserve of the Accountant and Veterinary Departments of the Army, and order the same to be promulgated.

(His Imperial Majesty's Sign-Manual.)
(Great Seal.)

Dated September 3rd, 1890.
(Countersigned)

COUNT OYAMA IWAO,
Minister of State for War.

(1.) When a volunteer accountant cadet has passed a practical examination in accordance with Article 6 of the Regulations as to commissioned officers of the first and second reserves, the Paymaster-General shall cause the paymaster of the corps to which he is attached to produce a certificate guaranteeing his fitness to become a commissioned officer of the accountant department, being industrious, of good conduct, and sound education, and if these are satisfactory, shall propose to the Chief of the Finance Bureau his appointment as a paymaster of the 3rd rank; the latter shall submit the matter to the Minister of State for War with his opinion. If the Paymaster General object to the certificate, he shall state such fact to the Chief of the Financial Bureau with his reasons; and the latter shall lay the matter before the Minister of State for War with such reasons. The Minister may decide to refuse to the candidate the status of a probationary commissioned officer. Candidates who are thus disposed of shall be appointed clerks of first rank and ordered to serve in the reserve.

(2.) The appointment of volunteer veterinary cadets who have successfully passed a practical examination in accordance with Article 6 of the Regulations as to commissioned officers in the first and second reserves, as commissioned officers in reserve of the veterinary department shall be in accordance with Article 15 of the Regulations as to commissioned officers serving with the colours in the Veterinary Department of the Army. If a candidate is deemed to be without capacity to become a commissioned officer of the veterinary department, the Surgeon-General shall report the matter to the Chief of the Veterinary Section of the Bureau of Military Affairs, who shall memorialize the Chief of the Bureau, by whom the fact shall be intimated to the Minister of State for War. The latter may then decide to refuse to the candidate the status of a probationary commissioned officer. A candidate thus treated may be appointed chief shoeing-smith and be ordered to serve in the reserve.

COLONIAL MILITIA.

IMPERIAL ORDINANCE No. 181.

We hereby give our sanction to the present amendment of the Regulations relating to Colonial Militia, and order the same to be duly promulgated.

(His Imperial Majesty's Sign-Manual.)
(Great Seal.)

Dated August 29th, 1890.
(Countersigned)

COUNT OYAMA IWAO,
Minister of State for War.

Article 1.—Colonial Militia shall be composed of colonial infantry, colonial cavalry, colonial artillery, and colonial military engineers, and shall be set apart for the defence of Hokkaido, where they shall be stationed.

Article 2.—Colonial Militia shall be organized as soldiers (in addition to their ordinary occupation of farmers), shall live in military houses which shall be provided for them, and shall take part in military drill, in cultivation, and in farming.

Article 3.—Colonial Militia shall also be composed of volunteers from cities and prefectures who shall change their registered residence (*honseki*) to Hokkaido and live there with their families.

Article 4.—The term of service of Colonial Militia shall be 20 years, the service with the colours being 3 years, in the first reserve 4 years, and in the second reserve 13 years. Should a colonial militiaman be released from service during his term, owing to his attainment of the full age of forty years, or through death, or some other cause, a suitable male of the family shall be ordered to fulfil the remaining term of service. Such service may be remitted if there be no suitable male.

Article 5.—Colonial Militia shall fulfil supplementary military service during ten years after the end of service in the second reserve, and shall be mobilized in time of war or other emergency.

Article 6.—The term for each stage of military service under Articles 4 and 5 shall be counted from April 1st of the year in which the soldier enters the militia.

Article 7.—The terms may be prolonged even though the period for each stage has fully elapsed, should war or other emergency or the requirements of military discipline or the inspection of soldiers (*Kwampeishiiki*) demand the same, or should the soldier be then in transit from or to, or be located in, a foreign country.

SUPPLEMENTARY RULES.

Article 8.—Colonial Militia enlisted before the carrying out of these regulations shall be treated according to the following distinctions:—

(1.) Those enlisted between the 8th year of Meiji and the 16th year of Meiji shall serve in the first reserve during 4 years and in the second reserve during 9 years.

(2.) Those who were enlisted between the 17th year of Meiji and the 20th year of Meiji shall serve in the first reserve during 4 years from the 24th year of Meiji, and in the second reserve, after the lapse of the above period, during 20 years, reckoned from the year in which they were enlisted.

(3.) Those who were enlisted in the 21st year of Meiji shall serve in the first reserve during 4 years from the 25th year of Meiji, and in the second reserve, after the lapse of the above period, during 20 years, reckoned from the year in which they were enlisted.

(4.) Those who were enlisted in and after the 22nd year of Meiji shall be treated in accordance with these regulations.

Article 9.—The mode of reckoning the terms of service of Colonial Militia levied before the 21st year of Meiji shall be in accordance with Article 6 of these regulations.

The term of service with the colours of these levied in the 22nd and 23rd years of Meiji shall be counted from the day on which they were included in the Colonial Militia, and their term of service in the first and second reserves from the day next to the lapse of the full term of the former service.

Article 10.—These regulations shall come into force on and after the 1st day of the 4th month of the 24th year of Meiji.

CHAMBERS OF COMMERCE.

LAW No. 81.

We hereby give our sanction to the present Regulations relating to Chambers of Commerce, and order the same to be duly promulgated.

(His Imperial Majesty's Sign-Manual.)
(Great Seal.)

Dated September 11th, 1890.

(Countersigned)

COUNT YAMAGATA ARITOMO,
Minister President of State.

MUTSU MUNEMITSU,
Minister of State for Agriculture and Commerce.

Article 1.—"Commercial men" in these Regulations shall mean merchants and persons who are included in the classes of commercial occupations mentioned in Article 4 of the Commercial Code.

Article 2.—Where the establishment of a Chamber of Commerce is intended, commercial men of the locality who may be members in accordance with these Regulations, shall become projectors and obtain the permission of the Minister of State for Agriculture and Commerce through the chief official of the locality. The number of projectors shall, however, be more than half of the number of members as settled by the bye laws of the Chamber. The chief official of a locality who has received notice as provided in the last paragraph, shall seek the opinion of the municipal or rural district assembly and shall submit the matter to the Minister of State for Agriculture and Commerce with his opinion thereon.

Article 3.—The boundaries of the locality of a Chamber of Commerce shall be the same as the limits of the municipality, town, or village. One Chamber may, however, be established in a district formed by the union of several municipalities, towns, or villages, in accordance with the commercial circumstances of the locality.

Article 4.—The business and powers of Chambers of Commerce shall be as follow:—

(1.) To decide necessary means for the development of commerce, and the prevention of its decline.

(2.) To convey to offices or boards its opinion as to the enactment, amendment, abolition and mode of carrying into practice laws and regulations relating to commerce, and other matters of commercial interest.

(3.) To report to offices or boards on the actual condition of commerce and statistics thereof.

(4.) To answer questions put by offices or boards relating to commercial matters.

(5.) To supervise public buildings in which occupations are carried on, firms of commission merchants, and all other buildings relating to commerce in the locality.

(6.) To take cognizance of the capacity, numbers, and fees of commission merchants.

(7.) To arbitrate in disputes relating to the commerce of the locality at the request of the parties concerned.

Article 5.—Commercial men of any locality where a Chamber is established, who pay income tax, shall have the right of electing members.

Article 6.—Commercial men who pay income tax in the locality where a Chamber is established, and who are above 30 years of age, or commercial companies, shall have the right of being elected as members.

Each company shall be represented by one person legally entitled to represent it.

Article 7.—In regard to the property qualification for election and the right to be elected members, as provided for in Articles 5 and 6, the Minister of State for Agriculture and Commerce may decide the amount of income tax or may specially include national taxes in such qualification by an ordinance of the Department, in accordance with the circumstances of the locality.

Article 8.—The following persons shall not have the right to elect or be elected members:—

(1.) Idiots and lunatics.

(2.) Those who have been punished with major imprisonment for not less than one year, or have been punished for offences calculated to injure commerce, agriculture or industries, offences against property, offences against morals, or offences against credit, and in whose cases three years have not yet elapsed since the expiry of their full term of punishment or the date of their pardon.

(3.) Those whose public rights have been withdrawn or suspended.

Article 9.—The number of members shall be decided by the bye-laws of each Chamber, but shall not be less than 15 or more than 50.

Article 10.—Members shall not receive any salary; their term of office shall be four years, half of their number being subject to re-election every 2 years, and the members to resign office for the first re-election shall be decided by drawing lots.

Article 11.—Members who are elected may not object to take office or resign during their term of office, without obtaining the decision of the Chamber except in the following cases:—

(1.) Those who prove that they cannot discharge the duties of their office owing to sickness or old age.

(2.) Those who prove that they cannot reside constantly in the locality of the Chamber, owing to the nature of their occupations.

Article 12.—Those who resign office in contravention of the provisions of the last article may be punished by a penalty of not more than yen 200, according to the decision of the Chamber.

Article 13.—The election of members shall be conducted by committees appointed by the headmen of rural districts or municipalities, who shall decide the date and place; and the expense of such elections shall be borne by the Chambers.

Article 14.—Meetings of a Chamber under paragraphs, 2, 4, and 7 of Article 4 shall not be open to the public.

Open meetings not mentioned in the last paragraph may be prohibited by order of the Minister of State for Agriculture and Commerce, or by decision of the Chamber.

Article 15.—A Chamber may assess reasonable fees to be paid by the parties concerned, in the cases mentioned in paragraph 7, Article 4.

Article 16.—A Chamber shall hold property in the same way as a person of legal status.

Article 17.—A Chamber may elect special members to the number of not more than one-fifth of the settled number of members, and permit them to attend its meetings. Special members can not, however, take part in its decisions. Special members shall be elected in respect of their experience in sciences, arts, or commerce.

Article 18.—The financial estimates of the expenditures of a Chamber must be sanctioned by the Minister of State for Agriculture and Commerce, through the local chief. The settled accounts of the financial estimates shall be reported to the Minister of State for Agriculture and Commerce, through the local chief.

Article 19.—The expenditure of each Chamber

shall be levied from persons who have the right of election, and the mode of assessment shall be decided by the Chamber and receive the sanction of the Minister of State for Agriculture and Commerce, through the local chief.

Should any one fail to pay the amount assessed at the proper time, it may be collected by the collector of local taxes for the locality.

Persons who fail to pay the amounts assessed when required by the collector, shall be deprived of the right to elect or be elected members during not less than four years and not more than eight years, and be liable to fines of not more than *yen* 200.

Article 20.—The bye-laws of each Chamber shall regulate the following matters under the decision of the Chamber, and must be sanctioned by the Minister of State for Agriculture and Commerce, through the local chief:—

- (1.) Rules for the election of members.
- (2.) Rules of debate.
- (3.) Rules for the conduct of miscellaneous affairs.
- (4.) The offices and rights of officials.
- (5.) Rules of Arbitration.
- (6.) Rules of Finance.
- (7.) Rules for the supervision of public buildings and places of occupation.

Article 21.—If the Minister of State for Agriculture and Commerce deems that a Chamber has exceeded its powers or caused injury to commerce, he may suspend its meetings, and order the re-election of a part or the whole of the officials or members in accordance with the circumstances.

Article 22.—The Minister of State for Agriculture and Commerce shall be responsible for the carrying out of these regulations, and shall issue the necessary orders relative thereto.

THE PARCELS POST.

LAW No. 82.

We hereby give our sanction to this Regulation relating to the release from Customs Duty of goods exported to foreign countries by Parcels Post and order the same to be duly promulgated.

(His Imperial Majesty's Sign-manual.)
(Great Seal.)

Dated September 12th, 1890.
(Counter-signed)

COUNT YAMAGATA ARITOMO,
Minister President of State.
COUNT MATSUOKA MASATOSHI,
Minister of State for Finance.
COUNT GOTO SHOJIRO,
Minister of State for Communica-
tions.

Goods exported to foreign countries by parcels post shall be free from customs duty.

CORRESPONDENCE.

TREATY REVISION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It seems to me that your correspondent, "Anxious Warner of 1886," has given some excellent advice to the incorrigibles who oppose treaty revision. He recommends them, if they cannot trust Japanese law, imperfect though it may be, to "put their houses in order," "close all accounts," and "shake the dust of Japan from their feet." Inasmuch as many of the objectors are narrow-minded enough to look only after their own selfish interests, they might naturally be expected to disregard the advantages accruing from treaty revision to other nations in respect to international and commercial relations. Moreover, as treaty revision is a simple act of justice toward Japan, "let justice be done, though the heavens fall," and the incorrigibles also! If they cannot trust the Japanese people, let them leave, and their places be filled by those who can trust. I have an idea that if a man acts honestly and treats kindly the Japanese people, he will be treated kindly.

Yours, &c.,

CLEM.

Mito, September 19th, 1890.

"AUDI ALTERAM PARTEM."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It stands well to reason that in all contentions and business disputes between the Japanese and foreigners, the fault is not *all* on the side of the former; and amongst multitudinous letters that have recently found their way into print it has somewhat astonished me that only one word,

though a very emphatic one, has been contributed in their defence. Business disputes occur all over the world; a wise and fair man, before too readily pronouncing an opinion, or giving a verdict, should carefully examine those two sides that belong to every question. It would be ridiculous and ungenerous to say that foreigners are *never* in the wrong in their transactions with Japanese. In some instances they bring out imperfect goods, not quite up to sample; either too light, too flimsy, off shade, or in some other way not really equal to slips from which contracts were made, and the majority of disputes arise on that account. This is not the result of any wish on the part of the foreigner to do anything unfair; in fact he is scrupulously trying to be exact in all these items; but some irregularity in the manufacture, or in some piece of machinery at home, causes certain defects in goods to be apparent on their arrival, and although makers in England may have taken the greatest pains, and gone most carefully to work with an honest wish that goods should be quite up to the muster, they have not succeeded. Then the dispute begins at this end, the Japanese wanting an allowance, and it is the question of the account of this reduction in price which causes many contentions. Whilst freely admitting that the Japanese often bleed us with some profusion on such occasions, it cannot be said that they alone are in fault, as the blame or misfortune attaches to the importer's friends. The latter has his opinions as to what allowance should be sufficient; the Japanese dealer has also his view. We all know that the opinion of a seller is often leagues asunder from that of the buyer, but the fault is not entirely with the Japanese. Disputes of this nature are sometimes allowed to widen into great difficulties, and whilst one side has his opinion that he is being hardly treated, his client holds quite another view, the justice of the case being probably between the two.

Japanese do not repudiate contracts so often as find themselves *unable* to carry them out. In bad times, not being in a position to get the wherewithal, they dawdle, prolong their term for delivery, keep making fresh excuses, no doubt some of them knowing perfectly well they cannot redeem their goods, but many more *trying their utmost* in the meantime to get the dollars together, but failing through sheer inability to do so; and having no credit granted, cannot take delivery. If firms received no credit in England, the same or a greater difficulty would be experienced. Of course some Japanese dealers are less conscientious than others, and fairly come under the category of being the reverse of straightforward; others, the majority, deserve much gentler designations.

There are some native merchants so straight and upright in their dealing that if any one of them were guilty of any trickery he could be unable to carry on his business in Yokohama at all. Especially is this true amongst the metal dealers, who, although when goods are rusty or late in arrival, or in any other way out of the line of contract, they insist upon reductions at times that seem unfair and in excess of the difference and damages appraised by a foreigner, nevertheless *much prefer* giving contract price, and observing contract conditions if they can have goods perfect and in time. When a foreigner orders an article anywhere and receives it damaged or deteriorated in any way, does he calmly accept it at original price without any demur? It is always a matter of opinion as to the money value of the depreciation of any item of merchandise, a light damage making it often no more valuable than a second-hand article. The native merchants are so trustworthy, that many of us have done good and honest business with them into the tens of years, and longer. The large purchasers of yarn, Italians, shittings, etc.—all standard imports—are men to have confidence in, or why are they in a position to get their contracts accepted year after year? Hard times produce business difficulties, and render many contractors unable to take their goods at stipulated time, and were the Japanese more inclined to meet us as to paying bank interest on extra time the goods remain in our godowns, and to pay our actual extra outlay in insurance and godowns rent—the Japanese are very hard and unfair in these particulars—they would have a much better character than is given to them by foreigners generally.

Competition in all countries interferes with individual firms. Each merchant thinks that by extra care and watching, and prudence, he can prevent Japanese who may have wronged others from being able to injure him. Or one firm has a large stock which it wishes to turn into money, and considering all disputes between natives and other foreigners as *their affair*—does not interfere, not being quite certain that the Japanese were the only party in the wrong. Referring,

lastly, to the fact that native merchants are unjust when, having bought goods at a fixed price, they want a reduction because exchange has gone up, and even urge the still paltrier pretext that they would lose money, it should be noted that although their action is manifestly unfair, they behave thus, as a general rule, only when the difference is very great, and the small dealers are the chief delinquents. It must not be forgotten, either, that the present crisis of exchange calls for exceptional manipulation on the part alike of natives, foreigners, and banking institutions. Some years ago, having made a contract for some goods, and exchange falling considerably, one large native dealer willingly paid me the difference. I have had pleasant intercourse, without disputes, with native merchants for very many years, and trust the word of my clients as I would do that of almost any foreign firm.

Yours obediently,

HEAR BOTH SIDES.

Yokohama, September 19th, 1890.

THE POLICE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I should like to say a good word for the Japanese Police, as I see in your paper that they have been roughly handled of late in some of the Settlement papers. I fancy the editors of those papers have little idea what police duty is like. As I have done Provost duty in garrison towns in England, India, and Egypt, I speak from experience, and can sympathize with the Settlement police, knowing that the handling of mad drunk men is far from a pleasant task, or one calculated to improve the temper, especially when the prisoner tries his best to disable one. In such a case the Police in self-defence must use force, and if the prisoner gets the worst of the argument I cannot see why he is to be commiserated with for that which he has brought on himself. I have nothing official to do with the force, but I meet some of them every day, and I will say that nowhere have I met with greater civility than from the Japanese Police. I think the gist of the whole affair is that those who run them down do not know them.

Yours, &c.,

N.

Tokyo, September 20th, 1890.

"STEADFAST."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have read in one of your local contemporaries a communication on 'Treaty Revision, signed "Steadfast." Steadfast is filled with fearful notions of what would transpire if foreigners were to come under the jurisdiction of Japanese Courts. He assumes, and perhaps believes, that the administration of the Courts would be defective for want of legal ability in the judges, even if the laws were honestly administered by them. He also believes that if opportunity was given the Government there would be oppressive laws passed discriminating against foreigners, just for the lust of the thing. He objects to any advance in the tariff rates as now established. Luxuries, such as the foreigner uses, are, he fears, to be taxed much higher than now. Possibly "Steadfast" might have done better than advance that idea, as he must know that with the present rate of exchange—and it is likely to go higher and stay there—he will have to pay for his luxuries fewer dollars than he has paid for many a year. Even if the tariff should be doubled, his Ireland brew of whisky, and his Plymouth gin will not cost him any more than formerly. Neither will any other luxury. I suppose "Steadfast" must be an Englishman: an Englishman of as stout a heart as even a Lowder or a Brooke, even more of a defender of British rights than they both bunched together. I like a man of his kind, because one knows where to find him. Evidently he has been against treaty revision from away back, and is now consistent with himself. Of his reasons wherewith he fortifies himself in his position I do not think much. His fear of the multitudinous taxes and rates that will be imposed by the Government if treaty revision goes through might have real foundation, and yet as an Englishman, delighted with English modes, English law, and of course with taxes, an income tax especially, as levied by the English Government, I cannot for my life see why he should fear the most that Japanese statesmen could devise in that direction. But Japanese imposition of taxes would not be English, you know. It is curious that the "Steadfast" man did not remember that the Englishman at home is taxed almost out of his boots, in one way or another; exemption for so long in Japan has perhaps clouded his memory

Original from

about home taxes, and no doubt he was of that dignity at home that he was called upon by the tything man and collector of taxes. The man who does not pay taxes to his heart's content in England must be pretty low down in the world, so low that he cannot fall any lower in the social scale. If treaty revision goes through on the lines protested against, the condition of most of the residents in Japan would not be altered in a degree large enough probably for them to perceive the difference. Law-abiding men have no fear of inadequate laws or of incompetent judges; they never get into Court. Mr. Lowder, the front of the present agitators of treaty revision, probably has no fear regarding himself and his interests personally. A pet of the Government for many years, and in the receipt of a munificent salary for those many years, the recipient of two decorations, and now when no longer actually in the Japanese service, a pensioner of the Government, he need not fear molestation. Probably, "Steadfast," would find that he was let alone about as much as he desired to be, and in no danger of oppression. Brooke of the *Herald* stands in danger of wholesome restraint, there is no doubt; every one appears to know it, and evidently he has a satisfying sense of it himself. That he should fear that the tone of his abuse of all things Japanese will have to be modified is natural. Unrestrained he has poured out his venom without stint; no doubt he fears a day may come when he will be compelled to attempt to be courteous and decent in his place. The merchants who complain of Japanese traders and Japanese Courts, from their own showing have nothing to fear from treaty revision. If there is no way by which they can compel their customers to keep their contracts and be honest, the evil cannot be augmented in that regard. As "Anxious Warner of 1886," puts it, five years notice, five years of preparation, five years of probation of the Japanese Court, five years of waiting and watching should be long enough for the most lagard to be ready to act in his own interest. Probably all the Consular corps would vote for an indefinite extension of time. Yokohama is a pleasant place. If five years is not long enough for Mr. Lowder and Mr. Brooke and their following, can they tell us how many years are necessary for us to cling to Consular jurisdiction. If they are not all at sea, they must have arrived at some definite conclusion as to the term of years the Japanese must continue to listen to their contumely and abuse. Really I think it is here that the shoe pinches. No Consular jurisdiction, and mud slinging will be at a discount; exemption from control begets undue contempt for wholesome restraint. A few of the residents of Yokohama have need for some controlling influence under some laws that will compel them to respect the feelings of the Japanese people.

Yours, &c., A FIVE-YEARS MAN.
Yokohama, September 24th, 1890.

LETTER FROM SAN FRANCISCO.

(FROM OUR SPECIAL CORRESPONDENT.)

San Francisco, Sept. 4th.

The Senate continues to devote its time to the Tariff Bill, sections of which pass daily by strictly party votes. The majority in the Senate does not affect to listen to argument, but blindly votes for the bill as reported by the Committee. It was shown that the provision increasing the duty on glazed granite ware was in the interest of a monopoly which had grown enormously rich under the duty as it stood; the Republicans did not answer the charge, but voted stolidly in favour of the increase. It was shown that this country exports nails even to Great Britain, and that the proposed increase in the duty could not be justified even on protectionist grounds; it was voted without debate. Senator Paddock, Republican, pleaded for a reduction in the duty on wire nails, which is a naked tax on the farmer; the majority made no reply, but voted the provision as it stood. When the clause increasing the duty on hand-saws was reached, it was shown that all the hand-saw factories in the country had been bought up by one firm, Henry Disson and Sons of Philadelphia, who had raised prices from 25 to 125 per cent. within three months; there was a laugh, but the clause passed without debate by the usual majority.

Meanwhile, it is currently believed that an understanding has been reached between Mr. Blaine and Mr. McKinley, by which the repeal of the sugar duties shall be made conditional upon the repeal by sugar-growing countries of duties now levied on American produce. This Mr. Blaine calls reciprocity. If Brazil, for instance, repeals her duty on American flour and provisions,

we are to admit Brazilian sugar, where there is any, free. It does not seem to occur to the Secretary or to his friends in Congress that if we are going to adopt free trade with countries which agree to follow our example, consistency would require us to begin with England, which admits all our products except whisky and tobacco free of duty.

The true secret of the new appetite for reciprocity is probably Mr. Blaine's willingness to lead his rivals into a hole. They will all commit *harakiri* in endeavouring to reconcile the principles of protection with the practical working of free trade in spots, and when the country turns on them, and reviles them, Mr. Blaine will be able to say that matters would have eventuated differently if he had been at the helm. He let the secret out the other day, when he said that though he was as ardent a protectionist as ever, he believed the time had come when the farming interest required the extension of our foreign markets. His idea is to ride the storm, other men—Mirabeau for one—tried that, but, if I remember correctly, they were generally rolled over by the waves.

Honest protectionists see every question of political economy through a medium which distorts. There is a bill before Congress to impose a heavy tax on the manufacture of "compound lard." This is an article which is made of cotton seed oil, and answers the purpose of lard for many uses. As it can be produced more cheaply than lard, its introduction into the market has interfered with the profits of the great pork-packers of Chicago and Cincinnati; it is they who have demanded that Congress shall protect genuine lard, in the interest of the honest farmer. Another bill, which is demanded by the friends of morality, proposes to make time bargains in products of the soil illegal. The farmers are told that the Republican party, in its jealous concern for their welfare, proposes to put a stop to the gambling that is going on among the bulls and bears in wheat and pork. Both commodities, it is said, would sell for more money if there was no speculation in them. When a man once gets inoculated with the views of protection, he can see nothing clearly.

An awkward accident threatens to complicate matters in Central America. A political exile from Guatemala, named General Barrundia, entered the Guatemalan port of San Jose, on board of an American vessel. She was boarded by the captain of the port, at the head of an armed guard, and the surrender of the exile was demanded. The American captain refused to allow him to be taken from the shelter of the American flag. The port captain returned to shore, and presently reappeared with an order from Minister Mizner, directing the captain to surrender Barrundia. Instead of tearing the order in pieces, and sending the Guatemalans back into their boat, the captain weakened, and pointed the way to the state-room where Barrundia was sitting reading. The door was broken open, and when the unfortunate exile appeared, he was shot dead by the guard. Some days have passed since the news of the outrage reached this country, but public opinion is only suspended in the hope that further intelligence may modify the story. Not many days will elapse before Mr. Blaine will have to take a position on one side or the other. A furious outburst of indignation is one of the possibilities of the future.

Madame Barrundia has addressed a pathetic appeal to the President, charging Mizner with having been the cause of her husband's death. Mr. Harrison replies that he has no official information on the subject, but that it will receive his most careful attention.

Bulletins which are periodically issued from the census bureau shed some light on the work which has been accomplished by Mr. Porter and his assistants. It appears that the population of the country will foot up about 64,000,000 as against something less than 50,000,000 in 1880. This growth ought to be satisfactory to every one, but in part it is not. We have bragged so lustily during the past ten years that it would have been hard to please us. The fifteen odd millions of new inhabitants appear to have been distributed between New York, Illinois, Dakota, California, and the Southern States, the largest gain being in New York, which, however, complains that the census has not done it justice. Three States show a decline in population. Iowa, Vermont, and Nevada. The decline in the two latter was expected. Nevada is shrinking in consequence of the reduced output of the mines. Vermont has been stagnant for a couple of generations: as one of her most gifted sons—Stephen A. Douglas, said—"It is a good State to be born in, provided you leave it as soon as possible afterward." In the East, the decline of Iowa is ascribed to the pernicious effects of prohibitionism, which has checked immigration, and driven out of the State

people who object to the supervision of their private lives by state officials; but the gradual reduction in the yield of the wheat lands bordering on the river has likewise held. The census returns indicate that the grain states of the central valleys of the continent, which were filled up with people between 1850 and 1880, and whose rapid growth was the phenomenon of those days, have reached the limit of their development for the present. There is not much profit in raising wheat—at the rate of 15 bushels to the acre—to sell on the farm at 50 cents a bushel; and corn, worth not over 25 cents a bushel on the farm, is even a less profitable crop.

The Secretary of the Treasury continues to buy silver at 1.19 or 1.20 per ounce. His purchases have not yet been so large as to deplete the stock which speculators had laid in at 10 cents or 15 cents an ounce below these figures to sell to the Government. When their supply is exhausted, as it soon must be, it will be safe to look for a further advance to 1.25 or over. At 1.29, silver reaches its old parity with gold, and the law does not permit the Secretary to pay more than that figure. But he announces that he will buy his 4,500,000 ounces per month regularly, if he has to pay 1.29 for the whole. Operators have thus a pretty safe thing in buying silver at present rates or anything like them. Silver plate has gone up; spoons, forks, and other silver goods are quoted at an advance of 15 per cent. over the prices of June last.

The *San Francisco* cruiser has done better than her contract required; she steamed 19.5 knots on a stretch, and the builders are entitled to a bonus of something like \$200,000 from Government. Considering that we have neither iron nor coal on this coast it seems queer that we should beat the eastern shipyards in steel ships.

The Knights of Labour have been beaten, horse, foot, and dragons, in their warfare with the New York Central. The locomotive engineers refused to strike, and the Central managers found no difficulty in replacing the other train hands and switchmen. There is plenty of unemployed labour in the East, and some of it is skilled. Our striking iron moulders in this city are supposed to be still on strike, but the work goes on as usual at the foundries, and but for the appeals to the public for aid for the strikers' families, it would not be known that the strike was still on.

Mr. George has returned from Australia, and is preaching his single tax doctrines in the East. His following is not large. There are many who believe that there is something in the single tax theory; but people generally lost faith in George when he fought his duel with Mr. Hewitt, and was so badly worsted.

LETTER FROM NEW YORK.

(FROM AN OCCASIONAL CORRESPONDENT.)

New York, August 27th.

Yokohama seems nearer New York than it once did. As we left the shores of Japan the Captain of the *China* remarked, "We'll put you into San Francisco next week." The promise was redeemed. To be in Europe and America the same week was a pleasant experience in 1887. To be in Asia one week and in America the next, is now another pleasant memory. We passed the *Oceanic* one evening at sunset, a few hundred yards distant and afterward learned that her passage was but six miles in distance and two hours in time longer than ours. The calculations of ocean steamers are now so nice that their time tables are almost as exactly kept as are those of railways. Fatalities are fewer.

Atlantic steamers are busy breaking the records. They also break their machinery and occasionally collide with an iceberg, or burn up. Of course there is no racing. That would not do. Just now we are waiting, however, for the arrival at Fastnet Light of two of the record smashers referred to. One was five miles ahead off Sandy Hook. Particular attention had been given to the quality of coal, and to the perfection of the firemen's service below. Each meant to do well. While there is no race, the shortest possible course is taken and there is to be no untutilized motive power. It is only a trial of speed, a question of discipline of stokers, of steam-producing qualities of coal and of certain lines and curves in nautical architecture. Lookers on persist in calling it a race.

There seems to be no lack of money about here, although Wall Street speculators last week got up a small panic that recalled the Black Fridays of long ago. Millions have been put into blocks of residences and public buildings near Prospect Park during my absence of eleven months. One social club only eight months old has put up an elegant edifice which, with its adorn-

Original from

ments, will represent a quarter of a million dollars. It represents a purer club life than ordinary. Genuine Christian men are among its managers. Their wives and daughters will be at home amid the luxurious elegancies of the place. A half dozen millions are promised to tunnel the Narrows and make Brooklyn waterfront the great distributing centre for the commerce of the Atlantic. Then comes another announcement, the scheme of a capitalist who has the "rocks" to put it into execution, a solid man, if he be rightly named, Mr. Rockefeller. Twenty millions for a university in this city. Our friends who carry their freight by water, the Baptists, are the ones who are happy in this magnificent project, a parallel to that big Californian university with a similar sum for a start.

Notwithstanding abounding wealth there is great discontent. Shorter days and higher pay are demanded by those whose wants increase faster than their needs. It would do people here a deal of good to look into a Japanese or Chinese home of the middle class and see how few our actual needs are. The introduction of Western life into the East, with all its advantages is introducing not a few mischievous and disturbing elements. The tyranny of those oath bound bands, whose strikes are getting to be so frequent is felt more and more by the members. In spirit and methods they are wholly alien to our national life. They must go to the wall. God hasten the time! The unwillingness of the United Brotherhood of Locomotive Engineers to hold up the recent revolt in this neighbourhood, practically killed the scheme of the Knights of Labour and led them to hint at the abolition of the order if future co-operation was wanting. There are wrongs to be righted, but anarchy is not the remedy. Such lawless action is an assault on the security of society and of national life. The press properly calls on the United States Congress to take the matter in hand and make this obstruction of the United States mails and railway traffic henceforth impossible. Boards of arbitration shall be formed. Every citizen of this country has the right of choosing his own employer or employé and making terms mutually satisfactory. Any threat or ill-treatment in the exercise of his freedom is a blow against the personal liberty of the citizen.

One of the new industries of the day is the Press Cutter. He is the Knight of the Scissors. Journals from all over the land and from across the sea are read by his subordinates. If any name or theme is conspicuous he scents his game. Statesmen, bankers, capitalists, schemers, authors, artists, actors, everybody who has some project about and has stirred up interest friendly or hostile, attract the Press Cutter. Parties are informed by circular, enclosing a sample clipping, that for five dollars in advance 100 clippings will be gathered and sent, or for forty dollars, a thousand as fast as found. Three different bureaux of cutters courteously call my attention to the wide spread comments on the efforts in behalf of the indigent insane of Japan and China. The reading of substantially the same inaccurately reported interviews is not entertaining, even if freely offered. Particularly annoying is it to read pure fabrications or simply forgeries as where one daily of this city writes "I met yesterday on Fulton St. and he said"—an audacious falsehood. The Press Cutter, however, has come to stay. Fiction is swallowed where truth has no showing.

We in the States are promised fifty lectures by Stanley, but unless his health improves even the stimulus of a thousand dollars an evening will be inadequate to keep him up. Dr. Talmage leads all lecturers in industry and pecuniary success. His new church edifice is soon to be occupied. Its lofty tower, the stone from Calvary, the rock from Mar's Hill, etc., will be in due time exhibited. A lady who greatly admires the brilliant preacher was visiting Brooklyn some months ago. At the end of her visit she remarked, "There is one more place to go to. I can't leave town without seeing Talmage's Ruins!" So they took her down to Schermerhorn Street to the remains of the burned Tabernacle, to which she had given such a gruesome and grotesque epithet. Dr. Talmage is well on in the fifties, but not by any means "in ruins." No man walks more erect or does more work in addressing audiences. He tells what a ludicrous diagnosis a doctor out West made, when, feeling ill, Dr. Talmage asked advice of him. The parson was unknown to the leech, who, solemnly said; "You need, sir, to exercise your lungs more! That's what's the trouble." A doctor in this city gave a young man a similar snap judgment without waiting for a history of the case. "You need to walk more in order to regain your health." "Dear me I'm a letter carrier, sir, and have to walk over twenty miles a day."

Latest.—The race no, the trial of speed, is decided in favour of the City of New York over the

Tentonic, by fifteen minutes! Also, it is now whispered that one cipher must be taken off that twenty millions promised for a university, making the sum two hundred thousand; further more that Mr. Rockefeller is not sure, but that the whole thing may be figurative if not fabulous. Such is life. The process of disenchantment is constant. Illusions appear and disappear. Meanwhile journalism, like a mirror, catches the phantasmagoric movements of society. He is wise who, out of the illusory and uncertain even gets a hint of, if not an impulse towards, what is sure and abiding. Before my next reaches you the annual Hegeia will have had its return and materials for a newsy letter will abound.

BRITISH CONSULAR TRADE REPORT FOR HAKODATE FOR 1889.

Consul PLAYFAIR to Mr. FRASER.

Hakodate, April 28th, 1890.

SIR,—I have the honour to forward to you my Report on the Trade and Shipping of the Port of Hakodate for the year 1889, accompanied by the usual tables, as follows:—

- I.—Return of articles of import.
 - II.—Return of articles of export.
 - III.—Table showing the total value of all articles exported from and imported to Hakodate to and from foreign countries during the years 1888-89.
 - IV.—Return of all shipping at the port of Hakodate in 1889.
 - V.—Return of foreign residents and firms.
- Imports during 1889 show an increase over those of 1888 to the extent of nearly 17,516t. This was mainly due to the pipes and other material necessary for the construction of the waterworks here, which material amounted to over 12,296t. In the above calculations I have not included the value of Welsh coal transhipped in the harbour to British war-vessels in 1888, as it did not appear in the customs returns. The amount of coal transhipped in harbour to British men-of-war during 1889 was about 1,200 tons of Australian coal, valued at 2,506t. 11s. 9d., as against 2,127 tons of Welsh coal, valued at 8,625t. 4s. 9d., in 1888. The other imports were of the usual miscellaneous nature. Exports amount in value to 121,694t. 6s. 6d., showing an increase over the previous year of 39,050t. 6s. 8d.

This increase is mainly due to the larger export of sulphur, and the better prices obtained for seaweed.

The total of sulphur during 1889 was 14,421 tons, valued at 34,627t. 9s. 10d., as against 3,609 tons, valued at 8,681t. 11s. 9d., in 1888, an increase of 25,832t. 18s. 1d. Prices show no material changes from those of previous years. Freights in 1888 were not sufficiently high to induce ships to come here to load sulphur, for while in 1888 only three ships carried sulphur from here, during last year, better rates being obtainable, nine vessels took away cargoes, four to New York and five to San Francisco.

I learn that during 1889 the total output at Kushiro was 9,678 tons, of which 9,606 tons were sold. The values given are: for best quality at Hakodate, 15 dol. per ton; inferior, 12 dol. 30 c. per ton, or 21. 6s. 8d. and 11. 5s. 8d. respectively, and the rate of freight from Kushiro to Hakodate was about 2 dol. (6s. 3d.) per ton.

The export of seaweed shows a decrease in the quantity exported, but a large increase in value, the figures being in 1888 15,027½ tons, valued at 53,381t. 6s., and in 1889 14,664 tons, valued at 66,564t., an increase in value of 13,182t. 14s. This is explained by the fact that the take last year was below the average, and the supply being consequently limited, better prices were obtainable both in Shanghai and on the main island of Japan. Shipments realised good profits, prices in Shanghai averaging, all round, about 9s. per picul of 133½ lbs. Six-sevenths of the total export was shipped direct by Japanese, the remainder by Chinese merchants, whereas, till recently, the trade in this article was almost entirely in the hands of the Chinese.

The trade in ico and cuttle-fish shows a slight increase over 1888, and transactions allowed of moderate profits. The figures for 1889 are 7,306t. 16s. 2d. and 7,696t. 4s. respectively.

The total output of coal from the Poronai Mines during 1889 was 87,689 tons, but sales during the same period amounted to 87,775 tons, which fetched 15,252t. 8s. 6d. at the pit mouth; 30,200 tons were taken direct from Otaru to Yokohama in foreign steamers, the value free on board at Otaru being 12,532t. 4s. 10d., and about 30,000 tons were brought to this port. The price per ton in Hakodate averaged about 17s. 4d. during the year.

Freights during 1889 show a marked improve-

ment over those of 1888, the rates being as follows:—To Shanghai, by Japanese mail steamers via Yokohama, for long seaweed, 30 c. per picul; by direct steamers 25 c. To Yokohama, by Japanese mail steamers, fish manure, 30 c. per picul; long seaweed, 18 c.; sulphur, 14 c.; in bags, 18 c.; salmon, in bulk, 30 c.; dried fish, 24 c., and peas and beans, 14 c. per picul. The company also make a certain allowance in weight on most of the above articles.

Freights for sulphur to New York averaged about 6 dol. 50 c., United States gold, per ton, ranging between 8 dol. and 5 dol. 50 c., United States gold, per ton.

To San Francisco the rates were from 4 dol. to 5 dol. gold, thus showing a considerable advance over those of previous years.

Foreign shipping amounted during the past year—including those vessels which went to Otaru direct—to 32 ships, with an aggregate tonnage of 32,162 tons, against 17 vessels, of 12,876 tons in 1888, an increase of 15 vessels and 19,286 tons. One British steamer took machinery for the hemp factory direct to Otaru, and another made 13 trips during the year between Yokohama and Otaru, with Poronai coal, making 14 vessels, of 16,121 tons, visiting Otaru during the year. Of the total of 32 vessels, in 1889, 21 were British, as against 7 in 1888.

Japanese shipping, steamers and foreign rigged vessels shows a considerable decrease, as compared with the previous year, both in sailing vessels and steamers: the figures being 1,576 vessels of 506,585 tons cleared in 1889, against 2,235 vessels of 636,857 tons cleared in 1888.

There was an increase during last year of 19,853 tons in the junk trade at this port as compared with 1888.

Imports to Hakodate from other parts of the Hokkaido during last year amounted to 267,573t., and imports from the mainland to 803,444t., making a total for the native import trade of 1,071,017t., as against 1,016,369t. for the year previous.

These imports include such staples as rice, saké, soy, kerosene oil, and silk and cotton piece-goods. As pointed out in previous reports, the gradual decrease in direct imports is accounted for by the fact that this town is supplied more and more with foreign goods which have already paid duty at other Japanese ports.

The exports from Hakodate to other parts of the Hokkaido during 1889 were 198,552t., and to the mainland 348,218t., making a total of 546,770t.—the amount in 1888 being 477,753t.

The chief exports from Hakodate for native consumption are marine products, such as salmon, seaweeds, fish, manure, herrings, &c. The total native trade, therefore, was 1,617,787t., as against 1,497,122t. in 1888.

The chief improvement effected lately was the completion of the waterworks. These were commenced in 1887, and concluded in September of last year.

The water supply is obtained from the River Aka, about five miles distant, and the filtering beds are some 220 feet above the sea-level. Water is brought into Hakodate in 12½-inch pipes to a reservoir on the hill side, whence it is distributed through the town. There are in the town 235 water posts, whence the inhabitants obtain their supply, and also 242 fire hydrants. The pipes withstood the frost perfectly, although, on occasions, the thermometer showed 16 degrees of frost. The total cost of the waterworks was 240,648 dol., equal, at 3s. 12d., to 37,475t. 18s. 3d.

The hydrants have already proved of great service in extinguishing fires.

The industrial school was burnt down and rebuilt during last year. The marine school was also destroyed by fire late in the winter, and has not yet been rebuilt.

A large tract of land at the head of the harbour is being reclaimed by private enterprise, presumably for building purposes.

During last year the traffic on the Poronai-Otari Railway was as follows:—

Passengers carried	No.	184,222	—
Goods and baggage	Tons	96,014	—
Coal carried	—	115,197	—
Receipts from passengers	—	27,338	19 6
Receipts from goods, &c.	—	10,947	9 4
Receipts from coal	—	15,934	13 0

Gross receipts..... — 542,200 12 10

Besides the above there were 3,280 immigrants carried over the line without charge, while their baggage and certain articles for the use of the Government, amounting together to 2,365 tons, also went free.

The sugar factory at Mombetsu was transferred by Government to a private company in 1887. The crop of beets last year, as compared with that of 1888, was less in quantity, but the percentage of sugar obtained was much larger. The area under cultivation is some 1,160 acres, and the

yield last year was 6,003 tons of beets, which produced 447 tons of sugar. Of this only some 55 tons were sold, averaging 19l. 9s. 2d. per ton, the total sales amounting to 1,070l. 6s. 4d. The chief markets are Tokyo, Hakodate, Kyoto, and Sendai. The stock in hand at the end of the year amounted to over 392 tons, valued at 6,664l.

The sugar factory at Sapporo is not yet in full working order.

The hemp factory at the same place has been erected. The buildings are mostly of brick, and the machinery—imported from France and Belgium—has been put in position, but the business last year was very trifling. There is one foreign employé at this factory.

The population of Hakodate at the end of 1889 was 57,808, showing an increase of 4,772 over the previous year.

At the end of last year there were 69 foreign residents, of whom 33 were Chinese. There were, in addition, living at Sapporo two American, two British subjects, and nine Germans; at Kushiro, one British subject; and at Nemuro, two Americans.

During last year 902,402 letters and newspapers were collected, and 801,945 distributed by the Hakodate post-office, while 2,238,766 went through to other parts of the Hokkaido. During the same period 114,146 telegrams, costing 4,088l. 3s. 8d., were sent from and 114,385 received at the local office.

The aggregate number of days spent here in 1889 by 19 men-of-war, of which 12 were British, four Russian, two French, and one German, was 431, and the number of men on board 4,301.

A factory for cutting match-wood was started here in October last. The supply of wood in the Hokkaido suitable for making matches is abundant. It is said to be a kind of willow.

Since the opening the business done was 670,500 bundles, sold for 731l. The wood is all sent to the Kobe and Osaka match manufacturers, but the freights from here last year were rather high being about 6s. 7d. per 1,000 bundles; consequently, profits were not large. The concern is to be turned into a company, and its future seems very promising.

The Tanko Tetsudo, or Hokkaido Mining and Railway Company, has obtained Government permission to commence operations. The section between Muroran and Sorachi (130 miles) will be begun at once. The line is to start from Muroran and connect with the present Poronai-Otaru line, which latter will then become the property of the company. The probable effect on this part of the above railway will be to attract trade to more distant parts of Hokkaido, and the amount of shipping and commerce here will probably greatly diminish.

The resolve of the Government to found a northern capital at Chibetsu, in the Ishikari Valley, will also, most likely, prove prejudicial to the interests of the port of Hakodate, but the effects will not be felt for some years to come.

The survivors of the terrible floods in Nara and neighbouring prefectures, to the number of 2,446, arrived in Hokkaido during November. They are to be provided by the Government during the first two years with provisions, hospitals, and schools, after which time it is expected they will be self-supporting.

The enlistment of the able-bodied of these immigrants in the Tonden-hei, or farmer-soldier corps, should add greatly to the value of that body of soldiers.

They have been settled at a village in Ishikari district, to which has been given the name of the New Totsukawa, from the place whence they came.

The addition last year to the farmer-soldier population was 522 houses, 1,350 men, and 1,068 women; and the total of immigrants arriving during last year from other parts of Japan was 13,090 persons.

Import values in this report have been calculated at 3s. 1½d. to the dollar.

Export values and the values of local produce, &c., have been calculated at 3s. 1½d. to the dollar.

THE LOSS OF THE "ERTOUROUL."

Early this morning (19th) the startling intelligence reached Kobe that the Turkish man-of-war *Ertougroul*, which left Yokohama on Sunday for this port, had been blown to pieces, and that only about a tenth of its large crew had survived. This information was brought to Kobe by two of the men who were saved—or rather who saved themselves. One is the band-master, the other a lieutenant, and they arrived by the *Boji Maru*. Of course they are utterly destitute, but knowing the proprietor of the International Hotel, in Division Street, they went there and were taken in. A representative called upon them this morning and obtained the following particulars of the catastrophe. As the men can only muster about half a dozen words of English between them, conversation would have been somewhat difficult but for the kindness of the proprietor and another gentleman who acted as interpreters.

The *Ertougroul* left Yokohama on Sunday, not on Monday as the Yokohama papers reported, at about eleven o'clock in the morning. All went well until one o'clock on Monday afternoon, when a strong wind commenced to blow, increasing in violence towards night. There was a heavy sea running at ten o'clock; they were off Oshima and the vessel was going at full steam. At that time a terrific noise was heard and all that followed was confusion. A terrible scene ensued. Men and officers were mostly below in their berths. Those who were not killed on the spot rushed upon what remained of the deck to find the vessel foundering. The band-master says that nothing was left of the vessel but little pieces, but that is probably a picturesque exaggeration. The Captain, Ali Bey, appeared on the bridge for a moment, with a lamp in his hand. He was heard to cry out several times "Save yourselves," then he disappeared and was seen no more. The survivors say that he made no effort to save himself. The navigation officer, Nomi Bry, perished in the same way. The Chief Engineer was almost the first to die. He perhaps suspected that something was wrong, for immediately before the explosion he went from his cabin to the engine-room and when the fatal moment arrived

he was literally blown to atoms. A couple of minutes after all that remained of the *Ertougroul* as a vessel had sunk, and the sea was full of men fighting for life, and floating debris. Many, it is said, went mad; they threw up their hands and sank. Osman Pasha, the Admiral, was swimming towards the shore when he was struck on the head by a spar and sank immediately. Those who were saved were the strongest swimmers, for the shore was quite a mile and a half distant and there was a heavy sea running. Only 6 officers and 57 of the crew reached the land and many of those are so fearfully injured that they are not expected to recover. It took the lieutenant and his comrade two hours to swim ashore, which they did without receiving any injury. Then they assisted some of those who were exhausted or injured to land. Out of the six officers who survive one has a broken leg and another a broken arm, while many of the men are badly hurt. We have not been able to ascertain exactly what steps were taken for the comfort of the men, but we understand that they were kindly treated by the Japanese in the neighbourhood, as indeed shipwrecked sailors invariably are. Yesterday the *Boji Maru* passed and was signalled from the shore by the men. Her captain readily agreed to take two of the survivors on to Kobe and kindly provided the lieutenant and the band-master, who were the best physically fitted to make the journey, with the clothes of which they stood so badly in need.

We do not know what has been done in order to bring the remainder of the survivors to Kobe, but as there is no Turkish Minister in Japan and the *Ertougroul* came to this country specially for the purpose of presenting the Emperor with an Order, we presume the Japanese authorities will make it their business to care for the men.

The *Ertougroul*, we may mention, is a very old vessel, formerly used as a training ship. The engines in her were of English make and bore the date 1855. She was, however, considerably older than this, having previously been a sailing vessel. She was thoroughly overhauled before she started on the voyage to Japan, and it was originally intended that most of the journey should be made under sail. In consequence, however, of her getting ashore in the Suez Canal, necessitating her going into dock for repairs, which occupied about three months, the fixed plans were more or less upset. Osman Pasha, who has met his death in this disaster, was the bearer of the decoration to the Emperor. He was an aide de camp to the Sultan, and a grandson of Osman Pasha, the renowned defender of Plevna during the Russo-Turkish War. He was a young and most distinguished naval officer, having received an official intimation of his promotion to the rank of Admiral during his stay in Singapore.

Several reasons have been suggested for the explosion, but the only feasible one is that more steam pressure was being used than the boilers could stand. It is said that the surveyors in Yokohama warned the engineers against using Japanese coal, but we do not know what truth there is in it, or how Japanese coal could possibly cause an explosion. One thing is certain—that the vessel was very much nearer the shore—which is a most fatal one—than she ought to have been, and that if the explosion had not occurred there would have been a danger of her being wrecked.

We hear, on further enquiry, that a secretary of the Oshima Local Government Office accompanied the men to Kobe, and that information of the disaster has been sent from the Hyogo Kencho to the various Departments of State.—*Kobe Herald*.

H.I.G.M.'s gunboat *Wolf* arrived here, says the *Hyogo News* of the 22nd inst., yesterday morning at six o'clock from Oshima, bringing 65 survivors from the wreck of the *Ertougroul*. Her visit confirms the worst news. The estimate of the two survivors first brought here of the number drowned is only too correct. It will be remembered, that, when the bad news was officially communicated by the German Acting Consul to the Captain of the *Wolf* on Friday morning that the *Ertougroul* had foundered, it was at once decided that the commander of the *Wolf* should proceed to render any assistance he could, and on Governor Hayashi calling on him on a previously arranged official visit he informed the Governor of that decision, and the Governor at once expressed his sense of the German officials' kindness. It of course rested solely with the German authorities here whether Captain Credner went or not. Having taken on board coal, provisions, a Turkish interpreter, and a Japanese official in case of any difficulty arising in the matter of landing outside Treaty limits, the *Wolf* started out at ten in the afternoon in order to reach Oshima by daylight next day. The services of a pilot were also requisitioned, as it was just possible survivors might

have been washed up at other places than Oshima, and a search inshore in strange waters without a guide would have been hazardous. The *Wolf* reached Oshima next morning about six o'clock, and the doctor and an officer were at once sent on shore. The survivors numbered sixty-seven, of whom only nine, we hear, were severely wounded, although all were suffering from slight contusions. There were already three Japanese doctors on the spot, but they were insufficiently provided with instruments. The presence of the *Wolf* doctor was a godsend, therefore, and he promptly dressed the worst wounds. The men were being housed in a temple and tea houses, and said they had been very kindly treated by the Japanese, who had furnished them with food, clothes, and lodging. After the men had been looked to they were sent on board, and by eleven a.m. 65 had been embarked, two of the most physically fit being left to bury the bodies as they washed ashore. With the two survivors in Kobe, the two left at Oshima, and the 65 on board the *Wolf*, the total number saved is 69. Some 65 bodies had already been buried by the Japanese, each body being placed in a wooden coffin, and there were about 25 more awaiting burial. The bodies were washing ashore in great numbers, and generally in one spot near the lighthouse. Many of the corpses are headless. Osman Pasha's uniform had been thrown up by the sea, but his body had not yet been seen, although an anxious look-out had been kept for it. Decomposition has already disfigured the countenances of the dead, but his will be known by a special ring he wore. It was the wish of Captain Credner, we hear, to accord naval honours to the dead, and he steamed round to that portion of the island where they lay, but it was too rough for him to land a firing party. The wish does the *Wolf's* commander infinite credit. The *Ertongroul* was crowding on all steam to clear Oshima light on the evening of Tuesday when she suddenly struck, at about half-past nine, and the boilers at once exploded, blowing the vessel literally to pieces: the completeness of the destruction is borne out by the fact that nothing that can be called wreckage has come ashore. Her magazine probably caught fire at the same time, and thus added to the utter destruction of the vessel and the awful loss of life. The *Wolf* left Oshima for Kobe at 2 o'clock on Saturday afternoon and reached here yesterday morning at 6 o'clock. The whole of the Turks were removed by the Japanese, with the consent of the German Acting Consul, to the disinfecting station at Wada.

The account which we gave on Friday last of the disaster which sent the *Ertongroul* and most of her crew to the bottom is confirmed in all its important particulars by the fuller information which the *Wolf* has brought from Oshima. We are glad to find, however, that the number of lives lost is not quite so large as was first reported. Owing to the outbreak of cholera, and to deaths from other causes, there were only 57 persons on board when the *Ertongroul* left Yokohama. Sixty-nine of these have been saved, so that the total loss of life amounts to 502. The narrative told by the two men who first reached Kobe differs somewhat from that of other survivors. The bursting of the boiler was not, it would seem, the primary cause of the destruction of the vessel. As we suspected, the *Ertongroul* was too near to Oshima, and was crowding on all steam to clear it. Her engines apparently were not of sufficient power to cope with the gale and the strong current which sets in there, and she struck on one of the hidden rocks with which the shore abounds. The one engineer who has escaped, and whom we saw yesterday, says that she struck three separate times before the boiler exploded. The chief engineer was in the engine-room at the time and was blown to atoms. The Captain and the navigating officer threw themselves into the sea and perished. All those on board who were not killed or injured by the explosion clung to the three masts, which were still above water. Two of them appear to have succumbed to the weight, for first one and then the other disappeared into the waves and with them the men who had clung to them. The third mast proved the salvation of all those who survive that terrible night. Osman Pasha was on it, and was pulled out of the water three times by his secretary, who was eventually saved. The Pasha, however, was either injured or, like the captain and chief officer, did not wish to live, for on each occasion he slipped from the mast and finally was lost.

By the kindness of the German Acting Consul the *Wolf* started at four o'clock on Friday for the scene of the disaster, taking with her a Turkish interpreter, a Japanese official, and a pilot. She reached Oshima at six o'clock next morning and at once made preparations for succouring the survivors. Their injuries, though

in several cases arms and legs were broken, were not so serious as was at first suspected, and they had been carefully tended by three Japanese doctors. The poor fellows were treated with the greatest kindness by the natives, who had placed a temple and tea houses at their disposal, and furnished them with food and clothing. By eleven o'clock 65 of the 67 who were at Oshima had been got on board, and the *Wolf* left at 2 p.m. for Kobe, which she reached yesterday morning at 6 o'clock. With the exception of the engineer and another man who were not seriously injured and who joined the two who first reached Kobe, at the International Hotel, the men were conveyed in the Governor's steam launch to the hospital at Wada Point. Two men were left at Oshima to superintend the burial of the bodies as they were washed ashore. The Japanese assisted in this sad office with commendable humanity and provided coffins for the purpose. Sixty-five bodies had already been interred when the *Wolf* reached the spot and others were being constantly washed ashore. Osman Pasha's coat has been recovered and is in the possession of his secretary. It hardly looks as if it had been tossed about by the sea for the lace on it is quite bright, but a large piece of cloth has been torn out of one of the arms. The Admiral's remains have not yet been recovered.—*Kobe Herald*.

THE LOSS OF THE "MUSASHI" AND "YORINOBU."

The Japanese quarter-master, the sole survivor of the crew of 66 officers and men who manned the *Musashi-maru*, arrived here, says the *Hyogo News* of the 23rd inst., yesterday morning overland from Tanabe, and left for Tokyo by the *Omi-maru* at noon. His tale is very short. He says they met with fearful weather after leaving the Bungo Nada, during which a large ventilator forward of the bridge was carried away, letting tons of water get below. They did everything in their power to cover the hole up, but the seas breaking over the vessel rendered it impossible for the crew to get near it. He was on the bridge with Captain Frahm, and so fierce was the gale and so high were the seas which swept over the vessel, and sometimes over the bridge, that they were compelled to lie down on their stomachs to avoid being carried overboard. The ship was by this time full of water from end to end. It appeared impossible they could last it out, and the end came when a huge sea took them broadside on and the *Musashi* turned over at right angles and foundered instantly. A couple of the boats were just then carried away, and he, with Mr. Miller, the Chief Engineer, and three of the sailors, reached one and got into her, and he saw Captain Frahm holding on to the other. The latter was, however, washed off and was not seen again. Those in the other boat were also washed out, but the Chief Engineer, who had a life belt on rose to the surface time and again, but he could never reach the boat and was at last drowned. The survivor saved himself by getting hold of a couple of oars and the boat's mast and lashing himself to them. This precaution was probably the sole means of saving him, as he states that the next thing he remembers was finding himself at the bottom of a fishing junk whose crew had picked him up. The *Musashi* sank fifteen miles from land and off Tosa.

The *Sagami-maru*, which left on Saturday afternoon at four o'clock for Yokohama, had received orders to postpone her sailing from noon, her advertised time of departure, until that hour, as several officials from Tokyo who were to arrive in the afternoon by train purposed proceeding in her to Oshima to view the scene of the *Ertongroul* disaster. At four o'clock, however, word was received that the gentlemen in question had changed their minds, and did not intend to avail themselves of the *Sagami's* services. Captain Carrow therefore at once left for Yokohama direct. Among the passengers was one of the survivors from the wreck of the *Yorinobu Maru*, the only cadet saved of the thirteen who were sailing as apprentices. He states that they left Hyogo for Bakan on Sunday; that on the afternoon of Tuesday the weather became threatening and the glass commenced to fall. The Captain thereupon tried to beat back to Hyogo, but was unable to do so, and then tried to beat out from the land, whither he was fast drifting. They tacked and tacked, but to no purpose, and matters reached a climax when they lost their rudder. The Captain then climbed to the mizzen-topmast head, to which he lashed himself and cried out to the others to go below. Matters remained thus until they were close to the rocks, when the Captain called all hands on deck and bade them take to the weather rigging. Just at this time the cabin caught fire by the

upsetting of a lamp, but the seas breaking over the vessel soon extinguished the flames. At one o'clock on Wednesday morning the vessel struck and the Captain was the first man to be drowned, the mast, which went overboard, burying him in the water. The survivor, from whom we have these details, reached shore with the assistance of a hen-coop after being an hour in the water. He states that, having taken off the whole of his clothing he was bitterly cold, and only kept himself warm by folding a couple of the rescued fowls to his breast. By the warmth he received from them he was able to sleep, and he made his bed on the sand.

In addition to the above disasters the square-rigged schooner *Nunobiki Maru*, belonging to Mr. Kawasaki, and bound from Shinagawa to Hyogo, was lost off the Island of Ishima on the same night. She left Shinagawa (Tokyo) on the 14th inst., and on the afternoon of Tuesday she ran into bad weather. When off Cape Hino the crew cut away the masts to ease the vessel, but she struck on Ishima during the night and was ground to pieces on the rocks. Out of a crew of 13 hands, 10 were saved. The Captain, second mate, and a boy were drowned. The body of the Captain was washed ashore in the afternoon at 4 o'clock.

REPORTS.

The German steamer *Daphne*, Captain Voss, reports:—Left Hongkong the 14th September at 12.3 p.m.; had at the beginning E.N.E. winds which freshened the farther we got along; from Breaker Point up to Chapel Island fresh N.E. winds, stiffening all the time; from latitude 28° N.; long. 127° E. it blew a gale up to 32° N. and 123° E.; had a fearfully high sea from W. and S.W. and it is most likely that we passed a typhoon moving to the N.N.E. with a probable velocity of 5 or 6 miles an hour. The direction of the wind the 17th, 18th, and 19th was as follows:—28° N. 127° E. N.; 29° N. 120° E., N.N.E.; 30° N. 130° E., E.N.E.; 31° N. 132° E., E.; 32° N. 133° E., E.S.E. Arrived at Yokohama the 20th September at 10 p.m.

The Japanese steamer *Satsuma Maru*, Captain Brown, reports:—Left Hakodate the 20th Septem-

ber at 8 a.m. Arrived at Oginohama the 21st at 7 a.m. and left at 3.30 p.m. Arrived at Yokohama the 22nd September at 4.15 p.m.; from Hakodate to Oginohama had variable winds with heavy rain squalls and high S.E. sea; thence to port moderate winds with passing showers and decreasing sea.

The British steamer *Belgie*, Captain Walker, reports:—Left Hongkong the 16th September at 4.34 p.m.; had strong N.E. winds and head sea from Hongkong to 200 miles east of Tonnabont; thence to Yokosima strong northerly gale and high sea and strong easterly winds with heavy squalls, wind and rain. Arrived at Yokohama the 22nd September at 5.50 p.m. Time, 5 days, 23 hours, 53 minutes.

The British steamer *Oceanic*, Captain Smith, reports:—Left San Francisco the 4th September at 2.46 p.m.; had moderate to light winds and fine pleasant weather. Arrived at Honolulu the 11th at 0.18 p.m. and left the 12th at 1.33 a.m.; had moderate to light N.E. and S.E. winds with smooth sea and pleasant weather all the way. Arrived at Yokohama the 23rd September at 7.15 p.m. Time: San Francisco to Honolulu, 6 days, 23 hours, 54 minutes; Honolulu to Yokohama, 10 days, 21 hours, 52 minutes; total 17 days, 21 hours, 46 minutes; distance, 5,477 miles; detention at Honolulu, 13 hours 15 minutes. This is the quickest passage from Honolulu to Yokohama ever made.

The Japanese steamer *Omi Maru*, Captain Christensen, reports:—Left Kobe the 22nd September at 12.20 p.m.; had light variable winds with heavy rain to Ichijye; thence fresh S.E. to E., with clear weather and light head sea to Rock Island; thence to port strong head wind with passing cloudy weather; passed American man-of-war off Rock Island going same way. Arrived at Yokohama the 23rd September at 6.30 p.m.

The Japanese steamer *Yamashiro Maru*, Captain Young, reports:—Left Hakodate the 22nd September at 8 a.m.; had moderate south-easterly breeze, dull cloudy weather, and occasional rain to midnight, when it hauled to N.N.E.; same weather from noon the 23rd till passed Inuboye at 7 p.m.; then had big S.E. swell; towards midnight wind freshened from north to a strong breeze accompanied by continuous rain and thick weather. Arrived at Yokohama the 24th September at 7.30 a.m.

The Japanese steamer *Nagato Maru*, Captain Ekstrand, reports:—Left Hakodate the 24th September at 8 a.m.; had fresh easterly winds with head sea and overcast sky and rain showers which lasted to Kinkasan, which was passed on 25th at 6.30 a.m. when wind hauled to the westward with heavy rain squalls weather moderating and clearing. Arrived at Oginohama at 7.50 a.m., weather squally, and left at 11.45 a.m.; had fresh westerly winds and cloudy heavy S.S.E. swell; at 8 p.m. weather clearing and fine with smooth sea. Arrived at Yokohama the 26th September at 0.45 p.m.

The Japanese steamer *Wakanoura Maru*, Captain Hussey, reports:—Left Kobe for Yokohama the 24th September at noon; 00.35 p.m. put back and anchored off Hyogo; left the 25th at 5 a.m.; had fresh wind from the S.W. and dull cloudy weather; passed O-hima at 1.28 p.m., with light wind from N.E. veering round N.N.W. and blowing a strong gale with high sea; at 11 p.m. wind shifting to the eastward and increasing to a strong breeze which continued to port; passed Rock Island at 4 a.m. Arrived at Yokohama the 26th September at 10.45 a.m.

The British steamer *Parthia*, Captain Pantou, reports:—Left Vancouver B.C., the 11th September at 6.15 a.m.; Victoria at 1.5 p.m.; had fresh to strong westerly winds and head sea to 20th. On 18th passed steamer *Sussex* bound east; 20th crossed meridian 49° N.; 20th to 23rd moderate to fresh winds and sea with hazy weather; 24th passed through fierce typhoon ship heave to for 8 hours; lowest reading barometer 28.80; shipped several heavy seas smashing one boat completely and doing various damage, all live stock destroyed and fowl crops swept away; 25th moderate S.W. gale and heavy sea, ship half speed; 26th moderate wind and fine weather; 12.30 p.m. made the land. Arrived at Yokohama at 7.40 p.m.

LATEST COMMERCIAL.

IMPORTS.

The Yarn Market has remained very quiet but firm during the week at unchanged prices for English Spinnings, the downward turn in Exchange favouring the position. Bombays are unchanged. Shintings have also been quiet. Fancies have not had much attention generally, but a few sales of Velvets at low rates are reported. Sales for the week amount to 325 bales English Yarns, 150 bales Bombays, 500 pieces Italians, and 3,000 pieces Velvets.

Tin Plates, per box	4.60 to 4.80
Pig Iron, No. 3	1.20 to 1.25

KEROSENE.

Business which was done a week or two ago at quotations has now transpired, and dealers are apparently well supplied for the moment. No fresh arrivals to note; deliveries are fair, and stock 750,000 cases.

QUOTATIONS.

Chester	\$1.72 1/2 to 1.75
Camel	1.70 to 1.72
Devoe	1.68 to 1.70
Russian	1.63 to 1.66

SUGAR.

A very small business has been done in White Refined, but nothing in other sorts. Prices have all declined, and the market is weak at quotations. Sales amount only to 930 piculs as follows:—188 piculs at \$8.10 per picul, 150 piculs at \$7.90 per picul, and 592 piculs at \$7.20 per picul.

White Refined	\$5.60 to 8.10
Manila	3.70 to 4.40
Taiwanfoo	— to —
Pentama	2.80 to 3.25
Namida	2.90 to 3.00
Cake	— to 4.00
Brown Takao	4.27 to 4.30

EXPORTS.

RAW SILK.

Our last issue was of the 19th instant, since which date settlements in this market are 259 piculs divided thus:—*Filatures* 31; *Re-reels* 162; *Kakeda* 66. Japanese shipments have been 100 piculs, so that the total business for the week is about 360 piculs.

Once again the chief buying has been for Europe, although some little business has been put through for the States, all the Japanese shipments mentioned above being for that destination.

Prices generally have been well maintained and the business done for Europe has been at full rates. Two days ago a sudden drop in Exchange has made holders much more firm, and all quotations must be raised more or less.

News from markets of consumption are not very good, although more business would have been

done for Europe had sellers shown themselves more accommodating. Trade in the States does not seem to improve; perhaps the reduction in the price of silver will assist matters there.

There have been two shipping opportunities since we last wrote, the English Mail and the American Mail both taking Silk. The former steamer, *Verona*, had 91 bales for Europe and the latter, *Belgie*, which left yesterday morning, had 262 bales for the New York trade. These departures bring the present Export to 3,820 against 9,728 last year, and 8,176 on the same date in 1888.

Hanks.—There has been no business during the week, but at time of writing 30 bales *Chichibu* are reported in treaty at \$567 1/2.

Filatures.—These have not been bought to a very large extent; in fine sizes, \$675 has been paid for *Utsu* and \$670 for good *Mino*; *Bishu* has been done at \$655. In coarse sizes *Hakuzuru* has been done at \$650 with *Toyesha* at \$645, but all these coarse sized Silks are now held for a further advance.

Re-reels.—Some business was done for America just as the steamer left, mostly in No. 3 and *Common re-reels* at about \$590 and \$585 per picul. One parcel *Five Girl Chop* was done a week ago at \$627 1/2, but holders now would require \$640 for the same Silk. No. 2 *Re-reels* were purchased for the Steamer at \$610, and are now held for an advance to compensate for the lower exchange.

Kakeda.—There have been some transactions, principally before the recent hardening in values. No. 1 was done at \$630; No. 1 1/2 at \$610; some medium and common were also done, \$590 being paid for *Tiger Chop* and \$580 for *Lily*; holders of these kinds are strong in sympathy with a lower Exchange, and firmness of holders in other classes.

In *Oshu* sorts and *Taysuam* kinds nothing whatever has been done; the home trade continues to pay better prices than exporters can offer.

QUOTATIONS.—(NEW SILK.)

WASTE SILK.

Settlements in this branch have been 1,400 piculs, divided thus:—*Cocoons* 30; *Noshi* 900; *Kibiso* 470.

There has been quite a revival in this market, and prices are firmer with an upward tendency. Buying is not yet general, but the few traders who are at work are taking heavy lines; especially is this the case in *Noshi*, where the staple *Foshu* has been taken in large parcels.

The English Mail steamer *Verona* took 33 bales of *Noshi* for Marseilles and Trieste, and it is a notable fact that all the business of the past week has been for Italy and Switzerland.

Present export to date is 1,578 piculs, against 2,879 last year and 1,913 in 1888.

Cocoons.—Nothing done in *Pierced* this week, but some few lots of *Sakusan* have been done at from \$20 to \$40 according to quality.

Noshi.—The principal business has been in *Fo-*

shu, which has been done in big lines at from \$75 to \$85 according to assortment, the chief purchases being in medium quality at \$75. Some few parcels *Filature* were done at \$122. *Goshu* is marked \$115; *Shinshu* \$112 1/2 with good *Oshu* at \$136 1/2.

Kibiso.—This has also been freely dealt in, all grades being taken from *Filature* at \$115 down to ordinary *Hachioji* at \$35.

In *Mawata*, *Neri* and *Sundries* there have been no sales.

Altogether it has been a busy week, and holders are much encouraged by the sales they have made. This combined with the fall in Exchange makes the Market close very firm.

TEA.

Telegraphic information from consuming markets indicates an improvement for Japan Tea, and consequently holders now demand higher prices for their leaf, but owing to the poor assortment on offer only 2,455 piculs have been purchased. Japanese Tea-men still persist that receipts are sure to be small later on, and that prices will yet further advance. Following are the Tea shipments from Japan to date:—11,056,319 lbs. for New York, 14,231,615 lbs. for Chicago, 9,452,779 lbs. for Canada, 2,827,847 lbs. for California; total, 37,658,590 lbs. as compared with 31,317,015 lbs. for the same period in 1889.

CONTRACTORS TO THE ADMIRALTY, LEADING STEAMSHIP COMPANIES, AND YACHT OWNERS.

STEAM LAUNCHES & YACHTS,

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest also suitable for carrying on yachts of 15 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. Illustrated Catalogue in English, French or Spanish. Send for Copy to

SIMPSON, STRICKLAND & CO.

DARTMOUTH, SOUTH DEVON (ENGLAND).
LONDON OFFICE:
181, QUEEN VICTORIA STREET, E.C.

MACHINERY.—Mr. ARTHUR WADHAM, proprietor of *The Machinery Market and Exporter* (illustrated)—the greatest machinery business journal published—(subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery and Engineering Materials. Mr. Wadham is open to act as sole Buying Agent in England for one or two good firms in Japan desiring to deal with a reliable house. Mr. Wadham's intimate knowledge of the English Machinery and Engineering Trades enables him to save large sums to foreign customers placing their orders in his hands. Firms dealing with Mr. Wadham may rely upon being served in a prompt and straightforward manner. Address:—Mr. Arthur Wadham, Engineering Offices:—181, Queen Victoria St., London. Registered address for telegram:—"Wadham, London." June 28, 1890.

KEATING'S BOMBONS OR WORM TABLETS.

A PURELY VEGETABLE SWEETMEAT both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTERINAL OF THREAD WORMS**. It is a perfectly safe and mild preparation, and especially adapted for Children. Sold in Bottles by all Chemists. Sept. 27th, 1890.

THE GREATEST WONDER OF MODERN TIMES. HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Dykes, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the system, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN! HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. F. Courge, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, and pigs were fed upon it, until at last a tea-spoonful was as valuable as a bowl and any quantity of peas, and the ointment became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1889

NOW READY, WITH COLOURED PLAN,

A FULL REPORT on the ERUPTION of BANDAI-SAN, being a reprint from the "JAPAN MAIL" of copious translations from Tokyo Journals, a Description by "Our Reporter," and an "Editorial," written after a visit to the locality. Price 50 Cents.

YOKOHAMA: SATURDAY, OCT. 4, 1890.

DEATH.

On the 30th September, after a long and painful illness, the wife of J. L. O. EYTON, aged 40 years.

SUMMARY OF NEWS.

HIS IMPERIAL HIGHNESS PRINCE KOMATSU paid a visit to the Emperor on the morning of the 30th ultimo.

AN Imperial Proclamation for the convocation of the Imperial Diet was expected to be issued on the 30th ultimo, but has not yet appeared.

CAPTAIN UCHIDA ZENTARO was ordered on the 25th ultimo to proceed to France, to bring out the *Isukushima Kan*.

COUNT ITO returned to Tokyo on the 25th instant from Osaka and Kyoto, where he had been staying for some time.

THEIR IMPERIAL HIGHNESSES PRINCE AND PRINCESS ARISUGAWA TAKEHIRO left the Western capital on the 29th ultimo for Tokyo.

THE Kyushu Railway Company was permitted by the Government on the 26th instant to open the section between Hakata and Sekigo for traffic.

A TELEGRAM from Kanazawa states that a violent typhoon visited Ishikawa Prefecture on the 24th ultimo. Six boats were lost, twelve persons being drowned.

THE line of the Osaka Railway Company between Oji and Nara, which is now in course of construction, will be opened for traffic on or about the 20th instant.

AN ordinary meeting of the Cabinet was held on the 30th ultimo at which Counts Yanagata, Yamada, Saigo, Oyama, Oki, Viscounts Kaba-

yama and Aoki, and Messrs. Yoshikawa and Mutsu were present, the proceedings being prolonged till a late hour.

THE *Chiyoda Kan*, the order for the construction of which was given in England, has been completed, and will leave that country on the 20th instant for Japan.

THE Chinese Minister, who will leave Japan shortly for home, will give a farewell entertainment on the 22nd instant to about eighty high officials of the Government.

IN consequence of the recent floods in Hyogo Prefecture, 976 houses were destroyed in Akogun, 188 houses in Sayo-gun, 604 houses in Shikito-gun, and 79 houses in Shikisei-gun.

RAILWAY communication between Ashikaga and Kiryu on the Ryomo Railway, which was stopped in consequence of damage to the line by the heavy rains, was reopened on the 28th ult.

COMMUNICATION on the section between Kurikashi and Kuki on the Japan Railway, which had been suspended in consequence of damage caused to the line, was re-opened on the 27th ult.

MR. IWASAKI YANOSUKE was permitted by the Minister of State for Agriculture and Commerce a few days ago to commence coal mining operation at Usumura, Kama-gun, Fukuoka Prefecture.

A TELEGRAM from Kagoshima announces that a violent gale visited the city on the 24th ultimo, and 774 houses were entirely destroyed, and 860 houses partially destroyed, eight persons being killed.

THE Directors of various bureaux and other high officials of the Finance Department held a meeting on the 29th ult. for the purpose of discussing the estimates of the Department for the 24th fiscal year.

A VIOLENT whirlwind visited Narigawamura, Chita-gun, Aichi Prefecture, on the evening of the 24th ultimo, destroying twenty-two houses and two telegraph posts. Two persons were killed, eight being injured.

THE Naval Department has received the sanction of the Emperor to send home the men saved from the *Ertongroul* catastrophe, on board the *Hiei* and *Kongo Kan*, and these ships will start for Turkey in a few days.

MESSRS. KUMAGAYE NAOAKI, Uda Taro, and Kaji Suyekichi, of the Equal Treaty Association, have presented a memorial to Viscount Aoki, Minister of State for Foreign Affairs, relating to the proposed treaty revision scheme.

A REPORT issued by the Sanitary Bureau of the Home Department shows that the number of persons attacked by cholera throughout the Empire from the commencement of the epidemic to the 28th ultimo, was 30,591, of whom 19,830 died.

OWING to the recent stormy weather, various rivers in Tottori Prefecture have overflowed, causing great damage to crops and roads; 41 bridges were carried away, 64 houses were submerged, and 11 persons were drowned.

PROFESSOR SHIDA RINSABURO, of the College of Engineering in the Imperial University, was raised to second class *sonin* rank on the 26th instant. On the same day Professors Shimoyama Junichiro, and Tamba Keizo, of the College of Medicine in the University, and Mr.

Imori Teizo, a teacher of the Fourth Higher Middle School, were raised to third class *sonin* rank.

A NUMBER of private persons and officials, including 27 Senators, are confidently indicated as the Imperial nominees to the House of Peers.

THE opening ceremony of the new buildings of the Fifth Higher Middle School (Kumamoto) will take place on the 10th instant. Mr. Hamano, Director of the Special School Affairs' Bureau, and Mr. Kawakami, a School-Inspector of the Educational Department, will be present.

A POLITICAL lecture meeting was held on the 28th ultimo at the Mantake-tei Theatre, Yokohama, where speeches on the subject of treaty revision were delivered by Messrs. Mogi Torajiro, Kiyama Seichi, Yamada Taizo, Mochida Naoshi, and several other members of the *Rikken Jiyu* party.

PROFESSOR HOZUMI YATSUKA, of the College of Law, was relieved from his additional appointment as a councillor of the Legislative Bureau on the 30th ultimo. On the same day Mr. Morimoto Gocho, a secretary of the Kyoto City Government, received the additional appointment of President of the Kyoto Museum.

ACCORDING to investigations made by the Tokyo City Government, the number of vessels of foreign build registered in Tokyo on the 30th June last was 550, showing an increase of 6 as compared with the 31st December last. The number of vessels of Japanese build above 50 *koku* burden was 494, which shows an increase of 16 as compared with the 31st December last.

MESSRS. SHIOTA MASAZO, Arai Go, Suzuki Manjiro, Uyeiki Emori, Suehiro Shigeyasu, and about forty other Constitutional Liberal members of the House of Representatives held a meeting on the 27th instant at the Yayoi Club, Shiha. The following members were elected a Committee for the investigation of political questions:—Messrs. Kawashima Jun, Suehiro Shigeyasu, Uyeiki Emori, Suzuki Shoji, Kurihara Ryoichi, and Arai Shogo.

BOTH the Import and Export markets continue to be seriously affected by the fluctuations in exchange, and during the week a greater fall (and subsequent rise) has occurred than at any time since the dollar was last at 3s. The Yarn trade has consequently been demoralised, and the principal business done has been in Bombays. A fair quantity of Shirtings has been taken, but in other lines there has been next to nothing done. Holders of Metals were somewhat encouraged in the middle of the week, but buyers were shy, and the rise in silver since reported has left the Metal trade at sixes and sevens. Kerosene has been enquired after, but the inclination to deal has been again damped, and the exchange question is a bar to business. Very little has been done in Sugar. Silk has moved but slightly, buyers chipping in when exchange went down, but the rise took place before many settlements were effected, and holders are again strong and bold. Stocks go on increasing, and are now nearly 13,000 piculs. Waste Silk has been more attended to, and over 2,000 piculs have passed the scales, all for Europe, but business has again been checked. The Tea trade is slack, though several firms are firing small orders. The total settlements for the season, however, have been considerably in excess of those of last year. Exchange has fluctuated, a big drop occurring during the week. This has been largely recovered, but rates are a fraction lower to-day.

Original from

EDITORIAL NOTES.

A SPLIT IN THE CAMP.

There appears to be a split in the camp of the "promoters." Last Saturday, the proposer of the principal resolution which was voted at the meeting on the 11th ult., wrote a letter to the *Japan Gazette* protesting against the use of the term "anti-revision," as applied to the Meeting, and making the following remarkable statement:

"So far from being opposed to revision, there is not an intelligent man in the community who does not admit that Japan is entitled to demand a relaxation of the terms of the present Treaties. We recognize, with sincerity and admiration, the progress she has made, and we sympathize with her aspirations; but we say that she has not yet proved her right to claim unconditionally the promise of unrestricted judicial control over us, and we believe that outside the *sushi* there are few Japanese who do not admit that we are right. The term "anti-revision" is, therefore, unwarranted, and discerning men will in future avoid its use.

This statement, as we have before said, probably embodies the view held by the large majority of foreign residents of Yokohama. It also expresses the view entertained even by those who, like ourselves, see clearly that the Treaty Revision problem must be disposed of in friendly relations are to be observed between Japan and foreign nations, and who consequently advocate a liberal treatment of the question. But on Monday another "promoter" came out in the correspondence columns of the *Japan Herald*, and somewhat angrily declared that "such of those who take a prominent part in opposition to the proposals of the Government for treaty revision, are but paltering with us when they say that because successful efforts have been made of late years to introduce a variety of improvements, the Japanese are entitled to some relaxation of the existing compacts between themselves and foreign nations." The peculiar, slipshod English of this paragraph, even apart from the rest of the letter in which it occurs, would suffice to identify the writer as one who, under various *noms-de-plume*, addresses constant communications to the *Japan Herald*, all couched in a capacious, discontented spirit, and all calculated to increase foreign distrust of Japanese laws and Japanese institutions. However, the point we are at present considering is the divergence between this arch agitator's views and those expressed in the columns of the *Japan Gazette* by the proposer of the first resolution. It is a very marked divergence and the writer in the *Herald* proceeds to emphasize it thus:—

"The display of this sort of disposition to 'run with the hare, and yet side with the hounds,' cannot be permitted to pass without challenge, for with every disposition to admit that very praiseworthy efforts have been made by the Government to introduce and adopt most of the essentials of modern civilization, and with a very fair show of success, yet it is necessary to object to persons who blow both hot and cold,—who join with others to take practical steps to oppose revision, and who yet would have us believe that they are theoretically in favour of it. Under existing circumstances we cannot be other than anti-revisionists; we cannot be more, and we must not be less. It is of no sort of use beating about the bush and declaring we are not against revision; to proposals for reasonable revision we would lend an ear, but they are not before us, and considering the yielding temper of Ministers and Governments, are not likely to be. Anti-revisionists we are, and shall have to continue to be to the end of the chapter.

Which of the two "promoters" really represents intelligent and educated opinion in Yokohama, there cannot be the least doubt. This, however, brings us face to face with the old trouble, namely, that it is the bigoted and implacable agitators who figure chiefly before the public. The writer of the letter in the *Herald* appears day after day over different signatures, and his Protean activity is not confined to the correspondence columns of that journal, for he often ventilates his views in leading articles and editorial notes also. He is a kind of noun of multitude, and the impression he evidently seeks to produce is that he has as many fellow-thinkers as abases. We warn the Japanese against being deceived by this kind of trickery. No respectable journal allows the same writer to appear over different *noms-de-plume* in discussing the same subject, and no honest controversialist descends to such literary chicanery. There are not half-a-dozen Englishmen in Yokohama who approve of it, and there are very few who endorse the extreme position taken by this incorrigible agitator. We trust that the gulf now

established between his ideas and those of the most active among his fellow-promoters, will lead to his expulsion from their camp. He ought to have a wigwag all to himself, where his slovenly English, his queer rhetoric, and his multitudinous metamorphoses would no longer disturb the public.

A SHUFFLER.

We commend the following to the notice of our readers. It is an instructive incident. Some time ago, we stated that, in our opinion, there are in Japan merchants of honour and integrity who would gladly combine with foreigners for purposes of commercial and industrial enterprises. Our assertion elicited a letter from a foreign merchant. He wrote over the signature "Business Chance," and addressed one of our local contemporaries. Here is his letter:—

"The commercial public would be greatly indebted to you if you could induce the Editor of the *Mail* to publish in his paper the names and addresses of Japanese merchants 'of honour and integrity' 'who will be found ready to gladly combine with foreigners for purposes of commercial and industrial enterprises,' with the understanding, of course, that the editor of the *Mail* is to be financially responsible for their honour and integrity. That would be bringing things to a practical issue, whilst vague general assertions have no more value than the papers representing money that the Chinese throw after their dead. I have been on the lookout for such Japanese merchants for the last three years, and made quite a number of drafts of agreements in negotiations with those whom I have approached on the subject of combination, but any clause fixing a hard and fast responsibility on them, or requiring any immediately convertible security for credit to be given, invariably ended all negotiations. Subsequently "Business Chance" explained that he had occasionally been offered by Japanese merchants bonds which foreigners are permitted to hold, but that the quantity offered had not been sufficient. Commenting on this we wrote:—

"The interesting point now made clear by 'Business Chance' is that the difficulty in the way of effecting the combination desired by him has been that the Japanese could not put up sufficient tangible security. In some cases they offered bonds 'but not in amounts sufficient for the credit asked for,' he writes. From his previous letter we were led to suppose that the chief obstacle was absence of 'integrity and honour' on the part of the Japanese. Insufficiency of funds is surely a horse of another colour; a misfortune rather than a fault.

To this "Business Chance" made the following reply:—

"It is quite a new departure in journalism, too, for an editor of a paper to put his own inferences and suppositions in quotation marks, but the editor of the *Mail* apparently is not above such little tricks of trade, by which the public would naturally be led to believe that the quotation is from the letter or article of his opponent.

Challenged by us to prove this serious accusation of bad faith, "Business Chance" first attempted to convict us of an utterly trivial error committed subsequently to his charge, and then in support of his charge wrote thus:—

"But the instance I originally referred to was the quoting of the words 'absence of integrity and honour' in the *Mail* of the 10th inst, in a paragraph referring to my letter."

Now if any one will take the trouble to examine the above extracts, he will see that the phrase "absence of integrity and honour" is not put in quotation marks. The inverted commas enclose only the words "integrity and honour." These words were actually used by "Business Chance," though whether they were used or were not used is absolutely immaterial. No inference was drawn from them; no supposition attached to them. "Business Chance" therefore stands convicted of preferring against us a charge of deliberate deceit without the smallest conceivable justification. Our readers can judge for themselves. The upshot of the controversy is to prove conclusively that this man, "Business Chance," whoever he may be, is himself entirely devoid of integrity and honour. We tell him so in the plainest terms, and we add this, that if he has hitherto failed to effect combinations with Japanese, so much the better for the Japanese.

THE MEETING AT THE MINATO ZA.

As advertised in several newspapers, the meeting of Japanese to protest against the action

taken by a portion of the foreign residents of Yokohama in respect of Treaty Revision, was held on the 24th ultimo in the theatre called Minato-za, Yokohama. More than two thousand persons are said to have been present, and the reports relate that storms of excited applause caused the whole neighbourhood to ring whenever the speakers made a telling point. Unfortunately the vernacular press contains very meagre notices of the proceedings. Only the *Kokumin Shimbun* and the *Nippon* refer to them at any length. From these journals we learn that the organisers of the meeting were the two Societies called the *Domei-Kai* (of Yokohama) and the *Taito-joyaku-Kai* of Tokyo. Mr. Hamano Kusuke appears to have acted as chairman. He explained how the meeting had been organized, and took it for granted that his audience had read all about the foreign resolutions as reported by the press. It would be difficult, he added, for the speakers to make themselves audible to such a large concourse of persons, but he was sure that the earnestness of these present would make them exceptionally good listeners. The first speaker was Mr. Ninomura Kakichi, who took for his subject "our resolution," the word resolution being used in the sense of firmness of purpose. A very brief epitome of his address is given. He told his hearers that he was a student from Tsuguru in Nambu, but that in Tokyo people had given him the name of the Gambetta of the East. In Tsuguru oxen and horses were compelled to turn their noses in whatever direction their drivers wished, but in national affairs the Japanese people did not propose to have their noses turned by foreigners. He bade them remember the history of men like Washington and Franklin, who through suffering and hardship had finally won liberty. Japan, too, after all her difficulties, would surely attain her goal in respect of Treaty Revision. Mr. Yamada Shimakichi followed, his subject being "a treaty of equality." He said that Count Inouye's programme of Treaty Revision had been opposed by both the *Kaishin-to* and the *Yiyu-to*, and that Count Okuma's proposals, though less objectionable than Count Inouye's, had also been rejected by the bulk of the nation. But now that the country had been brought within sight of a treaty of equality by Viscount Aoki's amended scheme, the foreign residents had set themselves to prevent the consummation of Japan's hopes. Under these circumstances the question must not be left to the *Rikken Yiyu-to* or to any other political party. The whole nation must take it up and push it with resolute strength. He concluded by saying that probably the only persons opposed to it would be the *Kaishin-to*. The next speaker was Mr. Katakuchi Yoichi. He said that as in lives of individuals, so also in the life of a nation, there were events of pleasure and of pain, and he illustrated this by referring to the case of the *Eriougrout* which, after a season of quiet enjoyment in Japan, had been dashed to pieces off the coast of Kishiu. For Japan the probable acceptance by Foreign Powers of the amended programme of Treaty Revision was a subject of national rejoicing, but three hundred foreign residents of Yokohama had determined to mar the nation's joy if they could. This speaker was followed by Mr. Uda Taro, who lectured on the necessity of recognising right. Then followed Mr. Hamano Kusaka, with "Information for the people of Yokohama;" Mr. Inouye Kakugoro with the "Rights of Treaty Revision;" Mr. Kobayashi Sentaro with "A discussion of the proceedings of the Anti-revision meeting," and Mr. Yonomoto Keisaburo with "an appeal to public opinion from the decision of the foreign residents." Mr. Yonomoto, in the course of his speech, grew very excited, and declared that death would not be enough for men like Mr. Lowder, whereupon the police interfered and stopped the lecture. Mr. Yonomoto alone seems to have exceeded the bounds of propriety, but his excess was certainly sufficient to make up for the comparative moderation of his fellow-speakers. We do not know whether Mr. Yonomoto's language will bring him within the

grasp of the law for inciting to violence, but it will at all events exclude him from all further recognition at the hands of foreigners with whom he has been seeking interviews. Be this as it may, there can be no question as to the excitement which has been caused among the Japanese by the action of the promoters of the meeting of the 11th instant. If it had only occurred to these gentlemen to embody in their speeches, or still better in their resolutions, some of the sentiments by which one of them has since declared himself and all thinking men actuated, a very different effect would have been produced in Japan, and the decision of the meeting would have carried far more weight abroad. But these bungling resolutions, in one case failing to refer to a vital part of their subject, in another conveying, by accident apparently, a great deal more than they were intended to suggest, and on the whole omitting to say what all moderate and sympathetic men must feel—these bungling resolutions, supplemented by the airily confessed ignorance of the Chairman, the mysterious insufficiency of the chief speaker, and the sheep-like docility of the meeting, combined to make a spectacle not at all creditable to the foreign residents, and decidedly exasperating to the Japanese people.

* * *

So meagre are the reports of the speeches delivered at the Minato-za meeting that it seems scarcely worth while to add anything to the accounts already published in these columns. The *Kokumin Shimbun* is most explicit, but it is plain either that stenographers were not present, or that the vernacular press has not thought it worth while to print verbatim reports. Nevertheless, as the *Kokumin Shimbun's* account has been subjected to the usual distortion in the translation laid before the foreign public by a local contemporary, we render it into English for our readers' information:—"Mr. Ayabe Takenosuke, speaking on the subject of 'a request to Viscount Aoki,' explained the reason why it seemed desirable that the present proposals for Treaty Revision should be made public. Count Inouye's proposals and Count Okuma's proposals had been laid aside, and though the argument sounded reasonable that secrecy in the present case was desirable, as the Cabinet wished to conclude the negotiations before the meeting of the Diet, the eventuality of these proposals also failing had to be considered. Who then could support them, or who fight their battle, unless the means of appealing to public opinion were furnished? Disraeli had been able to show a bold front at the Berlin Conference because he knew that British public opinion was with him. Mr. Uda Taro, speaking on the theme of 'practising courtesy,' said that in 1857 when the existing treaty was signed, Japan was regarded as still a child and uncivilized. Now she was a full-grown person. What reason any longer existed for objecting to the abolition of extraterritorial jurisdiction? Who was the Englishman Lowder? What kind of silliness was it to assert that the jurisdiction of Japan could not be submitted to, while well knowing that her Constitution had been lately promulgated, her civil codes and commercial codes published, and her courts reorganised? What kind of silliness was it to pretend that because English law recognises a right of property after twenty years of possession, therefore the tenure of land for that period by foreigners in Japan made them owners of the land? Had not the Australian Parliament decided that no Australian land should be sold to aliens? Did the meeting think that despite all these things foreigners practised courtesy towards Japan? Mr. Yonomoto Keizaburo, speaking on the subject of 'an appeal from the foreigners' meeting to public opinion,' said that extraterritorial jurisdiction must be abolished, and having then remarked that to kill such a man as Lowder would not be enough, was stopped by the police. Mr. Hamano Kinsuke, speaking on the subject of 'information to the people of Yokohama,' said that he and his fellow-thinkers recommended the Government to publish the amended proposals for revision.

By so doing they would remove all traces of the feeling that existed twenty years ago when the ports were opened. Mr. Inouye Kakigoro, speaking with reference to the rights of treaty revision, said that he and others had last year, and previously, opposed to the utmost of their ability the proposals of Count Okuma and Count Inouye, but now that the amended scheme of Viscount Aoki had been reached, people understood for the first time what had been the labour of the two Counts. He himself had opposed instead of supporting the two Counts, because he felt the immense importance of this national problem. Even now, though there was talk of a treaty on equal terms, he would not readily assent. He recommended his hearers to watch the Governments proceeding's with the closest attention. Even if the course pursued by the Government were not in agreement with their wishes, they must nevertheless with one accord support the Government against foreign opposition, and afterwards attack the Government if necessary. Mr. Kobayashi Kentaro, speaking on the subject of 'information to Yokohama folks about treaty revision,' said that in common with all those present at the meeting, he and his friends desired to thoroughly examine a problem of such national gravity as treaty revision. The affair of the *Normanton* was an example of the results of extraterritoriality. To correct this state of affairs was a task worthy of a Clive or a Hastings. He himself had been the means of furnishing an instance of the evil, for when he waited on Mr. Brooke and transcribed the results of the interview, without concealing any of the points urged against Japan, he had been charged with drawing on his own imagination. What such a charge meant, he could not tell."

ANOTHER TREATY-REVISION MEETING.

THE *Taito-joyaku-kai* held another lecture meeting on the 27th ultimo. The place chosen was the Koseikan, Tokyo, and about thirteen hundred persons are said to have been present. A curious incident occurred. Mr. Kachiku, a member from Hyogo Prefecture, in the course of his lecture drew a sword which he wore in his girdle, and flourishing it over his head, cried, "this is the way to cut them in two with one blow." The police immediately interfered and took away the sword, but when they came to examine it, the formidable weapon proved to be a split bamboo wrapped round with silver paper. The discovery caused much laughter. Mr. Kachiku was followed by Mr. Kaji, who described an interview which he and Messrs. Uda and Kumagaye had had with the Minister of State for Foreign Affairs that morning. They had asked Viscount Aoki to let them see the proposals for Treaty Revision, promising to support him if they found them satisfactory. Viscount Aoki replied that he was unable to comply with their request for two reasons. The first was that as the treaty-making power is reserved to the Emperor by the 17th article of the Constitution, to reveal treaty negotiations would be to disturb the Imperial prerogative; the second, that although it would be very convenient to have their support in the event of their approving of the proposals, there was a possibility that they might disapprove of them, which would be exceedingly unfortunate. Speaking broadly, however, he did not mind saying that as the excitement of last year had caused His Majesty much concern, the present proposals would probably be found less distasteful by the public. His Excellency was then asked whether the report was true that he adopts a strong policy, to which he replied that it certainly was true, but that no mistake should be made about the meaning of a "strong policy." Such paltry matters as the mere restraining of foreigners within treaty limits or preventing them from carrying on business forbidden by treaty, did not constitute a strong policy. The full assertion of the national power could alone be called a strong policy. The Minister subsequently stated that he failed to understand what was meant by a "treaty on equal terms" (*taito-joyaku*). The expression could be used of treaties between countries like England and France, but there were cases where the word

"equal" could scarcely be applied. He instanced Italy and England, a treaty between which Powers he showed his interviewers for their information. These meagre details are all that we find in the vernacular press about the meeting at the Koseikan. Probably the addresses did not seem worth reporting.

THE "KOKUMIN NO-TOMO" AND TREATY REVISION.

THE *Kokumin-no-Tomo*, after reproducing the resolutions of the Treaty Revision Meeting of the 11th ultimo, mentions that "Mr. Brooke, an Englishman, formerly editor of the *Japan Herald*; Mr. Lowder, an Englishman and a barrister; and the Hon. Mr. Napier, First Secretary of the English Legation, took the chief share in organizing the meeting." "The Japanese," our contemporary adds, "ought to remember the names of these gentlemen as benefactors of the country." Where, we wonder, did the vernacular newspapers get this strange notion about Mr. Napier? The *Kokumin-no-Tomo* is not the only journal that has published the rumour, though it is certainly the most important of the prints which have been thus duped by mystery-mongers. How in the name of all common sense do Japanese editors imagine that the First Secretary of the British Legation could take any hand, act, or part, much less a leading part, in a public demonstration, the avowed object of which is to protest against the course which his chief and his Government are pursuing in respect of an important international question. That is not the way English officials behave. If the First Secretary of the British Legation intended to act as the Hon. Mr. Napier is said to have acted, he would have to preface his performance by resigning his post in the service. Thus much premised, we will tell the *Kokumin-no-Tomo* two things. The first is that Mr. Napier was absent in the country at the time of the meeting, and had been absent for many weeks. The second is that Mr. Napier is imbued with the friendliest feelings towards Japan, and that to do what he is charged with doing would be utterly at variance with the sentiments he has always openly expressed. The insult offered to the British Diplomatic Service by the publication of such wild rumours is bad enough, but to traduce a loyal friend, as the *Kokumin-no-Tomo* has done, is far worse. We have too much respect for that journal to doubt that it will lose no time in frankly and fully correcting its error.

CONJECTURES.

THE *Hochi Shimbun*, remarking that the action recently taken by a portion of the foreign residents of Yokohama, has once more concentrated public attention on the subject of Treaty Revision, says that the negotiations have not been carried beyond the stage of submitting Viscount Aoki's proposals to the British Representative, and that no actual conference is in progress. As for the outline of the proposals, our contemporary says that they contemplate a period of twenty-two years for the new treaty; the abolition of Consular Jurisdiction; mixed residence; the opening of several new ports; the withholding of Japan's tariff autonomy for ten years longer, all changes of duties during that interval to be the subject of mutual agreement; and the withholding also of the privilege of land ownership by foreigners. We quote these statements not for the information of our readers, but to show how divergent are the ideas entertained by different writers who undertake to describe the basis of Japan's present proposals. What those proposals are the public will doubtless learn in good time. We are confident that outside H.B.M.'s Legation and the Foreign Offices in London and Japan, no one is in a position to state the proposals with any pretence to accuracy, and we are therefore strongly disposed to suspect that the mysterious information upon which the promoters of the Yokohama meeting acted, is imperfect if not misleading. Nobody appeared to entertain any curiosity about the nature or source of that information. The gentleman who took the

Meeting into his shadowy confidence, was careful to say that the name of his informant must be concealed, but he did not, apparently, think it worth while to give his audience even the most rudimentary sketch of the programme which they were invited to condemn. The more the proceedings of the Meeting are considered, the more astounding seem the childlike trustfulness and philosophic incuriosity of those present.

A COMPARISON.

SOME Japanese journals of the lower class referred to the Revision meeting of the 11th inst. and to its promoters in violent and abusive terms, which elicited loud and indignant rebuke from a section of the Yokohama foreign press. By and by a meeting was organized by Japanese in Yokohama to protest against the resolutions passed at the foreign meeting. Here was a good opportunity for the courteous and moderate foreign newspapers to show their Japanese contemporaries how such meetings and their promoters should be treated; and evidently the journal best qualified to preach this practical sermon to its erring brethren was the one which had made itself most conspicuous in censuring their rudeness. Accordingly, we find the *Japan Gazette* appreciating the situation, and coming forward with a suave and polite analysis of the *Taito-jovaku-kai*, by which party the meeting of Japanese was projected and organized. The analysis might almost have been written of the promoters of the foreign meeting. One leading member of the *Taito-jovaku-kai* is a barrister, we are told; one, an ex-journalist, and the Society has the countenance of men like Count Soyeshima. Then follows a general verdict, the studied moderation and courtesy of which contrast glaringly with the utterances of journals like the *Tokyo Koron* and the *Kokumin Shimbun*. "The rest" of the Society's members, says the *Japan Gazette*, "are probably of the gent (sic) conveniently described as *soshi*—a rather numerous species, by the way, being made to embrace all evildoers and evil sayers." This is the proper and civilized manner of treating people who organise meetings and make speeches. Japanese journals will please copy.

THE "NIPPON."

"TREATY REVISION," says the *Nippon*, "is an affair that concerns the national independence. It differs in this respect from a revision of the laws or of the administration. The entire State is effected by it, and the strength of the entire State must be employed to achieve it. The necessity of revising the old treaties was recognised at the beginning of the *Meiji* era. It led to the mission of Prince Iwakura to Europe and America. More than twenty years have passed since then. Treaty Revision must be effected by the national strength. Verbal discussion is hopeless. The progress of the administrative system, of the fiscal system, of the laws, the development of the national wealth and intelligence, the organization of the military system—all these things are elements of national strength. It is essential that their aid should be enlisted in the cause of Treaty Revision. After the return of Prince Iwakura reliance was no longer placed on mere discussion. Attention was devoted to domestic reforms and to the nurture of the national strength. This was the policy of the late Marquis Okubo. He died, however, without achieving the great work of Treaty Revision. Count Ito succeeded him in the Government, and at once inaugurated the policy of rapid progress. Count Inouye aided him and undertook the work of revision. Considering the policy pursued at that time, we are disposed to think that instead of seeking to develop the nation's real strength and raise its prestige, attention was directed to making a brave show and to revising the mere text of the treaties. The consequence was that, instead of success being achieved, the national power was endangered. The people, both inside and outside official circles, at once took alarm, and the work of revision had to be abandoned. The issue of this failure was the fall of the

Ito-Inouye Cabinet. Count Kuroda succeeded. He was aided by Count Okuma, and once again the task of Treaty Revision was essayed. But the policy of Counts Ito and Inouye was not changed. Reliance was not placed on the nation's strength. The dominant idea was to achieve a political coup. Thus, the new scheme was only a little better than the old: it exposed the national prestige to much the same danger. Once again, therefore, the Government encountered violent opposition, and Treaty Revision had to be stopped. It appears to us that these failures were not owing to any want of ability on the part of the Government: they were due to the fact that instead of having recourse to the strength of the nation, diplomacy and discussion were entirely relied on. In other words, instead of trying to carry through this great work in concert with the people, statesmen depended on their own devices and sought to earn a reputation for themselves. We do not yet know the merits or defects of Viscount Aoki's scheme. Doubtless, taught by the popular excitement of last year, the compilers of the present draft have improved upon the schemes of Counts Inouye and Okuma. But whether the people will be content or not we cannot tell. The foreign residents of Yokohama, alleging that they have news of the British Government's assent to the new proposals, are taking strong measures of opposition. Their view is discountenanced. The nation must understand the mistakes that have been made. A mistake once consummated in a treaty that concerns foreign relations cannot be rectified. The true facts as to Viscount Aoki's proposals should be accurately considered by the people, who must then discharge their duties as a nation.

Reading between the lines of this article, the only conclusion we can form is that the writer advocates submitting the question of Revision to the Diet. We cannot perceive any other way of directly enlisting the strength of the nation in the cause. To submit the question to the Diet, however, would mean final abandonment of all hope of settling it by negotiation. If the six hundred members of the two Houses are to be admitted to the Conference, farewell to all possibility of agreement. Such an impractical notion deserves only derision. Now and then we find a vernacular newspaper complaining that the people are not taken into the Government's confidence in this matter. Some even make a grievance of the idea that foreigners receive information which is withheld from Japanese. In what civilized country is Parliament made a party to covenants between the Government and a foreign State, and in what civilized country are the details of such covenants made public before their conclusion? Universal experience shows that either the former course or the latter would be fatal to every chance of concluding a treaty or convention. Japan does not impress us as being competent to tread successfully a path which all other nations can follow only to failure. Instead of finding fault with statesmen for not having recourse to the strength of the nation, the *Nippon*, as we think, should blame the intriguing politicians whose disloyalty fatally weakens that strength.

TREATY REVISION.

COMMENTING on the meeting of the 11th ult. in Yokohama, the *China Mail* says:—While we sympathise with the feelings of foreigners in Japan, we cannot altogether approve of their opposition. Independence is one of the essentials of progress. The very admittance of Japan into the family of civilised nations will stimulate her to make further progress, and the responsibility she will have to undertake in the administration of justice between foreigners and natives will go far to correct many of the mistakes that have been committed. Knowing that flagrant injustice done to foreigners would lead to the denunciation of the treaty, and perhaps to complications with foreign nations, the Japanese would be even more careful than they are at the present moment to avoid the suspicion of injustice, and the Government would be more than ever anxious to avoid disagreeable incidents. After all, life and property are safer

in Japan than in many of the States of South America, which we treat as civilised nations. With proper guarantees there ought to be no risk in granting the wish of the progressive statesmen of Japan. The exact point at which the negotiations have arrived at this moment we do not yet know. The telegram would lead us to believe that there had been some fresh development, and that the revision was all but an accomplished fact. For the last eight or nine months little has been said about the new treaties, the Japanese themselves being taken up with the elections for their first Parliament. The other day a Yokohama contemporary said that negotiations with Germany were being actively carried on, and that after some arrangement had been come to England would be pressed to come to a decision. We know, however, from a well-informed source that the negotiations with London were far advanced two months ago. A correspondent who is in a position to know wrote us last month as follows:—

Our people are very unwilling that all the time and labor spent over the business should be thrown away and we are anxious for a settlement of some kind. The Japanese came forward with amended proposals. The two principal amendments being, 1st, that they would have no foreign judges at all; and 2nd, that they would not throw open any part of the country until the new system came into full operation and foreign jurisdiction ceased, when it would be opened once and for all. You will remember their first proposal was to open the country to foreign residence so soon as the treaty should be signed, coupled with the condition that the foreigner who availed himself of this privilege would be subject to the native tribunals for everything done outside the concessions—a state of things which would have led to much confusion. I believe we have practically agreed to their proposals, so unless something unforeseen happens in the meantime, I expect to hear any day that a final settlement has been come to. As before, a five or six years' period of probation is to elapse, and we further require that the Courts and Codes shall have been at least one year in satisfactory working order before we withdraw.

KOBE AND TREATY REVISION.

THE following anonymous notice was circulated in Kobe on the 25th instant:—

TREATY REVISION.

An informal private meeting will be held on Friday, the 26th September at 4.15 p.m. in the Chamber of Commerce rooms, kindly lent for the occasion, when the temporary committee elected on the 16th inst. will present their report and offer their suggestions for further proceedings.

On the 27th the *Hyogo News* had the following:—

KOBE ON TREATY REVISION.

The committee appointed at a recent private meeting to ascertain the views of the community upon the subject of Treaty Revision brought up their report yesterday before a second meeting specially convened by private circular, and which was attended by representatives from the leading firms here. It was decided that the following memorial should be addressed to the Foreign Ministers, and that all who are willing to do so should be invited to sign. A special committee was appointed to prepare the memorial and to forward it to the proper quarter when signed. Notice will be given as soon as possible of the place where it can be seen and signed.

TO THEIR EXCELLENCIES THE REPRESENTATIVES OF THE FOREIGN POWERS HAVING TREATIES WITH JAPAN.

SIRS,—It having been represented that there is a probability of certain proposals of the Japanese Government being accepted by the Treaty Powers, involving the abolition of extra-territoriality without the safeguards that have hitherto been considered necessary for the welfare of foreigners, We, the undersigned subjects and citizens of the Treaty Powers in Kobe, consider it our duty to lay before your Excellencies the views that we entertain upon a subject which so directly affects our position in this country.

Whilst recognizing to the fullest extent the immense progress that Japan has made during the past few years, and whilst sympathizing with her natural desire to obtain complete Sovereign rights, it is our decided opinion, in common with our fellow-countrymen resident in Yokohama, that the time has not yet arrived when questions in regard to rights, whether of property or person, arising between subjects and citizens of Foreign Powers in the Dominions of His Majesty the Emperor of Japan, can be unconditionally and safely subjected to the jurisdiction of Japanese Tribunals.

We are also strongly of opinion that it would be premature to attempt to fix a date for the complete and unconditional relinquishment of extra-territorial jurisdiction until the New Criminal and Civil Codes, which it is proposed to put in force, have been in operation for some little time and experience has been gained as to how far they meet the requirements of the changed condition of affairs.

We have the honour to be, Sirs, Your Excellencies' humble and obedient Servants.

(Signatures)

THE "KOKU-HON" ON THE TREATY REVISION MEETING.

THE *Koku-hon*, a periodical of great influence and erudition, is greatly disappointed at the results of the recent Treaty Revision Meeting in Yokohama. It had expected that the discussion at the meeting would furnish useful material both for the Japanese negotiators of treaty revision, and for the Governments of the Powers concerned. But it finds, on the contrary, that the whole proceeding ill becomes a community representing Occidental civilization. The *Koku-hon* expresses surprise at the conspicuous want

of respect shown by foreigners towards the country of their sojourn. It believes that the unreasonable resolutions passed by the meeting will not have much influence on the course of the negotiations. But, as the question has attracted the attention of the whole Japanese nation, our contemporary considers it not altogether unnecessary to discuss the subject. Referring to the 1st resolution, the *Koku-hon* is astonished that, while charging the Japanese judiciary with incompetency, no reason or proof supporting the charge was given. It remarks that, even among the English residents of Yokohama, not a few have refused to sign the memorandum, and that no Austrian, nor Belgian, nor Dane, nor Russian, nor Spaniard, nor Swede, nor Norwegian attended the meeting. The primary object kept in view by the signatories of the resolutions is, in the opinion of our contemporary, simply to secure the continuance of Consular jurisdiction, under which system they can obtain favourable judgments against Japanese plaintiffs, who are virtually cut off from appealing to higher courts by reason of the immense expense and inconvenience involved in the process. The Tokyo journal also thinks that foreigners' objection to be placed under the jurisdiction of Japanese Courts is probably based on their experience of "the evils attending Consular Jurisdiction," and on the inference that similar evils are also prevalent among Japanese judges. Our contemporary, therefore, attributes this resolution to foreigners' ignorance of Japanese laws and Japanese judges. As to the 2nd resolution, the *Koku-hon* observes that the right of possession which foreigners claim to enjoy in virtue of the existing treaties really terminated in 1871. That they have enjoyed it so long after the proper period for revision of the treaties, is owing, in the *Koku-hon's* opinion, to the magnanimous desire of the Japanese Government to attain its object of treaty revision in an amicable manner. Such absurd resolutions proposed and passed by a meeting held at the instigation of a few discontented agitators, and attended by a section of the foreign community, will not, the Tokyo journal believes, influence the views of either the British Premier or the British nation, especially as the Chambers of Commerce in that country are reported to have expressed themselves in favour of revising the Treaty on the basis of the Japanese proposals. Lord Salisbury and the English Chambers of Commerce being far from attaching any importance to the resolutions supported by a handful of short-sighted merchants and petty journalists of Yokohama, our contemporary advises its countrymen not to be perturbed by the present movement in that Settlement.

"PICTURES OF ANCIENT JAPANESE HISTORY."

THE second part of Mr. Asso's work, "Pictures of Japanese History," has been published by Messrs. Maruya and Company. Like the first part, it is in both Japanese and English, the latter revised by Sir Edwin Arnold. This volume contains descriptions of a number of celebrated historical incidents from the days of the Fujiwara to the battle of Dan-no-ura, where the power of the Taira was finally broken and Nino-ama, Kiyomori's wife, jumped into the sea, holding in her arms the young Emperor Antoku, then only eight years of age. Mr. Asso gives only the barest outlines of the various events, but his book will be found very useful by those who desire to make themselves familiar with the land-marks of Japanese history, and to acquire a clue to the better understanding of many subjects employed in the decoration of art objects.

COMPARATIVE CIVILIZATION.

NO one, whether Japanese or foreigner will be found to say a word in extenuation of the conduct of the *soshi* whose lawless proceedings in respect of their country's domestic policy have suggested the possibility of their attempting violence against the promoters of the recent Treaty Revision Meeting in Yokohama. The authorities have adopted vigorous measures to guard the persons of these promoters, rightly

judging that in such a case it is better to exaggerate the danger for purposes of prevention than to minimize it for the sake of the country's reputation. The *soshi* are a pestilence which will be stamped out, sooner or later, we have no doubt, but which, though confined to a very limited circle, gives the enemies of Japan a strong handle to attack her. We cannot, however, see the fairness of asserting that because Japan is so unfortunate as to possess a small band of turbulent politicians who rely on force to further their views, she should therefore be pronounced unfit to be admitted to the comity of Western nations. The justice of such a contention will be better appreciated if we place, side by side, the argument itself, in the words of the newspaper advancing it, and some extracts from the telegraphic news appearing in the same issue of the same journal:—

Meanwhile, we notice that the Government has found it advisable to double the guards exactly told off for the protection of certain foreigners. But what a nice commentary this is on the boasted civilization of the country, so of its right to be placed on the same footing with other nations, that because the foreigners residing here protest against being placed under the Japanese jurisdiction without some adequate reason—the Government is obliged to take special measures for their protection.

London, August 20th.—A dispatch from Rome states that a big socialist conspiracy has been uncovered in that city. It consisted in the houses of working men belonging to secret societies the police have found bombs, charged with powder and dynamite, and correspondence of a dangerous character with foreign socialists. Republican flags intended to be used in case of an outbreak were also found.

Trieste, August 20th.—A bombshell was thrown into the office of the chief of Police yesterday and exploded, smashing the door and windows and severely wounding the secretary.

Another bomb with a fuse attached was found in a railway station in time to prevent a catastrophe.

It is surmised that the outrage is the work of Italian republicans who have headquarters here, and who strenuously and violently advocate the annexation of Trieste to Italy and the proclamation of an Italian republic.

The Austrian Government is generally considered to treat these turbulent agitators with a leniency that amounts to absolute weakness.

Another bomb was exploded today at the threshold of the office of the Editor of the *Adria*. A boy was killed.

A JAPANESE JOURNAL ON ENGLISH SELFISHNESS.

UNDER the heading "Selfishness of Englishmen," the *Kokumin-no-Tomo* writes as follows:—"We have heard that the English are a selfish race, but we never supposed them capable of insulting and belittling Japan as they lately did. We did not imagine that, on the plea of not being able to safely trust the Japanese courts of law, they would seek to sacrifice the aspirations and honour of this Empire on the shrine of their own selfish motives. Surely they know very well that Japan's progress has received the recognition of the world. Surely they know that their countrymen at home recognize her progress and admit the necessity of revising the Treaties. Surely they see with their own eyes the advance of Japanese civilization and the improvement of her legal institutions. Surely they know that the administration of justice in this country is comparatively free from corruption and partiality. Surely they know that the Japanese are a plain, simple, and honest people, with whom they can conclude an equal treaty without any danger to themselves. Surely they know that there is no cause for uneasiness in submitting to Japanese jurisdiction. We now discover that the selfishness of Englishman is without precedent in the Orient. The only impression left on our mind by the meeting of the 11th instant is that the English are capable of going to the extremes of selfishness. The meeting was attended by other nationalities besides the English, but we need not pay attention to them, as they were evidently led into the movement by the example of British subjects. It is Englishmen, the chief actors in and instigators of the movement, who deserve our condemnation. It is Englishmen whom the Japanese ought to censure with the voice of just anger and the pen of patriotism. Great Britain has hitherto been the leading power in Japan, but she has forfeited her place by the recent action of her subjects. Henceforth the word "Englishman" will signify a thing of venom, and English manufactures will be regarded as one regards evil insects. Is

this an advantage to England? The English residents in this country, probably as indifferent to the interests of their own country as they are to those of Japan, may not trouble themselves about such questions. But we should like to know what their countrymen at home think about the matter."

Evidently conscious of the danger of this inflammatory writing, the Tokyo journal, in an editorial note, warns the youth of the country against having recourse to any rash or violent measures. It tells them that such conduct will injure rather than promote the cause of the country. We, in turn, would ask the *Kokumin-no-Tomo* whether it really believes the diatribes it utters about British selfishness and so forth. Its editor, having arrived at years of discretion, must know perfectly well that the first duty of every rational being is to look after his own interests, and that the British residents of Japan, having only a very limited experience of Japanese jurisdiction, behave exactly as shrewd folks would behave anywhere on being asked to give up the protection of laws which they know and tribunals which they trust for that of laws which they do not know and tribunals which they have as yet had no practical reason to believe in. Could they change places with the Japanese, Englishmen would doubtless agitate at least as much as the Japanese for the recovery of their judicial and tariff autonomy. On the other hand, could they change places with the British residents, the Japanese, we venture to assert, would behave just as the latter are behaving. All this talk about selfishness sounds silly in the mouths of grown up people. The very same spirit which makes the Japanese seek to extend the sway of their laws and tribunals to every foreigner within their territories, that very same spirit prompts Englishmen to cling to laws which are the outcome of their national character and hardly earned experience, and to tribunals which the civilized world has learned to regard as standards of impartiality and legal acumen. Granting that there are some Englishmen who oppose treaty revision chiefly because their business interests are in favour of keeping things *in statu quo*, what has the *Kokumin-no-Tomo* to say of the Japanese who opposed it for precisely the same reason last year?

A CRISIS IN THE HISTORY OF CHRISTIANITY IN JAPAN.

SAYS the *Kokumin-no-Tomo*:—"The Christian belief, which has been hardened by the discipline of the past ten or fifteen years, is about to pass through a crisis. There are at present neither men nor books that can be taken as guides in matters of Christian belief, and every believer follows the bent of his own mind. Some have turned Unitarians, some lapsed into atheism; while others have turned sceptics. The present is a period of dead lock in the history of Christian evangelization. But as men of true loyalty can only be known at a time of national disaster, so Christians of firm and genuine belief are to be discovered at a time like the present. This day is, in fact, the vital season of test for Christian believers. On the whole we are glad that such a period has come." The meaning of this somewhat mysterious article may be gathered from what we have written from time to time about the utterances of Mr. Yokoi and others. The intellect of the Japanese is too subtle and their acquaintance with Western philosophical writings too intimate to suffer them to accept without cavi the somewhat chequered Christianity presented to them by the missionaries. To us who have been in the presence of sectarian disputes all our lives, it seldom occurs to observe the intrinsic pettiness of the questions that divide the followers of one faith into so many camps. Possibly if we had lived in the days when these insignificant mole-hills of dogma began to assume the dimensions of mountains, some of us might have been wiser and more liberal than the men of the time. But as it is, we accept all the schisms with traditional complacency, and talk of Christianity as one whole faith, forgetting how many angles

and facets it has developed under the friction of warring intellects and rival conceits. But when we bring this faith and submit it for the inspection of a people like the Japanese, they at once perceive how incomparably better adapted to human needs would be the original creed stripped alike of the theories of Paul and of the corollaries of Cephas. The unsightliness and embarrassment of Sectarianism are speedily appreciated by them, and they conclude that if they are to be Christians at all, their Christianity should be of a purer and more uniform type. They wish, in short, to receive the creed but to reject the excrescences that have grown upon it since the days when it was first preached by Christ and his disciples. Considering that Buddhism too has its sects, more numerous than even those of Christianity, one imagines that the Japanese should not show themselves so exacting. But Buddhist Sectarianism has ever been a very gentle business, a name rather than a reality; and besides, people often condone in an old friend what they will not pardon in a new acquaintance. So this inquisitive and eclectic nation aspires to have a Christianity of its own, and the ambition, happening to suit the temper of the present time exactly, seems on the point of bearing practical fruit. Years ago, the Rev. Dr. Eby, whose clear insight enabled him to see farther ahead than most people, laid down the principle that the Missionaries should aim steadily at self-effacement and at the transfer of their directing and leading functions to Japanese. We doubt whether even he foresaw how soon his precept would have to be carried into practice. Too soon, perhaps; for it is difficult to think that some unwholesomely morbid impulse does not underlie the eagerness of the rising generation of Japanese to assert their independence, and take the reins of everything into their own hands. But they are hard folks to understand. They manage somehow to walk erect in places where, according to foreign views, they ought inevitably to stumble. Perhaps they will keep their feet successfully in the present instance also.

JAPANESE COMBS.

M. THEODORE DURET, writing in the last number of *Artistic Japan*, says that among women the Japanese were the first to transform the comb into an ornamental object and fix it on the head. For the purpose of dressing and cleaning the hair combs were certainly used in very remote times, and it is on record that the Assyrians had combs adorned with lions carved in open work, that the Egyptians also decorated their combs richly, and that under the Carolingians ivory combs—called liturgical because they were used in the services of the church—were covered with elaborate carving representing figures and intricate scenes. All these, however, were after the fashion of the modern tooth-comb; that is to say, they were made with two rows of teeth and a space in the middle for grasping. No one thought of wearing a comb with one row of teeth to confine the hair and at the same time to ornament it. Nor does it appear that the fashion had its origin in Japan before 1700. Such, at least, is the conclusion arrived at by M. Duret, and as he seems to have expended a good deal of research upon this part of the subject, we accept his verdict while regretting that his enquiries did not carry him beyond the preliminary stage of comb-wearing. During the first fifty years after the wearing of combs had come into vogue, one only was used; but by and by another was added, and ultimately the number rose to three. It was not long, however, before the artistic simplicity of the national taste repelled against this abuse. To women of easy virtue was abandoned the privilege of loading the head with ornaments so numerous and heavy that their wearer could not endure them for more than an hour at a time. The refined lady contented herself with one little comb, sometimes elaborately decorated but generally quite plain and made of pure amber tortoise-shell, the paler the colour the better. Immense prices were paid for these combs of *bekko*. Their manufacture

constituted a special art, and to construct one of the usual dimensions—say three and a half inches long and an inch and a half in depth—the purest portions had to be taken from a large quantity of shell. A few years ago gold combs were in fashion. That was the epoch when Western civilization reached the zenith of its vogue; the time when a fine gentleman's three characteristic possessions were an Arabian horse, a gold watch, and *credat Judæus*—a concubine. Why this third chattel should have been deemed an evidence of attachment to the principles of *bunmei kaika*, we cannot tell. Perhaps the gentleman who writes indignant journalistic paragraphs about being called *Ijin*, *Tōjin*, and so forth, will be kind enough to enlighten us. At all events gold combs found favour in that era of extravagant display, and the worker in metals lavished upon them all the resources of his wonderful art. They did not survive, however. The æsthetic charms of the straw-yellow tortoise-shell reasserted themselves and still hold the field. But for girls between thirteen and eighteen there are combs of such variety that volumes might be filled with their designs, shapes, and colours. Some exquisite specimens encrusted with rich lacquer were shown at the recent Exhibition, but their glitter evidently outraged the taste of the time, for the handsomest of them remained unsold. Nowhere, perhaps, are the subtleties of fashion more inexplicable than in Japan. The slightest difference in the curvature or dimensions of a comb catches the eye of the Japanese lady, and either charms or revolts her. The magic words *riuko* and *hayari* have even more significance for her than for her Western sister, though happily they do not lead her into the same excesses and extravagance. M. Duret might have told us much when he set out to talk of combs, but his essay is of the most meagre and disappointing description. He has merely dipped into the *Miyako Fuzoku Keizai-den* and marvelled at Hokusai's two volumes about combs. Hokusai's two volumes! Think what a part the comb must have played in the ladies' life of Hokusai's time when a great artist could choose such an object for two books of paintings!

THE IMPERIAL NOMINEES TO THE HOUSE OF PEERS.

THE Emperor on Tuesday is reported to have nominated the following gentlemen to be members of the House of Peers:—

Mr. Obata Tokujin, President of the Keio Gijuku School.
Mr. Iwasaki Yanosuke, President of the Mitsu Bishi Company.
Mr. Narahara Shigeru, President of the Japan Railway Company.
Mr. Shitohsawa Eiichi, President of the 1st National Bank.
Mr. Kawada Koichiro, President of the Bank of Japan.
Mr. Tomita Tetsunosuke, ex President of the Bank of Japan.
Mr. Fujita Shiro, ex-Prefect of Ehime.
Professor Toyama Masakazu, Director of the College of Literature.
Professor Kikuchi Dairoku, Director of the College of Science.
Professor Funaiichi Kōi, Director of the College of Engineering.
Professor Hozumi Nobushige, Director of the College of Law.
Professor Komakamura Kiyomori, of the College of Literature.
Major General Yamagawa Hiroshi, Director of the Higher Normal School.
Mr. Iwamura Michitoshi, Privy Councillor.
Mr. Nishimura Shogeki, Court Councillor.
Mr. Matsukuri Rinshe, Vice Minister for Justice.
Mr. Miyoshi Tazuo, Chief Public Prosecutor of the Court of Cassation.
Mr. Hori Shingoro, President of the Tokyo Court of First Instance.
Mr. Kuki Ryūichi, President of the Imperial Museum.
Mr. Kawada Gō, Director of the Bureau of Imperial Sanctuaries in the Imperial Household Department.
Mr. Hirata Tōsuke, of the Legislative Bureau.
Mr. Iwamura Wataru, of the Legislative Bureau.
Mr. Kaneko Kentaro, Chief Secretary of the House of Peers.

Mr. Ito Miyoshi, Chief Secretary of the Privy Council.
Mr. Sone Kosuke, Chief Secretary of the House of Representatives.
Mr. Nagayo Sensai, Director of the Sanitary Bureau in the Home Department.
Mr. Kato Hiroyuki, President of the Imperial University.
Mr. Hamano Acata, Director of the Special School Affairs' Bureau in the Educational Department.
Mr. Nakamura Masanori, Senator.
Mr. Nishi Shū, Senator.
Mr. Maruyama Sakura, Senator.
Mr. Hōsokawa Junjiro, Senator.
Mr. Ando Sokumei, Senator.
Mr. Nomura Sosuke, Senator.
Mr. Kanda Kohji, Senator.
Mr. Mima Yasushi, Senator.
Mr. Mayeda Masanao, Senator.
Mr. Tanaka Yoshio, Senator.
Mr. Shigeno Yasutsugu, Senator.

ALLIANCE BETWEEN UNITARIANISM AND BUDDHISM.

IN a recent number of the *Rikugo Zasshi*, Mr. Takahashi Goro invites the attention of the Rev. Mr. Knapp to the shortsightedness of his alleged wish to ally himself with the Buddhists. Mr. Takahashi premises that he entertains no ill-feeling towards Unitarianism itself, but being convinced of the folly of the views of its representative in Japan as to Buddhism, he cannot but give utterance once more to the opinions he expressed at the Unitarian banquet at the Rokumeikan some time ago. Though his ideas as then expressed called forth various comments, he maintained uniform silence, because, in the first place, he was too busily occupied to take notice of his critics; and, in the second, because he considered their criticisms to be of a nature requiring no formal answer. Since then, he observes, the Buddhist press throughout the country had more and more distinctly shown a tendency to utilize Unitarianism as an instrument for attacking Christianity. Mr. Takahashi, however, believed Mr. Knapp to be too sagacious to become a tool of Buddhists. What, then, was his surprise to learn that the Unitarian missionary is still bent on cultivating the friendship of the Buddhists, as is shown by his article in the fifth number of the *Unitarian* on the similarities and dissimilarities of Unitarianism and Buddhism. Mr. Takahashi even goes so far as to say that Mr. Knapp's attitude towards Buddhism is that of one who flatters, prays, and solicits a favour. Does Mr. Knapp know, he asks, what Buddhism is really like? Buddhism is essentially an atheistic religion. This proposition can be proved by quotations from the Buddhist sacred writings; but Mr. Takahashi is too busy to do so, nor does he think it worth while to take so much trouble. He recommends Mr. Knapp to procure Viscount Torio's treatise called "*Shinsei Tetsugaku Mushin Ron*." He thinks Mr. Knapp does not know what he is about when he states that Buddhism arrived at the conception of God through the old philosophical ideas (*Bukkyō wa kodai no tetsugaku-teki shisō ni yotte jōtei ni kwan-suru shisō ni tasseru*). He then proceeds to refute another statement of Mr. Knapp, that on the fundamental ideas of creation Unitarianism and Buddhism are directly opposed to orthodox Christianity. Mr. Knapp is represented to have stated further that creation is not an event, but a perpetual progress which has neither commencement nor end. Now, in the first place, it is an abuse of a philosophical term to speak of "creation" in connection with Buddhism, for

how can there be any idea of creation, properly so called, in a religion that does not recognize God. For is it correct to say that creation is a perpetual progress without either commencement or end, because man, as maintained by no less an evolutionist than Virchow, does not seem to have made any progress during the first five or six thousand years. There is no reason, he goes on to observe, why there should not be any idea of progress in atheistic creation. If Mr. Knapp means to adopt the theory of atheistic evolution, Mr. Takahashi thinks he had better leave the Unitarian camp and join the atheistic Buddhists. Our author, however, believes that these apparently atheistic opinions have been expressed by Mr. Knapp for the purpose of obtaining the goodwill of Buddhists, for from other utterances of his it is evident that he recognizes the existence of God. Mr. Knapp is said to have observed, further, that Buddhism is, next to orthodox Christianity, a representative of the pessimistic religions but that Unitarianism represents the optimistic religions. Mr. Takahashi does not attach much importance to the fact that Christianity is included among the pessimistic religions of the world, for he thinks that this is merely a device of Mr. Knapp's to please his Buddhist friends. From the above statement Mr. Knapp ought to know that the religion he represents and the religion which he is so anxious to praise, are in their origin diametrically opposed to each other. Mr. Takahashi then refers Mr. Knapp to Hartman and Schopenhauer, remarking that these authors will no doubt enlighten him as to the nature of Buddhism. Mr. Takahashi goes on to observe that in thus criticizing Mr. Knapp's paper, he does not in any way intend to criticize Unitarianism itself. But he warns Unitarians against being utilized by Buddhists, and advises them to cultivate the friendship of their natural allies. What ideas Buddhists entertain about Unitarianism may be seen from the following passage in Mr. Maeda Unkei's tract "Shinshu Mondo":—"Unitarianism will not be productive of any positive benefits, but as it will be negatively useful in neutralizing the evil effects of Christianity, we approve the spread of that religion for the sake of the country; nay, for the sake of our Shin-shu sect." Mr. Takahashi, therefore, advises Unitarians to follow the example of the Rev. Mr. Spinner and his disciples, who, while professing opinions not very different from those of Unitarians, maintain intimate relations with other Christian sects.

A JAPANESE FABIUS.

SENATOR KAYEDA is an official who has made his mark. Men seek his opinion on all occasions of national difficulty, and newspapers quote his words as interesting contributions to public discussions. The *Matsui Shinbun* has accordingly elicited his ideas about Treaty Revision, the question now occupying so large a share of men's thoughts. Senator Kayeda is represented as having delivered a Fabian verdict. "There is no occasion," he said, "to revise the Treaties at present. I do not know the terms upon which it is now proposed to effect revision, but I do know what Professor Stein observed. 'Japan's foreign treaties,' the Professor said, 'were made by the former Government, the Bakufu. They are very imperfect affairs, beyond doubt, but if they are revised now, and if the revised treaties are still imperfect, Japan's prestige will suffer proportionately. Therefore there is no occasion to proceed with the undertaking hastily. All that need be done is to make preparations: to bring the nation to one mind, and develop the country's strength and resources. With national wealth, a powerful military organization, and public unanimity, Japan can be sure of obtaining what she wants whenever she chooses to ask for revision.' I agree with this view," Senator Kayeda said in conclusion. It is a pity that the Senator does not come to Yokohama. He would find several people in the foreign community ready to endorse his Fabian policy. From the side of his own nationals he is more likely to be met by the pertinent question—How is it that Japan's prestige would suffer by

revising her Treaties on lines which, though not absolutely perfect, at any rate secure the re-establishment of her sovereign rights, whereas, by leaving the Treaties unrevived, she continues to be debarr'd from the exercise of those rights, and to be condemned to national semi-isolation on the openly avowed grounds that her civilization is incomplete? As ordinary men, endowed with an ordinary sense of comparative values, we fail to follow the reasoning of Professor Stein and Senator Kayeda.

CAPTAIN LANG.

We take the following from the *Chinese Times* :—

The *Japan Mail*, in an article on "Foreign employees of China and Japan," makes the very true observation that the conduct of each of those countries towards foreigners appears to be the greatest advantage when viewed from a distance. It also penetrates to the marrow of the relationship between the Chinese and Japanese Governments and their foreign employees. Apropos of Captain Lang's resignation of the Chinese service, the *Mail* lays it down that neither China nor Japan ever has or ever can place a foreigner in actual command of their militant forces. This was also declared to be the case, so far as China is concerned, in the article we wrote on the occasion of Captain Lang's resignation. In claiming the position of joint-commander-in-chief, therefore, Captain Lang must have laboured under a serious misunderstanding. The question is who is responsible for the misunderstanding? and it is not answered by the flippant, and so far as the manipulation of facts goes—audacious letter which was recently sent from Tientsin to our Shanghai contemporary. In responding a second time to the request of China to take service as organizer of the fleet Captain Lang made his conditions perfectly clear that without full authority he would not undertake, as he certainly could not fulfil, the task. This was the subject of long protracted negotiations at Tientsin, and Captain Lang's terms were ultimately agreed to by H.E. the Viceroy, or he would never have entered the service. How the position of a foreign Admiral in the Chinese Navy was reconciled with the fundamental principle which forbade any such thing is best known to His Excellency and his literary staff; it is a resource of Chinese dexterity in the use of verbal illusions were probably taxed to the utmost on the occasion. But the fact remains that Captain Lang was given equal rank with Admiral Heng, with whom he acted as joint-commander, all official correspondence and all orders to the fleet being carried on in their joint names; and Captain Lang, with the full knowledge and approval of the H.E. Government, assumed the rank and title of "Admiral." In that capacity he proceeded to England and brought out the new ships, receiving at every port of call the full recognition of his rank; while on board he carried on all the duties of command without question. It was all the time under a delusion, which was carefully nursed by the Chinese authorities, until the fulness of time came when they could drop the mask. Whether the incident of the flag was brought on for the purpose of effecting the breach which had been long plotted for by the junior officers, matters little, as whether accidental or not it was the first revelation to Captain Lang of the position in which the Chinese regarded him, and when Li Hung-chang did not reply to his telegrams direct but through those whom Captain Lang considered his own insubordinate subordinates the whole deception was finally exposed. Captain Lang or his advisers may indeed have been too easily deceived, but it is not an imputation which lies gracefully in the mouth of any of those who were parties to the deceit. Captain Lang would have been quite willing to serve without rank, as naval adviser, but as organizer of the fleet both rank and authority were necessary to efficiency.

RATIONALISTIC TENDENCIES AMONG JAPANESE CHRISTIANS.

In reviewing a newly published treatise called "Kirisuto" (Christ), by Mr. Kato Satoru, who recently renounced the orthodox belief in favour of Unitarian doctrines, Mr. Takahashi Goro writes as follows:—"The Japanese Christian community has been seized by a sort of panic. Encountering the persistent attacks of the Buddhists, who, being now armed with sharp weapons imported from the Occident, have changed their attitude of defence into one of aggression, the Christian warriors—especially the pastors—who had until lately been the aggressors, have fallen back with timidity and precipitation from their outposts, and are now devoting themselves to the defence of their original position. The two sides have thus completely exchanged tactics. There are some even whose religious belief has been shaken by a perusal of "Robert Elsmere," and who, not knowing what to do, have made a headlong rush into the inner part of the citadel called Christ, and there stationed themselves as in a last place of refuge. Their example is being imitated by an increasing number of weak-minded Christians. These persons, instead of defending themselves on legitimate grounds (though in this case even to go on the defensive is a sign of defeat), have abandoned to the enemy their outer fortifications in every direction. If they sur-

render themselves or desert their positions in this manner, while thousands of fine recruits still flock to their standards, these Christian pastors are simply so many religious General Bazaïnes. We are afraid that such men, shallow in learning, weak in judgment, and unable to understand the works of profound scholars, may imitate the folly of that army of old, which was frightened into a wild stampede by the cries of water fowl.* Christianity, in the sense in which it is now generally understood, must stand or fall on its general merits. To forsake the outer fortifications and take refuge in the inner part of the citadel, is therefore neither more nor less than a desertion of Christianity. Such pastors ought to resign their positions, and, if they like, to originate a sect of their own. Otherwise they may inflict no small injury on the religion which they nominally profess. If Christianity be really unworthy of belief, its fall is only natural. But nothing can be more deplorable than that it should be lowered in public esteem by the conduct of incompetent pastors. Important as this question is, it is at the same time a large topic, and cannot be very well handled in a limited space. Further the present reviewer, being, so to speak, an outsider, will not here try to deal with the subject in a comprehensive manner. When we see that men, not competent to rightly understand the Bible, set about the hopeless task of criticising the sacred writings, we are inclined to admire the wisdom of the Catholic fathers in withholding the Holy Scriptures from their flock as dangerous weapons in the hands of children. * * * Must we also apply these observations to the author of the work now before us? No; yet, though he is bold, he is not in some respects a man of matured opinions being still a youth. He is, therefore, sometimes exceedingly enthusiastic and at other times exceedingly cold. Only recently he started a periodical called *Kyōgi* (Doctrine) for the purpose of expounding the theology of Calvin, and while the ink was as yet hardly dry on his journal he adopted the doctrines of Unitarianism. In entering the Unitarian camp, however, he has not done so as a conquered soldier, but as a general. He convened a general meeting of the congregation to which he belonged, and frankly avowed the reasons for his change of opinion. His frank and straightforward conduct ought to make double dealing pastors blush. . . . "Kirisuto" is an attempt to elucidate the teachings of Christ, principally from the human side of his nature, and, if the author permits us to take such a liberty with him, his book is, if not an imitation of a similar one by Strauss, a reproduction of that by Reuau. But as he has written avowedly from the standpoint of a Unitarian, his work is naturally preferable in some respects to the writings of the ambiguous pastors above alluded to."

THE RELIEF OF THE "ERTONGROUL'S" CREW.

THE *Choya Shinbun*, in an article dealing with the intention manifested in several quarters to subscribe money for the relief of those who have suffered by the loss of the Turkish man-of-war *Ertongroul*, says:—"No individual should accept the smallest iota unless its acceptance were sanctioned by reason and common-sense, and the proposition has even greater force in the case of a nation. There is no question of the wealth or poverty of either the giver or the receiver. Since the loss of the *Ertongroul* several benevolent people have intimated their wish to subscribe towards a relief fund. The desire shows a most charitable motive, which would almost seem to warrant the justice of the action. But international law and courtesy decree that a man-of-war may not be treated like a merchant vessel. The loss of the *Ertongroul* is the loss of the Ottoman empire, and our conduct in respect to the event must be governed by considerations of national etiquette, and not of individual desire. The money which it has been proposed to collect for the relief of those who suffered by the wreck of the *Ertongroul* might, in our opinion, be far more

* Allusion is here made to the flight of an army, said to have been fifty thousand strong, which was posted under Taira-no-Koremori on the western bank of the Fushikawa to check the progress of Yoritomo's arms.

fittings employed in succouring the families of the many Japanese who lost their lives in the gale that sent the *Erlongroul* to the bottom. There are no doubt many Japanese without pausing to weigh these considerations, allow themselves to be actuated simply by their benevolent instincts. In this category we must class Count Goto, Minister of State for Communications and also one of the plenipotentiaries appointed to represent this country in the negotiations for revision of the treaties. We would ask Count Goto whether, if he were entrusted with control of the foreign relations of the Ottoman Empire, he would accept donations from the people of Japan for a purpose which is peculiarly within the official province of the Government of the Sultan.

NIKKO.

MR. KATO SHOICHIRO, the manager of the Nikko Hotel, writes to one of the hotel's Yokohama patrons as follows:—"The unparalleled scenery of the Nikko mountains is made still more beautiful at the commencement of October, as it is then that the maples commence to put on their autumnal tints. About the 15th, the adjacent mountains are rich in polychromatic foliage, and as one gazes on the scene the maples standing out against the blue firmament appear to the imagination of the enraptured visitor as some vast brocade curtain woven of rich silks glorious in colour, kaleidoscopic in its blendings of light and shade, and suspended by an unseen but potent force from the ethereal canopy of heaven above. Nikko with its grand mountains, its leaping cascades, its streams and lakes, is year in and year out the most famous spot for beautiful landscapes in all Japan, but, when the deep crimson blush of autumn tinges the maples, words fail to adequately describe the exquisite and surpassing loveliness of the scenery. It is for this reason that a large number of visitors come here every year, and as now the railroad is open it may be confidently expected that the number will be considerably augmented. I need hardly add that we shall do all in our power to make our guests as comfortable as possible, and to that end we are endeavouring to improve our arrangements in every way."

CREUSOT.

EVERYBODY knows the great part played by the Creusot Works in the industrial competition which, during the past thirty years, has given the world such terrible engines of attack and defence. It is natural that such huge and nationally important works should be adequately described, and this has now been done by Lieut.-Colonel Hennebert, in a profusely illustrated volume of 212 pages. People interested in the story of one considerable branch of modern artillery progress will find it recorded in this book with considerable minuteness. We shall content ourselves here, however, with noting some facts, not generally known, among them the statement of Colonel Hennebert that 108 years have passed since Creusot first became a place of manufacture for artillery. Soon after that time (1782), arrangements were made, under the superintendence of an English engineer, Mr. W. Wilkinson, for the manufacture of the steam engine shortly before invented by Watt. Then followed the Revolution and the series of wars to which it led, during which period the activity of the Creusot Works never flagged. From 1815, however, till 1836, was a time of comparative idleness and embarrassment, and it was only when (1836) the establishment came into the hands of the Schneider Brothers and Company that it began to recover its importance. The first French locomotive was made there in 1838, and thenceforth all the locomotives used on the line of Saint-Etienne, Saint-Germain, and Versailles, as well as all the engines for the steamers navigating the Saône and the Rhône, were turned out at the works. Of course the war of 1870 kept Creusot pretty busy, but it is really since then that the works have acquired their world-wide reputation for the forging of steel ordinance. From 1875

to the present time they have supplied to the French Government 5,165 pieces of artillery for land service; and 500 big guns for the Navy, in addition to much other material of war. "At this moment," says Colonel Hennebert, "Creusot is engaged in the manufacture of a quantity of barrels for revolver-cannon and rapid firing guns of the Hotchkiss system; two steel guns of 303 centimètres to the order of the United States; four guns of 24 centimètres and 36 calibres, and 4 carriages, to the order of the Chinese Government; and a quantity of steel material for the Imperial Arsenal at Osaka, Japan."

THE CEREMONY OF OPENING THE DIET.

THE *Hochi Shimbun* publishes what professes to be, and very probably is, the official programme for the opening ceremony of the Imperial Diet (*Teikoku Gikai Kai-in-shiki*) on the 3rd of November. The following is the programme:—

1. The members of each House to assemble at their respective Houses at 9 a.m.; members holding patents of nobility and civil and military officials to be in full dress; the rest in frock coats. Orders to be worn. Persons taking part in the ceremony *ex officio* to be in full dress.
2. By "persons taking part *ex officio*" are meant Princes of the Blood holders of the Great Order of Merit, the Lord Keeper of the Privy Seal, the Ministers of State, the President and Vice-President of the Privy Council, the Minister of the Imperial Household, the Privy Councillors, the Chief Chamberlain and the Commandant of the Body Guards.
3. At half-past ten His Majesty will leave the Palace and proceed to the House of Lords. Imperial Procession National Ceremony. The *Sansetsu-in* will form His Majesty's suite.
4. The Presidents, Vice-Presidents, Chief Secretaries and Secretaries of the two Houses will assemble within the gates to receive His Majesty.
5. The President of the House of Peers will conduct His Majesty to the *Benden* (Imperial Waiting Room).
6. After His Majesty has reached the Waiting Room, the members of the two Houses, in accordance with the instructions of the residents and the plan of the ceremonial, will take their places.
7. The Master of the Ceremonies will pray His Majesty to come to the Diet.
8. The Emperor will follow the Master of Ceremonies to the House. The Gait seal will be handed to His Majesty by the Chamberlains. The Princes of the Blood and the suite will form up in their places.
9. The Emperor will mount the Throne. All the members with salute. The Minister President of State will present to His Majesty the Imperial Message. The Emperor will read the Message. At its conclusion all present will make an obeisance. The President of the House of Peers, advancing to the Throne, will receive the Imperial Message and carry it to his place.
10. Guided by the Chief Chamberlain, His Majesty will withdraw. The Princes of the Blood and the Imperial Suite will retire.
11. His Majesty will return to the Palace. The Presidents, Vice-Presidents, Chief Secretaries and Secretaries of the two Houses will bow His Majesty out of the gates.
12. The members of the two Houses will withdraw.

A REMARKABLE FEAT OF SEAMANSHIP.

ON her last voyage from Shanghai the Japan Mail Steamship Company's steamer *Saikyo Maru*, which is under the command of the universally popular Captain George Conner, was the means of saving a Chinaman's life under very remarkable circumstances. After leaving the Shanghai river the ship encountered a heavy gale, increasing by and by to almost typhoon force. As she battled her way against the big seas, a junk was descried evidently in a helpless condition. Steering towards her, it was seen that she had one man on board, lashed to the mast, and that the chances of her remaining afloat much longer were infinitesimal. To launch a boat was out of the question in so heavy a sea. Captain Conner, however, was not the man to leave a fellow-creature to his fate. He headed the *Saikyo Maru* right for the disabled Chinese craft, and by remarkably skilful steering, managed to get the junk under the lee bow of the steamer, and in contact with her. In a very short time, of course, the two vessels drifted apart, but before the junk passed to the stern of the *Saikyo*, ropes had been thrown to the Chinaman and he was successfully hauled on board. A rescue under such circumstances speaks highly for the seamanship and humanity of Captain Conner.

A CURIOUS STATEMENT.

WE translate the following from the *Nichi Nichi Shimbun*:—"With regard to the origin of the Anti-revision meeting held by British subjects in Yokohama, and to the various steps taken

* The term used in *Sansetsu-in* is those entitled to rank with the members.

by them, one rumour says that they acted on news received from the London Chamber of Commerce; another, that Mr. Thomas, who is now in England, furnished the intelligence. But recent information makes it quite clear that the revelation was made by a certain foreign Minister. The country which he represents has always hitherto been particularly friendly to Japan, and has treated her well in every respect. It was therefore not to be supposed that its Representative would encourage the foreign residents to oppose Treaty Revision. It does not appear, however, that the adoption of such a course by the Minister in question on this occasion only, is attributable to any exceptionally strong reason. One night, at a dinner where Englishmen and Americans were present, he is reported to have told the convives that they must not any longer rely on the continued enjoyment of commercial power and special conditions of land tenure hitherto prized so much, and that they had better make up their minds to a change. The Englishmen who heard these words were greatly perturbed, and proceeded at once to start an agitation."

* * *

The mystery affected by the promoters of the Treaty revision Meeting of the 11th ultimo, has led to the circulation of numerous rumours and is evidently responsible for the above. Having avowedly convened the Meeting in consequence of information that Her Majesty's Government contemplated the unconditional surrender of extraterritorial jurisdiction, the promoters of the Meeting took great care to afford their audience no manner of clue as to the source of that information. Mystery always begets conjecture, and when conjecture becomes sufficiently explicit it may take the shape of a mischievous libel. That is what has happened in the present case. The *Nichi Nichi Shimbun's* report, though names are excluded, can only be read as indicating that the information obtained by the promoters of the Meeting came from the American Representative in Tokyo. In one respect the publication of such a rumour must be called fortunate, for it is incomparably better that a grave falsehood should assume sufficiently tangible form to be openly contradicted, than that it should be left to circulate without rebuttal. We need scarcely say that the *Nichi Nichi Shimbun's* rumour implicating the United States Minister is absolutely without foundation. From whatever source the promoters of the Yokohama Meeting obtained their intelligence, the American Legation was not concerned in the matter, either directly or indirectly. A violation of diplomatic confidence is bad enough, but in this case such an act would have involved a radical departure from the eminently friendly principles by which the dealings of the United States Legation with Japan have been for many years guided.

AMERICAN NAVAL OFFICER DROWNED AT HOMOKU.

ON Friday afternoon about half-past five o'clock one of the officers of the U.S. ship *Swa-tara*, now in this port, lost his life by drowning while bathing at the Homoku beach. It appears that two of the Ensigns of the *Swa-tara*, Messrs. H. E. Rumsey and V. O. Chase proceeded in the afternoon to Homoku, where Mr. Rumsey decided to have a bath, his companion, however, declining to go in. Mr. Rumsey, having entered the water, swam about for a little, but suddenly sank in very little over his depth. As soon as the occurrence was observed attempts were made to render him assistance, but in the approaching dusk these efforts were a good deal delayed, and twenty minutes elapsed before the body of the unfortunate young gentleman could be recovered. Among those who were attracted to the spot were several who were familiar with the methods prescribed for the resuscitation of persons recovered from the water, and these used every endeavour to restore animation, but unhappily without avail, for when Drs. Eldridge and Micheaux, who had been sent for,

arrived, life was extinct. The body was conveyed to the Naval Hospital, where it now lies. The deceased was an accomplished swimmer, but is supposed to have been seized by cramp. This fatality, coming so soon after other melancholy occurrences of late has cast quite a gloom over circles in which the unfortunate officer moved.

The remains of Ensign H. E. Rumsey of the U.S.S. *Swatara* were interred on Saturday afternoon in the Yokohama Cemetery. Detachments were landed from the *Omaha* and the *Swatara*, with the band of the former vessel, to pay the last honours to the deceased officer. A short service was performed at the American Naval Hospital, whither the body when found had been conveyed, and the coffin on which were placed wreaths from friends and comrades, was then carried to the grave. Owing to uncertainty as to the hour when the interment was to take place not many of the public were present. Ensign Rumsey was about twenty-six years of age, had entered the U.S. naval service in 1882 and joined the *Swatara* in 1888. An enquiry into the circumstances attending the death of the deceased officer takes place this afternoon at the U.S. Consulate-General.

THE GERMAN PRESS AND THE JAPANESE.

SOMEbody recently asserted that the Japanese press is in far worse plight than the German press ever was. For purposes of comparison it will be interesting to peruse the following extract which we take from an essay entitled "The change of Government in Germany, in the last number of the *Fortnightly Review*—

The legal restrictions to which the German Press is subjected are contained in the Penal Law, the Law against Social Democracy, and the Press Law of May 7, 1874. Art. 1 of the Act of 1874 declares that the liberty of the Press is subject to no other restrictions than those laid down in the Act itself. Every editor of a periodical is bound to furnish the police with a copy of each number as soon as it appears; and the police can at once suppress it (1) if it does not give the name and address of the editor and of the printer; (2) if in time of war it publishes forbidden news on military operations; (3) if it contains indecent matter, provocation to high treason, or incitement to violence between one class and another, or to offences against the Sovereign or resistance to the Government; but in the case of provocation to public violence or disobedience to law (sections 110 and 120 of the Penal Code) the Act only applies if there is imminent danger of the incitement leading immediately to the commission of a crime or misdemeanour. In addition, the law against Social Democracy (October 20, 1878, section 12) provides that all prints in which Social Democratic, or Communist views are proclaimed in a manner tending to the overthrow of the existing political and social order, or the endangering of the public peace, especially as between the various classes of the population, are to be suppressed; an Act which sufficed to exterminate the entire Socialistic Press.

Where the case does not admit of simple suppression by the police, press offences are supposed to be dealt with by the courts of justice according to the law. Everybody admits that a newspaper can be guilty of treason, calumny, &c., and these offences are punishable in all civilized countries; but the German law gives a much stronger hold on the Press than that of other States, and its provisions are stretched to the full by the ingenious interpretations of the public prosecutors. As an instance we may quote that given recently to section 360, No. 5, of the Penal Code, which deals with those who cause a disturbance or are guilty of gross disorder. Hitherto the clause had been understood, according to the obvious meaning of the words, to apply to rioting, disturbing the public peace, breaking windows, &c.; but suddenly some prosecutor found out that "gross disorder" might also be caused by disrespectful attacks on the Government in the daily papers, even when no offence could be proved against any definite person; and docile tribunals accepted this reading, and passed a series of condemnations accordingly.

Another fruitful source of proceedings against the press is the law relating to personal offences (Art. 184 of the Penal Code), a law very different from the English law of libel. An offence is considered to be committed if anyone asserts or propagates a fact which is calculated to degrade another person in the public opinion, provided the truth of the alleged fact cannot be proved.

It was generally the Chancellor himself who prosecuted Opposition papers for having offended him. He kept a printed form by him for the purpose; and rarely indeed were those papers acquitted. The public prosecutors knew that there was no surer way to promotion than to hunt up offences against Bismarck and secure the condemnation of the offending papers. In the trial of Count Hermann Arnim (a relative of the unfortunate ambassador), the public

prosecutor argued that it was an offence against Prince Bismarck to deny him the virtue of generosity. And again, in the case of Baron Loe, who had commended the Chancellor's modesty in granting himself a pension of only 4,000 marks on his resignation of the sinecure post of Lauenburg Minister, the accused was condemned for damning the Chancellor with faint—or ironical—praise.

M. Th. de Bismarck, in an essay published April 18th, 1890, in the *Revue Internationale*, "Le Liberalisme en Allemagne," calculates that summing up the several condemnations, more than a hundred years of imprisonment have been inflicted on the opponents of the Chancellor on this account.

A WANT.

The *Maru Maru Chimbun* has this quaintly worded note:—

IN WANT OF A DICTIONARY.

"I think," said a young scholar, "that a good dictionary is very necessary for the success of Treaty Revision—at least for the goodwill of the foreigners."

"What a curious notice you give," replied another student. "What is the relation between the Dictionary and Treaty Revision? I don't understand."

"It can be easily explained. Have you seen the translations of the Japanese into the English which appeared in the *Gazette* and the *Herald*? Almost all of the translated words were exaggerated in the meaning. Think! The good dictionary is necessary."

The incriminated journals might flippantly reply that the *Maru Maru Chimbun* stands in as much need of a work on syntax as they do of a dictionary. But speaking soberly, we must say that the translations referred to often astonish us. In a majority of cases the renderings given convey a far harsher meaning than any one would gather from reading the original Japanese. Frequently, indeed, an English word is employed the inaccuracy of which must shock any ordinarily well informed scholar. If the translations sometimes, however rarely, err in the direction of softening asperities, we should be enabled to believe that error or ignorance was only to blame. But there is never anything of that kind. Invariably the translator more or less exaggerates the worst features of his text. Is it not a pity that this needless addition should be made to the width of the gulf already dividing foreigners and Japanese?

AN ILLUSTRATION.

Japan Mail, 27th September.

Mr. Yenamoto, in the course of his speech, grew very excited, and declared that death would not be enough for men like Mr. Lawder, whereupon the police interfered and stopped the lecture. Mr. Yenamoto alone seems to have exceeded the bounds of propriety, but his excess was certainly sufficient to make up for the comparative moderation of his fellow-speakers. We do not know whether Mr. Yenamoto's language will bring him within the grasp of the law for inciting to violence, but it will at all events exclude him from all further recognition at the hands of foreigners with whom he has been seeking interviews.

Japan Gazette, 27th September

In words of studied insolence our contemporary this morning practically tells foreigners that the policy they have pursued has been such as to provoke the ruinously sentiment *Enomoto* uttered.

THE INTERNATIONAL CONGRESS OF ORIENTALISTS.

SOME of our readers no doubt are interested in the affairs of the International Congress of Orientalists, and perhaps may have heard of the serious difficulties in that body arising out of certain proceedings at the Stockholm meeting last year. The most important official for the time being at these Congresses is the local secretary; he is the real working man at each meeting, and the comfort of the members and the success of the gathering are to a large extent dependent upon him. Besides, the statutes impose on him certain duties in regard to the arrangements for the next meeting. These matters are chiefly formal, but like many other formalities, they help to grease the wheels, and unless that is properly done everything comes to a standstill. Now at the Stockholm Meeting the local secretary was Count Landberg, the Swedish Consul-General at Cairo, who began life as a dragonian at Constantinople, and who is said to possess a wonderful colloquial knowledge of Levantine languages. He was fortunate in securing the favour of the King of Sweden, who appointed him to his present post in Egypt. Whether learned men are peculiarly sensitive, or whether want of tact on the part of Count Landberg was to blame, certain it is that the Count gave dire offence to several well-known scholars, and especially to those of English nationality. All

this, however, would probably have blown away and been forgotten, but the Count, it is said, broke the statutes in regard to the summoning of the next Congress. These, we believe, provide that a small representative committee is to be summoned at each meeting with a view to selecting a place or places for the next meeting, the selection being laid before the general meeting of the Congress for approval. Count Landberg, however, did not take the prescribed course, but evolved an arrangement from his own inner consciousness: he appointed four ex-presidents of the Congress to select absolutely and without reference to the general body of the members the next place of meeting. Amid the gaieties of Stockholm and the pleasures provided by the king for the members, this proceeding passed unnoticed, or at any rate without serious notice, but when the members returned to their homes and had time to consider the matter, especially those who had taken offence, it was seen that the Secretary's proceeding, however suitable under other circumstances, was absolutely illegal. But this left the Congress in a curious dilemma, for the statutes provide that the place of meeting must always be settled at the previous Congress and make no provision for a case such as had arisen. After sundry conferences of discontented members it was determined, we understand, on legal advice, that the Congress must go back to its original founders, namely the French scholars, in order to repair the error. This was soon done by the appointment of half a dozen or more English scholars—England being the country which was on the list for the next place of meeting—under the presidency of Sir Henry Rawlinson, to take the place of the Committee which ought to have met at Stockholm, and—as a general meeting is now impossible—to select absolutely where the Congress shall hold its next session. Thus at one time there were two Committees sitting to consider the same question, one under Sir Henry Rawlinson in London, and the other somewhere on the Continent, and having for members the ex-presidents nominated by Count Landberg. After a little negotiation the latter Committee sent in its adhesion to the former, and in this way the difficulty has been bridged over. The meeting will, we learn, be held partly in London and partly in Oxford in September next year. In the meantime another hitch has arisen: the French founders nominated as their representative on the London Committee Dr. Leitner, formerly of Lahore, a sort of modern mezzofanti and a man of some resolution and force of character. He regards himself as being to a large extent independent of Sir Henry Rawlinson and his Committee, and is reported to be unable to agree with some of their conclusions. How this new difficulty is going to be met at the present moment is a problem. Learned men are sometimes very intractable in business matters, and the less important the point at issue the more intractable they are. Probably they are so constantly engaged in the pursuit of the exact in science that they know nothing of the sweet reasonableness of compromise. However, there the matter stands now, and during the past nine months the Orientalists have been "slating" each other in fine style in various periodicals.

THE "JIJI SHIMPO'S" MEDALS.

WE referred recently to the fact that the *Jiji Shimpō* had invited a plebiscite of its readers to decide the merits of the articles exhibited at the recent Industrial Exhibition. This step was taken owing to the discontent expressed in many quarters by exhibitors who thought that they had not been fairly treated by the Judges at the Exhibition. The *Jiji Shimpō* advertised that a hundred medals would be awarded to the best exhibits in as many classes. The medals were called *Kimpai* (gold medals), but of course it was understood that this was only a *façon de parler*. The material employed seems to have been silver gilt. The medals, however, were massive and handsome and their recipients are understood to attach no small value to them. The proposal to vote was responded to by 6,620 persons, but only ninety-nine medals were

awarded, it being decided that nothing worthy of a prize had been shown in the section of paper-making machines. Our readers will probably be interested in learning the results of the competition. We quote the articles which seem to possess most claim to foreign attention:—

ARTICLE.	MANUFACTURER.	PLACE OF MANUFACTURE.
Matches	The Kogyo-Sha	Tokyo.
Tooth-powder	Saito Kichiro	Tokyo.
Cake-plates	Kawara Tokutsumi	Tokyo.
Kutani Flower-vase	Watano Kichiji	Ishikawa Pref.
Bricks	Su Miyama Shotoku	Tokyo.
Mirrors	Dou Shigezo	Tokyo.
Clocks	Atai Tameshichi	Tokyo.
Muskey safes	Takemouchi Zenjiru	Tokyo.
Umbrellas	Kawasaki Motokichi	Nagasaki.
Chairs	Miyazawa Heisuke	Osaka.
Lead pencils	The Seikin-sha	Tokyo.
Gas and electric lamps.	The Dento-kaisha	Tokyo.
Kerosene lamps	Kihara Mohel	Osaka.
Woven Window-curtains	The Nishijimmonori-kaisha	Kyoto.
Wines	The Seishi-kaisha	Tokyo.
Photographs	Ogura Iashin	Tokyo.
Painting (Japanese school)	Hashimoto Gahlo (Autumn scene)	Tokyo.
Painting (Foreign school)	Ando Nakitaro (Ladies going to see flowers)	Tokyo.
Ivory carving	Kanada Kanejuro (Ivory figure)	Tokyo.
Wood carving	Takemouchi Kanegoro (wooden figure of the Emperor Jimmu)	Tokyo.
Bronze casting	Haashi Kubei (bronze doors with dragons in relief)	Tokyo.
Enamel	Namikawa Zosuke (green with enamel panels)	Tokyo.
Print (picture)	Okamura Takeshiro (Girls playing musical instruments)	Tokyo.
Rice	N. Kano Kichichi	Shiga Pref.
Tea	Kinoshita Kizayemon	Kyoto.
Beer	Isono Kei (Kirin Beer)	Yokohama.
Shoyu (soy)	Mogi Saheiji (Kikkoman mark)	Chiba Pref.
Sugar	Okei Tomitaro	Awa.
Silk (raw)	Itô Goratemon	Mye Pref.
Fishing implements	Hanabusa Yasayemon	Kagoshima.
Surgical instruments	Mugi Kubei	Tokyo.
Tea table	Tanaka Sudo Kaisha	Hokkaido.

This list contains some surprises. Most astonishing of all is the verdict in favour of Mr. Takenouchi's wooden figure of the Emperor Jimmu. Judged by Western art canons, this piece of sculpture had very little indeed to recommend it, and so far as our acquaintance with Japanese art goes, we should have been disposed to pronounce it equally meritless. Certainly it could not bear comparison with Mr. Ogura's bronze casting of the same subject. Two things, however, probably gave the figure a popularity which, from an artistic point of view, it did not deserve. One was the striking likeness which the face bore to the reigning Emperor of Japan. The other was the fact that the editors of the *Kokka* gave a prominent place in their pages to the figure, virtually including it in the same art category as Mr. Hashimoto's remarkable painting which attracted so much attention. Scarcely more unexpected is the popular vote in favour of Mr. Ando's oil-painting. Visitors to the Exhibition will remember a large picture hung about the middle of the end wall of the Fine Arts Gallery. The subject was a group of ladies, dressed in Japanese costume, walking among cherry trees. We confess that the merits which secured for this picture a majority of votes in the *Fiji Shimpō's* plebiscite were not apparent to us. Neither should we have thought of awarding a gold medal to the huge ivory eagle which attracted so much notice and so little admiration. However, tastes differ. Perhaps the impressions that influenced the *Fiji Shimpō's* voters were not formed, in many instances, with a view to critical judgment. Had the plebiscite been held while the exhibits were still on view the results might have been different.

THE "KAISHIN-TO."

The leaders of the *Kaishin-to* have agreed upon a revised programme. We translate it from the vernacular press:—

PLATFORM.

1. Our Party shall be called the *Rikken Kaishin-to*.
2. Our Party shall include all subjects of the Empire holding the following principles:—
 - (a) Preservation of the prestige and power of the Throne, and consummation of the people's happiness.
 - (b) The preëminent necessity of domestic reform, and the development of the national power.
 - (c) Abolition of the policy of interference on the part of the Central Government, and esta-

blishment of local government as the basis of administration.

- (d) Extension of the franchise in due proportion to social progress.
- (e) The utmost possible diminution of political relations with foreign States, and the increase of commercial relations with them.
- (f) The preservation of hard-money payments in the national finance.

REGULATIONS.

1. Our Party shall have thirty councillors who will decide all its business.
2. On exceptional occasions, or in emergencies, the councillors may hold meetings as representatives of the Party, and may exercise all the power pertaining to a general meeting. For the purposes of such meetings two-thirds of the councillors shall form a quorum. There shall be selected from among the councillors 7 executive officers, one of whom shall attend daily at the Party office to transact the business of the Party. According to business convenience, however, and by vote of the councillors in session, the number of councillors transacting such business may be increased.
3. The period of service for a councillor shall be one year, and they shall be elected at the annual general meeting of the party.
4. The executive officers shall be chosen by the councillors.
5. For the better conduct of the Party's business, members may be occasionally appointed in the various cities and prefectures to manage affairs there.
6. Local executive officers shall not be less than two and more than sixty in any city or prefecture, and their election and period of service shall be in accordance with local convenience.
7. The Party meetings shall be of five kinds:—the regular general meeting; emergency general meetings; representative general meetings; councillors' meetings; and monthly meetings. The regular general meeting shall be in August of every year; the monthly meetings on the 15th of each month; the representative and emergency meetings shall depend upon circumstances, and be determined by the councillors in session.
8. Written opinions sent by absent councillors in relation to Party business, shall be transmitted to the councillors in session by the executive officers, and with the consent of the councillors present may be made a subject of debate.
9. Persons desiring to become members of the Party must be introduced by members.
10. Members desiring to withdraw from the Party should state the fact to the executive officials.
11. Members acting contrary to the spirit of the Party or in such a way as to disgrace it, may be expelled by decision of the local executive officers, confirmed by the councillors.
12. These regulations may not be altered except by vote of half of those present at a general meeting. In case of emergency, however, they may be altered by an emergency general meeting, or a representative meeting of councillors.
13. Expenses incurred in transacting the affairs of the Party shall be met by subscriptions from the members or by donations. The manner of collecting such monies shall be decided by a representative assembly.

APPENDIX.

The executive officials shall keep accounts of the income and expenditure of the Party, and shall lay them before the monthly meetings. These officials shall also report to each yearly general meeting the main features of the business and the state of the accounts. This appendix shall not be altered except by a vote of half of those present at a meeting of councillors.

THE "MUSASHI MARU."

The circumstances of the loss of the Japan Mail Steamship Company's steamer *Musashi Maru* have now been ascertained, with probably as much accuracy as is possible, from the evidence of the sole survivor. By the kindness of the Directors we are enabled to place the report before our readers:—

The *Musashi Maru* sailed from Shimonoseki at 7 a.m. on the 15th September, and passing between Hima Shima and Kishin, steered from the Inland Sea by the Bungo Channel at a speed of between 8.5 and 9 knots, with a light N.E. wind and barometer steady at 29.95. At 11 p.m. ship cleared the Bungo Channel and shaped a compass course N.E. by E. for Mirotaki, weather getting worse and wind increasing, with heavy squalls and rain, barometer falling slowly and speed reduced to 5 knots. At 4 a.m. very heavy sea, decks con-

stantly flooded with water. All hands employed securing gear, speed 3 knots. At 8 a.m. wind and sea increasing, shipping big seas. At noon ship evidently in typhoon; about this time the pig was carried away from the davits, and at 1 p.m. the wheel chain carried away and the ship fell off in the trough, and the seas made a clear breach over her, carrying away captain's cabin. A hold ventilator at the starboard side of the foremast was carried away close to deck, and a great quantity of water finding its way below, it was found impossible to repair the ventilator; the ship was brought under control of hand steering gear about 1.30 p.m. and kept off the wind, going half speed till 4 p.m., when the steam gear being in order she was brought head to wind and full speed. At 5 p.m. the starboard lifeboat was lifted by a heavy sea from the chocks and landed on the engine room skylight. The force of the wind and sea was now terrific, the ship's course S.E. by S., the sea on the port broadside. Ship's deck flooded with water, ship labouring and rolling fearfully. Boats and all movables dashing about the decks. Captain, 3rd officer, and 3 men on the bridge, chief and 2nd officers, and seamen clinging to bulwarks. Engines half speed; engineers and firemen in the engine-room at their stations. Dens Ootkichi says that about 6 p.m. he was at the wheel; the Captain ordered the helm hard-a-weather; the ship paid off about 2 points. Captain asked "Does the ship pay off?" The 3rd officer answered "Yes." At that moment a tremendous sea struck the vessel on the port side and hove her on her beam ends; she righted with her decks full of water, when a second sea struck her and threw her on her beam ends; she only partially righted, when a third sea struck her; she then heeled right over and sank. On rising to the surface Dens Ootkichi found one of the steel life boats floating, and climbed into her together with 17 others of the crew. At the same time he saw Captain Rahm and one or two others clinging to another boat which was immediately rolled over and over and the Captain disappeared. During the night the boat capsized several times. At daylight the following morning (17th) the occupants of the boat were the chief engineer, 2 quartermasters, 2 firemen, 2 sailors, the carpenter, and Dens Ootkichi, all very much exhausted. About noon Dens Ootkichi, seeing the life-boat could not float much longer, constructed a raft with the boat's gear, and in company with another man took to the water. At this time the chief engineer was washed out of the boat, and although provided with a life belt, was so much exhausted that he was drowned alongside. About 11 hours after quitting the boat the second man lost consciousness, dropped off and sank. During the night Dens Ootkichi saw lights on shore; became afterwards unconscious, but managed to retain his hold on the frail raft, and was finally rescued from his perilous position about 4 p.m. on the 18th September by a fishing boat and landed at Tanabe. Dens Ootkichi is convinced that he is the sole survivor.

THE "YORINOBU MARU."

The following particulars of the loss of the Japan Mail Steamship Company's ship *Yorinobu Maru* have been kindly furnished to us by the Directors:—

The *Yorinobu Maru* was a barque-rigged wooden vessel of 517²/₁₀ tons gross, built at Hyogo in February, 1884. In November, 1889, she was dismantled in a typhoon, and was subsequently remasted and refitted with new rigging and new sails throughout. The *Yorinobu Maru* loaded coal at Shimonoseki taking in 650 tons, being 15 tons less than usual, the Captain taking this precaution on account of the typhoon season. She sailed from Shimonoseki, at 9 a.m. on the 28th August bound to Yokohama, and passed through the Inland Sea and anchored at Hyogo on the 2nd September, where she remained till the 14th waiting moderate weather. She sailed from Hyogo on the 14th at 8 a.m. with light N.E. winds, making 2 to 3 knots under all plain sail, passing Tomaga Shima at 2 p.m. and arrived off Ichiye Saki about noon on the 15th. From that time the barometer fell slowly, wind changing to East, freshening, with heavy S.E. swell, light sails taken in. Midnight, wind strong and sea very heavy; reduced sail to lower topsails; at 2 a.m. Shiwo Misaki bore E. and N. 15 miles; ship making no progress. Captain decided to bear up for shelter in the Kii Channel, there being every sign of an approaching typhoon. At 7 p.m. Himo Misaki bore N.E. 2 miles, when the wind shifted to north and the ship steered south. At 9 p.m. wind shifted to S.E.; hauled upon starboard tack. The weather had now got very bad, wind typhoon force, and very heavy sea, the decks constantly flooded with water. At about 9 p.m. the fore lower topsail and fore topmast-staysail were blown away, and the steering gear carried

away, and the ship became unmanageable heading to the N.E. but drifting to N.W. Terrible typhoon, decks full of water, torrents of rain, and nothing visible. About 2.30 a.m. the rocks were suddenly seen towering up alongside the vessel, and she was carried broadside on the rocks, between two small islets on the south side of Ii-sima. The Captain ordered all hands to the rigging but endeavored to enter the cabin himself, when a heavy sea swept him overboard and he was seen no more. The chief officer escaped to the fore rigging. The vessel soon began to break up and by daylight was a total wreck. Out of a crew of 31 all told, including 14 apprentices, we regret to say only 7 were saved, viz., chief officer, boatswain, 2 seamen, 1 apprentice, steward, and boy.

CUSTOMS RETURNS.

The following is a summary of the Customs Returns for August, showing the foreign trade of Japan for the month:—

EXPORTS AND IMPORTS.		1890.	SILVER YEN.
Exports	6,161,264,710	4,057,231,430	
Imports	5,408,075,540	8,511,056,580	
Total exports and imports	12,569,340,250		
Excess of imports	4454,425,150		
CUSTOMS DUTIES.		1890.	SILVER YEN.
Exports	110,803,481		
Imports	218,854,160		
Miscellaneous	12,414,692		
Total	341,102,636		

TOTAL VALUE OF EXPORTS TO AND IMPORTS FROM VARIOUS FOREIGN COUNTRIES.

A WONDERFUL ESCAPE.

ANOTHER member of the crew of the Japan Mail Steamship Company's sailing vessel *Fort-nobu Maru* has been saved. He was a sailor on board the ill-fated vessel, and when she went down he, like the rest, obeyed the captain's orders and mounted the rigging. The following morning (17th), however, he floated off on some wreckage and was carried across the Kii Channel, a distance of twenty miles, by the force of the wind and the current prevailing in those waters. At 1 p.m. on the 18th, after having been in the sea for over thirty hours, he was picked up near Osaka by a junk, and carried to Okasaki in Awa, whence he was transferred to Kobe. It is needless to say that his long immersion, following on the hardship of battling with the storm while the ship remained afloat and clinging to the rigging for some hours

while she was on the rocks, produced terrible exhaustion, but happily he is reported to be fast recovering.

CHOLERA RETURNS.

The latest cholera returns derived from official sources are as follow:—

Prefecture or City.	Date.	New Cases.	Deaths.
Osaka	26th	125	148
	27th	124	103
	28th	123	124

THE NAGOYA MEMORIAL.

SEVERAL of the Tokyo journals seem likely to get into trouble for having published the text of two memorials addressed by politicians of Nagoya to the Cabinet and the Minister President. Translations of these memorials have appeared

in our columns. Their contents are not of such a character as to suggest the infliction of a penalty, but the Press Regulations are very distinct as to the veto they impose upon the publication of any such documents without official permission. The newspapers have therefore violated the Regulations, and it becomes a question whether their offence should be condoned or punished. Apparently the latter course has been decided upon, for we read in the *Yiji Shimo* that the Public Prosecutor of the Tokyo Court for Minor Offences has instituted proceedings against the offending journals. They will doubtless have to pay a fine, but inasmuch as they must have anticipated that inconvenience, it will not greatly disturb them.

A PETITION TO VISCOUNT AOKI.

THE members of the *Taisho-jyaku-kai* have addressed to Viscount Aoki, through their committee, Messrs. Uda, Kaji, and Kumagaya, a petition which we translate from the columns of the *Kokumin Shimbun*:—

EXCELLENCY.—We perceive that Treaty Revision is a great and difficult problem, affecting the national administration as well as our country's intercourse with other States. Sincerely do we regret the several failures that have been made to solve this problem during the past twenty years. Your Excellency, by the grace of His Majesty the Emperor, has been appointed to take up the task which Count Inouye and Count Okuma could not succeed in accomplishing, and it is our earnest hope by day and by night that by your ability you may earn the high merit of achieving this great undertaking. By a portion of the foreign residents of Yokohama steps were recently taken in opposition to the proposals for revision, and with the object of maintaining the present Treaty. This is because the system pursued with regard to the treaty ports is too lenient, and the privilege of travel in the interior is freely enjoyed. Consular Jurisdiction has encouraged the growth of an arbitrary mood. We pray your Excellency to adopt a resolute policy and to follow a strict system of control. It gives us the deepest satisfaction to learn that your Excellency's proposals for Revision include the complete abolition of Consular Jurisdiction and the re-establishment of the Empire's sovereignty. Our only subject of regret is that the country's tariff autonomy is not to be entirely restored. We pray that your Excellency will take steps to include in your proposals the full recovery of tariff autonomy. If tariff autonomy be not recovered before the concession of mixed residence, it can scarcely be recovered afterwards, which would be a most serious matter. We submit those humble opinions for your Excellency's enlightened consideration.

THE BANK OF JAPAN.

THE amounts of convertible notes and reserves in the Bank of Japan for the week ended the 27th ultimo were as follows:—

CONVERTIBLE NOTES.		RESERVES AND SECURITIES.	
Yen.		Yen.	
Notes issued	74,801,463	Gold coin and bullion	24,095,247
		Silver coin and bullion	19,366,803
		Public Loan Bonds	13,476,450
		Treasury Bills	—
		Government Bonds	—
		Other securities	4,737,182
		Commercial Bills	12,230,721
		Total	74,801,463

Of the above total issue of notes, the sum of yen 6,398,280 is in the treasury of the Bank, and yen 68,403,183 in actual circulation, the latter showing a decrease of yen 202,282 as compared with yen 68,605,465 at the end of the previous week.

A VISITATION.

ANGRY storms of vulgar personalities and virulent abuse sweep over the columns of a portion of the Yokohama foreign press from time to time. At such seasons moderate, self-respecting folks can only stop their ears and hope that the turbulent wind will soon sink into silence, leaving some shreds of the Settlement's moral reputation still intact. Just now the air is thick with mud, and the whole spectacle painfully parodies civilization. We shall have a serene time by and by, no doubt.

ACCURATE QUOTATION.

WE observe that one of our local contemporaries constantly quotes sentences and expressions written by us last year, and pretends that they were applied to "demands which Viscount Aoki has recognised in his present proposals." Considering that the journal resorting to this ingenious device does not even know what Viscount Aoki's proposals are, the justice of its methods is fully established.

RICE AND BREAD.

WHEN the price of rice was at its highest point this year, many foreigners talked of bread as a substitute, and remarked that, if Japan fed herself with wheat instead of rice, she would be exposed to fewer risks of starvation. In a certain sense this is true, for, whereas a bread-eating nation can procure flour from various parts of the world in the event of its own wheat crop failing, a rice-consuming nation is not always situated so favourably. Rice, like wheat, is grown in many countries, but, on the other hand, rice varies more than wheat according to the place of its production. There is only one rice grown outside of Japan which a Japanese will eat with contentment, namely, the rice of Hawaii, and that happens to be practically unprocurable. If a Japanese cannot get Japanese rice, his daily food loses much of its relish. When, as happened this year, he has to pay more than double the usual price for his favourite article of diet, imported rice of course finds a market. But no one will touch it who can procure a grain of the home-grown article, and the obvious consequence is that the latter is sometimes forced up to prices which embarrass householders and react upon the whole economy of the nation, by throwing labour out of employment and forcing people to curtail their expenses in every direction. Nothing so inconvenient can happen to a bread-eating people, for, if the home supply of flour fails, there are half a dozen countries abroad whence an equally palatable substitute can be drawn. Add to this that the labour of rice cultivation is the most severe and most degrading of all agricultural duties. The rice-farmer in Japan endures toil and hardship—not the men alone, but also the women, the girls, and the boys—such as his European or American representative has little conception of. Then again, there is the question whether a rice diet is as wholesome and as muscle-making as a diet of beef and bread. Dr. BAELZ, perhaps our most trustworthy authority on this subject, says that for a man taking strong and regular exercise, nothing can be better than rice, but that for a man leading a sedentary life it is a dyspeasiating, unsatisfactory staple of food. Certainly the rice-fed Japanese labourer is capable of extraordinary feats of strength and endurance, though in weight of bone and power of thew he is markedly inferior to the Anglo-Saxon or the Teuton; whereas the rice-fed Japanese gentleman is a delicate and by no means robust specimen of humanity. Passing by these larger questions, however, let us examine with which crop, wheat or rice, the advantage lies in an economical sense. In making the comparison, we are confronted at the outset by the difficulty of estimating the wheat-producing capacity of Japanese soil. It will not be extravagant, however, to as-

sume, that if the amount of labour required for rice culture were expended upon wheat, a crop of 35 bushels per acre might be obtained. Taking the weight of the bushel at 55 lbs., we have, therefore, 1,925 lbs. of wheat per acre, which gives 1,787 lbs. of flour, according to the rule that 14 lbs. of grain make 13 lbs. of flour. Now observing that, according to English law, 280 lbs. of flour make 80 quartern loaves, and that the price of a quartern loaf is 5½d. at present in London, we find that each acre of land devoted to wheat culture in Japan would give 510 quartern loaves, and would feed 1,020 people for a day, at an average allowance of 2 lbs. 2½ oz. of bread (half of a quartern loaf) per head, and an average cost, at the present London rate, of 2½ pence, or 6½ *sen*, taking the sterling value of the *yen* at 3s. 8d. We may observe, *en passant*, that in this calculation we take no account of the price actually charged for bread by foreign bakers in Japan. In London a loaf weighing more than 4½ lbs. can be bought for 5½d., that is to say, 12½ *sen*, assuming the silver dollar to be worth 3s. 8d. In Japan 4½ lbs. of bread, by no means as good, cost 26 *sen*, or more than double the London price. This by the way. Turning now to the question of rice, we have the following data:—According to the regulation observed in feudal times, 5 *go* of rice were counted a grown man's daily ration. Some men would eat a great deal more; some would be puzzled to eat nearly as much. We may, however, take 5 *go* as a fair equivalent for about 2 lbs. of bread. A *koku* contains 1,000 *go*, and thus represents a day's ration for 200 men. Now, the average production of good rice land is 2 *koku* per *tan* (one-fourth of an acre), and thus we arrive at the fact that an acre of rice will supply 1,600 men for a day. Recently the price of hulled rice per *koku* was about 10 *yen*, but in ordinary years it does not exceed 7 *yen*. In order to compare it with bread, however, we must add the cost of polishing and cooking, so that, even in cheap seasons, the *koku* of boiled rice may be estimated to cost fully 10 *yen*. Thus our final result is that an acre of rice will serve 1,600 men for a day, at a cost of 80 *yen*, whereas an acre of wheat will only serve 1,020 men for the same time, at a cost of 63.75 *yen*. In other words, the cost of the day's ration of rice is 5 *sen*; while the cost of the day's ration of bread is 6½ *sen*; and the ratio of the food-supplying capacity of an acre of rice to the food-supplying capacity of an acre of wheat is as 80 to 51, or as 8 to 5 approximately. It is certain, moreover, that, if a Japanese were offered his choice between 5 *go* of rice and 2 lbs. of bread, he would pronounce unhesitatingly in favour of the former. If, further, the ordinary adjuncts of a rice diet and a meat diet be taken into account—cheap vegetables and fish in the former case; beef, mutton, or bacon,

and vegetables in the latter—the balance sways still more to the side of rice, so far at least, as cheapness and food-giving capacity of the soil are concerned. When the market price of rice was at its highest—during June and July—considerable quantities of so-called “bread” were sold in Tokyo, and eagerly bought by the working classes. Wholesome stuff enough, doubtless, and unquestionably very “tilling at the price,” this bread seems to have become a recognised institution, as is also the case with the buns now sold at nearly all the railway stations. But bread as a substitute for rice is still a thing of the very distant future, and arithmetic, it will be perceived, is not likely to hasten the change.

THE KOBE RESOLUTION.

WE published in our issue of Monday the Resolution which now lies awaiting signature in Kobe. Private information says that some of the leading residents have declined, or expressed their intention of declining, to sign any protest of the kind. Still the Resolution will doubtless obtain many signatures. The moderation of its tone will commend it even to persons who are not prepared to completely endorse the views embodied, and others will affix their names for the sake of making a broad stand against the danger of abolishing Consular jurisdiction unconditionally. We should probably be doing the Kobe residents an injustice if we assumed that the experience of Yokohama had alone deterred them from framing resolutions in a similarly sweeping and unsympathetic spirit. The southern settlement has always adopted a more moderate attitude towards Japan than the northern, and would doubtless have adhered to its traditions in this instance also, whether the duty of framing a Resolution had been undertaken before or after Yokohama's action. Moreover, it does not seem that any good purpose could be served by considering to what extent Kobe's distinctly different method of procedure may be taken as a vote of censure on Yokohama's. We believe that the vast majority of thoughtful persons in the latter settlement have already perceived, or will soon perceive, that their radical and uncompromising protest has in reality hastened the end they seek to defer, since it has roused among the people of Japan a spirit which immensely strengthens the hands of her negotiators. The experience of last year showed that many, if not all, of the Great Powers are willing to treat Japan liberally, but that the strong sentiment of the rising generation, supplemented by political intrigues and jealousies on her own side, makes it very difficult for her statesmen to obtain national endorsement of any revised treaty which stops short of securing the fullest recognition of her claims. Yokohama's

action has materially lessened this difficulty by uniting all parties in support of the Government. A very slight exercise of tact on the part of the framers of the Resolutions would have avoided this completely. The Kobe Resolution, for example, though signed by every foreign resident in Japan, would not have excited any mood of indignation among the Japanese. Presented to them now, when they are already much incensed, it will probably evoke criticism. But had the Yokohama protest embodied any frank recognition of Japan's progress and claims, or any expression of sympathy with her aspirations, such as the second paragraph of the Kobe Resolution contains, and had it been made without the demonstration of a public meeting, all the unfortunate friction now prevailing would have been avoided.

Turning to the language of the Resolution, we find some points worthy of comment. Prominent among them is the fact that Kobe has adopted the first clause of the first Yokohama Resolution verbatim, without correcting an omission noticed by many critics. "The time has not yet arrived," says the Resolution, "when questions in regard to rights, whether of property or person, arising between subjects and citizens of Foreign Powers in the Dominions of His Majesty the EMPEROR of Japan, can be unconditionally and safely subjected to the jurisdiction of Japanese Tribunals." If the framers of this Resolution intended to protest against unconditionally submitting to Japanese tribunals questions which now come before Consular Courts, the language employed is plainly insufficient. For mention is made of rights of property or person arising between subjects and citizens of Foreign Powers only, and nothing is said of such rights as between foreigners and Japanese. The system now prevailing, as everyone knows, is that all questions relating to the persons of foreigners are reserved for adjudication by Consular Courts, whereas one half of all questions relating to property are left to be decided by Japanese tribunals. In other words, all criminal charges against foreigners are brought into foreign courts, while of civil cases one half are tried by Japanese courts and one half by foreign. But Kobe's Resolution, like Yokohama's, implies readiness to surrender to Japanese jurisdiction all questions, whether of person or property, in which a Japanese subject is concerned. We cannot think that this is intentional; and yet when we remember how obvious the omission is, and how plainly it was pointed out in respect of the Yokohama Resolution, it becomes difficult to suppose that the Kobe people have fallen into a similar error. Be this as it may, the Resolutions of Yokohama and Kobe alike, as they stand, declare by implication that their signatories are willing at once and unconditionally to transfer

to the jurisdiction of Japanese courts the great majority of the criminal cases now reserved to Consular tribunals, as well as civil suits by Japanese against foreigners, which are now tried in a court of the defendant's nationality.

The framing of the last clause of the Kobe Resolution probably involved some thought and trouble. To a limited extent it endorses the idea conveyed in the latter part of the principal Yokohama Resolution. Let us place the two side by side:—

<p>KOBE. We are also strongly of opinion that it would be premature to attempt to fix a date for the complete and unconditional relinquishment of extra-territorial jurisdiction until the new Criminal and Civil Codes, which it is proposed to put in force, have been in operation for some little time and experience has been gained as to how far they meet the requirements of the changed condition of affairs.</p>	<p>YOKOHAMA. The time has not arrived when an estimate can be formed of the period within which the unconditional relinquishment of extra-territorial jurisdiction in Japan can be safely promised.</p>
--	--

One of the principal objections urged against the Yokohama Resolution was that it demanded nothing less than the total abandonment of Treaty Revision negotiations for an indefinite period, since it denied the possibility of yet forming an estimate which has constituted the basis of all proposals for Treaty Revision hitherto, and must constitute the basis of all proposals hereafter. We were very roundly taken to task for showing that the Resolution could only bear this interpretation. Yet Kobe has evidently interpreted it in that sense, and has endorsed the interpretation so far as to say that negotiations contemplating the surrender of Consular Jurisdiction ought to be postponed until some little experience has been gained of the working of the new Codes. "The new Criminal and Civil Codes" are the words actually employed, but inasmuch as the new Criminal Codes have been in operation since January 1st, 1882, we presume that the reference is to Civil Codes only. Kobe thus endorses Yokohama, but there is this great difference that whereas the latter confines itself to a broad declaration of the impossibility of yet estimating the period which must elapse before fixing a date for the abolition of Consular Jurisdiction, the former considers that the question of fixing such a date may be entertained some little time after the new Codes shall have gone into operation. Yokohama, in fact, cannot discern the end at all: Kobe declares that it is clearly in sight. Probably this difference in Yokohama's case is chiefly an affair of careless phraseology. Explanations subsequently furnished show that the sentiments of Yokohama are by no means so uncompromising as the language of its Resolutions imply. The difference is there, however, for all the purposes of the Resolutions.

We thoroughly sympathise with the suggestion that some little experience of the working of the new Civil Codes should be acquired before conceding their efficacy.

That is the weak point in Japan's case: she asks us to come under Codes which, though promulgated, are not yet in operation, and which, for the rest, contain much that is not in apparent touch with her habits and customs. To be entirely prudent, the practical success of the Codes should be assured previously to their acceptance as a substitute for the laws administered by Consular Tribunals. But in order to act in strict conformity with this suggestion, it is plain that all negotiations for Treaty Revision would have to be postponed *sine die*, and even supposing—a very extravagant hypothesis—that Foreign Governments could be persuaded to draw back so incontinently at this eleventh hour, there can be no doubt about the effect of such a course upon Japan: the treaties would be renounced without much delay, and no terms of any kind could thereafter be imposed by foreign Powers unless they decided to have recourse to armed compulsion. Without any such sudden change of front, however, there is a method of virtually achieving the end contemplated by the Kobe Resolution; a method which we believe will be adopted by the negotiators of the new Treaty. For despite the information said to be possessed by the promoters of the Yokohama Meeting, we venture to assert that the unconditional surrender of Consular Jurisdiction is not contemplated by any party to the negotiations. The Judge guarantee is quite dead and buried, as we fully explained in past articles. But there are other means of securing the subjects and citizens of foreign Powers against the perils of a leap in the dark, and all moderate persons must hope to see those means adopted.

DOMESTIC POLITICS.

THE demands made upon our space by Treaty Revision questions have compelled us to postpone until now the publication of an important document, the original of which appeared some days ago in the vernacular press. It is the revised manifesto of the *Kaishin-to*. There appears to be little doubt that an amalgamation will not be effected, for the present at all events, between the *Kaishin-to* and the new *Rikken Jiyu-to*. The obstinate indifference shown by the latter to the traditions and feelings of the former, supplemented by an intentional or accidental want of adaptability on the part of the *Kaishin-to*, has kept the two parties asunder, and there is no visible prospect of the gulf between them being bridged over. It may be remarked, *en passant*, that the much abused regulations for the control of political parties do not seem to have caused serious practical inconvenience to any one. That celebrated article which the critics denounced so roundly, has evidently relapsed into its old condition,

and become in effect a dead letter. The Government's declared intention of putting it into active operation was only justifiable on the hypothesis that all temporary combinations of political parties, for the purpose of overthrowing the Cabinet, were seditious. Whether they really deserved to be viewed in that light, the Authorities must be admitted to have been the best judges. There are indeed journalists to whom these problems of administration look as clear as crystal, and who have no difficulty whatsoever in measuring the merits or defects of the Japanese Government's proceedings by means of an invariable gauge, made to fit all sorts and conditions of men under all conceivable circumstances. We are not gifted with such happy insight; neither do we possess any such universally applicable standard. When statesmen whom we believe to be actuated by motives of at least moderate purity and patriotism, have recourse to measures manifestly opposed to the spirit of their general administration and plainly destined to invite hostile criticism and unpopularity, we are moved to think that the springs of their action lie a little beyond the ken of every passing critic. So, when the Metropolitan Police, in obedience to instructions issued by their Chief and obviously conveyed to him by the Cabinet, began to enforce the provisions of a re-enacted regulation, previously in existence but not previously operative, we were disposed to suspect that this act was not perpetrated in pure lust of arbitrariness, but that some consideration of sound statesmanship lay behind it. The event does not impugn our faith. Had not the obnoxious regulation been invested with practical force, there is every probability that we should now see a congeries of political parties, temporarily cemented by the passion of opposition to the Cabinet, and ready to be disintegrated at any moment after the achievement of their destructive purpose. Such a coalition would not form a trustworthy or efficient part of the body politic. Instead of lending its strength to legislate for the good of the country, its proceedings would be guided by the one idea of ousting the Administration; while, on the other hand, the jealousies and ambitions holding its units asunder would incapacitate it for assuming the constructive functions from which it had expelled others. Instead of a result so little desirable, the operation of the laws has contributed to effect a complete fusion of the various rival sections into which the Radicals were divided. Their union may or may not be permanent, but it is at all events a union, not a mere coalition to overthrow a common enemy without any care for the consequences of his fall. And this has been brought about without any serious friction between the Government and the opposition. At first there was a loud outcry against the tyranny of a regulation interdicting communication

between parties, or their combination. But it was evident from the outset that the law need not cause any inconvenience to earnest politicians. If men's purpose was sufficiently genuine to make them subserve the ends of personal ambition to the cause of political principle, they could easily remove themselves beyond the reach of the law by dissolving the factions against which it was aimed. The event has proved this. Inefficient and seditious-breeding groups of agitators fell to pieces, and were rejoined into a party possessing the dimensions at least of a capable limb of the body politic. We have not heard of any prosecutions under the obnoxious regulation, or observed that it impeded the steps taken by the elements of the *Rikken Jiyu-to* to effect a union. Not a few of those steps seemed to violate the letter of the law, but since they were evidently prompted by an honest desire for party re-organization, the police seem to have refrained from interference. In short, the purpose of the regulation having been accomplished by a mere announcement of its enforcement, the vetoes it embodied have ceased to have any practical effect.

The present position, then, is that the *Kaishin-to* stands alone and in opposition, whether permanent or temporary, to the newly organized Constitutional Radicals. It was always difficult to imagine these two parties occupying the same camp, so bitter had been their mutual hostility from the outset. The opposition of the members of the old *Jiyu-to* to the Government was even less violent and demonstrative than their opposition to the *Kaishin-to*, and the seeds of hostility thus sown have not yet ceased to bear fruit. But in respect of political principles the division between the two parties is hard to comprehend. The *Kaishin-to's* revised platform, as will be seen from the translation published elsewhere, is nothing more than a very guarded and general declaration of liberal principles. There is not a single plank in it which the *Rikken Jiyu-to* could object to accept. Neither is there a single plank which the Government would decline to endorse. It is conceivable that the *Rikken Jiyu-to* might hesitate to reduce their radicalism to the dimensions of the *Kaishin-to's* very moderate programme; but the difficulty does not lie there, for the *Kaishin-to*, up to a recent date, were certainly willing to subscribe the largely expanded articles of the *Jiyu-to* creed. We cannot believe that political principles hold the two parties asunder. Still less can we imagine that the *Kaishin-to* obeyed political principles when, a few weeks ago, it signified its willingness to descend to a radical platform for the purpose of entering a combination organized to overthrow the Cabinet of which the Party's leader was last year a principal member. Something more than varying views of the theory of administration constitute the real limits of

political camps at present, and that something is, in our opinion, clan influence. There is one combination against which neither the *Kaishin-to* nor the *Rikken Jiyu-to* can hope to contend successfully, namely, the Satsuma-Choshu combination. To divide these great clans and to crush them when divided, must be the first aim of any political party seeking to get the administrative power into its own grasp. Last year the division was nearly effected when Count KURODA threw in his lot with the ex-leader of the *Kaishin-to*, then Minister of State for Foreign Affairs. This year, both Count KURODA and Count OKUMA are out of office, and while the latter remains the real, though not the nominal, leader of the *Kaishin-to*, the former, strange to say, has become so identified with the *Rikken Jiyu-to* that men openly speak of him as that party's candidate for the chief post in the Government. The presence of these statesmen in the camps of the two parties is a fact full of significance. They stand one at either end of the Liberal line, and their influence is steadily exerted to bring the whole into a compact phalanx. Satsuma will probably go with Count KURODA, for the men of that clan are remarkable for nothing more than their tendency to unite in the face of opposition. In that event, Choshu would probably fall, but whether the subtle politicians who planned its overthrow could then turn their arms with equal success against Satsuma, is a question hard to answer. At all events, we regard as equally unimportant the publication of political platforms and the doings of men like Count ITAGAKI, Messrs. OYE TAKU, KAWASHIMA JUN, and so forth. Legislative and administrative issues are secondary considerations at present, and so are the movements of agitators whose figures look Lilliputian in comparison with men like Counts OKUMA and KURODA, and whose theoretical politics count for nothing in the context of those tacticians' large projects.

CUSTOM HOUSE DISTRICTS.

IMPERIAL ORDINANCE No. 204.

We hereby give our sanction to the Regulations relating to Custom House districts, and order the same to be duly promulgated. We also order that these regulations shall come into force on and after November 1st, 1890.

(His Imperial Majesty's Sign-manual.)
(Great Seal.)

Dated September 6th, 1890.

(Countersigned)

COUNT MATSUKATA MASAYOSHI,
Minister of State for Finance.

The boundaries of Custom House districts shall be decided as follow:—

YOKOHAMA CUSTOM HOUSE.

The sea coasts of 11 provinces, Rikuzen, Iwaki, Hidachi, Shimosa, Kadosa, Awa, Musashi, Sagami, Idsu, Suruga and Totomi, and the Bonin Islands.

OSAKA CUSTOM HOUSE.

The sea coasts of 7 provinces, Mikawa, Owari, Ise, Shima, Kii, Idsumi and Settsu (eastward of Nishinari-gun).

Kobe Custom House.

The sea coasts of 20 provinces, Settsu (westward of Kawabe-gun), Harima, Bizen, Bitchu, Bingo, Aki, Suwo, Nagato, Iwami, Idzumo, Hoki, Inaba, Tajima, Tango, Oki, Iyo, Tosa, Awa, Sanuki, and Awaiki.

NAGASAKI CUSTOM HOUSE.

The sea coasts of 12 provinces, Hizen, Higo, Chikuzen, Chikugo, Buzen, Bungo, Huga, Osumi, Satsuma, Iki, Tsushima, and Rinkiu.

NIIGATA CUSTOM HOUSE.

The sea coasts of 9 provinces, Wakasa, Yechizen, Kaga, Noto, Yechu, Yechigo, Uzen, Ugo, and Sado.

HAKODATE CUSTOM HOUSE.

The sea coasts of 13 provinces, Mutsu, Rikuchu, Oshima, Shuibeshi, Ishigari, Teshio, Kitami, Nemuro, Chishima, Kushiro, Tokachi, Hidaka, and Iburi.

ADDITIONS TO THE BUDGET.

We hereby give our sanction to the present Regulations relating to additions to the General Budget of Revenue and Expenditure, and withdrawals from the budget of expenditure for the 23rd fiscal year of Meiji, and order the same to be duly promulgated.

[His Imperial Majesty's Sign-manual.]
[Great Seal.]

Dated September 12th, 1890.

(Countersigned)

COUNT YAMAGATA ARITOMO,
Minister President of State.
COUNT MATSUKATA MASAYOSHI,
Minister of State for Finance.

The amount of additional revenue for the 23rd fiscal year of Meiji shall be yen 324,473.126, and of expenditure yen 363,605.258, and the amount to be withdrawn from the expenditure for the year, yen 39,397.039. Under articles and paragraphs these sums fall as follow:—

ADDITIONS TO THE GENERAL BUDGET OF EXPENDITURE AND REVENUE OF THE 23RD FISCAL YEAR OF MEIJI.

REVENUE.

ORDINARY.

Article 3.—Licences and fees 193,343.000

EXTRAORDINARY.

Article 3.—Miscellaneous receipts... 131,130.126
Sum total of Revenue Yen 324,473.126

EXPENDITURE.

ORDINARY.

FOREIGN DEPARTMENT:—

Article 1.—The Department proper 506.583
Article 2.—Legations 1,100.000

Sum total Yen 1,606.585

HOME DEPARTMENT:—

Article 1.—The Department proper 4,230.000
Article 2.—Offices of districts for supervising works 224.000
Article 3.—Penitentiaries 160.000
Article 4.—Metropolitan Police Board 5,095.950
Article 6.—Cities and Prefectures... 28,832.000
Article 12.—Hokkaido Administration Board 770.000
Article 13.—Sapporo Agricultural College 64.000
Article 14.—Prisons in Hokkaido... 96.000
Article 15.—Local expenses of Hokkaido 6,451.077
Article 16.—Railways 43.000

Sum total 45,966.027

FINANCIAL DEPARTMENT:—

Article 1.—The Department proper 1,422.000
Article 4.—Cabinet 637.000
Article 5.—Privy Council 403.000
Article 6.—House of Peers 102.000
Article 7.—House of Representatives 102.000
Article 8.—Senate 36,014.598
Article 9.—Board for Examination of Accounts 395.000
Article 10.—Bureau of the Official Gazette 63.000
Article 11.—Custom Houses 362.000
Article 12.—Cost of collecting excise duties 3,677.000
Article 21.—Administrative Court... 47,101.000
Sum total Yen 90,278.598

WAR DEPARTMENT:—

Article 1.—The Department proper 90.000
Article 2.—Military Expenses 1,132.500

Sum total Yen 1,222.500

NAVAL DEPARTMENT:—

Article 1.—The Department proper 504.000

JUDICIAL DEPARTMENT:—

Article 1.—The Department proper 343.211
Article 2.—Courts of Law 56,253.452

THE "PARTHIA" IN A TYPHOON.

FROM THE "PARTHIA" REPORT IN THE SHIPPING COLUMN IT WILL BE SEEN THAT THE VESSEL ON HER VOYAGE TO YOKOHAMA PASSED THROUGH A TYPHOON. THE PASSENGERS IN APPRECIATION OF THE CONDUCT OF CAPTAIN PANTON PRESENTED THE FOLLOWING ADDRESS:—

The C. P. S. Co.'s *Parthia*,
26th September, 1890.

TO CAPTAIN PANTON AND THE OFFICERS OF THE "PARTHIA."

GENTLEMEN.—We, the passengers on board the *Parthia* from Vancouver to Yokohama cannot leave without expressing to you our great admiration of your conduct during the terrific typhoon of the 24th and 25th instant, and our grateful thanks for the able and successful manner in which you brought your vessel through it.

With every good wish for each and all of you in the future, we remain, yours most gratefully,

ROBT. A. McLEAN,
KOURYAN HITCHCOCK,
A. W. THOMSON,
SARAH A. GARDNER,
CHARLES GARDNER,
EMILY WALLACE,
GRACE GARDNER,
ELLEN GARDNER,
EMMA LOUISE HITCHCOCK,
M. B. HOLT,
THOS. ROY,
M. GILROY,
VICTOR FAGA,
MADRELINE WALLACE,
GLADYS WALLACE,
MRS. J. ALLEN.

CORRESPONDENCE.

MUNICIPAL RIGHTS AND JAPAN'S WRONGS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—A foreign merchant, a resident, riding in a *inrikisha*, approaches the Kobe Concession. The driver, for being improperly clothed, or for some other reason, is ordered by a native policeman to stop. The vehicle, before its inertia is overcome, has glided on to or just over the boundary line dividing the Concession from Japan. The foreigner now defies the policeman to interfere with the *inrikishi*; indeed the policeman may have been shoved for all that is known to the contrary, as the press is silent on the subject. It is strange for what trumpery reasons some men will be, figuratively speaking, keel-hauled in a series of three column leaders of double-headed pica,—but this is a digression.

Those wishing to obtain full particulars of the case alluded to above can do so by searching the archives of H.B.M. Consulate at this port.

Yours, &c.,

RESIDENT.

Kobe, September 24th, 1890.

CHRISTIAN METHODS OF CONTROVERSY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—If calling names be argument, some of the missionaries resident in Japan should take high rank as controversialists. Not long since Dr. Marshall Law and Mr. Isaac Dooman gave a very pretty exhibition of this sort in the columns of the *Japan Mail*, in which such choice phrases abounded as "cheap infidel ribaldry," "ancestors who are in the Zoological Gardens," "fool," "blasphemy and rallery," and so on. Now it appears Mr. Brunson is going to follow in the same delightful style. In my letter on "Christianity and Persecution" I accused Mr. Brunson of ignorance of matters upon which he had expressed a very confident opinion, and furthermore supported my accusation by the quotation of authorities and cases. This exposure seems to have made Mr. Brunson very angry, and in reply, with practical Christian humility, he likens me to a Gadarene "excited by the loss of a little pork," says that I tacitly arrogate to myself a monopoly of learning, hate Christianity with all the venom of my soul, am "wanting in integrity of soul and honesty of purpose" or "inexcusably ignorant and shallow," accuses me of "disgusting braggadocio" and of "false and impious charges," says I am a "ranting infidel," and winds up by praying "God be merciful to him," which, I suppose, is a polite Christian euphemism for telling me to "go and be hanged." Such language is worthy only of contempt. It is probably used by Christian missionaries in Japan with the design of driving their opponents off the field of controversy in sheer disgust; but it may interest Mr. Brunson to know that I have had too much experience of the methods of Christian apologists to be frightened by Christian bluster.

The disadvantage a Christian minister always seems to labour under in debating any matter is that he cannot divest himself of his pulpit style. In that refuge for the intellectually indigent, where neither question nor argument is allowed, he is never called upon to weigh his words or to substantiate his accusations; he speaks, as a rule, to people who agree with him, and resents criticism, even of the mildest order, as downright impudence.

As Mr. Brunson says that I arrogate to myself a monopoly of learning, I have carefully re-read my letter to find what possible justification there is for such a charge, and fail entirely to find therein anything approaching any assumption of the sort. Indeed, to answer Mr. Brunson, the display of learning was quite unnecessary; it would be like employing a steam hammer to break an egg. A moderate amount of information and a little commonsense are quite equal to disposing of all the arguments which that gentleman has yet brought to bear on the subject. But, interested as I always am in discovering on how slight a basis a mind trained on Christian lines can erect an edifice of falsehood, a further examination of my last letter inclines me to think that the charge is made because I parodied in my closing remarks the pompous Sunday-school style of parts of Mr. Brunson's first letter, where, perfectly oblivious of impertinence, he prayed that my heart might be "touched by the power of God" and my eyes "opened to the truth"; and, if my surmise is correct, it is a somewhat amusing example of how strongly the professors of Christianity

object to Christian methods when employed against themselves.

After Mr. Brunson's fulminations against his wicked opponent, it is refreshing to turn to the pretty picture he draws of himself as "actuated by the love of truth and the good of his fellow-men, and guided by a spirit of honesty and fairness." It really is kind of him to tell us this, for no one could have gathered it from his latest letter; and it may be interesting to those who have followed this discussion to examine how far Mr. Brunson is entitled to rank as an honest controversialist.

First, then, after a quarter-column of what is little else but personal abuse, he returns to the meaning attached to the word "infidelity" in this discussion. This word, he says, was originally used by Bishop Newman "in the sense in which it is generally used by Christian apologists, viz., the sense in which I used it," after which extremely lucid definition he complains that "Secularian" should have clearly defined what he meant by the use of the word. What authorities he has for saying that Bishop Newman used the word in the same sense that he did himself, I do not know; but if he will turn to the lecture on "The March of Christian Civilisation," out of which this controversy arose, he will find that Bishop Newman opposed two definitions of civilisation to each other—one by Guizot and the other by Buckle; and as the Bishop appeared to have Buckle in view throughout his lecture, I quoted in answer to the charges against infidelity, and (after protesting against the word) used as my definition of it, Buckle's well-known apostrophe to scepticism, where, among other claims, he points out that religion had become less intolerant in consequence of the growth of scepticism or unbelief for the two preceding centuries. Buckle was clearly referring in this passage not to any system of organised scepticism, but to the spirit of inquiry which within the two previous centuries had begun to have influence everywhere. To any one capable of following an argument my definition was clear enough; but seeing that Mr. Brunson was apparently not one of these, I was careful in my second letter to explain for his benefit my use of the term, asking him at the same time to refer to my previous letter for proof that I had so used it. Now, after quoting my words that infidelity is "fairly descriptive of those who, on any particular point—slavery, or witchcraft, or persecution for example—laboured in direct antagonism to the teachings of their creed," he says (of course without the production of a scintilla of evidence) that such a definition would include Wycliff, Tyndale, Luther, Calvin, &c., &c.; so that, according to Mr. Brunson, any good these men did was, as I have agreed all along, "in direct antagonism to the teachings of their creed"! A curious argument in support of Christianity truly. One can only wonder if this is simple incapacity for argument, or if Mr. Brunson really means what his words imply.

"Lucidity" is apparently very difficult for Mr. Brunson, and accuracy of statement seems to be equally so. He says I practically admit "that the fires of persecution were extinguished by Christians themselves"—a statement which, if I were dealing with a person attacking the ordinary meanings to words I should call a deliberate falsehood, but which under the circumstances I will merely describe as an excellent specimen of Christian truthfulness. Not only have I said nothing which could by any honest controversialist be so twisted, but in answer to Mr. Brunson's contention that "in the middle of the last century the great battle for religious freedom was practically ended," pointed out that Christians go as far as they dare in the way of persecution to-day, quoted the laws against "blasphemy" in England, and went on to show that Mr. Brunson's sneer that "infidelity has not that in it which makes martyrs" must be the outcome of sheer ignorance, citing many cases of most bitter and intolerant persecution of "infidels" the latest that of a gentleman in Sweden who was then undergoing imprisonment for writing and lecturing against Christianity. It is interesting to note how Mr. Brunson shuffles in dealing with these charges against his creed. Without a word of condemnation of those who to-day use this weapon of persecution—without admitting, "honest controversialist" as he is, that he was mistaken when he wrote that the "great battle for religious freedom was practically ended" in the middle of last century—he says that those who were so persecuted did not derive from infidelity their courage and endurance, because infidelity is not a "mysterious, vital, transforming influence by which a man is regenerated," &c.; and he goes on to use the word "infidelity" as if it connoted simply "unfaithfulness"—which is as if one should say that the Quakers could never have been

martyrs because the act of "Quaking" was not a "mysterious, vital," &c. There is the less excuse for his use of the word in this sense seeing that, not being without experience of the methods of Christian apologists, I happened to have taken the trouble to carefully define what I meant by "infidels who suffered for their opinions," my actual words being "using the word now as descriptive of those who objected to Christian dogma and teaching on moral grounds." But there is scarcely necessity to refer to my own definition, for in this matter, as in so much else of Mr. Brunson's argument, he confutes himself. In his first letter he says that "the very meaning of the term [infidelity] as popularly employed implies freedom of belief." Now he asserts of the cases of endurance I have quoted that the strength to suffer came not from infidelity, but from "the truth that liberty of conscience and freedom of thought . . . are the inalienable right of every man." "Infidelity," therefore, in his first letter, implied "freedom of belief," while in his second letter infidels who endured persecution suffered not for infidelity but for "freedom of thought." If it were worth while pursuing this point, Mr. Brunson might be asked, if he did not mean that infidels had not courage to endure persecution for their opinions, why he instanced the retraction of Galileo as an example of the "behaviour of a freethinker when confronted by a narrow, bigoted, ecclesiastical hierarchy." The truth is that in raising a cloud of dust to cover his retreat Mr. Brunson has got into a hopeless muddle, which he does not improve by his further remark that I claim these "cases of persecution . . . to be the legitimate outcome of infidelity"—an observation which is either another proof of his incapacity to say what he means or of his hopeless untruthfulness; certainly no such absurd statement was made by me. If Mr. Brunson considers such quibbling as this to be straightforward argument, he must have a curious idea of what is meant by "honest controversy."

One thing at least appears clear in this discussion—that after all his denunciation of me for pointing out that Christianity teaches persecution, it now appears that Mr. Brunson is himself not opposed to persecution in the abstract. He says that my major premiss is that "whatever system of doctrine teaches and enforces the persecution of its dissenters is an unmitigated evil," but, he adds, the "truthfulness" of this "needs to be established." Again, in answer to my quotation of the shocking commandment in Deut. xiii, 6, 9, after admitting that it is "revolting to us and causes the most hardened nature to recoil," he goes on to justify it as a "dire necessity" because the chosen people "had unmistakable idolatrous tendencies." Had the laws against idolatry been less severe, he argues, the Jewish God (all powerful, all seeing, all wise) would, it appears, have had to helplessly look on while "His truth" was buried beneath "heaps of ignorance, superstition, and degradation;" and therefore the enforcement of these laws, which to-day are "revolting to us," but do not seem to have been revolting at that time to God, who is "the same yesterday, to-day, and for ever," was the "wisest and most humane course possible." So that, if Mr. Brunson's words have any meaning, he is not opposed to persecution so long as the power to persecute is on the right side; for if the "revolting" law was the "outgrowth of the stress of existing circumstances," and the stress happens to occur again, it would be necessary, I suppose, to re-enact similar legislation—legislation that would necessitate "brother taking the life of brother, parent the life of child, and husband the life of the wife of his bosom." But Mr. Brunson has private information that this blessed revelation was purely national and temporary. (He uses the word "temporal," but as this word has no relevance to the subject under discussion, I presume he means "temporary.") If he does believe this, I am afraid I must again charge him with ignorance of his own sacred literature. Surely he is aware that the Pentateuch over and over again chronicles the promise made by Jehovah, that the land of Canaan was to be the "everlasting possession" of the children of Abraham (Gen. xiii, 15; xvii, 8; Ex. xxiii, 13), showing that the inspired writer of those books, whoever he was, had no conception of a state of things when the laws laid down in such detail would be unnecessary. But there are still more emphatic proofs of these laws being intended for all time. In the fourth chapter of Deuteronomy, before the recapitulation of the laws to be observed by the Israelites, there occurs this preface:—"Thou shalt keep therefore his statutes, and his commandments, which I command thee this day, that it may go well with thee, and with thy children after thee, and that thou mayest prolong thy days upon the earth, which the Lord thy God giveth thee, for ever" (Deut. iv, 40). The laws which are to be observed "for ever" then follow, and among them, in the thir-

teenth chapter, occurs that "revolting" law which enjoins the most pitiless persecution. Again, in the twenty-ninth chapter of Deuteronomy, after special reference to the disasters which shall fall upon the nation if the people worship other gods, the chapter concludes with these words, "The secret things belong unto the Lord our God: but those things which are revealed belong unto us, and to our children for ever, that we may do all the words of this law." Finally we have in the New Testament the words of Christ which I quoted in my former letter, that he "came not to destroy, but to fulfil," that "one jot or one tittle shall in no wise pass from the law till all be fulfilled." Now what has Mr. Brunson to say to this? Is the continual reiteration of "for ever" in the Pentateuch another way of saying that the laws referred to were only "temporary?" Do "all the words of this law" mean "some only" and "for ever" a "limited time?" I am afraid that Mr. Brunson would not regard any one else as an "honest controversialist" who should so argue in support of a religion in which Mr. Brunson did not happen to believe.

I had marked several other passages in Mr. Brunson's letter for comment (especially the audacious denial, after the evidence I had adduced, that Christianity still retained its persecuting character); but I think I have quoted enough to show how hopeless is argument with the retained defenders of Christianity. Their training wholly unfits them for it, and their faculties are so warped by prejudice that the constant assertion that black is white causes them possibly to come to believe that it actually is so. Not being a missionary, my leisure is limited, and I must therefore draw this review of Mr. Brunson's methods of controversy to a conclusion. His arguments (if they can be dignified by that name) go limping on, without cohesion and full of contradiction; substituting abuse for argument, assertion for proof, and quibbles for straightforward reasoning. In considering the writings of Christian apologists of the present day, I sometimes wonder whether Christianity is going to exhibit in its decay the phenomena that characterised its growth, when, as Mosheim points out in his "Ecclesiastical History," "it was an established maxim with many Christians, that it was pardonable in an advocate for religion to avail himself of fraud and deception, if it were likely they might conduce towards the attainment of any considerable good." It ought to make Christians pause to note the meaning already attached to one half of the name of the founder of Christianity, "Jesuitism" in popular usage having already come to connote "crafty deceit," and they should seriously consider whether, if their present methods of controversy are continued, the word "Christian" will not in time come to bear a similar meaning. At present it certainly seems as if it would. Straightforward argument seems impossible to the Christian apologist. If you point him to the words of the Bible, he says you are a "literalist;" if you point out obvious teachings from Biblical texts, he says you are "wanting in integrity of soul and honesty of purpose;" if you appeal to history for proof of the evil wrought by Christianity, he accuses you of being a "slandering infidel." And then, with sweet humility he will assure the world that he is a "Christian apologist, actuated by the love of truth and the good of his fellow-men, and guided by a spirit of honesty and fairness!"

Yours, &c.,

SECULARIAN.

Kobe, September 21st, 1890.

UNITARIANISM AND BUDDHISM.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It is a curious experience often enjoyed by English writers in Japan to see the transformation which one's thought may undergo after translation into Japanese, and retranslation into his own tongue.

In your recent editorial note upon Mr. Takahashi Goro's review of an article of mine with the above caption it is exceedingly difficult to recognize any trace of the purpose, tone, or sentiments of the original. No such absurdity as an "alliance" between Unitarianism and Buddhism has ever been dreamed of. The errand of Unitarianism to Japan is based upon the now familiar idea of the "Sympathy of Religions." It is the idea expressed by Mr. Yokoi as, quoted by you in a recent editorial, when he says that "the Christianity which is about to spring up in the East must stand on the pedestal formed out of the religion of Buddha and the Confucian philosophy." From this point of view, for an article stating the points of intellectual sympathy and at the same time emphasizing the intellectual differences between Unitarianism and Buddhism

to be construed as "begging and praying" for an "alliance" between the two religions, is a misapprehension so palpable that it needs only to be stated to be dispelled.

Nor has Unitarianism, as Mr. Takahashi Goro seems to insist, any controversy with Christianity. It is radically and vehemently opposed to Orthodoxy, but even in this antagonism it is not, as Mr. Takahashi complains, showing an unfilial spirit in attacking its mother, for Unitarianism, being far older than Orthodoxy, can of course acknowledge no such relationship. Unitarianism stands for that older simpler undogmatic Christianity which Mr. Yokoi describes when, as quoted by you in your editorial of the 22nd inst., he says:—"The disciples when they followed Christ knew nothing about the doctrine of the Trinity or that of Redemption: they did not observe the ceremony of the Lord's Supper, and some of them do not even seem to have received baptism. But they believed, and loved him, and their hearts were regenerated by his character and life."

Unitarianism is precisely this original, simple Christianity, plus the larger intellectual conception of the universe and of life which is given to our day, and which Christ and his disciples could not have had.

Unitarianism has no controversy with aught except the irrational dogmas of Orthodoxy, and even that antagonism must soon cease if we may judge by the general revolt from such doctrines which is now going on in the ranks of Orthodoxy itself.

Yours truly,

ARTHUR MAY KNAPP.

Tokyo, September 28th, 1890.

TREATY REVISION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It is impossible to hold that in so large a number of British residents as attended the recent meeting on Treaty Revision in Yokohama, there are not very many who would welcome a solution of the question in any way which fairly secured the interests which they have at heart. Also they will be the more ready to fall in with any reasonable suggestion, as their recent action has in all probability rendered some decision in the matter inevitable. If history may be trusted, it is an invariable law that there comes a point in all practical questions, when they no longer admit of being shelved.

Probably more than this may be said. It is all but certain that by this time a large number of those who attended the meeting regret the form of the resolutions which were passed, and still more the tone of at least one of the speeches which were delivered. English sense of fairness, which is never long at fault, has told them before now that guests in an alien land have no right either to parade the failings of their hosts in public or to ignore their virtues; and that such a course is particularly to be avoided in a country like Japan, where sensitiveness and self-regard are characteristic of the people.

But if these points may be taken for granted, the time has plainly arrived for wiser and more moderate counsels to claim a hearing.

The present writer some years since found himself at a dinner table by the side of the most brilliant jurist who has advised the Government of India, at least since Macaulay. For a time the conversation ran on Latin verses, and I led my companion to tell something of his achievements in the days when he carried off the blue ribbon of a senior classic. But the agitation on the Libert Bill was at its height, and to an old resident in India talking to a member of Council, the opportunity was too good to be lost. "What is the reason," I enquired, "of the disproportionateness of the present excitement? The bill does not make any very great alteration in the existing law." "It is a little difficult to say," was the reply. "I myself a few years ago carried through a bill which affected British interests far more largely, without any difficulty." "How," I asked, "did you manage it?" "The leading British merchants," was the reply, "in Calcutta met me privately before the bill was brought in and explained their views, and I told them the reason which in my judgment rendered the change necessary."

Now, sir, the conditions under which foreign residents live in India and in Japan are in some respects remarkably similar, at least sufficiently so to make it safe to state that if the best way of securing influence on public measures in India is for a few practical and moderate men to state in definite terms what they think necessary under the circumstances of the community, a similar method will not be out of place in this country. On the other hand, the general resolutions of a public

meeting may only perplex a question which would be by no means incapable of successful management in "a dry light."

To drop circumlocution. The present writer has read the discussion on this subject most attentively. More especially he has noted with deep interest that the able mover of the first resolution at the meeting, has since distinctly professed himself a "revisionist," and yet he is compelled to confess that he is entirely ignorant as to what guarantees other than those already existing would satisfy the Yokohama community. His ignorance is probably not unique. Under these subjects it is too much to ask that a few leading British residents, who are agreed in regarding Treaty Revision as under the circumstances desirable or at least inevitable, would formulate their opinions?

But meanwhile it may be permissible, even for a layman on such subjects, to enquire "what is the most reasonable form of guarantee which can be asked of an Oriental nation by foreigners, when the land in which they reside has reached the stage of development which is now exhibited by Japan?"

Two points may be kept in view:—

(1.) The Consular jurisdiction is the *crux* of the present question. All other points such as land tenure, import duties, &c., would quickly be got out of the way if it were settled.

(2. a.) No settlement can be satisfactory to the Japanese, and therefore no settlement can be permanent, which involves interference with the sovereign rights of their Crown in its own territories. (b.) Any settlement ought to be satisfactory to the foreign community, which secures that they shall be treated with substantial justice. We have no claim to favours.

Are these conditions capable of practical reconciliation?

From many years' observation of Oriental people I venture to say that from my own point of view the one thing which I should be anxious to secure, if a case in which I was interested were before the courts, would be *superiority*, or if the word be preferred, *publicity*. If, for instance, my judge were a Japanese, I should be content, if the case were watched from first to last by a legal assessor of my own nationality, acquainted with the Japanese language, with power of immediate remonstrance and an official right to make a report to his own Government, if he considered it necessary, when the case was concluded. I should make no doubt that this would secure me fair treatment. All danger, real or imaginary, of my case being "scamped" or hurried or misunderstood would be at an end. Indeed, it might rather be feared that for some years to come so anxious is Japan to show herself the peer of the West in methods and aims—the law would be strained in my interests rather than to my detriment. On the other hand, by this concession being granted me there would have been no interference with the sovereign rights of the Japanese Crown. Indeed, if it were desired, there would probably be no difficulty in granting perfect reciprocity under such a system to Japanese residents in Europe. I offer this then as one suggestion. It may possibly draw out others.

But it is said: "We know where we stand now. We have no experience of another system." No doubt. But is this dilatory plea defensible under our circumstances? Where a nation has made large strides in advance since certain legal stipulations were laid down, is it right for the other party to the conditions to refuse to modify them? Are treaties of permanent as well as binding obligation? May not insistence on terms of law be a violation of substantive right? If not, what is the meaning of equity? Are there not larger interests at stake even than those of trade: interests of justice and amity and widening influence? Does not the hope that the country where we reside may be the first in the East to be welcomed to the comity of Christian nations suggest a generous treatment? With these questions, Sir, I beg to subscribe myself,

Your faithful servant,

PACIFICUS.

Kobe, October 1st, 1890.

FOR IMPAIRED MENTAL POWER USE HORSFORD'S ACID PHOSPHATE.

Dr. GEO. SHERRER, L.R.C.S., Liverpool, says: "I prescribed it in a case of chorea of several years standing, and the most inveterate type, with the happiest result. It was in the case of a boy, aged 14, whose memory and mental powers were beginning to suffer, and in whom the involuntary movements were almost maniacal. His is quite cured."

OPENING OF THE NEW CHAMBER OF COMMERCE & MASONIC HALL.

On Thursday a large company assembled, on the invitation of Mr. O. Keil, in the new Chamber of Commerce and Masonic Hall, to commemorate the opening of what may well be termed the finest structure in Yokohama. To those even who have seen day by day the walls of what early manifested itself as a most imposing building, rising from the compound on No. 60, or those others who in addition have been aware from the outset of Mr. Keil's plans, and could realize how thoroughly he would carry them out, it has been a pleasant surprise to view the graceful and substantial proportions of the new edifice. To strangers the work will no doubt appear as a powerful evidence of Yokohama enterprise and architectural skill, and its beauty and convenience will further afford a satisfactory and gratifying index of the prosperity and strength of the Masonic and Oddfellows Orders, to the purposes of which one whole floor of the building will be exclusively devoted. Situated exactly opposite the German Consulate, this truly ornate addition to the architectural features of the Settlement can hardly be viewed to proper advantage from the street immediately in front of its elevation, although in deciding on its design regard was very closely had to its situation. Enough, however, can be seen to enable one to realise the immense labour and skill which have been expended on the structure, as evidenced in the harmonious proportions of the slender Doric pillars, the beauty of the carved Corinthian capitals, and the light and elegant lines of the pediment which surmounts the front, and on the face and base of which are shown in gold relief the square and compasses of Freemasonry and the three-linked chain of the Oddfellows. The front walls, which are 40 feet in height from the pavement, and 84 feet in length along the street (the building being 64 feet in depth), are of brick, resting on stone bases, and faced with stone and composition, chiefly in the form of pillars and carved capitals supporting plain mouldings.

As we have already indicated, the structure is Italian in design with a mixture of modern details, rendered necessary for convenience sake, the Queen Anne style being chiefly drawn upon for this purpose. In the front elevation there are three doorways, but entrance to the main part of the building is gained by the central opening, which like the others is 12 feet high and 7 feet wide. The main entrance hall is 20 feet by 13 feet, and leads between two fine *keyaki* columns into a longitudinal central hall 12 feet wide, with a spacious staircase at the western end. On each side of the entrance hall is an office, the two thus occupying the whole front of the lower floor. These are large rooms, 32 feet by 22 feet and have each an entrance from the street. At the back of the building is a suite of rooms consisting of a committee or reading room (at the western end), the secretary's room (at the eastern end) both 20 feet by 18 feet, and, between, the Chamber of Commerce Board Room, 34 feet by 25. A smaller corridor gives access to the lavatories, which are in a semi-detached wing of one story at the back of the building. A very handsome staircase of *keyaki* leads to the upper floor, the whole front of which is occupied by two lofty and spacious halls. Of these one is 45 feet by 27 feet and the other is 33 feet by 22 feet. They are connected by folding doors flanked by very beautiful pillars of *keyaki*, with slender Italian shafts and Queen Anne cornices or brackets. Along the centre of the building, from west to east, runs a hall 12 feet wide—corresponding in fact with the one below, and at the back is a suite of apartments of varying dimensions. At the head of the staircase is a gentlemen's cloak room (so used last evening) 20 feet by 18 feet; next to it a card room 27 feet by 20 feet, intended for use as a small lodge room, and having movable pillars, curtain runners, &c. Adjoining this is a ladies' private room, to be employed as a regalia room, and in the most easterly part of the building a cloak room 20 feet by 18 feet, also intended for employment in connection with lodge meetings.

No one who has from the outside noted the height of the doorways and windows need be surprised to find that the interior is most lofty and well proportioned. As a matter of plain fact the apartments and halls on the lower floor are 15 feet high and on the upper floor the height all over is 18 feet; so that our readers will be enabled to realize the proportions of the apartments upon which the architect has had to employ his powers of decorative design. Of the various rooms, however, the only one in which internal adornment finds full display is the large hall, the ceilings of which are panelled; a panel of Vancouver pine

running round the lower part of the walls. Canadian pine, indeed, has entered very largely into the construction of the building, for while the entrance doors and pillars are of *keyaki* and the outer shutters and other fittings exposed to the weather, of *hinoki*, the floors, which are first class specimens of carpentry, and other works are of pine. In the large hall the floor is stained dark in several lines, forming a border all round close to the walls, these latter being strikingly relieved by frequent Corinthian pillars. With three exceptions the grates and chimney pieces have been made in Japan and were supplied by Messrs. Carroll and Co., while the bronze work (such as locks and other fittings) which is of the most substantial character, and yet highly ornamental, has been furnished by Messrs. Sargent and Co. of New York. Attention will be attracted by the mantelpieces, which are of enamelled slate and are very artistically ornamented, the hearth in each case being formed of vari-coloured encaustic tiles from Stoke-upon-Trent. The pieces in the large hall specially are very fine works, each bearing on it in beautiful design the square and compasses of Freemasonry.

The building is amply furnished with windows, the large hall having, for example, four and the small hall three, while the other rooms are not less conveniently provided. The shutters in the upper story are so divided that while the lower parts are closed light and air may be admitted from above in ample degree. The windows are wide and lofty, their height being about 11 feet.

The design is the joint production of Mr. Keil and Mr. Diack, the latter of whom is to be warmly congratulated on the success with which he has carried out the views of his client.

Next to its decided architectural beauty, that feature of the new building which most powerfully impressed visitors—especially those who were privileged to see it last evening—was the system of electric lighting. The duty of carrying out this work has been most efficiently performed by Messrs. Fiazar & Co., to whom the contract was entrusted, and who have been represented in the new building by Mr. A. Churhill. Plainly no measure has been omitted that might tend to enhance the beauty of the various rooms by night, or to add to the comfort or aid the labours of their occupants, for not merely in the lofty and well proportioned apartments, but in the hallways and corridors and at various points and in different corners where their use might reasonably be anticipated, the plain little pear shaped glasses of the system are to be seen. It is hardly necessary to say that in such a case as the present no condition has been permitted to exist that might involve danger to person or property while the lights are burning. It may be remarked, however, that all the wires inside the building are very highly insulated. Indeed they belong to the class known as Edison's "grades," which means that no wires of higher insulation are procurable for general use. Danger from the main wires, that is those outside the building—is slight—consisting only of the risk always attaching to overhead wires—unless in the event of contact with telephone wires, to obviate which of course proper measures are taken. For the first case we believe it is the intention of the Union Electric Light Company, from whose works the current will be supplied to Mr. Keil's lights, to lay the chief electric mains in Yokohama underground, and in the latter case danger to life or property from the electric lighting wires is a most remote contingency. Means, however, are provided for protection in the event of the current on any wire being increased to a dangerous degree, for at two points, first at the junction with the main, and again before the wires are distributed to the various rooms are "cut-outs" provided. These consist of small plugs, each containing a piece of soft metal, which on the current increasing in power fuses long ere a dangerous temperature is reached and cuts off the electric contact. The first "cut-outs" are on the ground floor close to the meter; the "cut-out" station for the ground floor is in the wall of the upper hallway, and that of the first floor lights is situated in the attic of the building. The lights are distributed throughout the premises on the following plan:—Ground floor: (all lights of 16 candle power) front offices, 6 lights each; library and reading room, 4 lights; Chamber of Commerce Board Room 11 lights; secretary's office, 5 lights; lavatories, 4 lights; entrance hall, group of 3 lights; corridor and stairway 3 groups of 3 lights each; back corridor two lights, in safe, banto's office (night light), and other necessary places single lights; first floor: large hall 30 16 c lights (6 light cluster in centre); small hall 20 16 c lights; cloak room 4 16 c lights; small lodge room 3 16 c lights in centre and one 32 c light at each corner; regalia room 4 16 c lights; and eastern room 5 16 c lights, main corridor 4 groups of 3 16 c lights each. The remainder of the hundred and fifty lights which

comprise the system of the building consist of isolated lights at various spots. Numerous places have been provided where portable lights for desk work may be attached. The system, it should be said, is Edison's Three Light System, which ensures against complete cessation of the current by one dynamo stopping or breaking down. All wires, switches, (of which there are three for the large hall, and two each for nearly all the remaining rooms) and "cut outs" are from the Edison factory, while the fixtures have been made by Japanese from designs by Messrs. Bergmann & Co. of New York. It may be mentioned that the slender filament whence the light is emitted, which may be seen as a mere thread within the glass lamps, is carbonised bamboo fibre, the bamboo being shipped from Japan to the United States, and returning in this unique form.

Dancing began last evening shortly after nine o'clock, to the strains of the Tokyo Marine Band, which was stationed at the head of the stair-case. The electric lighting was perfect, not one of the lamps in the building failing to act, and the ventilation being also all that could be desired, and Mr. Keil's arrangements for the comfort of his guests, even to the merest details, entirely dictated by forethought and consideration, it goes without saying that all enjoyed themselves without stint. Supper, to which about two hundred and twenty guests sat down, was laid in one of the front rooms on the ground floor (the corresponding apartment being devoted to refreshment and smoking purposes) and in the Chamber of Commerce Room, where soon after midnight Mr. Keil's health was proposed by Mr. Brooke, who took occasion at the same time to remark that the event bore a double significance, as the day on which they met was the birthday of their host. The toast was most cordially drunk, and Mr. Keil briefly replied expressing the pleasure it gave him to see so many present, and his thanks for the kind wishes conveyed to him. "For he's a jolly good fellow" was given with proper vigour and spirit by the company. On the upper floor dancing was meanwhile continued with scarcely any intermission. Mr. Keil had arranged to have a special train run to Tokyo, starting from Yokohama about one p.m., but the enjoyment continued for some time after the departure of the contingent from the capital. No attempt at decoration was made either inside or outside the building, the only special provision being the erection of a temporary arch to protect guests while crossing the pavement to or from their carriages. Under the electric light the fine proportions of the chief rooms, and the beauty of the decorative details were plainly apparent, very general admiration of the building and its fittings being expressed. From no apprehension of danger, but chiefly in consequence of an absurd story that had been set in circulation by some foolish person, Mr. Keil had deemed it advisable to procure the attendance of police constables without the building so that not even the most timid should entertain any fear of disorder.

The following was the menu of the Supper:—

BEEF TEA.	
CAVIARE SANDWICHES.	GALANTINE OF CAPON.
GAME PIE.	
ROAST HAUNCH OF MUTTON.	
ROAST BEEF.	ROAST TURKEY.
ROAST CHICKEN.	
ROAST TRUFFLED TURKEY.	
CORNED TONGUE.	CORNED BEEF.
YORK HAM.	SALAD.
JELLIES.	
ASSORTED PASTRY.	ICE CREAM.
COFFEE.	TEA.

The list of the dances was as follows:—

1.—Waltz.	7.—Polka.	13.—Schottische.
2.—Waltz.	8.—Lancers.	14.—Waltz.
3.—Lancers.	9.—Waltz.	15.—Polka.
4.—Waltz.	10.—Waltz.	16.—Waltz.
5.—Galop.	11.—Lancers.	17.—Waltz.
6.—Waltz.	12.—Waltz.	

CHRISTIANS UNDER IMPERIAL RULE.

A SERMON PREACHED IN St. Andrew's, Suiba, TOKYO, ON SUNDAY SEPTEMBER 23RD, 1890, BY EDW. HIRAKAWA, D.D., BISHOP OF THE CHURCH OF ENGLAND IN JAPAN.

"Let every soul be in subjection to the higher powers; for there is no power but of God, and the powers that be are ordained of God."—Romans xiii. 1.

I. If for a moment we regard the New Testament as a book among the books of the world, it is simply a selection from the literature which was produced in the first century by a small religious society whose members were widely scattered amid the teeming population of a great empire. For reasons into which it is not now necessary to enter, we Christians hold that this literature en-

shrines a divine revelation, which for the purposes of our present life is alike final and sufficient. But what I am now concerned to notice is that the circumstances of its production enable us to take account of the relationship which obtained between the early Christians and the institutions and systems among which they lived, and to note what estimate they formed of the duties which this relationship involved.

From a variety of causes of which the chief was the bitter opposition of the Jewish colonies, which before the Christian era had been planted in every great city, the life of a Christian in the first age was beset with troubles and dangers. On the other hand, as a rule throughout the earliest period he was able to rely on the protection of the Roman law. That vast system of jurisprudence already embodied principles which since, mainly through it, have become the possession of the civilized peoples of Europe and America and lately of this land. And allowing for exceptional periods of excitement, as after the conflagration of Rome, the early Christian could on the whole count on a fair, perhaps even a favourable, hearing before the Roman tribunals. "It was to Roman justice and Roman Magistrates that St. Paul had recourse to shield him from the enmity of the Jews and to check their violence. At Philippi his Roman citizenship extorted an ample apology for ill treatment. At Thessalonica Roman law secured him fair play. At Corinth a Roman pro-consul acquitted him of frivolous charges." A Roman officer saved him from violence at the hands of his own people in Jerusalem. A little later his appeal to the judgment of Augustus is allowed without demur. His biographer does not fail to note the courtesy which during his voyage allowed him access to his friends at Sidon, and freedom, during the many months that elapsed before his trial, to carry on his apostolic work in Rome. There is good evidence that on his first trial he was honourably acquitted.

No doubt a generation or so later the case was different, and it is instructive to notice the reason of the change. It was because it had become evident to the rulers of the day that the propagation of the new and extraordinarily expansive faith of which the earlier years of the century had seen the birth, conflicted with principles and practices which they held to be essential to the stability of the Empire. This was so especially in two regards.

1. It was a principle of Roman jurisprudence to afford an impartial protection to all national worship alike, but at the same time to demand that they should not interfere one with another. You might worship as you liked; you might not tell another that truth or duty required him to adore the same God as yourself. From the point of view of the Roman statesman there was much to be said for the regulation. For the maintenance of a world wide empire it might well be argued that division was equally important whether of political areas or of religious cults. Large combinations were the one danger to be avoided. And on the other hand for no immediate advantage—and the continuance of legal protection might have seemed a very substantial advantage indeed—could the Church afford to conceal or lay aside her claim of Catholicity, her right to a universal spiritual empire. Her aim was to absorb all other creeds into her own and to silence all other worships but that which she herself offered. It could not but be so, but the claim inevitably involved after a while a conflict between the faith and the civil law. "I had no doubt," wrote the Governor of Bithynia, when asking for instructions from his imperial master for the treatment of Christians, who had been brought before his tribunal, "that willfulness and inflexible obstinacy ought to be punished."

2. This was one cause of the systematic persecution with which after a while the Church was confronted. Another was the position attained during the same period by the practice of paying divine honours to emperors. At an earlier time one of the reasons alleged to justify the murder of Julius Cæsar was that he had claimed prerogatives of the Gods. Augustus would allow no temple to be erected to himself alone. But afterwards all such restrictions were cancelled, and in the next century after the death of Marcus Aurelius it is said to have been counted sacrilege not to have his statue in the house. But "the Christian could not acknowledge in the Emperor the centre of that larger being which he had found in all its fulness in Christ. Only resting on that which is outward seemed to him necessarily to be partial and worthless. He looked forward to another order for the resolution of all the discords of life,"* and on this ac-

* See an essay "The Church and the World," by the Bishop of Durham, for a collection of authorities and facts bearing on this point.

count too after a while his faith involved him in danger of suffering and death.

Now the point on which I am anxious to fix your attention is the prevailing attitude maintained by the first Christians towards the Roman State, both during the earlier period in which on the whole its authority was exercised on their side, and later when it aimed at their extirpation. It is not too much to say that they never lost the sense of the reverence which is due to civil authority as a thing of divine origin. They never forgot, what the Christian theology teaches, that Christ is the light of every man, and that the powers of conscience and reason which find one of their noblest fields in human law and administration, are divine endowments. A Nero, though he had not yet exhibited his worst depravities, was on the throne of the Cæsars when S. Paul wrote the words which I have already quoted. "Let every one be in subjection to the higher powers; for there is no power but of God, and the powers that be are ordained of God." In the succeeding verses he twice calls the magistrate 'a minister of God' by virtue of his office, and he concludes: "Render therefore to all their dues; tribute to whom tribute is due; custom to whom custom; fear to whom fear; honour to whom honour." S. Peter has been thought to exhibit quite another phase of Christian thought to S. Paul, but he writes from Rome, probably during the worst days of the Neronian terror, "Be subject to every ordinance of man for the Lord's sake; whether it be to the King as supreme or unto governors as sent by him for vengeance on evil doers and praise to them that do well." And this estimate of the reverence due to civil power became permanent and characteristic in the Church. In the next era after the apostolic there arose a series of apologists who wrote in defence of their persecuted co-religionists. Their treatises were commonly addressed to the reigning Emperor himself, and appealed without hesitation to a standard of right and justice, which they assume will be recognized, though it had been violated. "We render honour to the Emperor," says one of the latest of them "in such a way as is lawful for us and expedient for him as to a man who stands next to God and who has obtained whatever he is from God, and is less than God only." Such phrases are exaggerated, but they are good evidence that respect for civil authority as a religious obligation is part of the best Christian tradition.

II. I should keep you too long if I was to pursue this subject in detail, but shall venture to insist for a short space on its application to ourselves.

We too are a small body of Christians amid a vast population of unbelievers. No doubt in most other respects our position and that of the first Christians is sufficiently dissimilar. The subjects of a mighty nation, protected by its name its influence and its power, their faith no despised superstition but the world's dominant creed, are very differently circumstanced from the members of the first Christian societies.

It is but fair to add that our own past history has not fulfilled the earliest promise. The primitive Christian, however lacking might be the body to which he belonged in point of rank or influence, could appeal without fear of contradiction or denial to the unsullied benevolence, the unselfishness, the usefulness of his co-religionists' lives. But Christendom has not always been the home of Christian principles. A black list might be written out of instances in which the Christian standards of right and wrong have been violated for long periods together. Toleration, for instance, is inherent in the Christian faith and was counted a virtue long after the establishment of Christianity by the civil power, indeed by men like S. Bernard far down into the middle ages,† but still long centuries passed in which it had no advocates, and yet more before they could obtain a hearing. "Peace on earth" is the first message of the Gospel, but war is still the arbiter of the disputes of Christian nations. They still live who can remember when slavery found its apologists in the lower house of our Legislature, and laws of unreasoning severity disgraced our statute book. Our own day has seen in the supposed interests of trade—thank God that the protest is growing indignant and loud—strong indigenous races being killed out by the sale of our spirits and our fire-arms. Failures and wrongs like these are not indeed the whole truth. It were it for us if they were. The history of England's work among the many millions of India, to take an instance on the other side, is on the whole one for which we may be thankful. But the fact is that the story of the life and action in the world alike of the Church as a whole and of our own nation is part dark and only partly light, and

we do not mend matters because, if we will, we may ignore the contrast.

And again, if we compare the attitude towards the Christian Church of the old empire and of Oriental countries in our own day, once more there are conspicuous differences, but in important respects the superiority is with the present. To confine our view to this country. The Roman law, we have seen, despite its general tolerance made an exception of Christianity on account of the catholicity of its claims. Since then the claims of the Faith have suffered no abatement in purport or range; yet here this has proved no bar to its recognition as a system which may do all that it can to win the religious allegiance of the people. We saw that of old the worship of the Emperor became part of the contemporary creed, both religious and political. Here within a few years the old mythical faith on which the throne of this country was thought to rest, has faded from the mind of every educated youth. Yes, even as on the Indian plains after the desiccating drought of summer, days yet before the showers fall and the parched land leaps into sudden verdure, already there is felt from afar the influence of the coming rain; the blast of the hot wind has ceased and the air is tempered; so in the higher sphere of the moral and the spiritual, signs are to be noted in these Eastern lands such as were without explanation, but for the sure approach of the day when the Faith and Church of Christ shall obtain in them full possession. Here at all events there is a greater recognition of spiritual needs, an expectation of the revelation of higher truth, an insistence on the necessity of manifold social reforms, a struggle against moral evil, which it may not be doubted are due to the unrecognized but real influences of Christian faith and practice borne in upon them from afar.

And now if we bear in mind these points of likeness and contrast, let us ask in conclusion what are the obligations which alike our position and our faith involves towards the people of this country. We have seen that early Christianity on the one hand paid high respect, as to creations of God Himself, to the institutions and laws of the countries in which it obtained a footing, and appealed to moral standards which were common to it and them, and on the other hand fearlessly and unswervingly claimed the religious allegiance of the people.

Let us its latest descendants and representatives not do otherwise.

1. Let us accord to this people, whose guests we are, the fullest and most generous recognition of their good qualities and endowments, their receptivity, their Grecian versatility of disposition, their appreciation of beauty, their ordeliness, their love of children and reverence of age. Let us look with generous eye on their political system and social institutions. It is not right because it is not true to speak as if men, who are not Christians, did not often know and act upon the claims of the moral law, as if they are not often honourable citizens, fair traders, upright judges. Our faith obliges us to no such conclusion. Nay, rather it founds its own more lofty claims to acceptance on the very dictates of that unwritten ethical code which it assumes, notwithstanding all human wanderings, still finds a recognition in the hearts of all men alike, and still exercises a constraining force on conscience and purpose and action.

2. And lastly, brethren, it is our duty, a duty imperative and inalienable, to use the opportunities which our residence in this land affords us in the interests of our Faith. Not all by their words, but all by good example, by kindly deed, by generous almsgiving, in a word by showing forth in practice what we hold in principle, can promote the extension among this people of the Kingdom of God. To do so is a duty inherent in our religious profession; it is no less an obligation of charity. For the claims of the moral law, it need scarcely be said, are sustained, as no otherwise so surely, by the truths of revelation, and religion has also "the promise of the life to come." To recognize this last is this people's greatest need, and he has done much for them who by whatever means has helped them to transcend in heart and mind the narrow limits within which their philosophies have bound them, of the earthly and the temporal, and has led them by example or precept to submit thought and life to the principles which draw their sanction from revealed realities of an eternal world.

The Lives which promote these ends will one day be found not to have been lived in vain. Other and more immediate purposes need not be decried. The acquisition of wealth for instance, and with it such collateral aims as the promotion of refinement and culture and the development of art or literature, are well within what is permitted to Christians as to others. The real difference is that the nation and the individual

which has accepted the canons of Christian faith and action, cannot count aims like these as the last or most important in its comparative estimate of duty. Since Christ lived and died, the service of God in the unselfish promotion of interests which are not our own must always have the first place in the judgment of all his followers. "Look not every man on his own things, but every man on the things of others also." "Even Christ pleased not himself." These are the formative elements of the Christian morality, which have gone far to make all that is best and noblest in the Europe of to-day. We may not forget them when we cross the seas.

May God grant that when the record has been written up of the dealings of the English nation and Church with the people of these islands, it may be a page of our history which shall commend itself to the best judgment of men, enlightened by the principles of Christ.

REVIEW.

More Grammar Lessons. For Japanese Students.

By J. N. SEYMOUR, B.A., Tokyo.

DR. J. N. SEYMOUR, Instructor in English at the Higher Normal School, Tokyo, has published a second volume of grammar lessons for Japanese students. Dr. Seymour's writings have already proved him to be possessed of three admirable qualities, terseness, lucidity and simplicity, all of which are well displayed in the little book now before us. Grammar is a study to which few people take kindly, and grammarians, convinced apparently that they cannot hope to make their writing attractive, too often fall into the other extreme and became conspicuously dry and deterrent. To sit down deliberately for three or four hours' study of the ponderous volumes of Bain or Fowler, demands such an exercise of moral courage that men are usually content to regard these masterpieces of care and research as mere books of reference, and to borrow their rules of syntax and construction from desultory reading and everyday conversation. Dr. Seymour has done what he could to correct this fortuitous mood by compiling small and easy books which cannot alarm even the least earnest student, though they introduce him very thoroughly to all the important rules of grammar. One of the features of Japan's assimilation of Western civilization is that she is coming into gradual possession of a literature of her own, specially designed to aid her youths in acquiring foreign languages and sciences. It is most interesting and stirring to read, year by year, the catalogue published by the great Tokyo booksellers, Messrs. Maruya and Company, and to observe how rapidly the list is swelling of books prepared by the Japanese themselves, or by foreigners in their service, with the view of lightening the heavy task imposed on this busy and resolute nation by its ambition to recover lost ground. Dr. Seymour's new work makes a useful contribution to the growing library. Not only does it contain the chief rules of grammar clearly stated, aptly illustrated, and accompanied by remarks which, no less than the examples chosen, show thoughtful insight into the special difficulties that beset Japanese students, but it also derives additional value from a quantity of original matter which will certainly be highly appreciated. We must confess to a feeling of regret that Dr. Seymour should assist to induct Japanese students into the pernicious tendency now becoming prevalent to substitute the loose usage of conversational language for the recognised rules of grammar. There are to be found highly educated men who claim that such phrases as "it's me," "it was him," must be pronounced correct because they are gradually ceasing to be colloquial solecisms. But is this reason consistent with facts? We should hope that English speakers are still few and far between who have become reconciled to the substitution of an objective case for a nominative in phrases where grammatical rules, strictly observed by past generations, prescribe the use of the latter only. Dr. Seymour, indeed, says nothing of this new license in respect of personal pronouns, but he tells us of the relative pronoun that the nominative "who" is often used as the objective case, and that "in conversation 'whom' is comparatively rare." Evidently he is a doubtful convert to modern license, for he spares his readers the shock of such examples as "the man who I was speaking to" or "the woman who you told to come;" but he nevertheless makes the mischievous admission, instead of protesting against it *in toto*. Apart from this concession to the tenets of the new school, we notice a few points to which the author's attention may be drawn for the purposes of a second edition. To his notice of "Pronouns used indefinitely," it would be advantageous to add a warning against

† The revolt against Puritanism in the latter half of the 17th century is the real epoch of the recovery of the earlier and true opinion. The Cambridge Platonists were its most successful advocates.

the too common error of mixing personal and indefinite pronouns in the same sentence, as when people wrongly write:—"One does not feel anything when he is insensible;" or, "It is hard for one to be patient when he is abused so." In the section on "References of 'It,'" also, we are disposed to think that a needless and perplexing distinction is introduced. Why should the student be told that "it" refers to the infinitive mood in such a sentence as "It is wrong to waste time," but that "it" refers to a clause in such a sentence as "It is true that Mr. X. is going to marry Miss Y."? Surely in both cases alike the reference of the indefinite pronoun is to a clause. We do not find, again, that the difference, puzzling to a Japanese, between "few" and "a few," "little" and "a little," is explained with sufficient clearness. It may, indeed, be gathered from the examples, but the value of the article in such a case is decidedly obscure to a Japanese student. Dr. Seymour has also omitted to tell his readers anything about "none," though the use and number of this pronoun have provoked some controversy among grammarians. We think, further, that he should enter more fully into the distinctive force of "that" as compared with "who" or "which." Punctuation furnishes a commonly employed means of obtaining the same distinction, but grammar and punctuation being separate subjects, students should be taught the difference of meaning between phrases of which "Englishmen who love the sea" and "Englishmen that love the sea" are types. Is it not also slightly misleading to say that there is only "a shade of difference" between "the same as" and "the same that"? Actual identity and generic identity differ by more than a shade. Further, in his chapter on "The Present Perfect" the author scarcely gives sufficient assistance to Japanese students. The proper use of the tense puzzles Japanese speakers and writers of English immensely, and experience has taught us that no rule assists them more than one which Dr. Seymour omits, namely, that the present perfect should never be employed when the verb is qualified by an adverb of past time. It is quite incorrect to say, for example, "We have heard recently," or "I have met Mr. so and so this morning." More important, however, than any of these points is an error into which Dr. Seymour falls in his exposition of indirect narration. He not only fails to note that the ordinary rule as to the use of "shall" and "will" (and their past tenses) in oblique narration is reversed when the subject of the verb in the principal clause is also the subject of the verb in the dependent clause, but he gives an example which, without explanation, is worse than misleading. It is not correct to say "He said he would stay at home," unless we desire to specially emphasize the speaker's expression of volition. The ordinary form, according to grammar, is "he said he should stay at home." This part of the subject of indirect narration requires amplification. Dr. Seymour is conferring a boon on Japanese students by the compilation of these manuals, and we trust that he will persevere in an undertaking so successful up to the present.

HOW I OPENED UP KOREA.

It happened during the memorable summer of 1882. A crisis had just passed in the Hermit Kingdom; a short conflict between the old and new—between progress and ignorance. The Japanese Minister had been driven from Seoul, and had to take refuge on an English gunboat, and he was now returning with a formidable force at his back to re-enter the capital in triumph. The Chinese had also taken a hand in the game—brought a small army into the country; had taken the Tai Won Kun prisoner, and deported him to China in one of their own vessels. Things were said to be at a standstill—"everything quiet on the Potomac,"—when we arrived there, but the mutterings of the eruption could still be heard.

I held the position at the time of a junior officer on one of the Mitsu Bishi Company's floating palaces. We had brought a company of soldiers with their stores and equipments to Chemulpo, and after these had been landed our time was at our own disposal and hung rather heavily on our hands, lying as we were anchored off the place awaiting orders from head-quarters. So many stories were told about this strange country that they excited quite a fascination for me, and a strong desire to penetrate into it took position of me as I gazed at the blue tint of the distant mountains where Seoul was supposed to be situated. No European, so I was told, except in disguise, had yet been inside its walls, and the glory of being the first was a strong incentive to make the attempt; besides I might perhaps be able to obtain a glance at the Court, just

now under a cloud, but said to be still carried on in real Oriental splendour. For a spell fate was against me; the Japanese authorities on shore, on discovering any intention, frustrated my plans. Both sleep and appetite forsook me, and I began to waste away perceptibly as I saw day after day pass and I still no nearer to the starting point. Saint Joseph, our noble skipper, used to ask me if my stomach was out of order, as he like the Chinese appeared to think that a man's heart was in his belly; and he could not understand my unconquerable desire, he said, to go and be murdered by a lot of savages.

Several steamers had arrived in the meantime, and one day I was agreeably surprised by Tom —, an engineer from another floating palace, offering to accompany me on my proposed trip to the capital. This infused new hope, and with renewed vigour I increased my efforts to elude the vigilance of the Japanese officials, and I succeeded! Be hold us then early one morning starting off on foot—the distance was stated to be somewhere between 30 and 50 miles. Evading the Japanese troops when we landed, and pressing a Korean coolie into our service to act as guide, we started. The sun was just rising as we commenced our journey, and we tramped gaily along the dusty road. Through smiling fields, over low green hills, past solitary houses surrounded with mud walls and clustering among umbrageous trees, was the road over which we travelled, our coolie with his jingling strings of cash trudging ahead. No sign of pursuit,—but unmolested and in peace we proceeded on our quest for adventure. About 9 a.m. we arrived at a small town, Ninsun, nestling between the hills, and we were there received by several unarmed Korean soldiers, who escorted us to the Governor's house. The Governor, a white-bearded old gentleman, received us with great politeness and placed us by his side on the raised dais in his reception hall, where shortly quite a number of the inhabitants assembled to see the distinguished visitors we were supposed to be. Our guide answered the questions put to him, but as he did not know anything about us, I doubt if our host was much the wiser. A bounteous repast was placed before us, consisting of a dozen different dishes served on a large lacquered tray, with bottles of native liquor, most abominable tippie; and as fifteen or twenty pairs of curious eyes were watching our movements, I felt no inclination to eat or drink, but Tom emptied all the dishes, which amused the spectators highly. We resumed our journey after having tarried for an hour in the Governor's hospitable mansion—not a very imposing structure, by the way—now on ox back. Payment offered for our refreshment was declined, but for the use of the oxen we had to pay 300 cash each in advance. I would not recommend ox-back travelling. For an hour or so to break the monotony of a long day it is well enough, but for any longer time, beware; the confounded sliding, jolting, and up and down motion is indescribable, and the slow, creeping gait—terrible! After having ascended and descended a high hill we found ourselves in a valley stretching away for twenty miles or more, under high cultivation, and dotted here and there with groups of houses, each enclosed by its own mud wall and surrounded by trees; the country presenting a peaceful aspect. We met several natives who just gave us a glance as they passed, but showed no undue curiosity, and also a number of Japanese officers who said nothing to us, not even answering our friendly *konnichi wa*, though they looked at us askance. The dusk of evening had fallen when we reached a large river where hundreds of junks were moored on both sides, over which we were ferried. The road so far had been tolerably good, but now we began to ascend a mountain path piled up with boulders, between which we had to pick our way in the dark. We let our animals have their own way, ceasing all attempts to guide them. If the natives had intended to do us any harm they had now an opportunity, but not the slightest mark of hostility was shown towards us. It was midnight before we arrived before the gates of Seoul, which we, to our dismay, found shut, and guarded on the inside by Chinese soldiers who were deaf to all our entreaties for admission. The gates would be opened at daylight, they said. For an hour we paced up and down outside the gates. "Paul Jones," as we had named our pilot, then beckoned us to follow him. He took us to a neighbouring hut, which turned out to be the Korean guard-house, and introduced us to two half naked, sleepy looking natives, who pointed out a place where we could rest; but neither sleep nor rest followed, for millions of flies took possession of us at once; and we were soon compelled to leave the hut, and, seating ourselves on the steps outside the door, remained there till morning. Crowds of country-people were continually coming with produce for the

market, and gathered outside the gates, ready to enter when they were opened. They eyed us apparently with some misgiving, until our faithful henchman vouched for our good behaviour.

At last the gates were thrown open. "Paul Jones" wanted us to straddle our steeds, as we had still some distance to go, but we declined and made our *entrée* on foot, to the great surprise of the Chinese soldiers who evidently did not know how to act, but before they had collected their wits we were a long distance away from them. We had impressed on the obtuse mind of "Paul Jones," as far as we were able, that we wished to go to an hotel on our arrival, and when we entered the narrow and awfully filthy streets, and ultimately stopped in front of the gates of a large building we thought our troubles were over, but we were somewhat astonished when "Paul Jones" begged us to wait a moment outside while he went in to announce our arrival. After waiting for 10 minutes he returned in company with a Japanese who asked us in good English what we wanted. Naturally surprised at such a question, Tom said we wanted a room, a bath, and something to eat! "Excuse me, you make a mistake, I think," said the Japanese, "this is not an hotel." "Not an hotel; then what is it?" Said the Japanese, "This is the Japanese Legation, and I am the secretary." To augment our troubles, the secretary told us that we had to return to Chemulpo immediately, but to this we demurred saying that we had reached Seoul after a long and tiresome journey, and we wanted to rest. The secretary then asked us to follow him into the compound which was full of Japanese soldiers, coolies, and Koreans. To our amazement we saw a European mounting a horse as we approached the building. After a good ablution and breakfast we were introduced to the Minister, who in a few well expressed sentences, in fluent English, told us that we must keep within the Japanese limits during the 24 hours he could permit us to stay and recruit our strength. Several Japanese were present, correspondents of Japanese papers. Both the Minister and the secretary soon left us to be entertained by the newspaper men. They pointed out the King's Palace some distance away among a grove of trees, and the principal buildings in the city, but after a desultory and halting conversation they strolled away one by one, and I found myself at last alone, when I stretched myself on the green turf, and felt inclined for a nap. I did not sleep, however, but throwing a hurried glance around to see that I was not observed, I moved away to the nearest declivity, down which I slid and reached the bottom in safety, ultimately gaining the long, broad streets which divided the city in two parts. I had suddenly determined to have a nearer look at the King's palace. People looked at me with wonder, but nobody troubled me, although the streets were crowded with pedestrians. In a few minutes I arrived at the gates, which were open; on each side a Korean soldier was stationed. A thick grove of splendid trees surrounded the palace, which looked somewhat like a Buddhist temple. I sauntered slowly through the gates, but though the soldiers watched me they made no attempt to stop me. This made me bolder. A broad avenue led up to the main entrance of the palace, and as none but the soldiers were in sight I walked on without hindrance right up to the very portals. My idea that I was unobserved was soon dispelled. Suddenly a crowd of white-robed figures rushed out and surrounded me, and I was literally hustled along to the back of the building by sheer force of numbers, while innumerable questions were asked me in Korean, to which I replied in English. What was done was in perfect good humour and no violence whatever was offered. They took me to a side gate, and into a small apartment, where I was invited to sit down. In a few minutes two aged officials entered, and taking me between their arms marched me through several large, empty rooms and into a spacious hall, where they were joined by several more officers, evidently of high rank. The floor of this hall was made of a dark wood, lacquered I believe. At one end a dais was raised a foot above the floor and about 12 feet wide; two large and beautifully painted screens were standing on the dais concealing the back of the hall. There was no other furniture of any description. Where was the expected pomp and splendour of this court? The Koreans were grouped about me in respectful attitudes as I stood in the centre of the room wondering what next would happen. The soft tinkling of cymbals was heard from the inside, at which sound everybody prostrated himself on the floor, while a young Korean of prepossessing appearance and dressed in a tight fitting green silk tunic emerged from behind the screens and stepped to the edge of the dais where he stopped. Surmising that this was the King, I made him a polite bow. He then

beckoned me to draw nearer. Saying a few words to the attendants, they all withdrew from the hall; only the two old gentlemen who had escorted me squatted down in the farthest corners. The King was a slight, tall young man with the usual Korean features, but more refined and delicate looking, and lighter in colour than any I had yet seen, and his hands were remarkably small. Being at a loss what to do, I stood watching the King, waiting for him to break the silence. I was not long kept in suspense: "How are you, old man?" were his first words, uttered in excellent English. I was fairly thunderstruck. He perceived my consternation, and probably guessed the reason, for laughing heartily he said, "Oh, I speak English!" "You speak good English," said I flatteringly, "where did you learn it?" "Oh, an American ship was taken by my people when I was a boy; one sailor was given to me, and he learned me to speak English." "And what became of him?" said I. "Oh, he vexed me one day and I killed him," was his answer. "I hope I shall not vex you," thought I. We had up to this remained standing; but the King now clapped his hands; a youthful attendant appeared from behind the screens and at a word from the King brought in two Chinese bamboo stools. The King seated himself on one and motioned me to take the other. He then entered in a long and interesting conversation on different subjects; question following question with rapidity, which I answered to the best of my knowledge, and I am sure that never before nor since has such good advice been given to him by any one, native or foreigner. When the audience was concluded he turned towards me and, grasping my hand, said with emotion, "If you will stay with me I will make you a general or a mandarin of high rank." But, incredible as it may appear, I refused his brilliant offers and preferred to remain in my ignoble obscurity. Taking a valuable ring from one of his fingers he placed it on one of mine, and asked me to keep it in remembrance of him, for which I thanked him. Ordering one of his high officers to accompany me back to the Japanese Legation, he bade me fare well.

I returned to the Legation and seeking out the spot I had occupied before I started out, I laid myself down on the grass, and immediately sank in a deep slumber. I was soon rudely disturbed by Tom, however, who shaking me by the shoulder sung out, "Are you coming down to chow or are you going to stay up here all day?" Not seeing any of the newspaper men near I whispered to Tom, "I have been to the King's Palace and I have just returned!" Tom looked at me doubtfully. "It is a fact," said I, "and I had a long interview with the King, who presented me with this ring when I left;" I held out my hand to show him the ring, but fancy my consternation when I found the jewel gone. I searched all about where I had been sleeping, but to my dismay the ring had vanished. Tom meanwhile laughed immoderately, and advised me to go back and get another ring. He insisted that I had never left the grass plot where he found me, which is absurd. But I begged him not to mention it to the Japanese. In the afternoon the Minister entertained us, and next morning at daylight we were off for Chemulpo, on horseback this time. We arrived late in the afternoon, and got on board without further adventure, to the intense chagrin of Saint Joseph, who had predicted the total collapse of our expedition.

THE BATHING FATALITY AT HONMOKU.

An inquest was held on Monday afternoon in the U.S. Consulate-General Court in connection with the death of Eusign Harry E. Rumsey of the U.S. steamer *Suwarra*. Mr. G. H. Seidmore, Vice and Deputy Consul General, presided, and Messrs. R. Meiklejohn and H. M. Roberts acted as Associates. B. O. Chase deposed—I was acquainted with the deceased. He was an American naval officer, and a citizen of the United States. On the afternoon of the 26th, Mr. Rumsey and I drove to Honmoku. We stopped at the tea-house usually patronised by people wishing to take sea baths. On arrival there Mr. Rumsey expressed a desire to go in the water, but, as I declined, he seemed to have given up the idea and said nothing further on the subject. Some time later he rose, said something in Japanese to one of the attendants, and went into another room. Some ten minutes after this one of the attendants came in and spoke excitedly in Japanese, and all the occupants of the room ran out, I with the rest. On passing out I noticed Mr. Rumsey's clothes hanging up, but did not see any one in the water. I endeavoured to find out what had become of him, but

it was some time before I ascertained that he had gone in the water and disappeared. I ascertained this through a gentleman named Blum, who interpreted what the Japanese said in answer to my enquiries. A passing sampan was hailed, and Mr. Blum and myself got on board and commenced to search for the body. In the course of 10 or 15 minutes we discovered the body lying near the bottom face downwards in 6 or 7 feet of water. Other sampans had joined us by this time. Previous to this I had not observed any one near that locality. With the assistance of the boatmen the body was recovered, taken ashore, and every means used that we knew of to resuscitate it. On discovering the body, I sang out to send for a doctor immediately. Dr. Mécère's assistant arrived in a half or three quarters of an hour. We meanwhile were at work on the body. We turned the body over a barrel to allow the water to drain out, and then, laying it on the back, worked the arms, at the same time pressing the stomach. Another foreigner, whose name I do not know, assisted me in my efforts. When we first began operations to resuscitate the body there was not, as far as I could find, any movement of the heart or of the pulse, though some one said he detected a slight pulsation. The body was perfectly warm and relaxed. On the doctor's arrival he immediately pronounced that life was extinct, and no further attempts at resuscitation were made. He spoke in French. He did not direct me to cease, but on his saying a second time that life was extinct I desisted. Operations lasted about 15 minutes. I should estimate that the body was in the water 15 or 20 minutes. I should say the place was perfectly safe for bathing. When last seen, the deceased was swimming out. I was told so by an elderly German gentleman whose name I forget. After the doctor arrived the body was conveyed to the hospital, and Mr. Blum kindly placed his carriage at my disposal to report the matter. I first met the deceased in 1882. He has bathed on several occasions from the gangway of the ship, and seemed to be at home in the water. I cannot say that he was particularly reckless. I cannot account for the drowning unless it was accidental.

Dr. William Henry Jones deposed—I formed one of a naval inquest on the 27th, and identified the body of the deceased. I made a superficial examination. From the appearance of the body I judged the cause of death to be drowning. I discovered no evidence of violence. There were no scars or abrasions, but the neck and shoulders were slightly discoloured. There was no indication of violence whatever. Previous to death I never knew of anything wrong with his heart. The vital organs were in good condition. I did not know of his having signs of cramp while swimming. I know about methods of resuscitation; and those used on this occasion were perfectly right. He has had cramps in the stomach about three months to my knowledge, since we left Singapore. If he had such cramp in the water he would in all probability sink and drown even in shallow water.

Levi Lichtenstein deposed—I was at Honmoku on the 26th inst. I saw a gentleman go into the water about a quarter-past five. He entered the water, and I think in four or five minutes my attention was called away for a minute or two. On looking back, I could not see him any longer. For a few minutes I continued looking, thinking he was sitting on the steps, but learned from the woman of the house that he had not returned. He was alone when he entered the water, and no one was near him till he disappeared. The woman went in to the room in which a friend of the deceased's was, and he immediately came out and got a boat to search. The deceased walked along the plank, and entered the water by the steps at the end in the usual way. I saw him swimming for about a minute. From the time my attention was called away till the time he was recovered was about 25 minutes. I did not see him dive from the pier; he dipped himself first and then swam. We turned the body and some water ran out, and then we moved the arms. I thought at one time he was all right because the body was warm. The first who came was the French doctor, who pronounced him dead. Dr. Eldridge came next, but by that time we had ceased our efforts. I had never before assisted in efforts to resuscitate bodies, but I have seen such efforts.

Dr. Jones, recalled—I have seen cases of drowning. How long might a man, in a case like this, be immersed and yet live?—Three minutes,—not more than 7 minutes.

Assuming that Mr. Rumsey had been in the water say fifteen minutes, at the outside, would it be possible to restore him?—In my opinion it would not. It is my opinion, from the testimony I have heard, that every reasonable and proper measure was taken for the recovery of the deceased. I

think he must have been dead before taken out of the water.

The Court returned a verdict of death by accidental drowning.

CRICKET.

BLUFF V. SETTLEMENT.

Capital cricketing weather enabled two Club teams to try conclusions on Saturday, when Bluff met Settlement. On paper it was ten to one on the former. Edwards won the toss, and elected to go in first, two wickets going down for one run. Edwards, E., made 18, the captain himself being run out for 8, and after that no stand was made, only 7 runs more being scored, the total amounting to 37. Walford and Sutter bowled, and seemed from the first to have well taken the measure of their opponents—Walford 63 balls, 19 runs, 3 maiden overs, 5 wickets; Sutter 60 balls, 15 runs, 2 maiden overs, 4 wickets. There were 12 on each side, and one absentee from Edwards' team.

Walkinshaw and Crawford opened the ball for their side, the former being sent back when he had notched 2. Crawford, however, had sweet revenge for his captain's retirement, and played a splendid innings. Edwards major could do nothing with him, though he bowled 6 maiden overs and took 8 wickets, and Crawford, carrying his bat right through, made a total of 71 not out, in which were 3 fours and 11 threes. For so strong a team the total, 124, was a small one, but several good men were put out for next to nothing, Walkinshaw, Walford, Wheeler, and Sutter only scoring 10 between them.

A second innings was started by Edwards' side, in which Shepherd made 19 and was bowled by Walford, Philip was run out before scoring. Grant and Edwards, E., made four each, and the stumps were then drawn. Following are the scores:—

SETTLEMENT.		BLUFF.	
Mr. Grant, b. Sutter	0	Mr. Walkinshaw, b. Edwards, W.	8
Mr. Adams, b. Walford	1	Mr. Crawford, not out	71
Mr. E. Edwards, b. Walford	18	Mr. Watson, c. Shepherd, b. Grant	10
Mr. W. Edwards, run out	8	Mr. Sutter, c. Grant, b. Edwards, W.	7
Mr. Balfour, b. Sutter	1	Mr. Read, b. Edwards, W.	7
Mr. Shepherd, b. Sutter	5	Dr. Wheeler, b. Edwards, W.	1
Mr. Howard, c. Harris, b. Walford	0	Mr. Harris, b. Edwards, W.	0
Mr. Philip, not out	0	Mr. Walford, c. Edwards, W.	0
Mr. Robinson, b. Sutter	0	Mr. Macdonald (absent)	0
Mr. Chalmers, b. Walford	1	Mr. W. b. Grant	0
Mr. Merriam, b. Walford	0	Mr. Gillett, c. Grant, b. Edwards, W.	3
b. 3	3	Mr. Moss, b. Edwards, W.	5
		Mr. Chope, b. Edwards, W.	0
		Mr. Nash, b. Philip	16

PASSENGERS.

ARRIVED.

Per Japanese steamer *Saikio Maru*, from Shanghai and ports:—Mr. C. R. Greathouse (U.S. Consul-General), Mr. C. W. Ure, Dr. G. P. Smith, Mr. Dorinther, Mr. Oldmans and family, Mr. Sim, and Mr. Dimok in cabin; Messrs. Champion, Morris, Nakamichi, Sonzu, and Omoto in second class, and 41 passengers in steerage.

Per British steamer *Ancona*, from Hongkong via ports:—Sergeant Major Williamson, Messrs. T. Hutchings, Wm. Mathieson and native servant, and F. Sangster in cabin; 2 Japanese in steerage.

Per Japanese steamer *Sagami Maru*, from Hakodate:—Dr. Fischer, Mr. Y. Kikuchi, and Mr. Y. Tanaka in cabin; 38 passengers in steerage.

Per British steamer *Telemachus*, from Hongkong:—Mr. Reid in cabin.

Per Japanese steamer *Yamashiro Maru*, from Kobe:—Mr. T. and Mrs. Kodama in cabin; 1 passenger in second class, and 48 passengers in steerage.

Per Japanese steamer *Omi Maru*, from Hakodate:—Messrs. Takeda, Midzuno, Tanaka, Chutii Chuck, and Mochiyama in cabin; 7 passengers in second class, and 58 passengers in steerage.

Per British steamer *Straits of Belle Isle*, from Hongkong via ports:—59 Chinese in steerage.

Per Japanese steamer *Tokio Maru*, from Kobe:—Messrs. F. C. Vignoli, Kawaoka Hikoza, and Tanaka Tashio in cabin; 1 passenger in second class, and 30 passengers in steerage.

DEPARTED.

Per Japanese steamer *Wakanoura Maru*, for Hakodate:—Mr. S. Asaba in cabin; Mr. and Mrs. Kamozawa and Mr. Matsuda in second class, and 23 passengers in steerage.

Per French steamer *Iraonaddy*, for Shanghai via Kobe:—Miss Wagner, Miss Wagner, Messrs. Wagner, Raoul Wagner, L. Rowe, J. Wilkowski, Miss Gurdin, Mr. and Mrs. C. Theppelman, Mr. G. L. Burton, Mrs. Clark and infant, Miss Clark, Mr. Trenche, Mrs. D. R. Churchill, Dr. C. Begg, Messrs. L. Nettland, O. S. Noestiyard, C. F. Luther, Dr. Baedeker, Mr. Kargel, Miss Rosa Billspacher, Mr. Vasiliou, N. Kojipis, Major Colclough, Mr. A. E. Waterston, Captain Dunn, Miss Rowe, Mr. Youmaid, Mr. and Mrs. S. F. Dayouing, Messrs. Ventura, K. M. Shuff, Girud, and Mrs. Sarah Cedelman in cabin.

Per Japanese steamer *Saikio Maru*, for Shanghai

and ports:—Rev. and Mrs. Brown, Mrs. McK, Mr. and Mrs. Hitchcock, Mr. and Mrs. Tewkesbury, Mr. and Mrs. Stoddart, Mr. and Mrs. Fujii, Mrs. Ichinose, Miss Cook, Mrs. Takenouchi, Mrs. Williams and infant, Dr. and Mrs. McCarthy, Misses Lautemann, Smith, Bird, Helvelt, Messrs. Ichinose, Saito, Nakamura, Hisiki, Sim, McKenzie, Neill, Hill, Hoarse, Uchida, Keeling, Richardson, Wheeler, Lucas, Bishop Bickerteth, and Dr. Campbell in cabin; Mrs. Ting, Miss Ishida, Messrs. Champion, Morris, Robin, Caffenheper, Yoshimura, Kaneke, Obata, and Mr. and Mrs. Okunoye in second class, and 62 passengers in steerage.

Per Japanese steamer *Satsuma Maru*, for Hakodate:—Messrs. K. Nakamura, T. Yoshiyuki, K. Saito, Yoshimi, and F. Yamao in cabin; Messrs. Wada, Kobayashi, and M. Kawashima in second class, and 46 passengers in steerage.

Per Japanese steamer *Nagato Maru*, for Kobe:—Mr. Fukuba in cabin; 24 passengers in steerage.

Per Japanese steamer *Yamashiro Maru*, for Hakodate:—Messrs. Sawano, Oku, and Asakusa in cabin; Mr. and Mrs. Chigusa, Messrs. Matsumoto and Tanaka in second class, and 70 passengers in steerage.

CARGOES.

Per French steamer *Iraonaddy*, for Shanghai via Kobe:—Silk for France 121 bales, for Italy 24 bales; Waste Silk for France 84 bales. Treasure for Shanghai \$2,200.

Per British steamer *Straits of Belle Isle*, for Vancouver, B.C.:—

REPORTS.

The Japanese steamer *Saikio Maru*, Captain Conner, reports:—Left Shanghai the 21st September at 2 p.m.; had fresh northerly wind and fine; 22nd gradually increased to a gale with threatening weather and all appearances of a typhoon to the southward. Arrived at Nagasaki the 23rd at 4.43 p.m. and left 24th at 5 p.m.; had fresh N.E. winds and squally. Arrived at Shimonoeki the 25th at 6.4 a.m. and left at 7.43 a.m.; had fresh N.E. winds and fine weather. Arrived at Kobe the 26th at 3 a.m. and left at 12 p.m.; had fresh N.E. winds and fine weather throughout the passage. Arrived at Yokohama the 28th September at 5 a.m.

The Japanese steamer *Satsuma Maru*, Captain Brown, reports:—Left Kobe the 27th September at noon; experienced light variable winds with fine weather down to Oshima; thence to port strong N.E. winds and clear sky. Arrived at Yokohama the 28th September at 7 p.m.

The Japanese steamer *Sagami Maru*, Captain Carrow, reports:—Left Hakodate the 27th September at 8 a.m.; had light variable winds and fine weather with easterly swell throughout the passage. Arrived at Oginohama the 28th at 7 a.m. and left at 4 p.m.; had same weather and easterly swell throughout the passage. Arrived at Yokohama the 29th September at 7 p.m.

The Japanese steamer *Yamashiro Maru*, Captain Young, reports:—Left Kobe the 29th September at noon; had fresh to moderate easterly and southerly winds; passed Oshima at 9 p.m.; thence fresh easterly winds and fine weather to Rock Island which was passed the 30th at noon. Arrived at Yokohama at 6.30 p.m.

The Japanese steamer *Omi Maru*, Captain Christensen, reports:—Left Hakodate the 29th September at 8 a.m.; had moderate southerly winds, clear weather, and easterly sea from Tsugaru Straits to Inuboye; thence fresh S.W. winds with heavy rain at times to Mela Head; thence to port variable airs and misty weather. Arrived at Yokohama the 1st October at 8 a.m.

The Japanese steamer *Tokio Maru*, Captain Drummond, reports:—Left Kobe the 1st October at noon; passed Oshima at 8.42 p.m.; rounded Rock Island the 2nd at 11 a.m. and Sagami at 3 p.m. Arrived at Yokohama at 4.45 p.m.; had light and moderate S. and S.W. winds with fine clear weather throughout the passage.

LATEST COMMERCIAL.

IMPORTS.

The Import Market generally has been more or less demoralized by the sudden great fluctuations in Exchange, and business is almost at a standstill and quotations nominal. Sales for the week amount to 50 bales English Yarns, 260 bales Bombays, 12,750 pieces Shirtings, and 750 pieces Italians.

COTTON PIECE GOODS.

Grey Shirtings—8½ lb, 38½ yds, 39 inches	\$1.35	to	1.90
Grey Shirtings—9½ lb, 38½ yds, 45 inches	1.60	to	2.54
1. Cloth—7 lb, 24 yards, 32 inches	1.15	to	1.47

METALS.

Holders are somewhat encouraged by the drop in exchange rates, but it has the effect of making buyers very shy. They seem inclined to wait until silver rises again before committing themselves to many fresh purchases.

Flat Bars, 4 inch	\$2.50	to	2.60
Flat Bars, 4 inch	2.60	to	2.70
Round and square up to 2 inch	2.50	to	2.70
Nailrod, assorted	Nom.		
Nailrod, small size	Nom.		
Iron Plates, assorted	2.80	to	3.00
Sheet Iron	3.00	to	3.25
Galvanized Iron sheets	5.80	to	6.00
Wire Nails, assorted	4.10	to	4.70
Tin Plates, per box	4.60	to	4.80
Pig Iron, No. 3	1.20	to	1.25

KEROSENE.

No great amount of business passing in this market. Quotations unchanged, although sellers would like to get some little advance now that sterling exchange is so much lower.

QUOTATIONS.

Chester	\$1.72½	to	1.75
Comet	1.70	to	1.72
Revoe	1.68	to	1.70
Russian	1.63	to	1.66

SUGAR.

There is no improvement in the Sugar market, and none can be looked for until the near approach of the New Year Holidays when there is always a good demand for White Refined and other brands. Sales for the week ending to-day are 325 piculs at \$8 per picul, and 500 piculs at \$7.15 per picul. Prices are more or less nominal.

White Refined	\$5.60	to	8.10
Manilla	3.70	to	4.40
Taiwanfoo	—		—
Pentama	2.80	to	3.25
Namida	2.90	to	3.00
Cake	—		—
Brown Taken	4.27	to	4.30

EXPORTS.

RAW SILK.

Our last issue was of the 26th ultimo since which date settlements in this market are 525 divided thus—Hanks, 27; Filatures, 225; Re-reels, 74; Kakeda, 199. There have been no Japanese shipments during the week, so that the total business is 525 piculs as noted above.

A further smart decline in the price of Silver

has produced a corresponding effect in Exchange, and buyers took the opportunity of settling a few hundred boxes before holders advanced their prices. The business done has been both for Europe and America in about equal proportions.

Prices generally have been pushed up by holders, and are very firm and strong at quotations; had they shown themselves current at last week's rates business would have been general, as shippers would have been able to fill many orders at limits which they have in hand.

News from the Markets of consumption are still by no means good. Our settlements to date are less than one-third of what they were to same date last year, and with any ordinary prosperity among manufacturers this would of itself lead to a large business. As matters stand now, we shall have a further long dragging time, unless holders realize the situation and agree to sell currently.

There has only been one shipping opportunity, the French Mail steamer *Iraoudy* on the 28th inst. taking 145 bales for Lyons. The present export is now 3,966 piculs, against 11,327 last year and 8,176 at the same date in 1888.

Hanks.—There have been several purchases at an advance of \$20 in price. The stock is very small, and the demand for this class is good among the native weavers. The purchases made seem to be entirely for Europe.

Filatures.—There has been a fair amount of business done on the basis of last quotations, but at closing holders have stopped the trade by opening their mouths too wide. In fine sizes some business has been done in *Shinsu* at \$675, *Mino* \$670 and \$650, with *Bishu* at \$645. Holders are anxious to secure a further advance, trusting to a low exchange helping them. In full sized silks *Kaimeisha*, *Hakusuru* and equal quality have been done at \$670; holders have stopped the trade by now asking \$685 for the same qualities.

Re-reels.—Business in this class has been small, and consists of medium and common, the third sortings of well-known *Foshu* Chops bringing \$612½. The business done in these would seem to be entirely for the United States, and shows an advance of \$20 or \$25 upon the quotations of a week ago.

Kakeda.—These have received marked attention during the week at prices ranging from \$635 down to \$575. Sellers now ask an advance, but are not so inclined in their demand as are the holders of *Filatures* and *Re-reels*.

WASTE SILK.

Quite a busy week in this branch, settlements reaching 2,189 piculs, divided thus—Cocoons 46; *Noshi* 1,548; *Kibiso* 595. No talk of direct export this season up to the present.

The buying has been entirely for Swiss and French account; buyers for those destinations entering the market very freely. Prices are very firm, and will probably advance a little more with a weakening exchange.

Pierced Cocoons.—The only operation has been in *Koshu* at \$114 per picul for good average quality. The *Cocoon* market rather hangs fire this year, the prices demanded by holders being far beyond the idea of spinners.

Noshi.—A very large business in this department, *Oshu* being freely taken at \$140, while the staple article—*Foshu*—has found very many buyers at prices ranging from \$75 to \$85, according to grading. One parcel of *Shinsu* passed the scales at \$112½, but there has been nothing done in *Filature*.

Kibiso.—There have been some important purchases in this department, *Filatures* bringing from \$110 to \$115, one or two buyers operating freely. In *Hira* sorts nothing has been done during the week.

CONTRACTORS TO THE ADMIRALTY, LEADING STEAMSHIP COMPANIES, AND YACHT OWNERS.

STEAM LAUNCHES & YACHTS,

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 10 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in France, &c. We supply sets of Machinery separately. Illustrated Catalogue in English, French or Spanish. Send for Copy to

SIMPSON, STRICKLAND & CO.

WORKS:
BARTMOUTH, SOUTH DEVON (ENGLAND).
LONDON OFFICE:
181, QUEEN VICTORIA STREET, E.C.

MACHINERY.—Mr. ARTHUR WADHAM, proprietor of *The Machinery Market and Exporter* (illustrated)—the greatest machinery business journal published—(subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery and Engineering Materials. Mr. Wadham is open to act as sole Buying Agent in England for one or two good firms in Japan desiring to deal with a reliable house. Mr. Wadham's intimate knowledge of the English Machinery and Engineering Trades enables him to save large sums to foreign customers placing their orders in his hands. Firms dealing with Mr. Wadham may rely upon being served in a prompt and straightforward manner. Address:—Mr. Arthur Wadham, Engineering Offices:—181, Queen Victoria St., London. Registered address for telegrams—"Wadham, London." 15. June 28, 1890.

KEATING'S BONBONS OR WORM TABLETS.

A PURELY VEGETABLE SWEETMEAT both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for ENTERIC, or THREAD WORMS. It is a perfectly safe and mild preparation, and especially adapted for Children. Sold in Bottles by all Chemists. Sept. 27th, 1890.

THE GREATEST WONDER OF MODERN TIMES. HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN! HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. H. T. Moore, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, my stock, butter, and horse feed poured in upon us, until at last a ten-poundful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1890.

NOW READY,

WITH COLOURED PLAN,

A FULL REPORT on the ERUPTION of BANDALAN, being a reprint from the "JAPAN MAIL" of copious translations from Tokyo Journals, a Description by "Our Reporter," and an "Editorial," written after a visit to the locality. Price 50 Cents.

To be obtained at the *Japan Mail Office*, or of KELLY & WALSH, Limited.

YARROW'S SMALL STEAMERS AND STEAM LAUNCHES.

SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.

PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER.

Stern Wheel Steamers with very shallow draft especially suitable for river navigation.

MACHINERY CONSTRUCTED FOR BOATS BUILT ABROAD.

YARROW & CO., POPLAR, LONDON, E.

Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.

YOKOHAMA: SATURDAY, OCT. 11, 1890.

BIRTH.

On the 4th October, at No. 214, Yokohama, the wife of C. WEINBERGER of a Daughter.

SUMMARY OF NEWS.

DURING three months ended June last 332 cremations occurred in Kanagawa Prefecture.

MR. HOSHII TORU, one of the leading members of the *Yiyu* Party, has returned from abroad.

THERE were in Hyogo Prefecture on the 30th June last 2,047 junks of above 50 *koku* burden.

MARQUIS MATSUDAIRA will leave Japan on the 12th instant for England to complete his studies.

THE Stanley Opera Company left Yokohama on Tuesday after a successful stay of over thirty days.

MR. O. RUDORFF, a German employé of the Judicial Department, will leave Japan shortly for home.

DURING the month of September last 45 civil and 120 criminal cases were heard in the Court of Cassation.

MR. KONDO, *Chargé d'Affaires* to Korea, will return home shortly and, it is said, be transferred to another position.

THE amount of coin struck in the Osaka Mint during September last was *yen* 57,935 in gold, and *yen* 1,276,869 in silver pieces.

A RELIGIOUS ceremony to the memory of those drowned on the *Ertongroul* took place at Watanomatsuki, Hyogo, on the 2nd instant.

SALES of foreign rice (uncleaned) continue at the Asakusa and Osaka Granaries. For 7,000

bags exposed at Osaka on the 3rd instant the highest price realized was *yen* 4.73 and the lowest *yen* 4.70 per *koku*.

THEIR Majesties the Emperor and Empress will proceed to Ibaraki Prefecture in a few days to view manoeuvres by the Imperial Body Guards.

PROFESSOR SHIRAIISHI NAOHARU, of the College of Engineering in the Imperial University, was relieved from office on the 4th instant at his own request.

THE subscriptions received by the *Jiji Shimpō* up to the 8th instant for the relief of the men saved from the *Ertongroul* catastrophe amounted to *yen* 4,198,626.

COLONEL MURATA TSUNRYOSHI was promoted to the rank of Major-General on the 3rd instant and raised to fourth class, second grade, from fifth class, second grade.

THE Standing Squadron, consisting of the *Takachiho*, *Naniwa*, *Fuso*, *Yamato*, *Takao*, and *Katsuragi Kan*, will visit Chinese ports about the end of the present month.

THE receipts of postal and telegraph offices during the month of September last amounted to *yen* 371,650, showing an increase of *yen* 15,926 as compared with the previous month.

RAILWAY communication between Kiryu and Komatsu on the Ryomo Railway was suspended on the 7th instant in consequence of damage to the line by the recent heavy rains.

THE departure of the Empress-Dowager, who was to leave the capital for Kyoto in a few days, has been postponed in consequence of cholera now prevailing in the Western capital.

A TELEGRAM from Kyoto states that about fifty persons were arrested by the Authorities on the 4th instant in Kyoto on a charge of having infringed the Rice Exchange Regulations.

THE revised Code of Civil Procedure was promulgated on the 6th instant. On the following day revised Regulations as to the organization of the Privy Council were promulgated.

RESIDENTS of the Shitaya district of Tokyo are still agitating in opposition to the opening of the railway between Ueno and Akihabara, which they consider inimical to their interests.

THE total amount of receipts of the Tokyo Tramway Company during September last was *yen* 11,765 96, which shows a decrease of *yen* 3,199 93 as compared with the same period last year.

COUNT ITAGAKI, who returned to Tokyo on the 6th instant from Saitama Prefecture, will leave the capital on the 11th instant for the province of Shikano to meet a number of his political friends.

THE quantity of tea sold by Japanese merchants to foreign firms at Kobe during the period from the commencement of the season to the 4th instant was 14,335,300 *kin* (one *kin* equals 1½ lb.)

A SHOCK of earthquake was experienced in the capital on the 6th instant at 4h. 36m. 50s. p.m. The duration was 2 minutes and 45 seconds, the maximum horizontal motion being 0.7. millimetre in 1.4 second.

It is stated that Mr. Kikuchi, a private secretary of the Minister of State for Justice, will be appointed Judge of the Court of Cassation, being succeeded by Mr. Magaki, Public Prosecutor, while Mr. Kumano, a councillor of the Judicial

Department, will become Judge of the Osaka Court of Appeal.

THE Regulations as to Elementary Schools were promulgated on the 6th instant.

MR. FUJITA SHIRO, a private secretary of the Minister of State for Communications, was permitted by the Decorations Board on the 7th instant to accept and wear a decoration conferred on him by the Emperor of Austria.

RAILWAY communication between Shizuoka and Yaidzu on the Tokaido Railway, which was suspended on the 6th instant in consequence of damage to the Abekawa bridge by the heavy floods, was re-opened on the 7th instant.

A TELEGRAM from Fukui dated the 6th instant states that in consequence of the recent heavy rains the rivers in the province of Echizen have overflowed. About 1,300 houses in the city of Fukui were submerged.

MR. SUGANO MICHICHIKI, who had been under judicial examination in reference to injuries he inflicted on *soshi* who had attacked him, has been released from custody. Four of his assailants have been acquitted for want of evidence.

THE Sanitary Bureau of the Home Department reports that the number of persons attacked by cholera throughout the Empire from the commencement of the epidemic to the 6th instant, was 35,631, resulting in 23,868 deaths.

THE *Rikken Yiyu* party will publish a newspaper on and after the 17th instant at Yamashirocho, Kyobashi. Messrs. Takahashi Kiichi, Nakaye Tokusuke, Kawashima Jun, and Hoshi Toru will become editors of the new journal.

A TELEGRAM from Nagoya dated the 7th instant announces that in consequence of the severe rains of the past few days various rivers in the provinces of Owari and Mikawa have overflowed, causing much damage to embankments and crops. Several bridges were carried away or injured.

PROSECUTIONS have been initiated against several provincial journals for publishing the memorial addressed to the Minister President by the Kansai Political Association. The decision of the Correctional Court inflicting penalties on nine Tokyo papers which had published the same document, has been appealed against.

THE Import market has continued dull and quiet during the week. Nothing doing in English Yarns; Bombays go off slowly; Shirts and Fancies quite neglected. A slight movement has taken place in the Metal market; and Bars have improved somewhat in price. Fifteen thousand cases of Russian oil have been sold at a reduction on former quotations, but otherwise the Kerosene market is dull. No fresh arrivals have taken place this week. A small quantity of White Refined has changed hands, but no other brand of sugar has been enquired for. A fair amount of business has passed in Waste Silk, but in the other branch of this export things have been quiet. Of Raw Silk the total settlements for the week are 300 piculs, of which 111 bales are direct export; European buyers seem to hold off and most of the above business is for the United States. On the Waste Silkside, where the settlements reach 1,753 piculs, the buying has been almost entirely for European account, and prices are firm and holders cheerful. There has been little business in Tea, buyers merely laying in small stocks with which to meet any sudden demand from the consuming markets. Exchange has fluctuated and at the close of the week dropped a point.

EDITORIAL NOTES.

THE ROADS IN TOKYO.

THE condition of the roads in certain parts of Tokyo, especially the districts of Akasaka and Azabu, does little credit to the administration of the municipality. We believe that, pending the execution of plans formed by the City Improvements Committee, some of the streets do not receive the full measure of attention usually bestowed on them. But this excuse can scarcely apply to broad thoroughfares intersecting important quarters. Doubtless in many cases the prime fault is in the manner of making the roads, but the method of repair is often equally faulty. We have frequently commented on the habit in general vogue of spreading gravel on the surface of the streets, where it remains for weeks the torment of pedestrians and the curse of vehicles. But broken stone is almost unprocureable in Tokyo, so that the gravel nuisance is to be condoned. An example of something much worse is to be seen in the case of a road through Aoyama Cemetery, now undergoing repair. Pebbles and boulders, the majority larger than a man's fist, are first thrown down, and over them cartloads of clay are spread. There is no possibility of such materials binding. The boulders must inevitably work into heaps and the clay be converted into mud filling the holes thus formed. These primitive methods of mending may be permissible in country districts, but we cannot understand how they find favour with the road-engineers of the capital. One painful consequence of the condition of the roads in the Akasaka and Azabu districts is that terrible cruelties are practised upon horses dragging loads of bricks and so forth over ruts and holes in which the cart-wheels sink nearly to their axles. In connection with this we may call attention to the fact that there appear to be no regulations in Japan for controlling the size of cart-wheels. In England the Highways and Locomotives Amendment Act of 1878 empowers local authorities to make by-laws for prohibiting or regulating the use of any waggon, cart, &c., having wheels of which the felloes or tires are not of such width in proportion to the weight carried by, or to the size of, such vehicle as may be specified by such by-laws. There are also regulations forbidding the locking of the wheel of any vehicle descending a hill, unless there is placed at the bottom of the wheel a slipper or shoe to prevent damage to the road from the locking. All these restrictions and precautions seem to be quite neglected in Japan. The felloes of the wheels of carts carrying earth, stones, and so forth are usually not shod at all, and being very narrow, they cut into the roads like knives. The locking of such wheels when descending a hill is fatal to the condition of the roads. So, too, in the case of heavy loads of bamboo, timber, &c. The common practice of coolies dragging such loads is to tilt the cart until the hind ends of the timber or bamboos drag along the road, thus setting up friction sufficient to restrain the vehicle but at the same time tearing the surface of the road. Until regulations are enacted putting an end to these reckless doings it will be impossible to keep the roads in good repair.

THE RELIGIOUS CRISIS IN JAPAN.

THERE is no longer any doubt that a turning point has arrived in the history of Christianity in Japan. For several years past, as we have more than once noted, a tendency has been discernible among a section of the rising generation of Japanese Christians to free what they now call Japanese Christianity from all the sectarian associations and superfluous rites and ceremonies that have grown up around the religion of Christ in the countries of the Occident. But the movement, in common with the national movement in every other department of the popular life, seems now to have assumed dimensions such as ought to receive the full consideration of every person interested in the progress of evangelization in Japan. We have endeavoured to reproduce in these columns the views entertained by one of the principal originators of the movement—Mr. Yokoi, editor

of the *Rikugo Zasshi*. Mr. Kosaki, formerly editor of the *Christian*, but now principal of the *Doshisha* Seminary of Kyoto, discusses the same subject in the last issue of the *Rikugo Zasshi*. There is nothing new in what he says, but considering the great influence exercised by him over the minds of the rising generation of Christians, his opinions on any religious subject cannot be passed unnoticed. His article is entitled "The New Phase of Christianity." He describes at some length the history of the reactionary movement that has set in during the last thirty or forty years in the countries of Europe and America, Protestant and Catholic, against the excessive individualising tendency of Christianity. In conclusion he says:—"Christianity has been too narrow, too selfish, and too monastic. We must return to the Christianity of the earliest period, and endeavour to proclaim its evangelistic, socialistic, and philanthropic principles. In introducing Christianity into this country, every one is desirous of obtaining a simple gospel. What, then, is a simple gospel? We believe that the so-called simple gospel is nothing more nor less than evangelistic, philanthropic, moral, and socialistic Christianity. Such was the teaching of Christ; such was also the principle of his disciples, such, in short, was the distinctive feature of the Christian theology in early ages. The rites and ceremonies of worship, the administrative rules of the Church, and its peculiar theory—these are the obstacles that now lie in the path of our countrymen in accepting Christianity. These things ought not indeed to be considered entirely useless, but they are only the outer garments of Christianity; garments which differ in different countries and at different periods of time, and need not, consequently, be imported with the Gospels. We sincerely regret that the Christian Church in Japan has been prevented by these garments from manifesting its true and original nature, and we are afraid lest these garments may become a stumbling block to those who have attached too much importance to them. What has thus far been observed, I recommend to the notice of those who are anxious to preach a simple Christianity in Japan."

En passant, we may notice that the recent visit of Mr. Drummond of the Glasgow University, seems to have given a new impetus to the nationalist movement among Japanese Christians. He addressed a large audience, principally composed of young Japanese, about 500 in number, at the Yayoi-kwan, Shiba park, Tokyo, on September 21st. In the course of his lecture, he strongly advised his listeners to establish a Japanese Christianity, and condemned the indiscriminate introduction of foreign sects and customs. Commenting on this address, a writer in the *Keizai Zasshi*, under the *nom de plume* of *Chisai Koji*, particularly quotes the above-mentioned passage, and rejoices to have his own opinions confirmed by a foreign scholar of Mr. Drummond's learning and prominence.

THE WONDERFUL RESOLUTION.

By and by we shall know what meaning was really intended to be attached to the wonderful Resolution "voted unanimously by the Yokohama Meeting." The language of the Resolution is plain enough. It says in the clearest possible manner that negotiations for Treaty Revision must be postponed *sine die*, inasmuch as the only practical basis of negotiation cannot yet be entertained. But when we interpreted the Resolution in this, the unequivocal sense of its language, we were taken severely to task and accused roundly of misrepresentation, the drafter and proposer of the Resolution declaring that he had not intended it to bear any such sweeping significance, being himself, in common with "every intelligent man in the community," in favour of Treaty Revision and opposed only to the unconditional surrender of Consular Jurisdiction. By and by the Kobe residents had to reflect upon the meaning of the Resolution, and their conclusion about it was identical with ours. Not prepared, however, to vote anything

so radical, they drafted a modified resolution urging the postponement of negotiations until some little time after the new Codes had been in operation. Yokohama, if it endorsed the disclaimer publicly and emphatically uttered by the chief promoter of the Meeting, ought now to have protested that Kobe had misunderstood its intention. Did it do so? Not a bit of it. On the contrary, a journal claiming to know all about the ideas and intentions of the Yokohama agitators, came out with the following comparison, avowedly intended to prove the identity of the Yokohama and Kobe Resolutions:—"The Yokohama Resolution says that the time to form an estimate as to when the change should take place has not yet arrived; the Kobe Resolution says that it would be premature to fix the date of the change until certain things still looming in the future shall have taken place." Precisely; Yokohama voted to postpone negotiations for Treaty Revision *sine die*; Kobe voted to postpone them until the new Codes had been some little time in operation. But the drafter and proposer of the Yokohama Resolution avers that he never intended it to convey any such meaning. It is a charming muddle.

Talking of drafting, we should like to hear from some of the gentlemen who voted at the Yokohama meeting an explanation of what they intended to say when they spoke of "rights of property or person arising between subjects and citizens of Foreign Powers in Japan." We do not refer to the fact that all mention is omitted of rights of person and property arising between foreigners and Japanese. It is evident that the Resolution was intended to cover this all important branch of the subject, and that the ellipsis is simply a blunder. But considering only the words "rights of person or property arising between subjects and citizens," what do they signify. In the first place, to an ordinary reader they signify rights in which subjects are concerned on one side and citizens on the other. They are of course intended to signify rights between subject and subject, or between citizen and citizen, or between subject and citizen. But the phrase, as it stands, conveys no such meaning. Then again, it does not appear to have occurred to the drafter of the Resolution that rights of person and property arising between subjects, or between citizens, or between subjects and citizens, can only be civil rights. When criminal cases are in question the right becomes one between the Sovereign and the subject or the State and the citizen. Every one knows what the Resolution is intended to mean, but if Yokohama's ideas are to be gathered from the actual language of the Resolution, it appears that the foreign residents are willing to surrender at once and unconditionally jurisdiction in all criminal cases without exception and jurisdiction in all civil cases where Japanese subjects are concerned. Is not this also a pretty muddle?

We do not desire to suggest that the faulty drafting of the clause about rights of person and property is a matter of any consequence. All practical purposes are served so soon as the intended meaning of the clause is apprehended, and that, of course, both the Foreign Representatives and the Japanese Government understand very well. But it does not redound much to the credit of the Settlement that it could not express itself clearly about points to which it attaches so much importance. What adds to the muddle of the whole affair is that the mysteriously conveyed information on the strength of which the meeting acted was both partial and erroneous. The information was "that outside what are known as Treaty Limits foreigners shall immediately become subject to the jurisdiction of the Japanese tribunals, and that after a period of five years all foreigners, whether within what are known as the Concessions, or whether in the interior, shall become subject to Japanese jurisdiction, and that without any conditions at all." Now this information is exceedingly incorrect—so incorrect that either the source from which it came was quite untrustworthy, or else the facts were purposely

misrepresented. Further, it is only a very partial statement. Well informed people say that if the true story had been completely told, the Yokohama residents would never have held a meeting at all. However that may be, it is certain that only a bit of the story was related and that the bit was erroneous. Acting on the strength of incorrect and fragmentary information, and unanimously passing Resolutions which in part were not intended to mean nearly as much as they say, and in part were intended to mean a great deal more than they say, the meeting seems likely to become in the end more notorious than celebrated.

THE PRAYING MANTIS ON PORCELAIN.

MEAGRE as are the details that have been transmitted by Chinese writers about the decorative styles and technical excellences of their great potters, they thought it worth while in one case to depart from this rule of reticence. The exception relates to the Hsuan-tih era (1426-1435) of the Ming dynasty when there flourished, we are told, a potter named Lo and two lady ceramists, the sisters Shu, whose specialty was the ornamentation of pieces with designs representing fighting grasshoppers. It appears that in those mediaeval times, a favourite amusement of aristocratic Chinamen was to pit grasshoppers against one another, the insects being kept in cages, fed, and, for aught we know to the contrary, specially trained for the purpose. Doubtless the Praying-Mantis was the "grillon" concerning which this tradition is translated by M. Julien. In "Notes from the Zoo" in a recent number of the *Saturday Review*, we find an interesting description of the manners and customs of this most quaint and evil minded insect. "The mantidæ," says the writer, "are noticeable, not only for their structural peculiarities, but also for the fact that they are living and walking exponents of the truth that the world is governed by appearances, as from very ancient times wherever they are found—that is, throughout the warmer regions of the world—they have been credited with piety, meekness, and all good qualities, whereas in truth they are the most bloodthirsty creatures imaginable. This extremely mistaken estimate of their character has arisen from the fact that, especially as they move slowly about, the thorax is raised, as we have said, at an angle to the body, and the large raptorial legs are carried extended and raised—thus fancifully imitating, or rather caricaturing, the position of a person whose hands are clasped in prayer. In many parts of the world they are still regarded with superstitious reverence, and extraordinary stories are told of them—for example, they are believed to be able to indicate coming events, whence their names of 'soothsayers' or 'prophets,' and in the South of Europe the Praying-mantis is supposed to direct any lost wayfarer, especially a child, into the right way; as Rondelet puts it:—'Puero interroganti de viâ altero pede extento rectam monstrat, atque rare vel nunquam fallit.' Another legend is to the effect that 'St. Francis Xavier, on seeing a mantis moving slowly along with its fore-legs raised as if in devotion, desired it to sing the praises of God, which it immediately did in a very beautiful canticle.' Again, we are told that among the Hottentots 'the individual upon whom one happens to alight is supposed to have a peculiar degree of sanctity imparted to him, and to be a special favourite of heaven.' As we before remarked, however, all this reverence is sorely misplaced, the whole of the creature's life being spent in murder and rapine; for, being 'fierce, cruel, gormandizing wretches, so far from indulging, as has been fondly supposed, in a state of religious abstraction, they are continually seeking what they may devour,' and the very position which has given them a reputation for sanctity is only assumed to enable them the more readily to seize any unfortunate insect that may come within their reach; and they are by no means particular what that insect may be, as they will with the greatest readiness seize and devour one of their own species particularly if smaller and weaker than themselves. It is therefore, not

surprising that they are most pugnacious, and indulge in the fiercest encounters on the least possible provocation—or, indeed, without any apparent provocation at all—when 'their manoeuvres very much resemble those of hussars fighting with sabres, and sometimes one cleaves the other through at a single stroke, or severs the head from the body. During these engagements the wings are generally expanded, and when the battle is over the conqueror devours his antagonist.' The performance is curious and amusing, the peculiar shape and carriage of the insects giving them the appearance of dancing with one another. In China and the East we are told that they are fought like game-cocks, for wagers. The following extract from the work of an American authority says much for their power of endurance:—'We have seen a female decapitated, and with her body partly eaten, slip away from another that was devouring her and for over an hour afterwards fight as tenaciously and with a much nonchalance as though nothing had happened.' It is perhaps, needless to say, the character of the Mantidæ being such as it is, that the two specimens at the Zoo are not confined in the same case, as were they placed together the Society would in all probability very shortly possess but one only. They are of different ages, one having arrived at the perfect winged state of maturity, while the other is much more youthful, and it is interesting to compare the two examples. Like all the Orthoptera, the young Mantidæ come into the world fully equipped with six legs, and except that they are much smaller, differ very little in shape and general appearance from their parents; their wings, however, are entirely wanting. The changes in their development from the larval stage to that of the perfect insect are gradual, being carried out by a series of moults, during which the wings which first appear under the skin behind the prothorax, increase in size with each successive moult until they attain their full development in the perfect insect. And their wings have this peculiarity, that the upper pair, the tegmina, are hard, and form a covering for the under pair, which latter are so constructed that when the insect is at rest they fall together like a fan. Both tegmina and wings are longer than the abdomen, upon which they rest horizontally, the tegmina being placed one over the other. Though not possessing wings, the young Mantidæ are blessed with voracious appetites, and are full as fierce and bloodthirsty as their elders—qualities which they soon display by attacking one another. They are produced from eggs, which are laid by the parent insect in clusters, inclosed in an envelope which, soft when produced, becomes hard by exposure to the air, and are attached to the twigs and stalks of plants. A Mantid, notwithstanding its evil habits, or rather, perhaps on account of them, is a charming pet, if the expression is allowable in reference to an insect, its 'tricks and its manners' being most amusing. No doubt, to be seen in perfection, it must be kept in its native country—as, indeed, is the case with all inhabitants of the globe; but even here, if carefully brought over and so received in good health, and kept warm and well supplied with food, we know no animal of its size from which so much amusement can be derived.

THE MINING REGULATIONS.

THE *Chōwa Shinbun*, commenting on the Mining Regulations promulgated by Law No. 87, remarks that doubts have been expressed in certain quarters as to the propriety of issuing the regulations without submitting them to the consideration of the House of Parliament, inasmuch as two sessions of the Diet will have been convoked before they come into force—June 1st, 1892. Their chief points of difference from the Mining Law of Japan (*Nippon Kō-hō*) consist first in the provision for payment of a tax equal to a hundredth part of the value of minerals produced; secondly, in the establishment of a Mining Superintendence Office; thirdly, in the definition of cases in which actions may be raised in the Administrative Court; fourthly, in fixing the maximum area of a mining district at 600,000

tsubo; fifthly, in investing the authorities with power to enact rules for the regulation of miners and of the periods and methods of operation; and, sixthly, in reducing the tax on land occupied for mining purposes to *sen* 30 per annum per thousand *tsubo*.

HEROISM REWARDED.

WE gave an account last year of an extraordinary act of heroism performed by a man named John Smith at the ironworks of Messrs. Firth and Co., of Sheffield. We now observe that Smith has been rewarded for his bravery on that occasion:—'At Marlborough House, His Royal Highness the Prince of Wales presented to John Smith, aged 26, a member of the Manchester Fire Brigade, a special silver medal of the Grand Priory of the Order of the Hospital of St. John of Jerusalem in England, for distinguished bravery on the 18th May, 1889. At that time, Smith, who had formerly been a sailor, was employed in the ironworks of Messrs. Firth and Sons, Sheffield. An explosion of molten metal occurred in the works, and one of the workmen fell against an ingot. All but Smith sought safety in flight. Smith, at imminent personal peril, descended by means of a ladder to where the workman had fallen, and carried him to a place of safety, not in time to save his life, however. Smith was severely injured internally by breathing the heated air from the surface of the metal, and was an in-patient of the local hospital for a considerable period afterwards. His heroic act was brought before the notice of the Queen, who has been graciously pleased to bestow upon him the Albert Medal, and this was followed by the presentation of the silver medal by the Prince of Wales. Smith is a married man with two children, and has been a member of the Manchester Fire Brigade several months.'

ROBBERIES IN TOKYO.

DURING the course of this summer quite a feature of life in Tokyo has been the successful perpetration of burglaries indicating that the thieves possessed an accurate knowledge not only of the houses robbed but also of their inmates' habits. Strange to say the time generally chosen was the night of the victim's return from a trip in the country. Perhaps the burglars thought that the weariness resulting from a journey would make the householder particularly sleepy; perhaps they expected him to carry home a considerable remnant of the funds provided for his tour. At all events they achieved several robberies of foreigners' houses at that particular time, sometimes carrying off a tolerably rich booty, but on the whole being poorly rewarded for their craftiness. In one case they entered the study of a resident in Nagatacho, opened all the drawers of the desks in search of money, and then, making their way upstairs, examined several wardrobes, finally decamping without any spoil except the study clock, a combined time-piece and barometer in a leather case. In this instance the police immediately recognised that they had to do with professional thieves, for in several places where the burglars had needed light, there were to be seen little heaps of white dust, resembling cigar-ash, but well known to experts as the ash of a peculiar fuse-like taper frequently used by practised burglars in Japan. A month passed without any further clue, and the police were much perplexed, for many of the articles stolen were of such a nature that any attempt to dispose of them by the usual channels must have led to speedy discovery. Indeed the regulations for the control and supervision of dealers in second-hand goods are so effective that thieves can scarcely venture to get rid of their booty in any of the cities. Purloined articles must either be handed over to foreign receivers or sold privately. What then had become of numerous watches, clocks, and other chattels carried off from houses where the burglars had failed to find the first object of their search, ready money? The mystery has now been solved, in part at any rate. Living in a hired house of some size and respectability, behind the shrine of Tenjin in Hirakawacho, was a certain Yamada Susumu, formerly a

shitoku of Aomori Prefecture. He appears to have been about four years in Tokyo, and so far as our present information goes, his chief occupation during the whole period was burglary. He never trusted any one to share his operations, but conducted them all himself, and to judge from what we have heard, he must have effected a robbery about once a week. He took anything that came handy, money, of course, being his chief aim, but clothes also receiving a due share of attention. The latter he could not dispose of without so far changing them as to render identification difficult, and with that object it was his custom to employ tailors for the purpose of making the necessary alterations. This accomplished, he used to send the articles to Sapporo for sale, an operation in which he was greatly helped by the fact that he belonged to a drug company (the *Seiyaku Kaisha*), and was thus enabled to ship parcels which would otherwise have attracted attention and probably excited suspicion. Rumour says, also, that he made use of Chinese aid to spirit away the stolen goods, and the statement is very credible. Japanese residents of Shanghai know that a perpetual trade is carried on there in articles of Japanese dress, head-gear, and so forth, which are sold at prices explicable only on the hypothesis of theft. Yamada may have been a contributor to the stock of these goods, but that part of his story is obscure. Suspicion was first directed to him by his large commissions to tailors for alterations of wearing apparel. Some of the tailors talked and their talk reached the ears of the police. At the same time it was ascertained that squabbles often took place between Yamada and his wife—who also appears to have been constantly employed in the business of re-making clothes. In the course of these altercations the woman occasionally called her husband a "gallows bird" (*Kyōshu*) in accents so shrill as to reach the neighbours' ears. By such means and by the revelations of a *geisha* whose company Yamada affected, the man's real character was ultimately discovered. Before he had any suspicion of what was impending, a warrant was obtained for searching his house, and in a room which had apparently served the purpose of a repository of stolen articles, quite a collection of other people's property was found, including some sixty or seventy watches and clocks, among them the study clock spoken of above. Yamada was a clever fellow. He is said to have been found possessed of several thousand dollars, the proceeds of his lusily plied profession.

A CURIOUSLY FALSE RUMOUR.

MANY strange statements have appeared in the vernacular press in connection with the Yokohama Treaty Revision meeting, but perhaps the strangest of all is the attitude attributed to the Rev. Dr. Eby. We are told by Tokyo papers that Dr. Eby helped at the Yokohama meeting, and that he published a circular declaring the present scheme of negotiations to be wrong, since Japan ought first to treat with China and then proceed step by step until she reached England. If such tales had been told of any one else they might have sounded less ludicrous and ungrateful, but that Dr. Eby should be thus misrepresented is indeed astonishing. About six years ago Dr. Eby published a valuable pamphlet in which the Treaty Revision question was fully explained and Japan's claims were strongly advocated. Subsequently he delivered in Canada and the United States more than a hundred lectures in which, directly or indirectly, the necessity of a just revision was ably urged. We have his authority to say that he had nothing whatsoever to do with the Yokohama meeting; that he has published no circular with reference to Revision; that the ideas which he is supposed to have embodied in this imaginary circular are, in his opinion, worthy only of ridicule, since he believes that England should be the first to join hands with Japan; and that no other missionary has taken any part in the Yokohama agitation. Do the Japanese newspapers forget that in 1884 the missionaries drew up and presented to their Representatives a memorial declaring their confidence in Japan and advocating her right

to be liberally treated by foreign Powers in the matter of Revision? There ought to be no failure of memory about such an act, neither ought vernacular newspapers to fall into the lamentable error of classing as an opponent one of their country's staunchest and ablest allies, the Rev. Dr. Eby. We invite our Tokyo contemporaries to translate and reproduce this note, in order to undo the wrong they have done.

A GERMAN "GOLIATH."

H. SANDOW, the strongest man in the world, according to his own account, while touring through Westphalia, fell in with an individual whom he calls the Goliath of the Fatherland. This prodigy he found at work near a quarry lifting huge stones on to railway trucks. Professor Virchow on inspecting him, testifies that he is the biggest man ever seen in Germany, and that is also the opinion of all the leading professors of anatomy in Cologne. There have been, and are now, taller men in the Fatherland, but none so remarkably developed. Goliath is only 6 feet 2½ inches high, but he weighs 27st. His chest measurement is 65 inches, with head and hands abnormally large, his head being 33 inches in circumference. His forefinger laid flat on a five-shilling piece entirely covers it. Sandow's next performance will include lifting this giant with one hand over his head, and carrying him about; also, raising his new play-fellow with one finger off the ground. Sandow likewise promises further unheard-of, and as yet unseen, feats of strength of a novel and extraordinary character.

A VETERAN OF THE SEA.

A VERITABLE veteran of the sea, Captain T. A. Christensen, left Japan on the 4th inst. by the P. & O. Co.'s steamer *Ancona*. Captain Christensen is now in his seventieth year. Fifty-three and a half years of his life were devoted to service at sea, and for thirty-eight years he was a Master Mariner, during the whole of which long period of command he never lost a ship or a spar; never lost a man overboard, and never had a vessel touch the ground, a wonderful record truly. He came to the East twenty-six years ago (1864) in command of the Peninsular and Oriental steamer *Corea*, but he resigned in Hongkong and returned to England. Four years later (1868) he brought out the steamer *Courier* for Messrs. Walsh, Hall & Co., and commanded her on the Chinese and Siberian Coasts for a year and a half, for the purposes of the fur trade. In 1869 he commanded the *Vulcan*, a German steamer belonging to Messrs. Kniffler & Co., and in 1870, having returned to Europe, he took command of the *Princess Royal*, an English steamer chartered by the French Government to run between Marseilles and Algeria. He next commanded the *Crusader*, plying between Glasgow and the Black Sea—the *Crusader*, by the way, is still running and was recently in Yokohama—after which he came (1874) to Japan and, entering the Mitsu Bishi service, commanded several ships in succession, the last (*Wakawoura Maru*) for 12½ years. Captain Christensen then passed into the service of the Japan Mail Steamship Company, and lately commanded the *Omi Maru*. Universally popular and highly esteemed by his employers as an officer of exceptional ability, he leaves a record of which any seaman might well be proud. We believe that his present purpose is to settle in Scotland, where we trust that he may enjoy many years of comfort and happiness.

THE FIVE POLITICAL PARTIES IN THE DIET.

Discussing the relative strength of the five political parties in the diet, the *Koku-Hon* states that the *Rikken Jiyu-to* possesses 130 or 140 seats, the *Taisei Kwaï* about 90, the *Kaishin-to* about 50, the *Hoshu-to* about 20, and the *Jichi-to* not more than 10. But our contemporary justly observes that the number of seats possessed by a party is not always a true test of its strength. As to the *Rikken Jiyu-to*, the Tokyo journal considers that though its numerical strength is very great, its power of combination is far from complete, and that, though it contains a number of distinguished statesmen, it

does not possess any personage of commanding influence. The *Taisei Kwaï*, being composed of various different elements, cannot, in our contemporary's opinion, be regarded as a cohesive party. With regard to the *Kaishin-to*, the *Koku-Hon* remarks that, after successive defeats in recent years, the party has regained something of its old power of combination—and that, consequently, its effective strength will be out of proportion to its numerical strength. The *Jichi-to* does not now-a-days possess the influence it once exercised, but as it maintains a peculiar connection with some statesmen in power, it may perhaps be capable of wielding unexpected influence. Next to the last named party, the *Hoshu-to* possesses the smallest number of seats in the Diet. But its cohesion is firm, and it will probably be able to maintain a respectable position among the parties in the Diet.

As to the *Kaishin-to*, the *Nippon-Hyoron*, which maintains a neutral position in politics, recommends the members of that party not to be disappointed at the smallness of the number of their representatives in the Diet, and at their inability to accomplish their recent object of amalgamation. "Bide your time"—is in effect the advice of our contemporary. "By and by you will be able to occupy a commanding position in the Diet as third party."

It is plain that at last a popular reaction has set in in favour of the long persecuted *Kaishin-to*. That party is now animated by new germs of life, and, as the *Nippon Hyoron* observes, it may perhaps hold the balance of power in its own hands. The scheme of amalgamation, in its original and general sense, has failed, at least for the present. But it is a remarkable fact that a powerful section of the newly organized *Jiyu-to* is anxious to cultivate the friendship of the *Kaishin-to*, and it is possible and even highly probable that the extravagant conduct of the extreme Radicals, under the influence of men like Mr. Endo and Mr. Oi, may drive the soberer section into the camp of the *Kaishin-to*. At any rate the *Kaishin-to* will probably present a very different appearance in the second session of the Diet.

A SPEECH DELIVERED BY DR. KATO, PRESIDENT OF THE IMPERIAL UNIVERSITY.

ON the twenty-eighth ultimo, the third meeting of the Philosophical Society was held in the Hall of the Society at Komagome Hongo, Tokyo. Dr. Kato, President of the Imperial University, delivered a speech on "Next November." The gist of what he said is as follows:—To prophesy what will happen in the course of next November would be idle. It is not so easy generally, to talk of future occurrences as to discuss past events. Next November is a month of momentous consequence to our people. Yet it may well be that our present anxiety about the month will prove groundless. In November next the Constitution will become an accomplished fact. The route that has here been adopted to a representative form of government is far different from that followed by European nations to attain the same goal. Their condition is the natural outcome of various changes wrought out from generation to generation; ours is a state prepared artificially and perhaps prematurely, and consequently there is a chance of its not proving good in practice. In England the representative form of government was reached at an early date. But among the rest of the European nations government forms have but lately been perfected, and therefore their political affairs are far inferior to those of England, where the present polity is the natural result of long experience. The systems of the countries of continental Europe are perfect and splendid in appearance, yet their practical working is still unsatisfactory. Even in England and other European countries where racial identity virtually exists and customs and natures do not differ much, marked degrees of superiority and inferiority are discernible in respect of the organization and utility of political parties. In Japan, thirty years ago, the

people were utterly ignorant of the very name of Constitutional Government. Yet they are now on the eve of adopting that form of government. It must be remembered, too, that the proceeding is not the result of natural evolution as in Europe, but is rather of an artificial character. Consider the Turkish Empire. Ten years ago Turkey was pressed to establish a Constitutional Government during a time of domestic commotion. But she proved unable to carry out the project, and the law issued with that object became a dead letter. Except Turkey, which actually attempted, though unsuccessfully, to establish a Constitutional polity, we are the first nation in all Asia that has adopted such a form of Government. May we not repeat Turkey's unhappy experience! November is close at hand. Though we cannot predict what will happen in the Diet, we know at least that unpleasant results have occasionally attended national assemblies in Europe where the government is sustained by a political party. We have to be very careful in making arrangements for a Diet which is to be opened for the first time. The Diet should not be a place for political fighting among different parties. If the representatives are interested for their own constituents only, but indifferent to the national welfare, serious results may ensue for the nation. Properly speaking, representatives represent not only the persons by whom they were elected, but also their country, and they should not be ambitious for their own glory, or self-conceit, but should be of good morals, to offer a good example to others. Yet at the same time they should not be luxurious and ostentatious in habits, but should observe strict simplicity of life. Those who know nothing of genuine principles and are yet determined to oppose the proposals of the government, and those who have no knowledge of the causes of the government expenditure but yet insist upon the reduction of such expenditure, cannot be said to possess the proper qualifications of representatives. As for the public, it should direct special attention to finding means for suppressing the so-called *soshi*. At present *soshi* and *violence* have almost become synonymous terms. In case the *soshi* become more violent in their methods the representatives will be obliged to confine themselves within narrow limits. Such accidents are apt to occur more frequently in a country where representative government has been reached artificially, than in countries where it is the outcome of natural evolution. It is desirable that arbitrary exercise of power by representatives of the people and physical violence of the *soshi* should not go together. Considered from every point of view, next November is the most critical month in our annals. We should be very careful not to invite such a failure as that made by the Turks. It is for us to set a good example of representative government to the rest of the Asiatic nations. I hope that nothing will happen to make Europeans and Americans pronounce representative government impracticable in Asia after all. I hope further that even though no very satisfactory result be attained by our Diet, we shall at least not become a laughing stock to the juriconsults of Europe and America.

A STRANGE STORY.

THE Sochow correspondent of the *North China Daily News* tells this story:—"Not long ago four young men, sons of men in high places, went in a boat to some point outside of the city. When they came back, about ten o'clock at night, they found the water gate shut, and the guard rightly refused to open it. Two hundred copper cash would have been of more weight than the names of their fathers on which they relied, but the young men were rude and insolent. When they saw that the guard stood upon his orders to close the gate at nine o'clock, and could not be brow-beaten, they abused him and even struck him, and passing on foot through the land gate went to their homes in the city. The guard went next day and told the whole case to the provincial judge. This officer bade the magistrate look into the matter and punish the young men. He said 'I am afraid

to do it.' The judge then told the city prefect to take up the case. He sent for the young men. They came at once in sedan chairs to call upon the prefect. One, however, the son of a provincial literary chancellor said, 'I am hurt and cannot leave home.' When the three young men came before the prefect, he merely told them that he would settle the matter with the judge and they retired. He then reported to the judge that he had arrested the guilty men and had given each forty blows on the hand. The judge said no more about the young men, but the poor boatman was beaten and his boat was sawn in two. This is a fair specimen of the way in which the literary class treat the people and even the officials. A magistrate, ruling a million of people, one third of the city and adjacent country, is afraid to touch the sons of high officers; and the head of the Sochow prefecture, who rules one of the eleven grand divisions of Kiangsu province, is forced by fear to do rank injustice. It is hard to say which is worse, his cringing to the young men or his cruelty to the boatman. These officers are not specially bad men. They may safely be taken as representatives of the official class. Whatever citizens of Western nations living in Japan may do in the matter of putting themselves under the jurisdiction of native rulers, sojourners in China, who know what the Chinese officials are, will never willingly come under their control."

THE MEMORIAL OF THE BRITISH MISSIONARIES.

It will of course have been understood that the memorial, of which we published a copy yesterday, addressed by the British Missionaries to Her Majesty's Representative, was signed only by the Missionaries in Tokyo. To send it all through the country for signature would have involved long delay, and as the great bulk of the missionaries are in Tokyo, their signatures were deemed sufficient.

Only one of the leading vernacular journals has referred to the memorial thus far, though several published it in their issues of yesterday. That one is the *Fiji Shimpō*. It writes as follows:—"We have often said that the foreign missionaries in this country are men of the greatest enlightenment, who instruct and convert our countrymen, and whose brightness, extending also to their own nationals in Japan, guides them in the right way. In general foreigners coming to Japan are impelled hither by love of gain only. Some of them are men who, in a strange country, do things which they would never do at home. Above all, there is no toil or pain which they will not undergo for the sake of gain. To restrain such natures is beyond the power of laws or covenants. Only by the moral tenets of religion can their better instincts be evoked. To this end the Christian missionaries labour, and we believe the results of their efforts to be worthy of all praise. They are the torches that lead the steps of foreigners along the path of right; the medicine that weans their hearts from the blind pursuit of gain. During the thirty and odd years of our country's foreign intercourse, had there been no missionaries here, and had things been left to follow the dictates of the merchants' (*byōki shonin*), convenience, this country's amicable relations with foreign States would have been brought into a very questionable condition ere now. It is true that problems of international intercourse do not fall within the sphere of a missionary's regular duties, but in actual practice the missionaries have much to do with such intercourse. Treaty Revision recently became a current topic of discussion. The British residents of Yokohama and other nationals assumed an attitude of opposition, and finally addressed to the proper quarters a memorial embodying their objections. From a superficial point of view it seems not unreasonable that men should disregard great problems of international intercourse, and direct their attention solely to the interests which immediately concern them. Such a memorial, however, not only is unjust to Japan, but also reflects little credit on foreigners themselves. We learn now that the British mis-

sionaries, taking an independent line, prepared a memorial advocating a proper settlement of Treaty Revision, and submitted the document publicly to the British Minister on the 3rd instant. For many years the British missionaries have interested themselves in the question of Treaty Revision. On a previous occasion they conveyed to all the Foreign Representatives their opinion that steps should be taken to restore to Japan the rights which she is prevented by Western States from exercising, and they have now presented a memorial in the same sense, without concern for the Yokohama resolutions. It cannot be doubted that when this memorial is forwarded by the British Minister to his Government, it will throw much discredit on the anti-revision resolutions of the Yokohama merchants. The resolutions of the Yokohama merchants are dictated by considerations of personal interest: the memorial of the missionaries is based upon the dictates of morality, and the British Government will know how to distinguish the evil from the good. The Yokohama resolutions could not, under any circumstances, have carried much weight, but they might have produced a very false impression. Uneasy, on the one hand, as to the effect of the Yokohama resolutions on the disposition of the British Government, and deeply uneasy, on the other, lest these unjust resolutions should create umbrage among our people and be the means of bringing about estrangement between them and foreigners, we are sincerely relieved to feel that many evil contingencies have been averted by this publicly taken action of the missionaries. We shall not easily forget that the British missionaries, though generally standing aloof from politics, have concerned themselves about this question of the amity of international relations, and have contributed very materially, as we believe, to a happy solution."

THE RATS THAT GNAW THE COLUMN.

ONE thing is quite certain, namely, that if a portion of the residents of this Settlement desire to preserve the privilege of exemption from Japanese jurisdiction, the newspapers claiming to represent them lose no opportunity of rendering the continuance of the present system obnoxious and exasperating to the Japanese nation. These journals are like the silly rats which gnawed the base of the column in which their nest was built. The recent press prosecution furnished an opportunity for their wonted intemperance, and it has been thoroughly utilized. When the news was published that several newspapers had been punished, the *Japan Herald*, under a wholly false impression of the act by which the offending journals had incurred the displeasure of the law, hastily wrote a severe criticism of the authorities, ridiculed their procedure, and expressed the hope that the story would be transmitted by the Foreign Representatives to their respective Governments. The next day the same paper learned that it had entirely mis-stated the facts; that it had, in short, described the offence of the newspapers as the publication of a memorial which had not been judicially noticed at all. Having committed so serious a blunder, and written half a paragraph deriding the Authorities for doing something which they had not done, the commonest principles of honesty required that the *Japan Herald* should acknowledge its mistake. It did nothing of the kind. Without a word of confession or explanation it proceeded to discuss what it had now discovered to be the true count. And this is how it discussed the matter. The Government, it declared, had "instituted preposterous prosecutions;" had "conclusively proved how little disposed it is to keep in abeyance the despotic powers with which it has armed itself, to make sure of being able to worry, or to crush outright, every newspaper and every antagonist it may wish to hold in check or whose power it may desire to annihilate;" had been guilty of "uncalled for and impolitic action," and had proved, "if proof were wanting, that notwithstanding the granting of a new Constitution conferring upon a portion of the people rights superior to what they before were in possession of, the Author-

ities incline unmistakably towards despotism, quite as much as before." Of the offence committed by the newspapers it spoke in the most trivial strain; called it the publication of "a moderately worded memorial addressed to the Cabinet, mildly criticising a clause in the Constitution," and doubted whether "it could be considered to be an offence, for certainly it would not be so construed elsewhere." As for the Court which had passed the sentence, the *Japan Herald* said that it had "objectionably and unnecessarily applied indefensible and insufferably bad laws;" accused it of a "laughable exhibition of malevolence" because it had extended the penalty to the type of the incriminated newspapers—a form of a punishment recognised by press laws everywhere—and compared its conduct to "the spiteful petulance of a child striking any object by which it has accidentally hurt itself." Concerning such writing as this there can be no second opinion. If the *Japan Herald* dared to apply to an English Court the language of contumely and contempt applied by it to the Tokyo Court of Minor Crimes, its law-despising words would be immediately and severely punished. No Western tribunal would suffer such criticism for a moment, and if Japanese tribunals are without redress against gross insult at the hands of a foreign journal published in Japan, the system which deprives them of inability to protect themselves cannot but strike them as intolerable and painfully inconsistent with national independence. The terms used with reference to the Government and the laws are equally bad. They are distinctly seditious. Uttered in England, they would only provoke a smile; but in Japan the publication of such language is still considered dangerous and calculated to interfere with the preservation of good order. A foreign journal published in Japan violates every principle of decency when it thus parades its glaring defiance of laws which Japanese newspapers are compelled to respect, and when it thus makes open exhibition of seditious licence which, if indulged in by a Japanese, would involve a heavy penalty. Extrajurisdictional was never designed to be thus abused; and if these abuses render the continuance of the system unendurable, who can be surprised? Only one thing is to be said, namely, that all respectable foreigners, whether opposed or favourable to Japan's Treaty Revision claims, heartily condemn this criminal recklessness. There are very few persons in this settlement who would be guilty of it, and preëminent among them stands the writer of the article in the *Japan Herald*, a man who for the past twenty years, by speech and by pen, has lost no chance of rendering the system for which he contends hateful in Japanese eyes, and of parodying Western justice, Western honesty, and Western courtesy.

THE OFFENDING NEWSPAPERS.

There ought not to be so much difficulty in understanding the nature of the offence committed by the recently punished newspapers. Some critics appear to think that the law is violated solely by the nature of the matter published. That is a misconception. It is forbidden to publish, without official permission, memorials addressed to the Government. Thus whatever might have been the contents of the Kansei memorial, its unsanctioned insertion by the newspapers constituted a breach of the law. But extenuating circumstances may be evidently deduced from the nature of a document. People addressing a memorial to the Prime Minister know perfectly well that its simultaneous publication in newspaper columns deprives it of the real character of a memorial, and converts it into a direct appeal to public opinion. If, then, they forward a copy of the memorial to an editor, the latter, especially should he find the contents of the document plainly innocuous, may not unnaturally conclude that it comes to him after official sanction has been obtained. But a memorial such as that addressed to Count Yamagata by the Kansei politicians could admit of no misconception. Any editor must at once perceive that he incurs a grave responsibility by

giving publicity to a document which attacks an article of the Constitution, and declares its terms to be a violation of the Imperial Prerogative. The memorialists, merely by forwarding their views to the Minister President, may not have disregarded the veto contained in the Preamble to the Constitution. We were disposed at first to think that they had, but we admit the force of the arguments advanced by a writer in the *Japan Gazette*. Again, there is no law, so far as we know, forbidding a memorialist to show his memorial to the editor of a newspaper. On this count too, the Kansei folks must probably be acquitted. The whole responsibility, in short, devolves on the newspaper. In the case we are considering each journal receiving a copy of the memorial had nothing to do but to adopt the simple course of enquiring whether its publication would be officially sanctioned. To insert it without taking that precaution was to become technically guilty at once. For the rest, the Court evidently considered that the publication of such a document was an attack upon the Constitution, and that the offending newspapers must be taught to take a stricter view of the responsibility devolving on them, and of their obligation to obey the law. We think, ourselves, that the sentence was needlessly severe, but our purpose is to discuss not the judgment but the nature of the offence.

NEW MEMBERS OF THE HOUSE OF PEERS.

THE Constitution provides that one member of the House of Peers shall be elected in each City and Prefecture from among and by the fifteen male inhabitants paying the highest amount of direct national taxes on land, industry or trade. The member thus elected receives his nomination from the Emperor. In accordance with this rule the following have been gazetted members of the Upper House:—

TOKYO CITY.—Watanabe Jiyemon, age 42 (tax yen 1,184), President of a bank and a heimin, Nishi-bashi District.
MIYE PREFECTURE.—Hayashi Soyemon, age 45 (tax yen 614), Merchant, a heimin, Arita-gori.
KANAGAWA PREFECTURE.—Umeshima Shobei, age 52 (tax yen 438), Agriculturist and Merchant, a heimin, Osomi-gori.
ISHIKAWA PREFECTURE.—Okano Koreyasu, age 36 (tax yen 890), Agriculturist, a heimin, Itakui-gori.
AKITA PREFECTURE.—Ikeda Jimnosu e, age 44 (tax yen 4,963), Agriculturist, a heimin, Senpaku-gori.
SHIZUOKA PREFECTURE.—Miyasaka Sogo, age 61 (tax yen 1,728), Agriculturist, a heimin, Udo-gori.
MIYAGI PREFECTURE.—Kama-matsuburo, age 46 (tax yen 697), Agriculturist, a heimin, Sendai Municipality.
AOMORI PREFECTURE.—Nomura Jisaburo, age 61 (tax yen 1,887), Merchant, a heimin, Kami Kira-gori.
HYOGO PREFECTURE.—Kawasaki Seizo, age 52 (tax yen 1,157), Manufacturer, a heimin, Kobe Municipality.
FUKUSHIMA PREFECTURE.—Taneda Rubei, age 34 (tax yen 620), Merchant, a heimin, Date-gori.
NAGANO PREFECTURE.—Yamada Sozayemon, age 38 (tax yen 1,092), Agriculturist, a heimin, Shimo Takai-gori.
GUMMA PREFECTURE.—Sakurai Dori, age 35 (tax yen 1,299), Merchant, a heimin, Nishi Gumma-gori.
SHIGA PREFECTURE.—Shimizu Dompai, age 47 (tax yen 1,129), Merchant and Manufacturer, Sakurai-gori.
KYOTO CITY.—Yoshida San'yemon, age 42 (tax yen 463), merchant, a heimin, Ameyasu-gori.
TOTTORI PREFECTURE.—Kawada Tojoan, age 37 (tax yen 1,899), Merchant, a heimin, Kume-gori.
OSAKA CITY.—Kubota Shingo, age 49 (tax yen 1,093), merchant, a heimin, Takayama-gori.
TOCHIGI PREFECTURE.—Kikuchi Saburo, age 37 (tax yen 624), Agriculturist, a heimin, Kawauchi-gori.
YAMAGATA PREFECTURE.—Hasegawa Naomori, age 55 (tax yen 4,035), merchant, a heimin, Yamagata Municipality.
KAGOSHIMA PREFECTURE.—Bunon Shinadzu Chingen, age 45 (tax yen 262), President of "Zushikwan" (a school), Kagoshima Municipality.
YAMANASHI PREFECTURE.—Wakao Ippai, age

69 (tax yen 3,897), merchant, a heimin, Kofu Municipality.
TOKUSHIMA PREFECTURE.—Miki Yokichiro, age 53 (tax yen 2,131), Merchant, a shizoku, Itano-gori.
FUKUI PREFECTURE.—Yamada Jo, age 57 (tax yen 813), Agriculturist, a shizoku, Sakai-gori.
AICHI PREFECTURE.—Kamei Shiro, age 62 (tax yen 849), Agriculturist, a shizoku, Kaito-gori.
WAKAYAMA PREFECTURE.—Mayeda Kenyu, age 53 (tax yen 511), Agriculturist, a heimin, Naka-gori.
VEHIME PREFECTURE.—Mura-kami Keisaku, age 38 (tax yen 772), Agriculturist, a heimin, Nii-gori.
OKAYAMA PREFECTURE.—Nosaki Takekichiro, age 41 (tax yen 5,865), Agriculturist, a heimin, Kojima-gori.
SAITAMA PREFECTURE.—Sekiguchi Tago, age 41 (tax yen 1,329), Nakakatsushika-gori.
TOYAMA PREFECTURE.—Baba Michihisa, age 43 (tax yen 1,981), Kammarai-gori.
GIFFU PREFECTURE.—Watanabe Jirokichi, age 33 (tax yen 1,110), Merchant, a heimin, Gifu Municipality.
SHIMANE PREFECTURE.—Tanabe Chosayemon, age 39 (tax yen 3,126), Mine owner, a heimin, Iishi-gori.
KAGAWA PREFECTURE.—Suzuki Dangoro, age 32 (tax yen 1,301), Merchant, a heimin, Takamatsu Municipality.
KUMAMOTO PREFECTURE.—Izumi Jenta, age 38 (tax yen 1,461), Merchant, a shizoku, Yatsu-shiro-gori.
YAMAGUCHI PREFECTURE.—Takigochi Kichiro, age 67 (tax yen 400), Agriculturist, a heimin, Aburatsubo-gori.
NARA PREFECTURE.—Nakamura Kashin, age 35 (tax yen 477), Miscellaneous occupations, a heimin, Sonokami-gori.
IBARAKI PREFECTURE.—Yamazaki Shinzo, age 35 (tax yen 608), Agriculturist, a heimin, Kawachi-gori.
KOCHI PREFECTURE.—Shimanchi Takeshige, age 35 (tax yen 947), a shizoku, Kamigori.
MIYASAKI PREFECTURE.—Ota Seibei, age 30 (tax yen 633), Merchant, a heimin, Higashi-usube-gori.
NAGASAKI PREFECTURE.—Isahaya Isisaku, age 62 (tax yen 459), Agriculturist, a heimin, Kikuchi-gori.
NIIGATA PREFECTURE.—Ichishima Tokojiro, age 42 (tax yen 11,282), Agriculturist, a heimin, Kikakubara-gori.
CHIBA PREFECTURE.—Igashiki Keishi, age 33 (tax yen 607), Agriculturist, a heimin, Katoh-gori.
IWATE PREFECTURE.—Kudo Kantoku, age 41 (tax yen 1,186), Agriculturist, a heimin, Kuwatate-gori.
HIROSHIMA PREFECTURE.—Sawahara Tamiemon, Agriculturist, a heimin, Akigori.
SAGA PREFECTURE.—Hara Chujun, Agriculturist, a shizoku, Fujisagori.
FUKUOKA PREFECTURE.—Kagezaki Taro, Agriculturist, a shizoku, Mitogori.
OITA PREFECTURE.—Mizunoye Ko, Agriculturist, a heimin, Usagori.

IMPERIAL NOMINEES.

THE names of Imperial Nominees to the House of Peers, published in these columns some days ago, were not taken from an official announcement, but from the vernacular press. The true list has appeared in the *Official Gazette*. It differs slightly from the newspaper list, and we therefore reproduce it in full:—Mr. Iwamura Michitoshi, Mr. Yamaguchi Naoyoshi, Mr. Tsuda Idsuro, Mr. Hosokawa Junjuro, Mr. Kanda Kohei, Mr. Mitsukuri Rinsho, Mr. Nishi Shu, Mr. Iami Shigekata, Mr. Kuki Rumi, Mr. Obata Buo, Baron Osawa Takeo, Mr. Nomura Motonuke, Mr. Miura Yasu, Mr. Kato Hiroyuki, Mr. Watanabe Ki, Mr. Yanagi Yuretsu, Mr. Osaki Saburo, Mr. Fukuhara Jisun, Mr. Harada Katsunichi, Mr. Okouchi Shigetoshi, Mr. Nakai Hiromu, Mr. Matsumoto Jun, Mr. Kamishi Junsei, Mr. Tanaka Yoshio, Mr. Nishimura Shigeki, Mr. Wataru Masamoto, Mr. Ando Sokumei, Mr. Murata Tamiuo, Mr. Hashimoto Tsunatsune, Mr. Miyoshi Taizo, Mr. Nakamura Masanao, Mr. Nagayo Sensai, Mr. Yamakawa Ko, Mr. Oki Shuko, Mr. Narahara Han, Mr. Shigeno Anyeki, Mr. Ito Miyoji, Mr. Kawada Go, Mr. Hamano Shin, Mr. Kinashi Seichiro, Mr. Mayeda Masana, Mr. Kaneko Kentaro, Mr. Maruyama Sakura, Mr. Hirata Tasuke, Mr. Iwanuma Waro, Mr. Iwasaki Yonosuke, Mr. Fujimura Shiro, Mr. Morioka Shojun, Mr. Shibusawa Yeichi, Mr. Tomita Tetsuno-

suke, Mr. Kawada Koichiro, Mr. Murata Tsuneyoshi, Mr. Toyama Shoichi, Mr. Kikuchi Dai-riku, Mr. Hotsumi Chicho, Mr. Furuchi Koi, Mr. Hori Shingoro, Mr. Konakamura Seiku, Mr. Obata Tokujiro, Mr. Sufu Kohel. All these gentlemen except Mr. Sufu Kohel, who was nominated on the 1st inst., were nominated on the 29th ult. according to paragraph 4, Article 1 of the Ordinance of the House of Peers.

THE "KOKUMIN-NO TOMO" AND ENGLISHMEN.
